Mr. Buchanan carries this principle into Dickons's life, and declares that his resentment against his mother's conduct and his carica-ture of his father as Micawber are not inconsistent with his pos-session of "a noble soul, a beneficent mind, and a loving heart." We should say that they were inconsistent with the self-respect of a strong intellect capable of real depth of emotion, though not inconsistent with the amiability of a sensitive child. And here we come to a moral problem which to our thinking is susceptible of a definite and conclusive answer. If Mr. Buchanan is right, we ought to give all but the highest place to work significant of the moral qualities implied in Dickens's relation to his parents, because those qualities are really noble. Denying them to be noble, we deny Mr. Buchanan's conclusions. Doubtless the controversy will not be settled speedily; like most other moral problems, it will strike different people in different lights, and the ultimate test will be Dickens's power of affecting the consciences or the osthetic tastes of future generations. Still it is not a mere question of taste, to which the only answer could be, Mr. Buchanan prefers this, and we prefer that, but is as definite, though not us easily answerable, as the question whether a particular prisoner is or is not guilty of theft. The ablest critics may differ, and must be guided by instinct as much as by reasoning; but, in proportion to their ability, they will be able to anticipate the verdict of posterity. And therefore we should value the judgment of a sound critic as something more than the mere record of an impression. His impression indeed must go for much; ought to give all but the highest place to work significant of record of an impression. His impression indeed must go für much; but the impression leads to statements which can be exposed to definite tests, and which therefore come to some extent within the domain of scientific observation.

Here, we see, the artistic question runs into a moral question; and this brings us to another reason why Mr. Buchanan should admit that criticism is something more than one of the line arts.

In fact, he has distinguished himself by proclaiming most emphatically the connexion between art and morality. He seldom misses as occasion of administering a blow in passing to what he calls the "musical ravings of diseased animalism." He condemns Mr. Carlyle in the most unmeasured terms for what he considers to be his universal want of sympathy for humanity, and declares that his "very name has become the synonym for moral heartlessness and political obtusity." We will not here take up the cudgels for Mr. political obtusity." We will not here take up the curgers for man. Carlyle, though we utterly deny the correctness of Mr. Buchanan's judgment, and agree to some extent with the inferior Scotchman who set down such criticisms to defective appreciation of Carlyleses hereour. We merely remark that here, again, the discussion passes beyond the sphere of simple personal impression. To decide upon Mr. Carlyle's literary merits, we must decide upon the depth of his anisitival insight, and therefore, to some extent, upon the truth or rather passionately, "has never been on the side of the truth. He was for the lie in Jamaica, the lie in the South, the lie in Alsace and Lorraine." If this merely means that ou each of those occasions. When Carlyle, the appears that ou each of those occasions. When Carlyle took the convenient side to Mr. Ruchard. and Lorraine." If this merely means that on each of those occasions Mr. Carlyle took the opposite side to Mr. Buchanan, the word "lie" is out of place. Mr. Buchanan really means to assert that Mr. Carlyle showed his "obtusity" by a mistaken view of the questions at issue. To decide, therefore, upon the amount of penetration implied in Mr. Carlyle's judgment, we must decide upon the rights and wrongs of the French we must decide upon the rights and wrongs of the French and German war. That is a question of facts, and not of mere personal impressions. It is true that it is not a question which anybody is now entitled to answer dogmatically; but a hundred years hence, when passions are cooler and the issues clearer, critics will be able to form an accurate judgment of the amount of insight implied in the unreserved acceptance of one view of the quarrel. We quite admit that, in such complex questions our judgments must be quided in great measure by the questions, our judgments must be guided in great measure by the shaple instinctive appreciations formed without any conscious logical process; but it is also true that our judgments may be guided and checked by many external criteria, which give to our ultimate decision, not a really scientific value, but that kind of weight which is due to the opinions of a candid judge pronouncing weight winch is the to the opinions of a cauchy judge problem. Such a judge will be biassed by a perception, of which he can give no distinct account, that one witness is a liar and another a true man; but he would acandalously neglect his duty if he confined himself to such methods of discovering the truth.

Perhaps we have been drawn into too long a discussion of a minor point, which Mr. Buchanan did not mean to state too prockedy. We are, however, really justifying Mr. Buchanan's practice at the expense of his principles. He lays down many critical judgments from which we dissent in various degrees, critical judgments from which we dissent in various degrees, and some with which we can heartily agree. But in all serious cases he goes far beyond telling us simply that he has such or such tastes, and proceeds to justify his opinions by arguments of more or less cogeney. As in the essay upon Dickens, they are generally implied in a lively portrait of the person under consideration, rather than worked out in the form of analytical discussion. They are almost always instructive, even where we differ from them; for Mr. Buchanan has the poetical faculty of sympathizing very keenly with many different kinds of merit. The essay upon Victor Hugo strikes us as the best in the volume; though there is also much that is very interesting in the chapters upon Danish literature, and upon the "poets in obscurity." We have, however, no space for doing more than simply acknowledge their merits, and adding that Mr. Buchanan's volume, though of unequal merit, is full of fresh and vigorous writing, such as can only be produced by a man fresh and vigorous writing, such as can only be produced by a man of keen and independent intellect. Though we may differ from him as to the proper functions of a critic, we may willingly admit that he so far fulfils his own theories as to give us a very lively impression of his own intellectual idiosyncracles; and this is in all a a pleasant sensation, if only as a contrast to the ordinary jogtrot of conventional criticism.

A PRINCESS OF THULE.

NOVEL which is both romantic and natural, which has much A NOVEL which is both romantic and natural, which has much feeling without any touch of mawkishness, which goes deep into character without any suggestion of painful analysis—this a rare gent to find among the debris of current literature, and this, or nearly this, Mr. Black has given us in the *Princess of Thule*. As might be inferred from the title, he has gone to places far off and little known to find a subject for his book; but the bright freshness of the author's descriptions brings his scenes in clear outline and heautiful colours before the reader, and makes him feel outline and beautiful colours before the reader, and makes him feel that, should his bodily vision ever encounter the landscapes which the author has presented to his mind's eye, he will greet them as old familiar friends. Perhaps there is no better piece of brief description in the whole book than its opening passage:—

On a small headland of the distant island of Lewis, an old man stood looking out on a desolate waste of rain-beaten sea. It was a wild and a wet day. From out of the louring south-west, tierce gusts of wind were driving my velumes and flying rugs of cloud, and sweeping onward at the same time theregathering waves that fell hissing and thundering on the shore. Far as the eye could reach, the sea and the air and the sky seemed to be one indis-

and Princess of Thele. By William Black, Author of "Stratige and turns of a Phaston," &c. 3 vols. Macmillan & Co. 1894.

nguishably mans of whirling and hurrying whysam-mailf ha ere were no more land, but only wind and walter, and the risk voices of their strife.

This old man is Mr. Mackensie, known as the King of Metre, who of the islands of the Lewis up in the Hebrides. He is mounting for the less of his only daughter Sheila, gone off to Lewisson the bride of an Englishman. He sees the last glumpse of her in the white haudherchief which she waves to him from the dark of the steamer through the mist and win and driver metre district the steamer through the mist and win and driver metre district the same white handkerchief which she waves to him from the dark of the steamer through the mist and rain, and drives sadly, silently away through Stornowsy back to Horva. At every turn he to remainded of his loss; it is the natural subject of talk for all the increase and keepers he comes in contact with. He asks the findermess from the neighbouring villages and his piper in to drink with him, with that pleasant free hospitality current only in the North between different classes. He hopes thus to drive away his inclandably, but in vain; one of the young fishermen being asked for a noing injudiciously selects the "Lament of Monaltrie," which was one of Sheila's particular songs. This is more than the King of Borva can bear, and he rushes from the room into the darkness of the night:—

But even here he was not allowed to forget the sorrow he had been vainly endeavouring to banish; for in the far distance the pipes still physical the melancholy wail of Lochaber. "Lochaber no more! Lochaber no more! that was the only solace brought him by the winds from the man; and there were tears running down the hard grey face as he said to himself, in a broken voice—

"Sheila, my good lass, why did you go away from Borva?"

It will be seen that Mr. Black plunges at once into the midst of his story, which in this instance is a mistake in art. Something, no doubt, is gained by starting at once with a vigorous exciting chapter, instead of with a plain introduction, either narrative or conversational, to the story; but more is lost by the eaction which follows when excitement and emotion are succeed. by the even flow of narrative and dialogue, which is inevitable at by the even how of narrative and dialogue, which is meeting with a climax and working back to it. In the hands of a less skilful guide the reader would become weary when he found that his journey to the end of the first volume brought him up exactly at the point whence he started. This danger the author steers clear at the point whence he started. This danger the author steers clear of by force of the excellence of his style and characters, and the interest of his story, which in its outline is of the simplest kind. In the first volume the young Englishman already spoken of, Frank Lavender by name, is travelling with Edward Ingram up to Borva to stay with the King of Borva and his daughter, old friends of Ingram's. Lavender is an impetaous, excitable young man, with a talent for believing so thoroughly in his own passing impressions as to make other people also believe in them. As the two make their way across the Minch in the steamer Clansman, Lavender chaffs his companion on his enthusiasm for Sheila Mackenzie, of whom he has heard as a kind of Highland princess, mystic and wonderful; whom he believes in his immost heart to be an ordinary girl enough. When he arrives and sees her his tone changes; has susceptible feelings are raised to their utmost pitch of enthusiasm. Before he has seen her for more than an hour or two, he informs his friend that she is the first girl he has ever seen whom he would like to marry. Ingram begins to ever seen whom he would like to marry. Ingram begins to remonstrate at this folly, which he has already heard about twenty other women; but while they talk the two young men are waiting for Sheila and her father, who have walked down to the village of Borvabost after dinner, leaving their companions a little above the houses. The young men's talk is interrupted by the return of the others, and Lavender is lucky enough to have Sheila for his companion on the walk home, the description of which may serve as a specimen of the author's picturesqueness and truth :-

as a specimen of the author's picture-squeness and truth:

And now the moon was still higher in the heavens, and the yellow lane of light that crossed the violet waters of Loch Roag quivered in a deepergold. The night air was scented with the Dutch clover growing down by the shore. They could hear the curiew whisting, and the plover calling, amid that monotonous plash of the waves that murmured all around the coast. When they returned to the house, the darker waters of the Atlantic, and the purple clouds of the west, were shut out from sight; and before them there was only the liquid plain of Loch Roag, with its pathway of yellow fire, and far away on the other side the shoulders and peaks of the southern mountains, that had grown grey, and clear, and sharp in the beautiful twilight. And this was Sheila's home.

Such romantic scenery as this, a young man of fascinating manners a young girl constantly in his society—what result should these things have but marriage? Ingram, who has a kind of fatherly love for Sheila, at first opposes the marriage to the best of his powers, afraid to see her future trusted to so easily influenced a being as Lavender: but flually, seeing that his friend is in carnest, he devotes himself to smoothing away difficulties and beinging

he devotes himself to smoothing away difficulties and bringing affairs to a happy conclusion.

The second volume is occupied with the Levenders' life in London. Frank falls into evil ways of idleness and gadding about after a certain Mrs. Lorraine, a young widow, while he leaves Sheila at home. When they are together a want of consideration on his side checks her confidence in him. He is disappointed in the effect produced by his Princess of Thule, and wearied with her ignorance of everyday conventionalities, and, in fine, he neglects her. Ingram attempts to interfere, and naturally enough gets anubbed by Lavender for his point. Thatly, Sheila's endurance is overcome by Lavender's refusal to interfere at table with her cousin Mairi, who used to wait on them at table with her cousin Mairi, who used to wait on them at Borva, and she leaves him attogether. The third volume is noticely repentance, his success as an artist and reconsideration with him.

March Committee Control of the Control

and a manique between Jagreen and Mrs. Legenine, the facinating

men that the author does not rely on either variety or moissont; his messes, which is undoubtedly great, is due study and competent knowledge of character, to a style of from lifemish, and to a power of graphic description t very soldom met with. It is probably the perfection inh not only excise off, but absolutely renders attracture throughout the book of the Highland dialect t writtens of fintion have not seldom failed to repreting a negaliarity of speech without becoming the and present writers of faction have not seldom failed to represent in writing a possiliarity of speech without becoming tire-acres. It is Mr. Elack's merit that, partly by force of moderation, partly by skilful management, he has succeeded where master-hands have failed. The principal character is naturally Sheila Mackensie, who gives the book its name; and hers is a very beautiful character; aimple, frank, fearless; holding one-half of the reins of the kingdom of Borva, able to take care of herself in an onen host at sea, or wandering among the works on shows. She the rains of the kingdom of Horva, able to take care or herself in an open hoat at sea or wandering among the rocks on shore. She sensibles an unusual gentleness with great strength of character, and it is partly by failing, in spite of Ingram's warnin,—, to compached this that Lavender brings misery upon her and himself. Through the first two volumes one can have nothing but admiration for her; but then, as often happens in three-volume novels, there is a falling off in the third, as well in the drawing of her character as in other points. It is not unnatural that when her husband as in other points. It is not unnatural that when her husband finishes a long course of neglect which, though thoughtless, amounts to brutality, by insulting her relations, Sheila should leave his house and for a time refuse to see him. On the other hand, it is not natural that her pride should so far overcome her softer quali-ties as to make her refuse all communication with him, although she know him to be penitent and wretched. Even if a man sine inst his wife as much as a man can sin, she can scarcely do more than pass him in the open street without a word or a look when she knows that one glance of recognition or forgiveness is to him as returning life. This, however, is what Sheila does when she knows that her husband, whom she still loves in spite of his faults, is about as miserable as a man can be. More than this, she takes no notice of what becomes of him when they part; she gives him no tidings of the birth of his child; and it is only by a happy chance that he finds her again at Borva, just when, beginning to think that her line of conduct is not strictly preseworthy, she is prepared for a reconciliation. That he should thus arrive exactly at the right moment seems, in spite of the author's skill in telling a circumstance more likely to occur in a novel than in real life. whose grand simplicity and quaint pride in what he supposes to be his wonderful powers of penetration go with other things to make up a character more attractive than one can often hope to meet. So in the case of the quick, impressionable Lavender, and his friend Ingram, whose steadiness and quiet (somewhat didactic) wisdom contrast well with the other's excitability. minor characters in the earlier part of the book are life-like and well sustained. Here, for instance, is an extract from an admirably humorous letter to Sheila from her father's head-keeper, whose acquaintance the reader makes at the beginning: -

John McNicol of Habost he will be verra bad three months or two months ago, and we was thinkin he will die, and him with a wife and five bairns too, and four sows and a cart, but the dector took a great dale of blood from him, and he is now verra well whatever, though wakely on the legs. It would hev been a bad thing if Mr. McNicol was dead, for he will be verra good at pentin a door, and he haz between fifteen pounds and ten pounds in the bank at Stornoway, and four cows too and a cart, and he is a ferra religious man, and has great skill o the psalm-tunes, and he toesna get trunk now more as twice or as three times in the two weeks.

Mrs. Levender, Frank's aunt, again with her heathen philosophy, her scales for weighing her dinner, and her cockatoo-like head, is a well-finished, life-like picture. Here are her views of death, at least of its prossic side:—

"Bah! I hope I am able to recognize the facts of life. If you were to die this afternoon, I should get a black silk trimmed with crape the moment I get on my feet again, and go to your funeral in the ordinary way. I hope you will pay me the same respect. Do you think I am afraid to speak of these shings?"

"Why should you speak of them?" said Shella, despairingly.

"Why should you speak of them?" said Sheila, despairingly.

"Because it does you good to contemplate the worst that can befall you; and if it does not happen, you may rejoice. And it will happen. I know that I shall be lying in this bed, with a half-a-dozen of you round about trying to cry, and wondering which will have the courage to turn and go out of the room first. Then there will be the funeral day, and Paterson will be careful about the blinds, and go about the house on her tip-toes, as if I were likely to hear! Then there will be a pretty service up in the cemetery, and a man who never saw me will speak of his dear sister departed; and then you'll ell go home and have your dinner."

That the latter rows of the book persinds one of the latter than the state of the book persinds.

parted; and then you'll all go home and have your dinner."

But the latter part of the book reminds one of the desinit in given maker formose superns. The style is as good as ever, and that is much in these days, but the marrative becomes disjointed and straggling. Some events are explained loosely, or not at all; others are thrust upon one without any estemble reason. We find Lavender painting hand in his self-imposed exile at Tarbert, so hard landsed that he suddenly drops his brush and faints. This leads one to expect a serious libers; Lavender will be at the point of death; liberila will hear of it, and will travelen despair sight and day amily the provider recovers from his fainting all, goes out selling the parter of the friend, is oversalism by acquail, wearing the provider recovers from his fainting all, goes out selling the provider recovers from his fainting all, goes out selling the provider recovers from his fainting all, goes out selling the provider recovers from his fainting all liberally recovers from his fainting all liberally recovers from his fainting and the liberally recovers from his fainting cause of his filess. The lands has the liberally recovers from his fainting cause of his filess.

nothing comes of his being wrecked, except a good description of a storm. This irresistibly secalls to mind the fact that A research of Thule was written in numbers. One cannot help thinking that the author changed his mind and the plot between two mouths, specially as, when Lavender turns up next mouth, so to quest, sale, well, and having made a great reputation as a painter in a surprisingly short time, the mercut passing notice is given to the socident which nearly killed him, and seems at one time to have been intended to do so. Another indication of a change of plot during the progress of the story occurs in the case of a young musician named Mosenberg, who is introduced in the second volume, and is apparently going to complicate matters by making love to Shells. But he, too, seems to give up the purpose for which he was presumably created, and takes no active part in the course of events. His character, though well drawn, is not of sufficient importance to warrant his presence merely as a portrait; and a sense of initiation is produced by the continual expectation, followed always by disappointment, that he will either make or mar matters by some conspicuous action. Such mistakes—or one should perhaps say such marks of neglect—as these just spoil the book, and prevent it from being artistically good throughout. But the Priscess of Thule contains much that is, besides much that might be, finitate; enough indeed to warrant the assertion that Mr. Black has it in his own hands to make his mark among writers who will be remembered.

HALL'S MODERN ENGLISH.

WE have long known the name of Mr. Fitzedward Hall as one of the editors of the Early English Text Society; but we do not remember to have before come across him as the author of any independent work. But he takes care to let us know, in his preface and in his fly-leaves at both ends, that he has published a book at New York called Recent Exemplifications of False Philology. We gather that it contains a fierce attack on a certain Mr. Richard Grant White, who is quite unknown to us. And, from the extracts which Mr. Hall has given at the end of his present volume, we gather that the fierceness of his attack on Mr. White has awakened the wrath of a part at least of the American press. According to the Galden Age, Mr. Hall has dealt with Mr. White "as a braggart, a bully, and a blackguard," and his book is "an exhibition of arrogance, of pompous pretence, and of literary braility." These are strong words, but they are not only what somebody has said of Mr. Hall, but what Mr. Hall wishes us to know that somebody has said of him. Mr. Hall, like the āčuse λόγος in the Clouds, takes the epithets cast on him by his enemies as a crown unto him:—

Δικ. εἶ κάναἰσχυντος. ΄Αδικ. ρύδα μ' εἴρηκας. Δικ. καὶ βωμολόχος. ΄Αδικ. κρίνεσι στεφανοῖς. Δικ. καὶ πιτραλοίας. ΄Αδικ. χρύσω πάττων μ' οὐ γιγνώσκεις.

Now we shall not copy the exact language of the Golden Age, or of the other American papers which have spoken their minds freely of Mr. Hall; but we are not surprised that people who are used to express themselves in a more vigorous way than is usual on this side of the Ocean should speak of Mr. Hall as the Golden Age has spoken of him. We have not for some time come across a greater literary offender than Mr. Hall. And he is the more wholly without excuse because the work which he has done and the offices which he has filled would make any one treat him in the manner usual among scholars and gentlemen, and would also make any one expect the same kind of treatment back again from him. We should be the last to quarrel with fair criticism, however severe, but it is a good rule which is given in another play of Aristophanes:—

ού δε μή πρός δργήν, Αίσχύλ', άλλά πραύνως έλεγχ', ελίγχου. Ασιδορεΐσθαι δ' ού πρέπει ανέρας ποιητάς ώσπερ άρτοπώλιζας.

Now this is just what Mr. Hall does. He does not criticize; hereviles. He seems to be in a passion from one end of his book to the other. And, what is worse still, his reviling does not confine itself to the matter in hand. He gives a good deal of time to pointing our real or supposed faults of style in some of our most popular writers, in some of our really best writers. Now, if this is not a very gracious task, it is certainly a very useful one. No one's reputation, no one's real excellence, ought to be any shield against fair criticism. It is plain that, in pointing out faults of style, inaccuracies of expression or any other faults, the higher the general merit of the writer in whom the blumish is found, the more instructive the blemish is as an example. But Mr. Hall is not satisfied with pointing out blemishes of style, unless he personally abuses the writers in whom he finds them. We are not quite sure whether Mr. Hall ever really speaks well of saybody; he certainly speaks ill of a great many people. And he ast only speaks ill of them, but he thoroughly enjoys speaking ill of them. He catches at every chance of abusing anybody whom he happens to quote, even about things which have nothing what he happens to quote, even about things which have nothing whater to do with the subject of "Modern English." Style and matter do indeed often run very closely into one another, and it is aften hard to criticize inaccuracy of expression with the same time criticizing inaccuracy of expression.

* Modern English. By Pitzedward Hall, M.A., Hon. D.C.L. Orients.: Williams & Nanjante. 1973.

does not do, because it may be perfectly fair to point out some fault in a writer's style, to go on to call him names at great length on account of the matter of his writings, on account of his views on matters of taste, on account of his politics or his theology, on account sometimes of points which almost come under the head of personal conduct. This is what Mr. Hall does in every page. Mr. Richard Grant White—of whom, let it be remembered, we never before heard, and we have not the least notion of what he may have said of Mr. Hall—comes in for his share. We note by the way that Mr. White is charged with "philologastry," a crime of whose nature we have not the faintest notion, but we will copy only the last sentence which is hurled at the offender:—

Of the style of retort which Mr. White accounts becoming, I have said enough. And the same style, in all its essentials, is that of his half-educated and ill-bred satellites. My facts, arguments, and conclusions, both he and they, as unmistakeably as if they categorically avowed it, recognize to be absolutely impregnable; and, in unwise alternative to silence, they sluice me with haphazard billingsgate. It is idle for them to hope, that their affecting to make light account of me will not be interpreted by others, and rightly, as a clutching at the last straw of despair. Genuine contempt is anything rather than clamorous; but the vulgar, when alarmed and irritated, invariably seek relief in a free secretion of scurrility. It is not thus that what I have called fulse philology can be made out to be true.

"A free secretion of scurrility" may be "Modern English"; if it is English at all, it certainly is so modern that our own notions of its meaning are not a little vague; but, so far as it gives us any meaning, it suggests that Mr. Hall, "himself the great sublime he draws," is anxious to appear, not only as the warning lecturer, but also as the "frightful example." We suspect that the way in which Mr. Hall speaks of people in general must be something like what, if anything, is meant by a "secretion of scurrility."

Mr. Hall has thus by the way in which he thanks a common the secretion of scurrility."

Mr. Hall has thus by the way in which he treats every one whom he comes across; done his best to turn away the thoughts of his readers and reviewers from the matter of his book to its manner; and by the form into which he has thrown his book he has put a further hindrance in the way of those who may wish to find out what the book is about. We once saw a book loaded with foot-notes, described as a "podagra of Literature," and we certainly never saw such a podagra in this sonse as Mr. Hall's Modern English. In most of his pages there is more note than text; in some there is hardly any text at all; and the notes are not notes which can be skipped if the book is to be read at all; for they contain a great part of Mr. Hall's illustrative matter, though we certainly do not always see why some things are put in the text and other things in the notes. For both are, as from their subject they could hardly fail to be, full of examples, extracts, references, and words in italics. But all this goes a very long way to make it somewhat hard to see what Mr. Hall is driving at. As far as we can make out, his main object is to upset certain people whom he calls Conservatives—Conservatives, that is, we conceive, in matters of language—and to assert the right, which, as far as we know, nobody ever denied, of all languages, and of English among them, to make changes and to bring in new words whenever there is good reason for so doing. If we rightly understand Mr. Hall, one great object which he has in hand is to defend a good many newfangled words—"neoterisms," as they seem to be called in the grand style—to show that some of them arose to supply a real want, and that others are not newfangled at all, but were used, sometimes generations and conturies, before the time when they would at first sight seem to have been brought in. One is certainly a little surprised to find the word "cducational" used in 1652. But Mr. Hall does not fail to see that this does not prove very much. As just at this point he does not happen to be in a rag

Many a word is circumstanced like educational, regarding which it would be vain to inquire whether Burke, or wheever first brought it forward in the last century, was aware that it had been used before. It is not unsupposable that a word may be proposed independently by a dozen different writers, and, after all, from not being a desideratum, may fail of being popularly accepted. To pass to ascertained facts, there actually are words which were ventured many generations ago, but, for some reason or other, were not taken up, became altogether or generally forgotten, and yet are now familiar to everybody. In such cases we have not resuscitations, but virtually new inventions. Among the words specified below, two or three fall strictly under this description.

This is in a note, but a little way on in the text Mr. Hall sees a red rag and runs at it. He has just quoted Archbishop Trench as disliking—or at least as once having disliked—the word "educational." So there comes an outburst:—

Well, and what is the matter with educational? Utility, perspiculty, and conciseness are, we all know, to persons of a certain sort—those who would keep the world in leading-strings—nothing, if to be purchased at the cost of innovation. The people who would object to educational are, however, of the same type, and, almost invariably, of the same class, with those who, if they were but honest enough and manly enough to speak out their convictions, would object to everything that is connected with the word in our associations. For, inconsistent as the majority of men are, we every day observe, more and more, that, as those who seriously favour progress at all favour it in all things, so those who openly resist it in one direction would, in propitious circumstances, resist it in all directions.

As the risk of being set down among those who resist progress—though, to be sure, after what Mr. Hall has said of us elsewhere, it does not much matter what we are set down as—we venture to ask something about the word "prochronisms," which we do not remamber to have seen before, though, as it is so hard to prove a negative, it might not be safe to askirm that it may not be found in some writer of the year 1652. Mr. Caxton, we all know, looked on having Picistratus as an anachronism; and the Mayor of Aumale,

some years back, announced in a public proclamation that addicity was an anachronism; but would either of them have talked about a "prochronism"? Mr. Hell may ask why, if we swallow "anachronism," we kick at "prochronism." We can only say that, if we have, by no fault of our own, got an ampleasant great quartered on us whom we cannot get rid of, that is no meason why we should of our own free will take in another equally ugly. But about "prochronism," Mr. Hall uses the word quite calmly in the text, without seeming to look for any stir at its appearance; as for its meaning, all that we can make out is that it is something without which Lord Macaulay puts the word "puff" into the mouth of a bookseller knocked down by Dr. Johnson. This is not quite so clear as we should like the explanation of a hard word to be.

Again, Mr. Hall says that "Lord Macaulay finically objects to saturation, as 'not pure English.'" Mr. Hall, ima pathetic note, cries out, "We should be wretchedly straitened, if one might not introduce such a word as saturation." We have lived all our lives in those straits without feeling the wretchedness, but then perhaps, for aught we know, "saturation" may have something to do with "prochronism," or even with "educational," and we know that if we object to "educational," we shall be set down as "objecting to everything connected with the word in our associations."

We should perhaps not have taken the trouble to notice Mr. Hall at all, had not the positions which he has held and the work which he has done for the Early English Text Society given him a certain claim to notice. That is to say, to write an abusive book without any intelligible purpose is less pardonable in him than it would be in a common penny-a-liner. The book has its use in one way, as any collection of obsolete, uncommon, or novel words and meanings of words has its use. Nor do we deny that Mr. Hall shows a good deal of English reading. But, if he has any regard for his own credit, the best thing he can do is to call in his book. At any rate let him strike out the Buckle-like dedication "To My Mother." Namby-pamby and billingsgate do not go comfortably arm-in-

THE TODAS.*

THIS book is a holiday task, the result of renewed health and leisure void of occupation. Juded with work, deafened by official importunities, and warned by doctors, an officer ongaged in active administration takes a trip to the Hill-station of a Presidency not his own. At first nothing can exceed the delights of emancipation from the slavery of the desk; and all work is forsworn. After a little time a well-trained mind seeks relief from the monotony of idleness in any new occupation; and some contribution to philology, natural history, or Asiatic peculiarities is the upshot. The writer of this addition to our knowledge of a the upshot. The writer of this addition to our knowledge of a strange tribe is, we take it, a gentleman connected with the department of Public Works in Oudh. And there can be no doubt that he has contrived to amass and arrange a great quantity of interesting details, which will enlist the sympathies, not only the Amass Indians but of ethnologists who take pleasure in studyof Anglo-Indians, but of ethnologists who take pleasure in studying man in his primitive aspect. The book has sundry faults. Colonel Marshall has filled at least two chapters with the peou-Colonel Marshall has filled at least two chapters with the peculiar jargon of phrenology, at no time very intelligible, and here mystified by the use of sesquipedalian words. Then he has a very tiresome habit of backing up his own statements by reference to well-known works en masse. Combs and Fowler, Mr. Baring-Gould, and Mr. Tylor, are hurled at the reader's head, like tomes in the Lutrin or in Swift's "Battle of the Books." Not a chapter or even a page is referred to when the author appeals for support to Malthus, Adam Smith, and Dugald Stewart; Cæsar's "Gallic Wars" are mentioned, generally to prove a stated fact, and Cicero's "Letter to Atticus" is quoted as if there were some one epistle as well known as Trajan's celeas if there were some one epistle as well known as Trajan's celebrated reply to Pliny about the Christians. Further, Colonel Marshall is under the impression that Madge Wildfire is a character in Guy Mannering. We wonder if he would transplant Dandie Dinnont and Meg Merrilies to the Heart of Middothian. But our interest in the researches and discoveries of the author is not-quenched by these blunders. He appears to have entered on his task with great earnestness and considerable tact. He visited the heads of the tribes at all times and places; he had conferences with them through his interpreters; in the language of Grattan, he sat by the cradle and he followed the heares; and on a dark night, with a venturous companion, he actually penetrated into the immost recesses of a mysterious temple where he found nothing except a convincing proof that his Toda informants had not practised on his credulty. Most fortunately, too, Oolonel Marshall fell into the hands of a missionary, the Rev. F. Mets, perhaps the only European who can speak the Toda. Panguage, and of a sound Dravidian scholar, the Rev. G. U. Pope. The records of the Madras Government gave up to him some of their buried treasures on the subject of Toda infanticide, and the volume is illustrated by some well-executed photographs and sketches descriptive of the platean of the Neighbories, the hurs and dairies of the Todas, their utensils, considerate, and their vives and children. The appendix contains a grammuse and vocabulary of the dialect, complist by the two reversed gentlement to whom the author is as the first of a Primitive Trice. Grattan, he sat by the crudle and he followed the hearse; and on

* A Phranologist enterings the Todat; or the Study of a Primitive Tribe in Santh India. By William E. Marshall, Lipsannian Orland of Har Majorty's Bengal Staff Copps. London: Linguistic & Co. 1879.

them he could have found no better philosophers and guides, and, conferred from more than two hundred and fifty pages, the interty of these authorithems is somewhat as follows.

Whether, indeed, they are a portion of the indigenous and boriginal psychition which had possession of India long before he Aryan immigration, or whether they only preceded by some here hundred years the advent of those who spoke the copious and exists limited years the advent of those who spoke the copious and exists limited years the advent of those who spoke the copious and exists limited years five class of Todas have occupied the tableland of he Neighberries, while a small postlen have settled on a lower latest in the Wynaed, a tract taken up by Englishmen for offee plasting. The "Blue Mountains" of Madras differ widely cost the Himshayss. They present no grand amphitheatre of coffee planting. The "Blue Mountaine" of Madras differ widely from the Himshyss. They present no grand amphitheatre of sternal anows, and no jagged outline of inaccessible peaks, on which the rising and setting sun sheds reseate hues, to stimulate the fancy and to charm the eye. Neither have they the lofty cedars and the precipitous ravines of the northern barrier of India. But they have a picture-que beauty of their own. Green swelling hills covered with short grass, here spread out into undulating prairies, or these in close valleys shaded by dense forests and watered by clear streams. The elevation is from five thousand to even seven thousand feet; the air is pure; the tract is at one time swept by by clear streams. The elevation is from five thousand to even seven thousand feet; the air is pure; the tract is at one time swept by the showery blasts of the monsoon, and at another is bathed in sunshine; while the soil is naturally rich and fertile, though hitherto mainly subservient to the wants of a pastoral tribe. Space is so extensive, and nature has so fully anticipated the requirements of a Toda in fodder, water, and fuel, that he has led a life very different from hill tribes elsewhere, the members of which are compelled either to rear poultry, or to hew wood and carry burdens, or to raise rice and cereals by occupying small terraces, and by burning down the forest or scretching the side of a hill. To the Toda the buffalo is indeed his ox, his ass, and his everything. Featoral in one sense, he is not a nomad; for he sticks to his mand or village with its pasture-ground, and migrates occasionally to a second, or even a third, station reserved to him as his own. When the monsoon is too furious or pasture too scanty, he shifts from one mand to another. There may be one hundred of these on the man to another. There may be one hundred of these on the plateau, of which not more than forty are occupied at a time. One room is sufficient for a family. The houses, superior to those of agriculturists on the plains, are built of stout planks, split canes, and bamboos; the roofs of grass, and the sides daubed with clay and cowdung. Attached to each mand is a pen for the buffaloes, and a dairy for the milk. The thoughts and aspirations of the Toda never get beyond the herd and its products. He salutes the right super super the salutes. of the Toda never get beyond the herd and its products. He salutes the rising sun when the animals go out to pasture, and mutters a short prayer at their return in the evening. There are however two tribes, apparently of the Hindu faith, which if not exactly Helots, supply to the Toda what he is too indolent to get himself. These are called Badagas and Kotas. Permission to till the ground is given to them by the Toda, on receipt of a tribute, which does not seem to be collected without wrangling. With this, when paid, the Toda procures the cereals, salt, sugar, and tobacco, or else he sells the surplus produce of the dairy for the same objects. He eats no meat except the flesh of a calf on rare same objects. He eats no meat except the flesh of a calf on rare occasions; and, looking to his fine climate, his simple requirements, and his abundant supply of milk and butter, it is not easy to conceive a set of human beings who are less troubled with anxieties about drought and heat, who breathe an air so conducive to health and enjoyment, and who take life on such cheap and

The dialect is Dravidian; believed, by those competent to form an opinion, to be old Canarese with an admixture of Tamil words. There is no trace of Malayalim and not much sign of Telugu. There is no trace of Malayalim and not much sign of Telugu. But, as might have been expected, a rude people drew on Sanskrit to express the ides of a Deity, of sin, and of ghosts' and demons. Orthodox Hindus all over India would read these words intelligently in the Toda vocabulary. One expression, occurring five times in the simple formula of prayer which the author gives and translates, is undoubtedly pure Sanskrit. But it is equally evident that the frame and groundwork of the dialect is not Indo-Germanic, and it is also possible that Dr. Caldwell may be correct in affirming that the Dravidian languages have a distinct affinity to those snoken by the Finns and Lapus, and by the Ucrian tribes Germanic, and it is also possible that Dr. Unidwell may be correct in affirming that the Dravidian languages have a distinct affinity to those spoken by the Finns and Lapps, and by the Ugrian tribes of Siberia. The limited wants and ideas of such a people are fully provided for by a slender stock of words; and when a Toda has got distinct sounds for all the degrees of an intricate relationship, for the divisions of time, for the sun, moon, wind, lightning, and rain, for the most familiar kinds of animals, tame and wild, for the parts of the human frame, for the utensils of the dairy, the functions of the priesthood, and a few obvious wants, he is certainly not conscious of any deficient power, nor does he struggle in vain to designate objects of which he has never dreamed. A wish to amend or after his condition probably never enters his head. His religion partakes neither of the idolstry nor of the Pantheism of Hindus. But there is the same veneration for the cow; a wombip of sun and moon, some idea of spirits and witchersit, none of a hell, and no clear throughtion of a personal God, invested with attributes of messey, hower, and justice. The Toda, however, does acknowledge a demitted by the others to have "no occasion for a God," the use of a Sapreme Ruler being to protect property and life. "No meaning to the class, owning few herds, was admitted by the others to have "no occasion for a God," the use of a Sapreme Ruler being to protect property and life. "No meaning to the class, owning few herds, was admitted by the others to have "no occasion for a God," the use of a Sapreme Ruler being to protect property and life. "No meaning to go God." Milk is a divine fluid, and particular sown of a Supreme Ruler being to protect property and life. "No property, no God." Milk is a divine fluid, and particular cows assessmented to wear certain bells, which are of great antiquity, which like the Roman ancile, ere believed to have agree straight

from heaven, and which are handed down as objects of intense disvotion. The Bell-cows, as they are termed, remain attached to be holy village, designated Trieri. The word is said to be a concuption of the Sanskrit savi, or worshipful. To us, both in sound and sense, it seems to have a family likeness to tirthe, the well-known word for pilgrimage, or holy place, in use all over India. Yet, in spite of imputed sanctity, young bulks are given away to the Kotas and Badgas, and even become the subjects of liens and mortgages. At every sacred place there resides an ascetic milkman, termed Pakil, who has a subordinate hardsman called Kavikil. The Pakil never marries, wears long hair, utterly disregards cleanliness, and is worshipped by his tribe as a child of God. If tired of dirt and callinery, he is allowed to find a substitute, doff his mantle, and become a man again. To judge from the photographs, there is nothing in the physique of the Toda not equally characteristic of low-caste Hindus in the plains. Some years ago we heard a wild theory advanced that the Todas were a remnant of the lost tribes of Israel. One glance at the pictures dispols any such hallucination. The Toda might very well do duty for Kubir, who, in Central or Upper India, points out the lair of the wild hog to the magistrate or the planter, or for Gopal, who, on the edge of a jungle noted for leopards and tigers, fearlessly pastures his cows and buffaloes during the long summer heats of April and May.

The Toda, though he worships no idols, and does not believe in

May.

The Toda, though he worships no idols, and does not believe in a state of retribution, has a distinct idea of happiness in a future world, and seems to have no doubts about getting there.

He even

Admitted to that equal sky, His faithful come shall bear him company

"Other Todas are there (in amnor), and, as they can't live without milk, buffalces must get there also." They have two highly inconsistent customs of infanticide and polyandry, on which the author waxes eloquent and strangely philosophical. The Toda pleads poverty for the former practice, as the Rujpoots in the North-Western Provinces have done to Mr. Thomason, Mr. John Colvin, and their humane successors. We gather that our author believes the custom to survive, in spite of preaching and persuasion. But, oddly enough, he looks on it, not as what it is, a revolting crime, the offspring of extravasance and pride, but as a political and social discovery of inestimable value in certain stages of society. He speaks of it as "a national remedy for tiding over family difficulties"; he actually calls it "a work of love, performed without needless violence"; he regards it as a solution "of the difficult physical problem of finding the condition of equilibrium" of certain forces; and he but mildly censures it as "a retrograde step" which "ignorant tribes of weak and amiable dispositions took to in order to escape the natural consequences of their sitions took to in order to escape the natural consequences of their own helpleseness." At the worst, we are told, the Toda has only confined the expansive powers of his race, and interrupted national development. It is almost a pity that this philosophical Colonel, instead of being enrolled on the Bengal Staff Corps, had not been a member of the English Bar, in which case he might have persuaded a perverse and unenlightened jury that the late Mrs. Margaret Waters had usefully devoted her talents to society, and had wisely rid it of weakly and unprofitable members without "needless violence." The result of this practice, Colonel Marshall thinks, is that Toda mothers have got a curious twist in their constitutions, and produce even now more sons than daughters—"A male-producing variety of man is formed." We give the author credit for zeal and endeavour to obtain correct statistics, but we must hold, either that the real proportion of females to males was not disclosed to him, or that some error has crept into the tables, or, what is even more likely, that female infanticide is still pra tised, in spite of all the efforts of the Commissioner and the missionaries to discountenance the rite.

Polyandry, a custom confined mainly to some hill-tribes in Northern India, besides the others mentioned, leads the author to similar amazing conclusions. We need hardly dwell on the abhorrence with which it is viewed by Hindoos, who err in precisely the opposite direction. Very curious domestic complications arise from polyandry. The children of the promisenous union are held to be brothers and sisters, and each male child is the children of the promisenous which the the content of the promisenous are held to be brothers and sisters, and each male child is union are held to be brothers and sisters, and each male child is an heir to the property of all his possible fathers; and there are other difficulties of which we cannot write. Now and then a sounder instinct prevails, and when young women abound, and young men can afford a necklace, a new mantle, and possibly a brass cup or two, a distinct wife is allotted to each bridegroom. But polyandry is still, with the author, an instance "of the grave, practical, and undeviating character of the people." They are "so like animals in their peculiar notions"—a remark which strikes us allotted to people another. In another like animals in their peculiar notions"—a remark which strikes us as slightly inconsistent with the previous quotation. In another chapter the author holds that the introduction of polyandry is one of the first steps towards organization. Yet, in spite of these aberrations, he has hit on one reason for the origin of the custom. The Toda, unwilling to dig, content to live on buffaloes, and without mercantile or speculative bias, soon discovered marriage to be a costly affair. In order to cut down expenses, he reduced marriageable females by simply suffocating them during infancy. When this plan had been carried out for some generations, and young women became scarce, the deficiency was made up, in a coarse and clumsy fashion, by dividing one women amongst four or five men. We can discorn in dividing one women amongst four or five men. We can discern in this no proof of organization or of high inventive especity. It

seems to us nothing but the abortsightedness of the savage and the deliberate cruelty of the Asiatic. Then we have a Buddhist legend quoted from the *Early History of India* by Mr. J. Talboys Wheeler, relating to four brothers, who took to life in the jungles, and each of whom married one of four sisters not born of the same mother. Colonel Marshall might have referred to a various enjaced of the Muhābhārata, more in voirt, on the subject the same mother. Colonel Marshall might have referred to a curious episode of the Mahabharata, more in point on the subject of polyandry. When the five sons of Pandu returned home from of polyandry. When the five sons of Pandu returned home from the Swayamvara, or choice of a husband, bringing to their mother the daughter of King Drupada, they said, as they entered the house, "Mother, we have brought you blikksha" (alms). Without looking, she replied, "Share it amongst you," and was horrified on finding that her order was to be literally obeyed. When the father of the bride naturally objected to this way of disposing of his daughter, the sage Vyāsa was called in, and he made out the five Pandavas to be five demigods, and their bride to represent Lakshmi, or Fortune. Yudishtira, the eldest of the five, took refuge in a verse which seems to point to polyandry as an ancient custom, and which quite justified the late H. H. Wilson in holding that it may have descended from the hills to the plains. But ing that it may have descended from the hills to the plains. But it is quite certain that, in the great Hindu epic, all parties were dismayed at the literal fulfilment of the maternal behest, and that

dismayed at the literal fulfilment of the maternal behest, and that the practice, as repugnant to delicacy and decency, was never adopted by any tribe or caste of note in Hindu annals, with the exception of the Nairs in Malabar.

We have no space to follow the author further. His description of the Boath or conical temple; of the ceremony called Adabuddiken, where the inferior or junior places on his or her head the feet of the person saluted, with its artificial distinctions; of the green funeral, performed two or three days after death; and of the dry funeral, a species of festivity which takes place some two or three months later, with songs, dances, pipes, and the slaughter of cattle, will well repay perusal. It is possible that future inquirers about this tribe may still further enrich ethnology, may amend the statistics, may dissent from some of the conclusions, and may increase the slender Toda vocabulary. But whoever seeks refreshment in what the Laureate has termed "the whoever seeks refreshment in what the Laureate has termed "the half-English Neilgherry air," will not fail to hear a good deal of discussion on primitive races and Dravidian dialocts, and, on many points, will not do better than take Colonel Marshall for his

CHESNEY'S MILITARY BIOGRAPHIES.*

THE reader, of whatever profession, who can appreciate an uncommonly clear, refined, and forcible style will find his taste amply gratified in the perusal of these essays. The subjects, too, are of a striking kind, and the biographical character of the volume imparts unity to scenes and events which occupy considerable space in the history of nations. But their chief value is for the military student. As might have been expected from one whose knowledge of military history, the fruit of much reading in many languages, ripened by patient thought and a singularly impartial judgment, is so wide and deep as Colonel Chesney's, he has imparted fresh interest to well-known military problems by the points of view in which he has set them; and whether illustrating an epoch from the personal experience of a minor actor in the scenes depicted, such as De Fezenssc and Brandt, or presenting a leader in the light of his own achievements, as in the essays on Lee, and Grant, and "Chinese Gordon," he fails not to give us new and faithful impressions—in the one case of the characteristics of the times, in the other of the distinctive qualities of the generals.

the times, in the other of the distinctive qualities of the generals.

The first essay is a review of the "Military Recollections" of the Duc de Fezensac, who, sprung from the ancient nobility of France, began his career as a private soldier in 1804, and in 1813 had won in many campaigns the grade of brigadier-general. These had won in many campaigns the grade of brigadier-general. These recollections therefore are a picture of war from the inside; they record details rather than results; they deal with camp life and bivounces, with the duties, the hardships, the grievances, and the aspirations of soldiers and officers. This is so done as to reader the book an important item in the mass of reactionary literature which a long course of indiscriminato eulogy on Napoleon at last provoked. Grave historians have disputed his Napoleon at last provoked. Crave historians have disputed his greatness as a statesman and his infallibility as a general, and these memoirs cast doubts on the spirit and soldiership of the army to which have been always attributed such enthusiasm and devotion as have invested the records of its deeds with the air of an epic or a romance. This corrective was undoubtedly needed; and yet, though there is no reason apparent why De Fozensac's testimony should be otherwise then houses we do not account it quite so implicitly as does the than honest, we do not accept it quite so implicitly as does the essayist. The young soldier's career began in the camp of Boulogne, which has long been regarded as the school in which the Grand Army was prepared for its astonishing victories, but which he describes as a scene of monotonous sloth, varied only by which he describes as a scene of monotonous sloth, varied only by pedantic drill. It was better, he says, to get drunk when one had money, to sleep when one had none. And this state of things existed in the part of the camp commanded by Marshal Ney. Now we know that the army of Austerlitz differed in many important particulars from the armies which Bonaparte had commanded as General and First Consul of the Republic. It was different in organization, in tactics, and in the functions of the neincipal generals. The battle of Austerlitz is perhaps that in

ays in Military Biography, By Calonal C. C. Channey, London:

which, of all battles ever fought by the Fren which, or all pattles ever longit by the Francis, their theirs to most advantage. The various corps played, with singular the parts assigned to them in the sagrations plane of Ra. They executed diverse manceuves adapted to the particular than the sagration of the particular than the sagration of the particular than the sagration of the sagration. the parts assigned to them in the management of the particular parts of the battle-field where they respectively fought. Their leaders exercised unwanted independence in management, and accretion it like masters of their craft. The whole action on the side of the French is a singular example of unity and skill. If, therefore, the army did not learn so to acquit itself, under such new existing in the camp of Boulogne, established ostensibly for that kind of instruction, it must have learnt it by a miracle. There is thus good reason to doubt De Fezensac's accuracy on this point, but it is one well worth inquiry, and the means of coming to a true conclusion must surely still exist. Another point on which we more confidently accept his testimony is the policy of maintaining an invading army by forced requisitions. Thiere, in his taining an invading army by forced requisitions. Thiere, in his long and uncompromising eulogy on the military gamius of Napoleon, tells us that the French can do this "without their discipline suffering to any extent from the practice." De Ferensac, on the other hand, describes the march to the Dannbe in 1805 as on the other hand, describes the march to the Dannbe in 1805 as marked throughout by pillage, which still did not keep the troops from famishing; and he ascribes the disorders of the Eylan campaign, and the disasters of the retreat from Moscow, mainly to this mode of supply. Effective for an immediate purpose, it may become ruinous in the long run; and it is for the interest of armies, as well as of mankind, to expose the evils of a system which trackers the long run; and which trackers the trackers are the system. which we have lately seen put in practice, and which tends more than any other circumstance of war to perpetuate and envenom the animosities of nations. Another matter on which De than any other circumstance of war to perpetuate and envenome the animosities of nations. Another matter on which De Fezensac speaks with afthority is the performance of the duties of the Staff in the French army in the conveyance of important orders. Nobody, he says, over inquired if an officer thus employed had a serviceable horse, or knew the country, or had a map. Everything was taken for granted, and delays which might have been fatal occurred at momentous junctures. Thus he confirms Jomini in the assertion that the late arrival of Ney, and the absence of Bernadotte, at Eylan, were owing to the want of a good system of transmitting orders; an owing to the want of a good system of transmitting orders; an assertion which the want of communication with Gronchy at Waterloo, and the mendacious attempts to shift the blame made

at St. Holena, render especially credible.

Decidedly the most important essay in Colonel Chesney's book is that on the officer known in our Army List as Lieut. Colonel Charles G. Gordon, C.B., R.E., and to the world as "Chinese Gordon;" because it gives us such a history of his extraordinary achievements as, short as it is, was much needed. It is true that a book has been written on the subject, which indeed forms the corresion of Colonel Charles, assay but he completes that it the occasion of Colonel Chesney's essay, but he complains that it is so overladen with irrelevant details as to confuse rather than enlighten the reader. Even now the knowledge is by no means enlighten the reader. Even now the knowledge is by no means sufficiently general among us of one of the most extraordinary campaigns in our annals, and the striking successes which crowded it can be given only in outline in the space of a single essay. Never has any portion of mankind been rescued from a tyranny more herrible than that which crushed the inhabitants of the districts held by the Taipings; never had any association of miscreants less claim to the sympathy which nevertheless was afforded to them by some fanatics among ourselves. Their ranks constantly recruited by the multitudes to whom laws are a burden and rapine a delight, these rebels, headed by an inhuman villain who styled recruited by the multitudes to whom laws are a burden and rapine a delight, these rebels, headed by an inhuman villain who styled himself the Heavenly King, held some of the richest towns in China, devastated and depopulated the surrounding territory, kept at bay the Imperial armies, and threatened the existence of the Empire. Such was the state of affairs when the captain of Engineers appeared on the scene. Taking the command of a few thousand Chinamen, who were officered by wandering Englishmen and Americans, and aided by a flotilla, he at once struck the first of a succession of blows that, in sixteen months, during which he destroyed numbers of the enemy equal to fifteen times his own force, reduced the Taipings to such straits that, when he was withdrawn from his command in accordance with the policy of the English Government, the Imperial leader had no further difficulty in consummating their defeat and obliging the Heavenly King English Government, the Imperial leader had no further difficulty in consummating their defeat and obliging the Heavenly King to seek by suicide a destination which can scarcely have been that whence he took his title. It is surely not too much to call these achievements wonderful, and it is the more necessary that they should be recorded, since nobody will ever learn their magnitude from the chief actor in them, in whose composition modesty has, if it can have, an undue share. Declining the magniticent rewards offered by the control Chief. composition modesty has, it is can have, as unone anare. Deciming the magnificent rewards offered by the grateful Chinese Government, Gordon returned to his regimental duties, and has just accepted the leadership of the Khedive's enterprise in the interior of Africa left vacant by Sir Samuel Baker. Such a man, in such a post, can hardly fail of new achievements which will demand to be recorded, in which case he can have no better chronicler than the brother officer who has written of him so generally and so justly.

than the brother officer who has written of him so generously and so justly.

We have already said that impartiality is a marked quality of our essayist; and he gives ample proof of this by his transmit of the great antagonists Lee and Grant, the Hector and Ashilles of the American Iliad. Without a word to reveal that he was pujudiced in favour of the devotion of the North to the Iliaion on the one side, or of the desire of the South for independence on the other, he paints the man, and describes the parts that here in the conflict. He does full justice to the intuitive standard of the deplayed by Grant, latery a quantum matter, and here. Indeed, in the conflict.

by to the command of great armies, on the Tennesses, st. labors, and at Chattaneous. He does not spare his errors (not compand for the first time) when, transferred to the Putumac, he g, and at Obstanoon. and for the first time) wh move appeared for the first times when, transferred to the Potomac, he ended oniced to practice against Lee the continuous direct pressure of numbers in which momentaring was set saide for sheer fighting, and which, maintained by his own indomitable resolution, had succeeded so well elsewhere. The unpardonable folly of the attack at Cold Harbour is justly condemned; but, in requital, the courtesy and magnenizaty of Grant in his final dealings with his vanquished opponent receive a just eulogium. And if Lee's successes are described in terms more glowing, and his darker fortunes in tones of deeper fielding, it is not because of the cause, but of the man. The Virginian's character was of that noble kind which retains it full measure of dignity in the shadow of adversity. Though "nothing ure of dignity in the shadow of adversity. Though "nothing succeeds like success," yet in the last meeting of the hostile generals, our admiration and respect are given chiefly to him who surrenders his sword; and, viewing them as they appeared in later years, when their fortunes diverged so widely, the President of the great Republic looks small and commonplace compared with the broken-hearted schoolnaster of Lexington. He can be no wellwisher of America who does not hope that the day may come when she will honour Lee as the greatest of her sons.

LADY BELL.

THIS is one of the books which, as coming from a writer of some credit, constantly send the reader in search of a reason for their existence other than the universally assumed one that the author has, or believes that he has, comething to say. The youthful aspirant, whatever his belief in himself may be worth, starts with this degree of self-reliance. It is his motive; he depicts scenes, passion, adventure because they have possession of his own mind, and he craves for sympathy, credit, and fame in virtue of them; he does not look about him for a subject; what he wants is some means of giving air and light to what haunts his fancy, heart, or brain. The difference between the new and the practised novelist often lies in the distinction that the first believes he has a story to tell, the other that he can find one at will. And no doubt a well-stored mind is in a vertain degree independent of the imaginative flash which opens out a romantic scheme of action and suffering upon the inventive faculty. Many of our best novels have vastly little plot in them. Experience, observation, humour, so attract and charm the reader's interest and attention that, if the hero and heroine only marry in the end, he does not know till the critic has told him that, properly speaking, there has been no story—that is, no plot—at all. But there has been an inspiration of some sort; longtreasured stores of thought and memory have found their way to the surface, and the author was right in relying upon them. But if the author of Citoyenne Jucqueline has in her time worked under both these influences, the present volumes show that she has passed them. Here we must acquit her of any reliance on a store either of knowledge or memory. The plan clearly was to prepare for a novel by ledge or memory. The plan clearly was to prepare for a novel by a proliminary course of reading; first to get up a period, and then a heroine. We cannot compliment her on her success, or recommend the plan, however painstaking, for imitation. A mass of newly-acquired material is as difficult to digest into a story as the Frapria quae maribus and "As in presenti" into the rustic preacher's sermon; in fact, that sort of information won't digest unless there has been time enough for it to be shelved, and to have slipped altogether out of the learner's busy and conscious memory. vly-acquired knowledge is apt to obtrude itself on all occasions, Newly-acquired knowledge is ant to obtinue ineat on an occasions, but especially where its only use is immediate display, and it will be labour wasted when the one opportunity is passed by. Nothing, for instance, but a solicitude to use every available acrap of newly-acquired fact, so eager as to obscure all sense of taste and fitness, could have led a writer of some deserved popularity into the uncoult comparisons and affusions which we find in these volumes. Not only is her narrative supported by what may be called charter and worse but awars unasker and actor in the crisis called chapter and verse, but every speaker and actor in the crisis of his own private fate has, superadded to the duty of representing himself, to hear testimony to the author's condition. The lover in ome supreme moment is made the vehicle of an anecdote which the some supreme moment is made the vehicle of an anecdote which the discoverer would not willingly let die. Nothing is said or done without a veucher, and we may safely affirm that the characters of the story are in the writer's mind always subordinate to the period in which they play their part; a state of mind which communicates itself to the reader and influences his moral judgment. Lady Bell, the hereine, is always running the most extraordinary rige, but we excuse her. She could do no less, since on her devolves the task of making as acquainted with his account of the state of making as acquainted with his account of the state of making as acquainted with his account of the state of making as acquainted with his account of the state of making as acquainted with his account of the state of making as acquainted with his account of the state of making as acquainted with his account of the state of making as acquainted with his account of the state of the ordinary rigs, but we excuse her. She could do no less, since on her devolves the task of making us acquainted with life as the author conceives it to have been a hundred years ago. And this office in her is so conspicuous that the reader never thinks of consorious critisium, whether she rims away from one hundred, or escretly sentries another, or buys a lottery-ticket, or dances the fiders at Ranslagh, or goes alone to a macquerade, or throws hereaff into electionswring.

This survive to utilize the labour of preliminary reading and research results in a tone sufter hard on the living celebrities of the day, who are sarely mentioned without some hint of easy discussment, indicating a familiarity hordering on contempt. This the "stopping a familiarity hordering on contempt."

This the "stopping a familiarity hordering on contempt.

to an exhibition, and see Watte the inv Scotchman"; they criticise his figure, which might be let alone at this time of day, and Lady Rell makes eyes at the Captilla, and lets him know through their agency that she greatly purfers his "stalwart, well-carried figure" to that of the "Andrimeder of the modern world." When a young girl, she falls in with Mrs. Siddons, who accepts her services as waiting-maid and companion. The exiguncies of the story require that she should not stay long with her. so the good-natured acress finds her another situation. with her, so the good-natured actress finds her another situation, with her, so the good-natured actress finds her another situation, and does all that benevolence could possibly inquire of her; but because she urges the plea of having her children to think of first, that is, before a perfect stranger, the comment uponit brings a charge of selfishness. "She urged the same plea many a time from youth to age in trampling down generosity and even justice, till the very world that worshipped her genius was outraged by her family selfishness." Why, we ask, should a respectable woman who never courted publicity out of her calling, and who has been in her grave scores of years, have her faults raked up in this way opropos of nothing at all. Miss Reynolds and others are introduced to the reader, and made to talk in a strain little to the credit of their taste; characteristically, as it is supposed, but, as the reader taste; characteristically, as it is supposed, but, as the reader perceives, with a garrufity and want of propriety of diction common to most of the characters.

In these days, when every one who has shown that he can write a story is tempted to urge his powers, such as they are, to uttor exhaustion, we respect the conscientiousness which, aware of flagging fancy, substitutes information for invention rather than let the pen run in a course of fluent manities, or worse. The readers for whom Lady Bell was intended may learn something—some names and facts of a hundred years ago—which they did not know before; but the style always betrays a writer's secret opinion of his work; and here, whether from haste or cardiesness, or more conscious contempt for her readers, or the proceduation we have spoken of, the style is marked by psculiarities which are simply puzzling to the reader who recalls this author's earlier works. There are pages where the use of the personal pronoun is ignored. The more look of the page indicates some fundamental change from ordinary modes of expression. How author or corrector of the press can see "Lady Bells" scattered broadcast like plums in a cake, and not strike the pen through three-fourths of them at the very least, is the wonder. "Lady Bells confession to Mrs. Sundon had died on Lady Bell's lips." "Lady Bell seconds and had a lady Bell's lips." "Lady Bell seconds and had a lady Bell's lips." "Lady Bell seconds and had a lady Bell's lips." "Lady Bell's proposed and lady Bell's lips." resured them at the very least, is the wonder. "Lady Bell's confession to Mrs. Sundon had died on Lady Bell's lips." "Lady Bell resumed... all Lady Bell's pursuits." "The London smoke which had smelt sweet to Lady Bell had not begun to soil the fresh spring green when Lady Bell," &c. Any one who knows what it is to be addressed every moment by his own mane will imagine the disturbance to ave and are of this resultant architectured. disturbance to eye and ear of this peculiar verbinge; and there is a Mrs. Sunden whose name figures with equal persistency. It is perhaps one of the evils of the social system under which most perhaps one of the cells of the social system under which most novels first see the light that it sauctions a headlong carolessness of diction. The class of readers who seize upon the story in a cheap periodical are not supposed to be critical; care and accuracy would be wasted on them; so approximation to the roal meaning is enough. We do not think, for instance, that Lady Bell's biographer would have written that she "borrowed a brood of chickens from a neighbour that she might have fresh eggs," with the responsibility of three volumes of handsome print and binding the responsibility of three volumes of handsome print and binding immediately before her eyes. Mixed up with a variety of other matter in the close columns of Good Words, precise points of wording are immaterial. Nor is this the ohly inconvenience of random writing. We are far from bringing vulgarity in this instance as a general charge, but recklessness in imaginary dialogue almost necessarily falls into vulgarity; the pen will write what the tongue would not utter; it stands midway between thought and awards. The gradent word was Sunday Lady Belly and speech. The good-natured Mrs. Sundon, Lady Bell's chaperon, might be deficient in breeding, but she would think about her stepdaughter's teeth in a strain wanting refinement, without telling the young woman in a mixed company that " she had not

teeth for grins because they were too black."

Lady Bell personates the fine lady of the eighteenth century both in character and adventures. She is made to marry an old man against her will after the example of Mrs. Pendarves. He dies conveniently after the same pattern, though the future Mrs. Delaney did not run away. She forms a fervent female friendship, and the two ladies live together for a time, justified by the procedent of the highborn recluses of Llangollen. Their pursuits in the country are regulated by the idea of Lady Bountiful and the description of country life in the Essayists, and she figures in the quescription of country life in the resayists, and she figures in the great world of London as a reigning belle, either doing, or emphatically not doing, all that historical belles do. She is surrounded by hosts of admirers, "three-bottle men," rakes, gamblers, &c., and marries secretly a captain in the navy-a very "pretty" manly figure, but "not such a dendy as Rodney had shown himself"-for no other reason that we can see, considering that she was her own mistress, except that some other ladies did the same. She and her beautiful friend go to Ranelagh, and were the observed She and her beautiful friend go to Ranelagh, and were the observed of all observers; "as conspicuous," we are told, "and rather more attractive than that gigantic Russian Count Orloff who was yet to put his size and strength to use in strangling his Czar, Peter III." We are introduced to Mrs. Thrale, on whom the author has bestowed some pains. Such attempts at reproduction are hazardous in the best hands, but we give it as a favourable example. Lady Hell and the Captain are calling on Sir Joshua Ruynolds:—

There was the portrait of a plump little woman, sprightly even on anvas; her high-dressed hair wreathed with posits, a shawl-girdle binding totally the short waist and bodiec, which Sir Joshua strove to paint into

fashion—a great improvement on the earlier elongated steal-bound walst and laced-up bodice.

As Sir Joshus was about to hame the original, the real lady ran unshered in her het and clock into the room.

The newcomer had not a moment to stay to be introduced to Lady Bell Trevor and Captain Fane. She was in haste to tell Sir Joshus that she had just come down from the Burgh, where she had left her mester at his place of business, but nearly as ailing as the Doctor (good lack what a load she had on her head and shoulders!) She wished to know whether Sir Joshus had done the retouching which he had taken into his head to throw away on a barn-door face beyond improvement. Give her joy on the audacity of complimenting herself; but she did not mean to compliment—not that she was not well enough pleased with her own, she would never deny it. She would like the picture packed and sent out without loss of time. Queency and the rest of the young fry might care to look at it one day, when it was all that was left of their mother. Good day to him and to all.

"You are in luck, Lady Bell," announced Sir Joshus returning, briskly rubbing his hands, from seeing the lady to her coach, "if you have not had a previous opportunity of meeting my friend. That is Mrs. Thrale, the wife of the great brewer, who is himself an exceedingly liberal gentleman and well-read scholar, but his wife excels him in the classics."

Of all undertakings, the historical novel is among the most arduous.

Of all undertakings, the historical novel is among the most arduous. The power to throw yourself into the past so as to create a living present there is so rare that many people fix upon distant times for their scenes because they offer no field for, or at least seem to dispense with, the gifts they want. They are not conscious probably of this reason for their choice, but it influences them all the same. We are not finding fault with our author for not succeeding where so few succeed, nor yet for her selection of period, but simply for not having done her best. Honest pains would have told everywhere. Her heroine would not have been the silly chit she is throughout her career. She would have had some coherence and consistence if newly acquired hundred-year old gossip had not led her such a dance. How far the soberer merits of style would have gained by care is a point on which we need not enlarge further.

THE PRINCE CONSORT MEMORIAL.

THIS sumptuous volume, enriched with engravings and chromo-lithographs, elucidated with ground plans, sections, &c., and altogether got up with evident disregard of any but artistic considerations, is in keeping with the National Memorial which it describes and illustrates. Much has been already published in the way of handbooks or criticisms on this the most ornate and the way of handbooks or criticisms on this the most ornate and costly work of modern times; but not till now have we been presented with an account which is absolutely exhaustive of the subject. The large folio plates, twenty-four in number, comprise a general view of the work, the statue of the Prince, allegorical figures and mosaics, all in colours, likewise engravings in black and white of the marble groups at the four angles, and of the reliefs round the podium. There are also architectural plates showing the foundation and construction, while woodcuts setting forth further details are worked into the letterpress. The explanatory taxt almost as a matter of course, is much occupied with docutext, almost as a matter of course, is much occupied with documents, official correspondence, and other matters not recommended by novelty or otherwise. Still, as part of the history of the un-dertaking, we can hardly object to the recapitulation of what the Lord Mayor did at the Mansion House. Almost the only chapter which rises above the level of careful compilation is that in which the architect himself discourses on the design. Sir Gilbert Scott here not only describes a structure which we can all see for ourselves, but he discloses his motives and reveals the sources whence he borrowed his ideas. The chapter reads as a criticism written by an author on his own works. And yet, though naturally showing satisfaction at the accomplishment of an arduous task, it is free from selfglorification. Indeed the creator of the work is almost ready to forget himself in the tribute he pays to his fellow-labourers. Mr. Skidmore, Mr. Clayton, Mesars. Salviati, Mr. Armstead, Mr. Philip, and others seem in their several materials of metal, mosaic, and stone, to have worked together as one of those happy families to whom Italy of the middle ages owed the harmonious union of the sister arts. We have heard some cavillers object to the final result; indeed, as we shall proceed to show, the work is open to critician; nevertheless, on the whole, it does credit to all -concerned.

First, we will speak of the Memorial in its construction, which may be said to combine the solidity of a pyramid in the base with the lightness of a flèche and the delicacy of jeweller's work in the superstructure. Those of our readers who may have been in the habit of passing along the high road of Kensington will have been astonished at the heavy masses moved and manipulated, and at the amount of mechanism and steam-power brought into action. The motive forces now at command are known to give to our engineers and architects the advantage over the builders of old. The structure, as completed, rests so lightly on the ground, and soars so easily and joyfully into the sky, that the spectator may hardly realize the weight and the magnitude of the component parts. From the published statement we make the following dignary: following digest:-

The quantity of concrete used is zso,coo cubic feet; beneath the steps are 306 piers and 868 arches. The total length of granite steps is two miles and a quarter, and the number of steps are z,803. Some of the blocks of granite in the podium weigh fifteen tons. The sub-plinths of the bases of columns are two stones, each stone weighing ten tous, and the bases them-salwes in single blocks when unwrought weighed seventeen tons and a half

The National Memorial to in: John Murray. 1873. al Memorial to His Royal Highness the Prince Consort. each. The working of each of these stones occupied twelve me weeks, and cost afol. The length of polished granite columns fifty-six stones. The blocks forming the capitals each weighed wrought, thirteen tons and a quarter. The meckanical appropriate that the whole of the work above the podium, great columns, the arches, the pinnacles, gables, and grotning in thirteen weeks. The iron girder which carries the fleche we three tons, and the weight resting upon it is 220 tons. d granite columns as sitals each weighed, be to mechanical applies was the podium, incl

three tons, and the weight resting upon it is see tons.

This rapid recapitulation of masses and weights will enable the reader not only to realize the structural difficulties encountered, but will also account for the flying rumours that external the beams could not be removed safely, and that the Mamorial in divers points needed propping and other assistance. Any one sequainted with Italian menuments—with the tombs of the Scaligeri in Verona, with the Loggis de Lanzi, and the church of Sto. Spirito, severally in Florence—will have an ocular proof of the infirmity of arches and areading springing lightly and boldly on columns. The thrust, according to well-known laws—a pressure provided against in Gothic cathedrals by buttresses—is so tremendous that the Memorial could not have stood five minutes without some special provision. We have seen in the statement above quoted that the fieche pressed down with a weight of no less than 210 tons. We remember to have pointed to these perplexities when the metal-work was in construction at Coventry, and Mr. Skidmore at once made a sketch to show that by means of an iron girder, accurately delineated in the plates now before me, the whole of the superstructure would be bound together of an iron girder, accurately delineated in the plates now before us, the whole of the superstructure would be bound together solidly. Accordingly it was believed, as the event proves, that the outward thrust would be neutralized, and the only remaining task was to make the four clustered columns sufficiently strong to sustain a weight which is estimated at "twenty-one tons per foot super.

From this narrative it becomes at once evident that the structure owes its safety to the intervention of iron, and we all remember the denunciations which Mr. Ruskin has from time to time launched against iron and other modern expedients, which he is pleased to designate as dishonest. It is often instructive and occasionally amusing to follow cobweb speculations which inter-weave with infinite play of fancy and of rhetoric, ethics, esthetics, and architecture into one. But a professional architect is wise to take a more practical view of the work in hand. In the present instance there can, we conceive, be no suspicion of dishonesty; certainly every practised eye sees at a glance that iron or other metal must be in use; there is in fact so much bronze and other metal work visible externally that we may take it almost as a matter of course that the internal anatomy is something more than of stone. The real question is not whether it is lawful to use metal, but whether the metal is used rightly; and we think we have arrived at the period when a wise artist will employ whatever material best suits his ends, holding himself accountation. for the treatment, which at his peril he must make artistic. In the present instance we recognize a studious endeavour to bring the whole work into unison; the bronze, the gold, the mosaics, the enamels, and the stone are reduced to harmonious relation.

Objectors have made their voices heard against this National Memorial. Some have urged that the design is too pretty and potit, that the finished work has a delicacy and a decoration so bittle in keeping with our English weather as to need the protection of a glass case. Others have cavilled at the society in which the Prince, whenever the time may come for him to reach his pedestal, will be found. Instead of the statesmen, philosophers, authors, and will be found. Instead of the statesmen, philosophers, authors, and artists of his time, he is placed in the midst of Phidias, Apelles, Leonardo da Vinci, Raffaelle, Michael Angelo, Sir Ohristopher Wren, Sir Joshua Reynolds, and the like. The last objection ought not to be allowed too much weight. The choice of treatment necessarily lay between modern and historic times. Rauch and Schinkel in the elaborate monument to Frederick the Great in Berlin committed themselves to the former alternative, with its attendant disadvantage of cocked hats and knee-breeches. Sir Gilbert Scott, on disadvantage of cocked hats and knee-breeches. Sir Gilbert Scott, on the contrary, presupposes the spectator to possess sufficient imagination to bring before the mind's eye people who, though without place of meeting on earth, may hope by congeniality of spirit to find a common assembly in some abode in space. So irredeemably literal and prosaic is the art mind of the present day that it may even be feared that this apology will read as a condemnation. Yet we would further urge that this monument is not a Tomb or a Mausoleum, but a Memorial. The dead whom we are asked to honour is buried elsewhere, and the intention may be taken to be to read as in a book, enduring as marble or brass, the spirit and the aspirations of one who has passed the narrow confines of time and space. Such latitude was certainly allowed to the great and space. Such latitude was certainly allowed to the great artists of old; and Lord Bacon would seem to plead the cause of such liberty when he objects that "reason doth buckle and bow the mind unto the nature of things," and that "because the acts or events of true history have not that magnitude which satisfiant the wind of war notter formeth acts and account to the satisfiant. the mind of man, poetry feigneth acts and events greater and more heroical." But the fairest course will be to allow the artist more heroical." But the fairest course will be to allow the artist to speak for himself. It would appear, judging from what is now presented to public view, that the architect has had present in his mind an Eleanor Cross, a Scaligeri Tomb, a Baldanehino, together with Delaroche's "Hemicycle des Beaux-Arts." The "minary aim," we are told, was that "of erecting a canopy to overshadow the statue of the Prince"; and the second leading idea was to give to this overhanging structure "the character of a vest shrine." Six Gilbert Scott sets forth his medium as follows:

Though thating the state of a Gothic Cross I have a follows:

thing type, but there struck out one suited, to the best of my judgment, specially to this individual object.

The great purpose of an architectural structure, as a part of the Meserial, is to present and overshadow the statue of the Prince. This idea is a key-best to my design; and my next leading idea has been to give to its eventhadowing structure the character of a vant abrine, eariching it with the arts by which the character of precioesness can be imparted to the lext which it protects. The idea, then, which I have worked out may be leading in a colessal statue of the Prince, placed beneath a vast and magnificent shrine or tabernacle, and surrounded by works of sculpture, lustrating these arts and sciences which he fostered, and the great undertered which he originated. lustrating those arts and so things which he originated.

The second leading idea was, as we have seen, to give to the varianging attracture "the character of a vast shrine," the germ f this idea being the fanciful and somewhat impracticable fractures in miniature wrought by the old jewellers of Germany—rnate shrines which gave opportunity for the freest exercise of the kill and taste of the modeller, the enamelist, and the worker in rectous metals. In this Memorial we witness an attempt to ranslate back the image of some such fancy edifice into a structure hundred or a thousandfold the size of the original germ. Much a the first embryos must be cast aside as beyond the reach of ranslation or development. Hence we find in the Memorial granite a place of less resistant materials. But the architect specially rides himself, he tells us,

a the metal-work of the roof and its gables, and in the lofty fièche which armounts the whole. I have here been enabled [writes Sir Gilbert Scott] to salize most exactly the ideal I had in view, and this is unquestionably the sost marked and characteristic portion of the work, inasmuch as it stands sits alone in character and workmanship, so far as I am aware, among these most includence or account transfer to the standard of ither modern or ancient structures.

This sentence, we think, goes far to explain and to apologize for he petit and jewelled character of the Memorial. The architect, we see, openly confesses to have taken as his exemplars works in he precious metals, and at all events he has succeeded in rearing nto high heaven a structure rich as a jewel, and elaborate in letail and colour as a miniature painting. We agree with Sir Hilbert Scott in thinking that the most satisfactory part of the lesign is that which has been carried out in metal; and we ventred, at the time when the Memorial was thrown open to the public, to object to the sculpture executed in marble, especially to he large groups at the four corners, as indecisive in modelling, wanting in breadth of shadow, and altogether displaying scattered weakness instead of concentrated strength. Mr. Armstead's frieze llustrative of Music, Poetry, and Painting, and Mr. Bell's 'America," are among the best; the latter group, we are glad to ee, has, since the tima when we objected to its vague execution, seen further carried into detail. But the inherent coldness and and its of all the positions in white readly not him. rudity of all the portions in white marble, nothing-not even a condon atmosphere—can bring into tone, and most fortunate is it hat the original idea of running white marble figures into the upper tructure of coloured marbles and gilded surfaces has been aban-loned; the additional sum attendant on the change into bronze was well laid out. Another alteration, the great increase of illding, is not so happy; the consequence is a tawdriness which would have been avoided by the open confession of the contructive materials.

We cannot pretend to predict what may be the judgment of sosterity, but we recognize in the crowds which gather round he monument even in the worst of weather the approval, or at as monument even in the worst of weather the approval, or at east the curiosity, of contemporaries. Yet we fear that an oftenessed objection may here hold good; that the work not being reflect in any one part, the architect resolved to make it gay broughout. But, at all events, we conceive that in after times ite "Prince Consort Memorial" will be accepted as a precious spitome of those constructive materials and these decorative arts which it has been the pride of England to mature or to revive in the nineteenth century. the nineteenth century.

FRENCH LITERATURE.

AST year we had occasion to notice the splendid edition of Villehardouin's Chronique de Constantinople, which formed the first instalment of Messrs. Didot's collection of French mediaval authors. Joinville's Histoire de Saint-Louis * must now be briefly Within the last ten years no less than three reprints described. Within the last ten years no less than three reprints of that truly classical piece of biography have been issued, two of which are the work of M. Natalis de Wally, the distinguished scholar to whom we are indebted for the Villehardouin. The present sumptuous volume gives us both the original and a modernized text, twenty-six essays illustrating various interesting of anthropology unprisonation to a company of Lain modernised text, twenty-six essays illustrating various interesting points of archeology, numismatics, &c., a grammar of Joinville's language, three maps, a glossary, and an index. The illustrations comprise two chromo-lithographs and a number of woodents. Amongst the disquisitions added by the editor we have remarked especially one on the domestic life of the middle ages. The position of the variets is there clearly defined; and M. de Wailly shows that this designation included not only persons of low birth who discharged menial offices in the households to which they belonged, but also young men sprung from noble lamilies, who qualified themselves by personal attendance on their loves for the duties and position of a knight. The essay on the pattern and limits of the royal authority is also one which cannot will also read with interest. Our suther her se different in prov-7 A. Mar M. Johnville : histoire de Soins-Louis. P. Pilés avintende Mailly. Paris : Didos.

ing that, although the kirg's relations with his great vassals were unsatisfactory because his power was checked and often set at defi-ance, within the limits of his own personal domain it admitted of no control. This fact may be illustrated by the barbarous punishments inflicted by Saint-Louis upon blasphemers. It has been generally supposed that mediseval legislation, in France at least, manctioned the branding with a red-hot iron of the lips of persons convicted of blasphemous language. Such was not the case; one citizen of Paris, and only one, was sentenced to undergo this heardd torture; but this was by the express will of the King, and directly in opposi-tion to the advice of his councillors.

Paris, and only one, was sentenced to undergo this security in opposition to the advice of his councillors.

The Soiries de la villa des Jasmins may be regarded as a kind of French "imaginary conversation" or an imitation of the well-known Friends in Council. The Duchers Eltha, left a widow at a very early age, and thrown into a state of hopeless melancholy by the impossibility of finding in this world the realization of her ideal conceptions of justice, truth, and greatness, retires to a villa on the shores of the Mediterranean. Eltha is a kind of Christian Lelia, diagusted with society; but she soon gets tired of solitude, and the demon annu, visiting her retreat, drives her to write to an old tutor who was always her chief adviser, and who acted as a father towards her. This mentor, characteristically named Rabboni, comes from Paris accompanied by three or four friends, and Madame de Blocqueville's two volumes are supposed to be the record of the conversations which took place daily amongst the members of this society on subjects of philosophy, poetry, religion, and art. A marriage appropriately ends the work, the two contracting parties being the Duchess Eltha and a young poet.

Not many of the illustrated books recently published are more welcome than the volume on Spain † with which Baron Daviller and M. Gustave Doré have jointly presented us. The marrative is simply a series of impressions de voyage unaffectedly told, with their

simply a series of impressions de voyage unaffectedly told, with their vicissitudes of enjoyments and annoyances, of accidents and pleasures, of comic and quasi-tragic adventures, pictorially rendered by the talent of an artist who is unequalled when his crayon finds employment in reproducing fantastic and picturesque scenes, and strong contrasts between light and shade. M. Davillier starts from Perpignan, inviting us to take our road in Pavilier starts from Perpignan, inviting us to take our road in the correc, the galera, the carro, or the tartana—vehicles which are equally original and equally incommodious. He leads us on to Tarragons, and then to Valencia; from Valencia we go to Granads, thence to Jaen, Seville, Cordova, Madrid, Salamanos, and Burgos; atter a short excursion as far as the Balearic Islands, we come home by the Basque provinces. In this amusing volume history is agreeably blended with sketches of society, and anecdote with descriptions of landscape scenery. Baron Davillier is a great admirer of the immortal work of Cervantes. "Everybody," he save. "who travels, as we did, through the province of La he says, "who travels, as we did, through the province of La Mancha with Don Quirete in his hand, must be struck by the accuracy of the descriptions. The portraits which Cervantes sketches are as real as his delineations of insnimate nature; and, after an interval of two centuries and a half, we find characters which seem as if they had sat to him for their likeness.

The authoress of the Life of Robert Emmet had intended, some years ago, to write a complete biography of Lord Byron; the magnitude and difficulty of the task, however, discouraged her, and she has given us only the introductory and concluding chapters of what would have been a work of considerable extent. The Jeunesse de Lord Byron was published some time since; we have now an account of the poet's last years 1, and we see him successively at Geneva, at Coppet, where he meets with Madama de Stael, in Italy, and in Greece. An appendix of documents closes the volume, and some of the extracts given are from papers hitherto unmultilished.

unpublished.

M. Lemerre has done much for the cause of elegant literature. His collection of sixteenth-century authors, of which we have had already more than once occasion to speak, comprises the re-presentatives of the *Plead*, besides Rabelais and Montaigne. Agrippa d'Aubigné now appears on the list, and will form one of its chief ornaments, When, forty years ago, the leaders of the Romantic school called public attention to the French writers of the Romantic school called public attention to the French writers who preceded the classical epoch, they could not fail to dwell upon the merits of the Frotestant poet, saturist, historian, and statesman, Agrippa d'Aubigné. M. Sainte-Beuve, M. Saint-Marc Girardin, M. Philarete Chasles, and other equally competent critics pointed out his titles to literary fame, and showed that he deserved to be extensively known and read. The interesting work of M. Sayous on the writers of the Reformation brought out this fact with still greater prominence, and Dr. Merle d'Aubigné, himself a descendant of the Huguenot leader, entertained once the idea of buckling himself to the task now successfully attempted by MM. Résume and De Caussade. In the meanwhile several assarate Mcaume and De Caussade. In the meanwhile several separate works of D'Aubigné had been published here and there; thus M. Ludovic Lalanne contributed an edition of the Transmes to M. Jannet's Bibliothèque Elzévirienne, and annotated the Memoires for M. Charpentier's series; the Aventures du baron de Fieneste were given by M. Prosper Mérimée, and, finally, M. Charles Read

also reprinted the Tragiques. Still a considerable number of D'Aubigné's writings, such as the Histoire universells and the Confession de Sancy, remained accessible to the public only through the medium of editions carelessly got up at the beginning of the seventeenth century; and it was known besides that a large quantity of unpublished MSS., including the correspondence, had been collected by the industry of Colonel Tronchin of Beninges, near Geneva. MM. Réaume and De Caussade accordingly undertook to prepare an edition of Agrippa d'Aubigné's complete works. They obtained access to the Tronchin MSS.; they procured from various quarters materials which had never till then been made use of; they collated, or got collated, the old editions with copies preserved in the British Museum and elsewhere. Thus armed at all points, they sent to the press their first volume, comprising the author's correspondence—that is to say, about two hundred and fifty letters arranged under eight different heads. This series will be found extremely important from the light it sheds upon the political and religious important from the light it sheds upon the political and religious history of the sixteenth century and the beginning of the seventeenth. MM. Réaume and De Caussade propose completing their publication in five volumes, exclusive of the *Histoire universelle*, which would form about five volumes more, and which will be issued if sufficient encouragement is given to the editors. A glossary and an essay on D'Aubigné are to form part of the con-

cluding volume.

M. François Lenormant has just brought out the sequel of his Essai sur la propagation de l'alphabet phénicien. The instalment before us is the first livraison of the second volume; it treats of the Syriac alphabets in all their varieties, the Tartar alphabets, the Sabsan, the Nabatsan, the Arabic, and the inscriptions belonging to the Sinaitic region. Some persons may wonder perhaps at the Tartar language being brought within the compass of this work, and supplying materials for one of its most interesting chapters; but we must bear in mind that, through their intercourse with the Nestorian missionaries, the inhabitants of Western Tartary became acquainted with the Syrian alphabet, the characters of which they adapted to their own use about the same time when the Eastern adapted to their own use about the same time when the Eastern tribes of the same extensive region vainly attempted to turn to similar account the elements of Japanese writing. Discussing the subject of the Sinaitic inscriptions, M. Lenormant remarks that they were neither exclusively Jawish nor exclusively Christian in their origin; a certain proportion of heathen elements are mixed up with them, and they cannot be regarded as the records of pilgrims travelling for religious purposes. M. Lenormant believes that they were simply indications intended to identify pasturages, and to form rallying or gathering points for shephords turages, and to form rallying or gathering points for shephords

belonging to the same tribe.

The Lettres à une inconnuc †, by M. Prosper Mérimée, form one of the most curious collections of correspondence which we have seen for a long time. We almost wonder that the unknown lady to whom the letters are addressed should have allowed their publication; but we are glad that she did, for no novel can surpass in interest this record of a passion which, after having been extremely violent, subsided gradually into platonic affection and lasting friendship. The first letters are not dated, but they belong, we are told, to the year 1841; the last was written at Cannes, September 23, 1870, two hours before M. Mérimée's death. In the case of the present publication, as in that of the Lettres à la Princesse, it is a pity that we cannot be allowed to study the feelings of both correspondents; cannot be allowed to study the feelings of both correspondents; we should have liked to see how the incomme managed to govern her admirer, to keep him within the boundaries of simple disinterested affection, and, let us add, to play with edged tools without getting wounded. The sceptical turn of M. Mérimée's mind, his fondness for irony, his thorough desillusionnement, come out strikingly throughout these two volumes, which contain, besides, several amusing sketches of character and incident; as, for instance the description of a party where Maddle Rechalded in the stance, the description of a party where Madlle. Rachel declaimed some scenes from Racine's tragedies.

M. Victor Pierre writes the history of the Revolution of 1848 ‡ from a point of view which will not please the Republicans. In his introductory chapter, tracing the antecedents of the events which led to King Louis Philippe's overthrow, he speaks of the September massacres as the baptism of the Republic, and shows that violence and bloodshed have been the constant accompanithat violence and bloodshed have been the constant accompaniments of the revolution in its various phases. Both Bonaparte and the Republic were the children of '93; their common origin was force; their means of government, dictatorship; their aim, universal levelling for the benefit of the State. A decided taste for centralization, impatience of all opposition, and a supreme contempt for all religious and moral principles—such are the most prominent characteristics of Bonapartism and Republication. canism. The only difference, we are told, between the old and the new is all to the advantage of the former, because the Bourbons during the period which preceded 1789 did not at any rate conceal their despotism under the mask of Liberal maxims. We do not know whether M. Pierre is in favour of a limited Management of masks of Liberal maxims. limited Monarchy, or whether he accepts the rule of a dictator as a kind of inevitable pis-aller; one thing is quite clear, according to him—that Republican institutions are impossible in France, and that from Lamartine to Caussidière there is not one of the

persons concerned in the episode of 1848 who will escape his

persons concerned in the episode of 1848 who will escape bless at the bar of posterity. M. Piarre states his facts with telepable accuracy, but his interpretation of them is very one sided.

We have received several scientific works of more or less importance. M. Amédée (duillemin's volume is particularly valuable as coming from the pen of a writer who is thereighlard versed in physical science. His style is admirable for its clear ness and precision; no writer could explain so satisfactorily the details of the electric telegraph, the steam-engine, photography, &c., who did not know intinately the laws upon which these various branches of applied science are founded.

The Dictionnaire de Chimic, so ably edited by M. Wurtz, is speedily coming to a conclusion t, the sixteenth instalment taking us as far as the letters Th. Amongst the articles contained in the last three livensons which we have received, we may mention

as far as the letters Th. Amongst the affices contained in the last three livraisons which we have received, we may mention those relating to the chemical constituents of the muscular system, to the manufacture of bread and of paper, and to the preparation of mortar. Their practical character will render them interesting to the great majority of readers. The details given in the text are copiously illustrated by sketches of machinery.

M. Moynet's Envers du théditre t treats of a subject which we do not remember to have seen so existence that the start part of the

not remember to have seen so satisfactorily attempted before. When we are sitting in a comfortable stall at Drury Lane or Covent Garden, and admiring the wonderful effects produced by the art of the stage-painter, the skill of the machinist, and the taste of the costumier, we are apt to forget at what trouble and at what expense the theatrical manager is put to amuse his audience, and we do not give a thought to the contrivances which end in such astonishing results. The little volume composed by M. Moynet, and illustrated with sixty woodcuts solves these mysteries for war it

astonishing results. The little volume composed by M. Moynet, and illustrated with sixty woodcuts, solves these mysteries for ua; it takes us behind the scenes, and unravels the complicated mysteries of ropes and pulleys, trapdoors and stage properties, which constitute the necessary data of a successful pantomime.

In explaining the mysteries of photography M. Tissandier considers his subject from three different points of view. First, he gives us the history of the science, beginning with the earliest efforts of J. B. Porta and the attempts of the alchemist Fabricius, explaining the discoveries of Daguerre, and ending with the recent application of M. Poitsvin. The second part discusses the modus operandi, and reveals the secrets of the photographer's studio. Finally, we have an account of the mumorous applications of photography to industry, science, and art, to the necessities of war, and the administration of justice by the identification of criminals.

by the identification of criminals.

The Belgian Académic royale des sciences, lettres, et beaux arts is already a contury old, and its history, so far as astronomy is concerned, is related by M. Mailly in a very romarkable brochure. Founded under the name of Académie de Marie-Thérèse, this institution did not originally bring before the public any distinguished amount of Belgian talent. One Portuguese Thereso, this institution did not originally bring before the public any distinguished amount of Belgian talent. One Portuguese observer, several Englishmen, one German, and one Frenchman appear as its chief representatives, and the despotism of Napoleon tended still further to prevent the development of native genius. A reaction took place on his downfall, but it was only in 1835, after the foundation of the Brussels Observatory, and thanks to the unflagging energy of M. Quetelet, that the progress made by Bolgian scientific men was really manifest. Since that period the setting the beau increasing steadily, and investigations conducted activity has been increasing steadily, and investigations conducted at the Brussels Observatory must be reckened amongst the most striking that have been contributed to European science during the last forty yours.

M. Soubeiran's small volume on Hygidne I is a work which we should like to see widely circulated. The author aims especially at being practical; he writes for persons who want results rather than theories, and who desire to have a few simple rules which they can carry out without much difficulty. The instructions he gives include the construction and ventilation of houses, food, dress, exercise, mental and intellectual work, sleep, and gymnastics; they extend over the whole life of man, and form in their

entirety a very valuable code of precepts.

Amongst the scientific publications of M. Gauthier Village we find the fourth volume of M. Flammarion's year-book on astronomy.* It is as usual full of the most interesting facts, and astronomy. It is as usual full of the most interesting facts, and contains a complete account of the principal phenomena lately observed. The transit of Venus, the eclipses, the form and physical nature of the moon are successively discussed, and the author gives a record of all the aerolites which have fallen between the years 1866 and 1870. The volume closes with an account of the planets recently discovered, and with a description of M. Janssen's aeronautic voyage undertaken for the purpose of studying the eclipse of December 22, 1870. This book is illustrated with thirty-three astronomical diagrams.

M. Hadan has done good service by the publication of his tables. Issued for the first time in 1864, they are drawn up from Laplace's formula, and the author introduces them with a very permitenous est of instructions on the way in which they are to be made available.

made available.

We are always pussed when we come to speak of current French We are always pussed when we come to speak of current French tools of fiction have become worse and worse, and that there is no symptom of reform in what pretends to be the study of modern cociety and of contemporary manners. The last volume of tales (a posthamous one) by M. Prosper Mériméo is certainly not fit for general reading; but it shows all the qualities of style which characterized the author of Colomba and Cormon. † M. Xavier de Montépin has not even the merit of writing good French, and publishers are now reduced to reprint the realistic compositions of MM. Gustave Flaubert and Champfeury. Many years ago M. Sainte-Beuve astonished a considerable portion of the public by his favourable criticism of Madame Bovery 1, and many persons wondered that a writer who admired Eugénie de Cuérin's correspondence and the beautiful essays of Madame de Tracy condisit down deliberately and praise a novel which had been found bad enough by a very tolerant Government to justify a public prosecution. M. Flaubert's masterpiece of cynicism is now once again thrust before us, supplemented by a verbatim report of again thrust before us, supplemented by a verbatim report of the trial to which it gave rise. The advantage of this piece justificative is obvious; as the Government prosecutor had to show in

ficative is obvious; as the Government prosecutor had to show in the clearest manner the disgusting nature of the work incriminated, he collected and put together all the most objectionable passages; so that in the present edition the reader will find not only the novel complete, but an anthology for easy reference.

M. Champfleury's Anouneux de Sainte-Périne § created also no small stir when published for the first time, because the book was considered as a libel upon a well-known nation de sauté in Paris. An unflinching advocate of realism in literature, and professing to describe characters strictly as they are, M. Champfleury unfortunately persists in confining his observations to the "Bohemian" classes of society, and consequently his works, if not grossly immoral as a whole, leave on the mind of the reader impressions of a disagreeable and painful nature.

With M. André Theuriet, M. Jousselin, and M. Legouvé we come to a purer atmosphere, and we need no longer ex-

With M. André Theuriet, M. Jousselin, and M. Legouvé we come to a purer atmosphere, and we need no longer exclaim Caveat lector! The author of Le blen et le noir || is not always natural, and his poetry is often spoiled by a certain affectation which provokes us; but he appeals to the best feelings of our nature, and whether he yields to the power of melancholy (le noir) or takes a more cheerful view of the world in which he lives (le blen), he is equally striking. M. Jousselin's Enfants pondant la pair || ought to become a favourite book with children. It is a collection of fables and school stories written in Enjoints position if pair of ought to become a favourite book with children. It is a collection of fables and school stories written in poetry, breathing the most healthful spirit, and well illustrated by Bertall, whose talent appears to far greater advantage here than in the volume entitled La comédie de notre temps **, the tone of which is decidedly objectionable. M. Legouvi's octavo contains, besides three tragedies, a series of short poems †† composed at different times, and far above the average of modern French lyrica. Eximply we have to posture a spirited and observe tragelytics of Finally, we have to notice a spirited and elegant translation of Corneille's Lo Cid !!, by Mr. W. F. Nokes; it is inscribed to M. Guizot.

SPAIN.

FAIN.

FIGURE period of Spenish sevolutions might almost counterment in the dectrine that there is a philosophy of history in the makes of a visible and necessary succession of cames and effects. The reciprocal intolerance of all factions, producing total absence of loyalty or obedience, rendered by the anarchical section of their body would have their term in the government. When the opportunity them, although the ineptitude which they displayed transcended previous expectation, the tendency of their principles and professions to render the conduct of affairs appossible corresponded with probabilities which had long impossible corresponded with probabilities which had long been foreseen. It was evident that their supremacy could only has until there was a sufficient disciplined force to emble some military header to assume power. In his Message to the Cortes, Señor Cassume power. In his Message to the Cortes, Señor Cassuman, with singular infelicity, amounced that the day of military pronunciamients and the day of the tyranny of parties had simultaneously passed away. If either assertion had been well founded, the other might have been comparatively plausible. Within a few hours the Captain-General and the gaszison of Madrid rose, not against the Minister, but for the purpose of turning out of doors the dishonest and in-capable Assembly which had refused to support in the person of Castellar the only possible Republican Government. Spain has accordingly begun again at the beginning; if indeed the victous circle which embraces a period of sixty years can be accurately described as having either beginning or end. The preservation of order and the maintenance of society depend on the soldiery; and the liberties of the nation will be such as it suits the leaders to allow. Of all the military revolutions which have occurred in Spain, the enterprise of Paria and SERRANO is the least criminal. It is prevable that the promoters have acted not from selfish or personal motives of ambition, but under a sincere con-viction that the folly of the Republicans had left no alternative possible. The proposition which is laid down in the Circular of the new Government, that "legality is in the Careniar of the new Government, that "legality is "on the side of the first who dares to prevent the ac"complishment" of a deed which is not in accordance with the national will, "even though he may not previously
"consult it," is obviously open to a dangerously elastic interpretation; but the Ministry are at least justified in holding that their chief duty is to re-establish order. The first and most mischievous act of Figure and his colleagues after the fall of the Monaistics will as a hemotia subtle in Madeid and other mischievous act of Figures and his colleagues after the fall of the Mousethy was to arm the rabble in Madrid and other towns; and now Pavia his done an unmixed service to the country by discrining the Volunteers. The distribution of same, smong a turbulent and bloodthirsty populace had twice heat followed in Paris by revolt and by carnage. Cavaranach had to conquer Pavia in 1848 with frightful loss of life; and again in 1871 Thursts and MacManon were forsed to ando by a regular siege the hischief which had resulted from the armament of the distributed part of the population. It may be hoped shut in their Spanish towns either the disarrangement will have fright troops will have prevailed, as at Valladolid and Birectors. It estinot be doubted that preparetime had like been made for durified that propaga-contributions of a military to indiv Suncare and his descentia-ied Corrected II the Cortis had no installe falls of presidentiality the installe and president diffi-tation of the president of the same is at preparedities had

the period which has clapsed since the dethronment of Queen ISABELLA. It remains to be seen whether the later progress of social and political desolution has not greatly increased the difficulty of government. A still more important question is whether Pavia or any other leader possesses the ability and the influence of Prim. Branano is reputed a good soldier; but he has never proved himself a great statement, and he is growing old. Of his colleagues or subordinate Ministers, Sagasta possesses much political experience; but, for the present, Parliamentary skill and ability will be wholly giseless. It is possible that the nation might be inclined to rally round any Government which proved itself capable of restoring the honour of the flag by see and by land. Topete, though he is obstinate and impracticable as a politician, is reputed to be a man of courage and honour; and perhaps he may succeed in organizing a squadron which will blockede Carthagena in earnest. It is not known whether Montones, who is hard pressed by the the period which has elapsed since the dethronement of aquadron which will blocksde Carthagena in earnest. It is not known whether Moriones, who is herd pressed by the Carlists in the North, will recognize the authority of Seriano. It was said a short time ago that he declared that he would obey no Minister but Castrian. Marshal MacMahon properly dismissed from the army a General who had declared that his allegance was contingent on the form of government, which might be adented by the form of government which might be adopted by the Assembly. Spanish rulers cannot afford to be equally delicate in questions of mutiny; and probably CASTELAR may have thought that impropriety was redeemed by zeal. If the regular army is unanimous, partial revolts will soon be suppressed; and perhaps the siege of Carthagena, where a nephew of Serrano is in command, may at last be prosecuted to a conclusion. The robels have held out in the expectation that the meeting of the Cortes would place Pi y Margall, or some other accomplice of their own, in power. Their disappointment when they hear of the blow which has been struck against their faction will perhaps disincline them to further resistance. If Carthagens were reduced, a Government of generals ought to be able to direct a formidable force against the Carlists. One judicious preliminary measure has been adopted in the suppression of the Intransigente and Carlist journals throughout Spain. Only an imbecile Government would tolerate the daily publication of apologies for civil war.

It is not improbable that the majority of the present Government may favour the restoration of the Boursons in the person of Don Alfonso; but only two or three months have elapsed since TOPETE, at a meeting of the Conservative party, complained of the policy of the Republican Government on the express ground that it might tend to the benefit of the supporters of ALFONSO. If SERBANO and his celleagues are prudent, they will continue the Provisional Government, or Monarchy without a king, which was first invented by PRIM, and afterwards imitated on a larger scale by Thiers and MacManon Serrano and the other leaders of the reaction have much to atone for in the past. An affront from Serrano was one of the immediate causes of the abdication of King Amadeo, whom he had himself helped to place on the throne. He had previously committed a more excusable mistake whon he took a principal part in the determinant that it would have been far better to endure the mandals of her reign than to remedy the evil by the examinant of her dynasty. The best Government which Spanisheds of the present generation have known was that of Dominist, rading in the name of Queen Isabella. Next in order, perhaps, comes the Hegenry of Streams, with Pain acting as Prime Minister and Commander in Chief of the larmy; and the worst evil of government is that it destroys the principle of reference and alphaet traccascious chedience. tion of King AMADEO, whom he had himself helped to place

It would have been well perhaps that FERDINAND VII. should never have changed the order of succession, though the male line of the Spanish Boursons seems to be incurable. There was much wisdom in the old English saying of standing by the Crown though it hung on a bush, and nothing but confusion has followed from the abandonment of the Spanish Crown, though it hung on the chief of a dissolute Court together with the ornament of the Golden Rose by which the Pope acknowledged the virtues of a pions Queen.

Time will show whether Castelan is destined again to take a part in public uffairs. His protest against the measures which avenged him on his ungrateful associates is consistent with his character, eloquent and useless, and it suggests the question whether the Minister was in any degree privy to the enterprise which he condemns. If CASTELAR had received no information of the purpose of PAVIA, he must have been singularly ill-informed. Of all the civilians who have held supreme power in Spain, he leaves the least discreditable memory. Having done much by fine phrases to render all government impossible, he had the honesty and good sense to disregard all his principles when he was charged with the hopeless task of restoring the order which he had helped to destroy. Though a Fredershitt he world all the force which he would government Federalist, he used all the force which he could command to reduce the rebel stronghold of Carthagena; and he persuaded the Cortes to abstain for some months from its troublesome interference. Charitable critics will balance the good which he attempted against the mischief which he accomplished; nor indeed have foreigners any right to complain of the suicidal experiments which Spain has lately tried for the instruction of the world. The Republic which has lately collapsed is but the other end of the journey which the CHAMBERIAINS and the DILKES are inviting England to commence. The late Chairman of the Reform League land to commence. The late Chairman of the Reform League justly recognized in the Spanish Constitution of 1869 the embodiment of the principles to which the Hyde Park palings had been already sacrificed. A nearly similar bundle of chimeras had been adopted by the Spaniards in 1812, while Wellington was engaged in the less exalted task of driving the invader out of the country. The Constitution of 1812 was again adopted in 1822, to be put down by the Duke of Angouleme. After the expulsion of Queen Isabella, a new edition of the Spanish Rights of Man was published: a new edition of the Spanish Rights of Man was published and the recent Cortes would probably have conformed still more closely to the standard of theoretical equality and universal license. The Cantonal insurrection, like the Paris Commune, is the natural result of pure democracy in the social condition of modern Europe. It is the fear of such evils which induces the upper and middle classes in Spain and in France to submit to any Government in preference to the despotism of a numerical majority. English ngitators who rightly hold that universal suffrage would be fatal to the institutions which they hope to everthrow, must regret that Spanish Republicanism has had a premature opportunity of revealing its secret. Fortunately

THE STROUD ELECTION.

no party in England seems disposed to clamour against the expulsion of the Cortes. Exclusively elected by one faction, the representatives of Republicanism could not agree among themselves; nor had they the good sense to support their only respectable or presentable leader. The

prospects of Spain, though gloomy, are perhaps one degree less hopeless since the disappearance of the sham Parliament

of 1873.

THE Conservative victory at Stroud is the most important and significant of all the recent triumphs of the party. The vacancy was caused by the death of Mr. WINTERBOTHAM, who had highly distinguished himself, who was popular with his constituents, and whose career had reflected credit on the borough. There had therefore been no breach between the member whose death caused the vacancy and his supporters. On the contrary, there had been exceptional circumstances to strengthen the ties between them. The Liberal candidate had also many recommendations. His name ensures general respect, and his family traditions are, like those of Mr. WINTERBOTHAM, in harmony with the feelings of the Nonconformists. He

up to scare weak Liberal candidates. Both candidates set an equally good example by declaring that they would have nothing to do with the crotchetmongers. Lastly there were no abstentions and no indifference or apathy to favour the suggestion that the bound did not care about the dection, or that the Liberal party lest because they did and take the trouble to win. The total number of votes given to Sir Henry Havelock and Mr. Dorington this time exceeded by more than six hundred and fifty the total votes given at the last general election to Mr. WINTERBOTHAM and Mr. Dogingron. There was nothing therefore to disturb Mr. Dorington. the main issue which the electors had to decide, and this was the simple issue whether Strond should return a member to support Mr. Gladstons or one to oppose him. It has returned a Conservative. But this is not all. At the last general election the Conservative candidate was seven hundred behind the lowest Liberal candidate, and now the Conservative candidate has beaten the Liberal by a majority very slightly short of four handred. This indicates a change in the opinions of the constituency which is wholly unmistakable. The electors of Stroud wish to get rid of the GLADSTONE Ministry, and they have shown their wishes in a way that leaves no doubt as to what they mean. It is important, too, to notice that this manifestation of their wishes comes at a time which precludes the supposition that it is due to temporary and accidental causes. While the most glaring blunders of the Government were in the course of being committed, or when they had just been exposed, a constituency night have been hurried into a hasty vote of disapprobation. But now some time has clapsed since Parliament rose, and the Ministry has done all it could do to strengthen its position. It has played all the cards it could play to win back the favour of constituencies. Mr. GLADSTONE has taken the Exchequer; Mr. BRIGHT has come back to office; feeble or obnoxious Ministers have been shelved; and new appointments have been carefully and judiciously made. So far as this Ministerial reconstruction was meant to conciliate the goodwill of the constituencies, it must, after the Government defeatat Strond, be pronounced to have failed. If the GLAPSTONE Government is patched and tinkered ever so much, still, at its best, it does not any longer please the constituencies. There is no violent feeling against it. Most Conservatives are content that it should go on a little longer; but there is a general sense that its existence is drawing to a close, and that it is a good thing for the country that this is so. Ministries must die in one way or another, and it seems probable that a gentle lingering death of this kind will be the fate of the present Government. They have done a great deal of work, and some very good work. They have, on the other hand, made great mistakes and given great offence. It might have been expected that such a Ministry would perish in a storm, and find an appropriate ending in a grand catastrophe. But this apparently is not to be the case. The Gladstone Government will come to a quiet end, and will simply pass away, because those who make and unmake Ministries think they have had enough of it.

Mr. GRANT DUFF has been making some observations to his constituents at Elgin, which may very well be discussed in connexion with the Stroud election. He remarked that it had been suggested that a middle party might soon be formed in England to unite moderate Conservatives and moderate Liberals; but he was himself of opinion that ne such party could be formed, or was in the least wanted. He judged by his acquaintance with moderate Liberals in the House, and took Mr. WHITBREAD as an example. It seemed to him ridiculous to suppose that Mr. WHITEREAD could ever be induced to be anything but a Liberal. This line of thought is quite sound so far as it goes. It is not likely that Liberals of established position and of known Liberal opinions will be inclined to form or sup-port a Coalition Ministry. Nor is it likely that candidates. will come forward except as belonging to one of the two great political parties. A candidate must employ two recognized party agents, act with the recognized party leaders in the constituency; and the managers of the party like a candidate to be one of their managers of the party like a candidate to be one of their men, some one whom they can rely upon and understand, and who will talk as they expect him to talk, and set as they advise him. It is only in the presence of some great political or social danger that parties rade away as they did when the target of the French Revo. is connected with the county in which Strond lies, and has already at an early age distinguished himself as a suddler. The alborals did not therefore fail because they had a bad candidate. Nor did the election turn on any of those miserable little side issues which are so apt to start!

e constituencies themselves there y of a middle party springing up. remposed of Conservatives who are not by conceive litting times, to changes of a distinguish, and of Liberals who are if their landers go too for and too fact. ound slowly perhaps, but surely, and moline the ni won bus edie ene se rrover ni won re favour of the other. The man they return does not belong to a middle party. Mr. Doranton will now always vote gainst Mr. GLADSTONE just as, if he had been returned, Sir HENRY HAVELOCK would always have voted for Mr. GLADSTONE. But the middle party in the constituency gives effect to its views by putting a check on the action of that party from which for the time being it is most removed in opinion. And it cannot be doubted that the Ballot very much aids and strengthens such a party. It relieves each member of the party from the pressure of former friends, and from having to explain the grounds of the change in his opinion. Far from this being a fault of the Ballot, it is one of its greatest merits, if the Ballot is to be defended on the ground that every elector ought to be freed from all disturbing influence, and left to give his vote in the way that he honestly thinks best. For various reasons this middle party is now very It is probable much disposed to favour the Conservatives. that it is not under the influence of anything that can be called a Conservative reaction. It might be expected to turn round very quickly if a Conservative Government came in and proposed measures distinctly adverse to the general train of Liberal thought. But it wants to get rid of the GLADSTONE Government and to let another set of Ministers have their chance; and it certainly could not do anything better calculated to effect its purpose than to reverse the decision of the last general election in so con-spicuous a manner as has been done at Stroud.

Mr. Grant Dung further observed that he did not see where the materials of a strong Conservative Government were to come from. He surveyed from the Treasury Beach the ranks of his opponents, and he could not find among them the men calculated to win the confidence of the middle party in the country, or to gain general respect and esteem. It certainly is a very curious thing that there should be such a complete failure of rising young Conserva-tives, considering the great advantages with which so many young Conservatives start. They very early secure very safe seats, and there are so many seats at the disposal of the Conservative leaders that they could easily make sure of giving an excellent opening to any one they wished to push. It is also true that in the House of Commons Mr. DISHARLI stands very much alone, and that the balance of power and ability is very much in favour of the present Ministry. But the argument that the present Government is cloverer than any by which it would be replaced is one to which the middle party in the constituencies attaches at the present moment very little weight. It is, in fact, tired of clever people, and it even likes the Conservatives better for not being so very clever. The times are quiet, and in quiet times, it is argued, men who can do routine work effi-ciently are all that is needed. Supposing the Conservatives are not very striking as debaters or administrators, why, it is asked, should we not get along very comfortably under them? Lord Dersy will do in the Foreign Office exactly what Lord Granville does. He hates and fears a row as much as Lord Granville does, and will take equally good care to keep us out of difficulties. Mr. WARD HUNT may not be able to invent Budgets, but he can copy Mr. GLADstone's, and a Budget framed on a good puttern will do very well, although it shows no originality. Lord CARNS decides already what measures of law reform shall pass the Lords, and in what shape, and it would save the Whig lawyers a good deal of unnecessary trouble if he would draft these measures as well as control them and determine their fate. Experience has shown that any one, although he has never such a ship, is fit at five minutes manage the Admiralty, and so there can be no difficulty on that score; and Mr. Canowett thinks he has brought his that score; and Mr. CARDWELL turnes he has brought his scheme for managing the army so mear to perfection that it will soon work itself. Thus the ordinary business of the country may go on very well under a Conservative Government, and as to the general credit and character of the Ministry, it would be abound to presente a Cabinet stupid of which Mr. Desirant was the head. This is the way in which members of the middle party in the constituencies measure with Management and these cap the stituencies mason with the considerations which impl

Belief that they may gratify their dislike of the Granssons Government without subjecting the country to any serious risk. On people who reason and feel in this way had the distributed to people who reason and feel in this way had the says may do very well for Elgin, less it will not do for them. They are not, like the Elgin electors, destrous to have a general survey of manifold offered to them. They could not understand it, and do not wish to be able to understand it. They are altogether below the Elgin level, and are very well satisfied to be so. They do not pretend to understand grand subjects, but they know when they like a Ministry and when they dislike one, and they are pleased to think that, when they do dislike a Ministry, they have such excellent opportunities as the Stroud election of letting all the world know what they feel.

THE DUKE OF BROGLIE AND THE RIGHT.

THE Extreme Right has descried the Duke of Bround a little scener than was expected. That a schism between them and the Ministry must come some time or other has been evident ever since the break-up of the Monarchical combination by the Count of Chambon's lotter; but it did not seem likely that it would come so early in the Session. Indeed the Extreme Right appeared to have put thomselves out of court for the moment by their support of the vote for prolonging Marshal MacMauon's powers. Had it not been for this, M. DE FRANCLIEU's argument on Thursday would have been perfectly consistent. Society, he said, is on the brink of an abyss, and there is but one he said, is on the brink of an abyss, and there is but one means by which the descent into it can be averted. There is safety in Legitimate Monarchy, and there is safety in nothing clse. The Duke of Brouns and his colleagues had this chance of salvation offered them, and they wilfully rejected it. If the Right Centre had stood by the Right and accepted the Count of Chamborn's letter as the basis of a Restoration, they would be a projected in the Assembly and might have commanded a majority in the Assembly and might have proclaimed Henry V. Instead of this, they chose to take their stand on constitutional niceties, and to reject their King because he spoke as a King should. The Government are now trying one expedient after another to undo the mischief which their own cowardice has caused. Their latest experiment in this direction is the Bill giving the President or the Prefect the nomination of Mayors. M. DE FRANCISCU is a Conservative as well as a Legitimist, and he arged with great truth that the Conservative party ought to aim at strengthening the local authorities in France, not at putting them still more completely in the power of the Central Government. It is the absolutism of the Control Government that has been the cause of so many successive revelutions. What the Conservatives ought to desire is the creation of new barriers against this absolutism. Even if he had confidence in the use the present Ministers would make of the powers which the Bill proposes to vest in them, he had no confidence in their retaining office. On the contrary, he believed the triumph of the Radicals to be imminent, and then, instead of the Conservative Municipalities finding strength and guidance in their elected Mayor, they would be weakened and rendered useless by the intrusion of a Mayor sent down by a Radical Minister of the Interior. This was the prospect for which the Right were asked to sacrifice the decentralizing convictions of a whole lifetime. This reasoning is very much to the purpose, but it would have come with more grace in the debate on the motion giving Marshal MacManon a soven years' tenure of power. In that debate the Right Centre made it quite clear that they had abandoned the idea of a Restoration, and that in their opinion the only available substitute for a Restoration was to appoint a dictator for a fixed term, and to invest him with exceptional powers. It was doubtful for some time whether the Extreme Right could be dissuaded from openly opposing this motion; but when this danger was got rid of, it was supposed that the general vote would carry the particular votes, and that, after sequiescing in the prolongation of Marshal Mac-MAHOR'S powers, the Extreme Right would equally acquiesce in the extension of them. It is earnly safe to look for consistent strategy from a political party. It is to the consciousness that they were untrue to their principles in not voting against the Seven Years' Bill that the present defection of M. DE TRANSLERS and his friends is probably attaibutable. Am amenay conscience has irritated them into

doing something to regain their self-respect; and the appearance of the Mayors' Bill gave them just the occasion they wanted.

M. PICARD, who supported M. DE FRANCLIEU'S motion in the name of the Left, drove home the argument that to give the Government the nomination of Mayors was to plant in every commune an agent of the party in power. Many members of the Right must have romembered with uneasiness how short a time ago M. Picand was a Minister, and how soon he, or some one worse than he, may be a Minister again. The Right are naturally exempt from the particular delusions which are most cherished by the Right Centre. The latter are in power, and though they know that the country is at present against them, they cling to the hope that before their tenure of office comes to an end, they will have discovered a way of bringing the country round to their side. The former are not in power, and have no present chance of coming into power, and consequently they are able to look at the situation with some approach to disinterestedness. The Right Centre again are Constitutionalists, and as such they feel a difficulty in admitting that the country is against them. It is an unpleasant fact which they are compelled to recognize in action, but they speak of it as little as they can, and do not care to measure too critically their chances of being able to alter it. The Right, on the other hand, are not at all disturbed at the notion of the Government and the country being in opposition. Considering the present prevalence of political wickedness, it would be no credit to a Government to have the country with it. Consequently they are in no way tempted to misread or underestimate the indications which show which way the current of public opinion is setting. The Right Centre are not disturbed by the thought that the effect of the Mayors' Bill will be to increase the power of the Radicals when-ever they are in office. They have no intention, they would say, of letting the Radicals come into office, and though they may secretly distrust their own ability to make good their boast, they cannot give that distrust expression. To do so would be to imply a doubt of their own fitness for the position they occupy. They have been placed there because they professed themselves strong enough to defend the fortress against the Radicals; and to admit that there is any force in the objection that the new works which they propose to erect will make the fortress all the stronger in the hands of the Radicals, when the present garrison has capitulated, would be to disclose the weakness of the defence with most unmilitary candour. But the Right, who survey the chances of the assault as simple critics, are not at all assured that the day will go as the Right Centre predict, and they are reasonably enxious to forecast what these new works will do when their fire is directed against the Conservatives. These reflections are not calculated to make them comfortable under such speeches as M. Picaro's.

The object of M. DE FRANCLIEU'S motion was to post-pone the discussion of the Bill until after the vote on the new municipal law which is hereafter to be brought forward. From his own point of view the Duke of BROGLIE had a good answer to this proposal. It is certain, he said, that the municipal law cannot be introduced for some time to come. It is part of a long series of constitutional measures, and it must be taken in connexion with the others. But there are certain powers which the Government finds it necessary to obtain without the loss of a day, and the right to nominate the Mayors is one of these powers. The Assembly has already assented to this demand by voting the question urgent; what can be more ridiculous than to do this, and then, when the question thus declared urgent is brought forward, to vote that it be postponed indefinitely? If all the deputies who had voted urgency for the Bill had been present on Thursday, this reasoning might have availed to carry the Government safely through the division. But the Right had mustered thinly-perhaps from a wish not to be forced to vote either against the Government or against their own champion; those who did attend were some of them supporters of M. DE FRANCLIEU; and the Left and Left Centre were strongly represented. The Government did all they could be represented. ment did all they could to postnone a division. They were so far successful that the balloting did not close till nine o'clock, which is full two hours later than the Assembly can usually be persuaded to remain at work, and this interval cught apparently to have sufficed to call the supporters of the Government from Paris. Whether the ing deputies had strayed beyond the reach of the tele-

graph, or did not care to answer to the summons, is clear. From one cause or the other only 494 mentions of could be got together, and of these 268 voted against Ministers. After this the Duke of Brouls thought himself bound to resign. That the majority of the Assembly will be anxious to avert this result may be taken as certain; but it is not so clear how the end is to be attained. A vote of confidence will not give the Executive the par-ticular powers which the Duke of BROGLIE has declared to be indispensable to carrying on the Government, and it is hard to see how he can return to office with dignity unless the Assembly grants his demand. Yet to cancel the vote of Thursday is hardly possible without subjecting the Assembly to an indignity which many even of those who had not courage enough to vote against the Mayors' Bill may be disposed to resent. No Legislature likes to admit that divisions are final only when they go in favour of the Government.

MR. CHAMBERLAIN AT SHEFFIELD.

MR. CHAMBERLAIN'S late speech at Sheffield, though it showed little of the ability which he is believed to possess, had the merit of stating with total unreserve the object of the revolutionary section of the party which is still called Liberal. Scarcely one of Mr. CHAMBERLAIN'S opinions would have been avowed or held by the leaders or the majority of the party ten years ago; but when re-formers have abated all the grievances of which they formerly complained, they must of course discover new abuses or discontinue the business of reform. If Mr. CHAMBER-LAIN and his allies had suppressed the House of Lords, the Church, the Game-laws, the absolute ownership of land by the present proprietors, and the toleration of religion in schools, they or their successors would be not less enger to abolish the Crown, the capitalists, and any other remaining exceptions to a system of universal democratic equality. It is possible that after the next general election Mr. Cham-BERLAIN may be a lender of a not inconsiderable party in the House of Commons. Mr. Cowen, who is now a candidate for the representation of Newcastle, professes nearly similar opinions; nor is it easy to distinguish between the professions of Mr. Chamberlain and those of Mr. Bright. processions of Mr. Chamberhain and those of Mr. Brieff.
"The priest, the parson, the squire, the land, and the Church,
"the aristocracy of birth and the plutocracy of commerce,"
would, as Mr. Chamberhain justly observed, "be united to
"stem the tide of democracy"; but the present constituencies,
especially when the revolutionary portion of their body is
reinforced by the establishment of household suffrage in. counties, will possibly be able to return a majority pledged to general subversion. The land, the Church, and the rest may judge of the equitable treatment which they will receive from their conquerors by the typical proceeding of the Chairman of the Sheffield meeting. It seems that when two or three hundred retrograde Liberals ventured to hold up their hands against the resolutions proposed, the Chairman announced that, as far as he could see, there were only two or three dissentients. It would not be complimentary to the majority to suppose that they were convinced by the arguments which Mr. Chamberlain thought good enough for the occasion. A democratic assemblage required no reasons for abolishing the institutions of the country or for asserting the uncontrolled supremacy of the multitude.

Mr. CHAMBERLAIN advocates a "universal provision of "gratuitous schools," which are to be such "that children " could go to them without the conscientious scruples of their parents being infringed." The Birmingham League. of which Mr. CHAMBERLAIN is a conspicuous member, and the Birmingham School Board, of which he is Chairman, have hitherto professed to regard the conscientious scraples rather of ratepayers than of parents. That a parent should have a conscientious objection to a school from which religious teaching is carefully excluded is at least conceivable and possible. No sentiment can be more landable than to desire for the people an elevation which should give greater value to their abour for themselves; but Mr. CHAMDERIALE would have done better to omit the conventional wish that their labour should also be of greater value to their employers, including the "commercial plutocracy."

Brassey and all competent authorities concur in the statement that the rise in wages and the dimination of the hours of work have sandered labour less efficient as well as dearer.

The large section which they already fully enjoy; and the complete which they already fully enjoy; and the complete and entered in simpleyers as a conspiracy. The great manufacturers who have, in the undoubted exercise of their sight, if with questionable prudstice, entered into the new Federation, are tearned with the remark that it is atrange that they cannot make an honest living. A capitalist who has invested 100,000l. in an industrial undertaking might undoubtedly have made an honest living if he had chosen simply to put his money into the funds. As a manufacturer he is entitled also to demand a reasonable profit, and to conduct his enterprise in freedom from incessant annoyance. It is a coarse and idle criticism to intimate with a sneer that, if he is not satisfied, he may change places with one of the leaders of the Trade Unions. If Mr. Chamber Lain and his party succeeded in destroying the plutocracy which they profess to hate, they would find that they had at the same time annihilated or banished the industry on which their clients depend. Those manufacturers who are not also demagognes will probably take warning at the next election from the language which is applied to their class by Liberals of the school of Mr. Chamberlain.

It is hardly necessary to say that Mr. Chamberlain is the deadly enemy of the landowners. His attack on "the "absurd custom of primogeniture" requires further ex-There are always plausible reasons for objecting to a law which unnecessarily restrains freedom of action; but the agitator who denounces "an absurd custom" may be supposed to point directly to restrictive legislation. There can be little doubt that Mr. Chamberlain means to recommend the adoption of the French system of compulsory subdivision; and perhaps it is as well that the real purposes of the assailants of primogeniture should be plainly avowed. The farmer, who is of course offered his share of the plunder of the landowner in the form of tenant-right, may save himself the trouble of stipulating for the terms of an occupancy which would itself become obsolete as soon as the law of partition had had time to operate. He may also be surprised to learn that the Game-laws are maintained for the amusement of the rich to the injury of the poor. The poor man may perhaps have a natural right to poach on the preserves of his wealthy neighbour, but if there were no Game-laws, there would be no preserves and no pheasants to peach. The more prudent opponents of the Game-laws are for the present professed advocates, not of the poor man, who has indeed no intelligible interest in the question, but of the farmer, whose crops are conventionally supposed to be injured by the game. It would be interesting to learn how far down in society obnoxious plutocracy extends.

If Mr. Chamberlain could succeed in introducing universal suffrage, it would be scarcely worth while to discuss the rest of his proposals, because they would be adopted as a necessary consequence. There are those who think that a numerical majority of the population ought to possess absolute power; while others consider that no other political system is so mischievous, so paradoxical, and so atterly unjust. The two parties, though their opinions admit neither of reconciliation nor of compromise, differ little as to many of the consequences of universal suffrage. The ulterior results in the form of anarchy and of the ultimate suppression of liberty may perhaps afford greater room for controversy; but if every man had an equal vote, it would be a waste of time to defend the House of Lords, or the Church, or the rights which are at present possessed by "the aristocracy of birth and "the plutocracy of commerce." Universal suffrage has been tried in France, where it has always been found necessary to counteract its preponderance by military force; and in Spain, which is now furnishing an incomparable object-lesson to Europe. In the United States, where social conditions are approximately equal, and where the supply of land is unlimited, universal suffrage has issued in nothing worse than the corruption and degradation of legislative bodies and of public functionaries. With those who think that the franchise is a natural and imalienable right it is useless to argue. There are undoubtedly honest advocates of a social and democratic Republic, but the weakness of those who at the same time about their objects and play into their hands is contemptible and inastrable. That a liberal, it may be hoped, highly insprobable. If fig. Characterial, it may be hoped, highly insprobable. If the Characterial, it may be hoped to be a substant of any further and the properties and play into their hands is contemptible and insarrable.

party. It is estimated to observe that a large number of Sheffield Liberals preferred a rival candidate. The violent measures which are recommended by such politicisms as Mr. Chamberlain and Mr. Cowen may perhaps furnish some explanation of the successes of Conservative candidates in elections. The defeat of the Liberal party at Strond will do the Government a service if it suggests the expediency of returning to the policy which was a few years ago that of the Liberal party. On a small scale the recall of Mr. Diseaell to office would resemble the late transaction in Madrid as a protest against the Intransigentes who are beginning to threaten revolution. The great majority of prudent persons would prefer a system of tamperate progress to reaction on one part, and to Mr. Chamberlain's subversive projects on the other.

FRANCE AND ITALY.

TO have the Romish clergy as enemics is troublesome enough, and is a severe call even on the energies of Prince BISMARCK. But it is still worse to have them as friends, to be thought their especial favourites, and to have to rule so as to please them and satisfy their requirements. The French Government is to a large extent a Government of those whom the clergy delight to honour, and whose fortunes are linked with those of the priests. The Duke of BEOGLIE and his colleagues may not perhaps be all that their ecclesiastical supporters could wish; but they are very anxious to receive such support as the French clergy can give them, and are not disinclined to go considerable lengths to purchase this assistance. The Ministerial organs are nover weary of repeating that it is easential in the eyes of every wise Frenchman that other people, and especially other people in a humble rank of life, should be religious; other people in a humble rank of life, should be religious; and to obey the priests and to be ready to look at everything from a clerical point of view is the only conception of religion that is ever recognized by French journalists as worth discussing. The priests, as a rule, are quite willing to render the services which their political allies require, and at every election the Government candidate is backed up by the priests is the Government candidate is backed up by the priests, is spoken of as marked out by Heaven to represent the constituency, and is pushed forward by the lavish use of ecclesiastical arts and arguments. But in proportion as the Government trusts more and more to the priests to befriend, it, the priests become less able to render it effectual service. The most marked result of the War of 1870 is one which could scarcely have been expected to have arisen from it. It is a growing and a very violent breach between the masses of the French people and the priests. The feeling is not confined to the lowest classes, nor to the inhabitants of towns, nor even to men. There is a repugnance to the priests, and an alarm at their designs, and a detestation of them as the secret causes of the War of 1870, which is found even in Brittany, and is spread generally throughout France. That the priests dragged France into the late disastrous war, that it is to the priests that almost every family owes the loss of some well-known face in its home circle, and that it is the priests who have made sugar and oil and soap and candles enormously dear by the new taxation which the war has made necessary, is the firm belief of the suffering heads of countless humble households from Calais to Nice. The Government has with it not only the priests but the great bulk of the upper classes, all that in the provinces is known as society, the minor professional, the financial, and perhaps the military worlds. But it makes no way with the masses. It is as unpopular in remote hamlets as in large towns, and this, not because humble Frenchmen have any dislike to the PRESIDENT or to the Dukes who rule under him, or any strong attachment to any other men or form of government, but simply because they think that the success of the present Government means the triumph of the priests. The Ministers have, it may be believed, no wish to become the humble servants, of the clergy. They feel like the Count of CHAMBURD, who had often said that, if he were on the throne, he would show the priests that they must keep their place and respect their The Duke of Broggie is not likely to be entirely blind to the harm that the alliance of the priests does him. He seeks at present to prop himself up, not by humouring the priests any further, but by various small political devices, by getting authority to appoint between thirty and forty thousand mayors all to his own taste, and by recasting the electoral law. It is the policy of his Cabinet just now to

impose some sort of restraint on the priests, and to seem in some trifling degree independent of them. But the head of the Ministry has a hard, if not a hepcless, task before him, if he proposes to overcome the suspicion and dislike with which he and his party are regarded in very large sections of Franch society, not on their own account, but because they are associated in popular estimation with the priests; and to the account of the priests is set down, partly justly and partly unjustly, the larger portion of the terrible misfortunes which France has had to endure, and the shock of which is even now deeply and widely felt.

One consequence of the alliance between the Government and the priests is that the Ministry is always getting into difficulties in the region of foreign politics; and very naturally it is with Italy that its relations are of the most varying and complex character. The priests make, and from their point of view naturally and properly make, the restoration of the Pore's temporal power the supreme aim of all their political efforts. That the Pore should have been robbed of his temperal power by the King of ITALY is mortifying enough, but it is doubly mortifying to think that he was enabled to accomplish his robbery by means of the very war which the priests exerted themselves to bring about in order that their views might gain a greater as-The majority of the Assembly would, at least in cendency. the early days of the existence of the body to which they beloug, have been delighted to go to war with Ituly and restore Rome to the Pork if they had dared, and probably the Ministry of the Duke of Broune would be very glad to do so now. The Italians are thoroughly pursuaded that, if there was a real Legitimist Government in France, Italy would be soon called on to fight; and during the autumn months of last year, when the designs of the Fusionists seemed likely to be crowned with success, the Italian Government thought it necessary to spend large sums, which could very ill be spared, in preparation for defence. The present French Government disclaims any intention of thwarting or threatening Italy, and in the present state of French opinion a war of any kind would be almost impossible, and war to please the priests would be entirely so. Even the Count of Chamborn had the good sense to see that he must let it be understood that he did not propose to begin his reign by dragging france into a crusade. But, on the other hand, the priests are the allies of the present Government, and something must be done to please them. It need not be anything of any importance, but it must be something which may be supposed likely to give pain or annoyance to the Italians, and so remind them that France is really on the side of the Vatican in the great Italian quarrel. In return the Italians view everything that the French Government does with sensitiveness and suspicion, and see intimations of un-friendliness in very small acts. The upshot is that France is always doing something in a tiny, safe way to annoy the Italians, and the Italians are always on the watch for some ground to be annoyed. In 1870 a French man-of-war called the Oranoque was sent to Cività Vecchia to be at the service of the Pork in case he chose to leave Rome, and there the vessel has remained ever since. presence is forgotten for the greater part of the year, but at the beginning of each year the thrilling question arises whether the captain of the Orinopse is to go to pay his respects to the Pore without also paying them to Victor Emmanuel, in whose harbour the ship is lying. It is exactly the kind of thing priests like to squabble about, and to get the visit of the captain paid to the POPE only is a triumph eminently calculated to stir their ambition. A terrible controversy raged this winter as to what the captain was to do, and the priests at last scattered their adversaries like dust by aunouncing that the French Government had decided to let the captain pay his respects to the Pope only. Fortunately the captain was a sensible man. When the day came for him to pay his visit, he discovered that he had sprained his arm, and could not visit any one. So neither party exactly triumphed, although the priests seem entitled to say that, if the Captain had not sprained his arm, he would have had to offer a trumpery mark of disrespect to the King of ITALY; and as this is the only political triumph the pricets have actually achieved in their contest with Italy for a long time, it would be unfair not to let them make the most of it.

In the last few days there has been another squabble of an equally undegnitied kind. Colonel DE LA HAYE, a French military attaché in Italy, died, and was to have been buried in the French church of St. Laure; but, in accordance with

custom, some officers of the Italian army, and among the Prince Humanus, proposed as a mark of separation at the ceremony; on which it are Councillate the French sentative at the Vatican, ordered that the financial at not take place in the French church, which is under the place in the French church, which is under the place in the French church, which is under the place in the French church, which is under the place in the French church, which is under the place in the French church, which is the Prince of the Pri control, and it took place in another church, Prince Hunself and several Italian officers being present. The Italians looked on the intervention of the French Minister as an insult to the Heir-Apparent, and the Minister himself seems so far ashamed of bimself that he now seeks to attribute what he did to a difficulty of etiquette, inasmuch as in the French church the Minister of France always takes the place of honour, and he wished to avoid taking precedence when so great a person as Prince Hussell was present. That he should be driven to such an explanation is perhaps, in the vicissitudes of this tiny diplomatic struggle, a greater gain to the Italians than his forbidding the funeral was a loss to them. But, although the Italians may perhaps be inclined sometimes to see slights when none are meant, they are quite justified in saying that the French Government marks its ill-will to them in ways that are unmistakable. The French Government is perpetually making little shifts and using little arts to avoid having a diplomatic representative at the Court of VICTOR EMMANUEL. It does not venture to say openly that it will have no representative at his Court, but somehow the representative is never there. For months it was left uncertain whether M. FOURNIER was or was not continued in his function, until at last the Marquis of NOMILLES was selected to roplace him; but the Marquis was at Washington, and it was discovered that his services there could not be immediately spured. All this is extremely petty, and very inconsistent with the dignity of France. It must be said, in defence of the present French Ministry, that they only continue to treat Italy very much as M. THEELS treated it when he was in power. But, since the liberation of the territory, the time has come when, if France is to preserve its solf-respect, it must have a clear foreign policy and pursue it openly. It professes as part of its foreign policy to be on good terms with Italy, and declares that the science of Rome is not regarded as a ground of professellings. If so it opplies to the trust light with of unfriendliness. If so, it ought to treat Italy with proper respect and good taste, and to scorn the appearance of desiring to subject a weaker Power to miscrable little annoyances and affronts. At the request of the little annoyances and affronts. German Government, the French Ministry has lately issued a circular to the French bishops inviting them, in courteous but plain language, not to use language about Germany which might get France into trouble. When it comes to which might get France into trouble. the point the Government is always ready to show that it will not allow the priests to get up a new war, or even to embroil the relations of France with foreign Powers. But there is something very mean in proclaiming, and in the main following, this line of policy, and in being ready at the request of the conquerors of France to give the clergy an open rebuke, and at the same time in giving an inferior Power like Italy a succession of covert kicks and sunbs. It would be exceedingly impolitic, but it would not be undignited, if France chose to break off diplomatic relations with Italy; but it is both undignified and impolitic in France to maintain apparently friendly relations with Italy, and yet to use these relations as a means of perpetually contriving some petty mark of dislike towards the Italians, just big enough to make the Italians feel it, and just small enough to give them no ground of sorious complaint.

A NONCONFORMIST GRIEVANCE.

I. In the eral use of conventional language, and perhaps he will gradually learn that the same accomplishment is equally applicable to written documents. A Prime Minister receives every day scores of applications and suggestions to which it is proper or customary to return civil answers, and a defeated Ministerial candidate fresh from his losing contest has an additional claim to counteons notice. Mr. Arture Armold has an excuse for troubling Mr. Charge me in the request of some of his supporters at Hantingdon, that he would represent their grievances to the Peinse Ministers and the Lose Chargeslass. It was not to be expected that a Liberal candidate should sak them why they had any approach ground for complaint. Of the facts of the one Mr. Armold seems to know subling except

mily been teld, and Mr. GLADSTONE'S is desired from hear in desired from hearny once removed; nor more either to the candidate or to the MINISTER k that on the face of Mr. Arrold's statement no delin is disclosed. It would be unreasonable to expect Mr. Armord should inquire parrowly into the merits of a tion with which indeed the borough of Huntingdon ms to have the smallest possible concern. County towns seldom furnish a large proportion of the justices of the county, although it seems that the father of the present Mayor occupied a seat on the bench. "His son, a Nonnformist of position and ability, has been passed over "in favour of young men, of whom one of the most recently "appointed is a brewer." As long as brewers are eligible as magistrates, they must, if they are appointed at all, be sometimes preferred to competitors who are not brewers. It might even have been thought that there was a Liberal resumption in favour of a Huntingdon brewer. It would be both discourteous and unjust for those who know as little of Huntingdon as Mr. GLADSTONE himself to question the position, the ability, or the mature age of the son of the late Mayor; but probably Mr. Arnold is well aware that he has scarcely propounded a case either for administrative interference or for remedial legislation. He says indeed that, in writing to the LORD CHANCELLOR, he did not ask his intervention; and it may be supposed that his communication to Mr. GLADSTONE is equally unconnected with any practical object. Nothing can be more pardonable than Mr. Arnold's wish to advertise his acquaintance with the Prime Minister; and possibly he may have cherished a well-founded hope that he would be able to publish a complimentary reply.

Mr. Aunold asserts that, "although the population of "the county is nearly half Nonconformist, yet there is not "one Nonconformist among more than fifty magistrates;" and Mr. Gladstone at once pledges himself to the proposition that the case as stated by Mr. Arnold "seems to be "one giving much ground for complaint as to the average "one giving much ground for complaint as to the exercise "of the powers of the Lord-Lieutenancy." The case stated by Mr. Arnold is defective, inasmuch as there is no allegation that a single Nonconformist possesses the legal qualification for the office of justice of the peace. It might happen that every Nonconformist in Huntingdoushire was a day labourer or a village shopkeeper, and yet that half the population might be Nonconformists. It is of course probable that there are several wealthy Dissenters; and perhaps some of them may have the necessary qualification in land; but Mr. GLADSTONE might as well have paused to remember the incompleteness of Mr. Arnold's case before he pronounced a censure on a public functionary of high rank. It is unfortunately true that Lord-Lieutenants, like other dignitaries, occasionally abuse their patronage. The great majority of the body must at present belong to the Liberal party, which has had the opportunity of making five appointments out of six. In some counties the bench has to a greater or less extent been supplied with members for political reasons, though it becomes every day more difficult to find persons in the upper or middle classes who approve of modern Liberal theories. It is possible that Lord Sandwick may have furnished an excuse for the charge which is insinuated against him by Mr. Arnold, and hastily adopted by Mr. Gladstone; but neither of the accusers of the LORD-LARUTEMANT pledges himself to the preliminary statement that competent Nonconformist candidates have, except in the case of the son of the late Mayor, been unfairly, or at all, passed over. According to Mr. Arnold there are lifty magistrates in Huntingdonshire of whom not one is a Nonconformist, but it is notorious that the class of country gentlemen from which county magistrates are taken does not, except perhaps in the neighbourhood of the great does not, except permaps in the neighbourhood of the great towns, include one Neaconformist in fifty. The case was different in the reign of Charles I., when the nephew of the possessor of Lord Sambwich's sent of Hinchinbrook, who was a Nonconformist, and, as his enomics said, a brewer of Huntingdon, rose afterwards to a higher rank than than of justice of the peace. M. Mr. Gladskous had not the most of justice of the peace. If Mr. Grandeness had not the most sensitive conscience of any statesman our record, he might be thought to have indulged in a recklement not altogether worthy of his position in discrediting without any sufficient around the administration of justice in Mantingdonshire. For all that Mr. Grandeness knows, even if Mr. Automotive and the meant conscientious and impartial of Lieut-Lieutenants; to indeed he may have an undue leaping to Dissenters, and have been unable to find among them any qualified

candidates for the beach. If, on the other hand, he is unjust in the distribution of his patronage, the Lone Charcellor has the power of correcting his mistarriages, and even, if any gross case can be proved against him, or removing him from office. The present mode of appointing magistrates is not wholly free from objection, but it is not easy to devise a preferable alternative. The Government has no means of knowing the social or personal qualities of different country gentlemen; and if a Minister disposed of the patronage, he would probably be guided by the advice of the nearest member of Parliament belonging to his own party, as Mr. Gradstone at once takes the side of an unsuccessful candidate.

There can be no objection to the complimentary language with which Mr. GLADSTONE closes his letter. Mr. ARNOLD was beaten at Huntingdon, but he will find consolation in being assured, on the highest authority, that his defeat can hardly be called a defeat. "It was a brave effort" to spend a good deal of trouble and a cortain amount of money in a hopeless contest. Mr. Arnold has now received a part of his reward, and he may reasonably expect future favours from the head of his party. It is the accepted duty of a Minister to prefer any follower to any opponent, and Mr. Gladstone is not likely to be backward or insincers in regarding elections from an exclusively party view. Private Liberals would be sorry to see Mr. DISRAELI turned out of Buckinghamshire, as private Conservatives would think it a disgrace to the Liberal constituencies if they failed to find a seat for Mr. GLADSTONE; but in official eyes a vote is a vote, and the merits of candidates have nothing to do with the reasons for electing them. It would be interesting to learn whether Mr. GLADSTONE and his colloagues really regret that the first lawyer of the Opposition and the leader of the common law Bar has, after a considerable interval, found a sent in Parliament. If Lord Sandwick has had any share in the choice, his Parliamentary patronage at least is well bestowed. It is no slight to Mr. Arnold to say that he can be better spared in House of Commons than his successful opponent. If it should be thought worth while again to contest the borough at the general election, some of Mr. Arnold's late supporters may perhaps ask him whother he concurs in Mr. CHAMBERLAIN'S opinion that Huntingdon ought to be summarily disfranchised. Mr. GLADSTONE is supposed to favour a redistribution of scats as a consequence of the proposed extension of household suffrage to counties; but it may be doubted whether the Liberal voters of Huntingdon are prepared to disfranchise themselves for the good of their country. Much larger boroughs will have to sacrifice the political power which they at present enjoy, if the country is to be split up into equal electoral districts; and it is not impossible that the prospect of disfranchisement may influence the next election. No compensation will be found in the anxiety of the larger constituencies for representa-The rabble of the tion in proportion to their numbers. large towns are already on the side of the party which seeks to extend and equalize the suffrage; and probably the respectable inhabitants of Sheffield will deprecate more carnestly than strangers the prospect of hereafter sending to Parliament five revolutionary agitators. On the whole Mr. Arrond may be congratulated on his first political experiment. He has contested a borough where members of remarkable eminence had been returned without opposition for forty years; and, if he has not prevented Sir JOHN KARSLAKE from worthily continuing the succession of the Perls, the Pollocks, and the Barings, he has obtained the honour of a letter from Mr. GLADSTONE which is scarcely more judicious than Mr. DISRABLI'S letter to Lord GREY DE WILTON. The Nonconformists of the county of Huntingdon may perhaps have been surprised to find that their real or supposed grievances form the subject of a correspondence between the late candidate for the borough and the PRIME MINISTER, but they will probably appreciate the ready sympathy which anticipates any knowledge of the facts. It may be conjectured that the Lord Char-cellor has not followed the example of his chief in furnishing Mr. Armour with a testimonial adapted to publication in the newspapers. As a lawyer, Lord SELBORNE must have seen that the charge was demurable; and as a Minister, e is probably not inclined to lend his anthority for election Durboses.

THE GERMAN ELECTIONS.

THE elections for the German Parliament take place 1 to-day. In Prussia, at all events, the interest taken in them will be mainly indirect. The Prussian people can think of nothing but their conflict with the Ultramontanes, and in this conflict the Gorman Parliament can have no share. It is probable that measures similar in tendency to the FALK laws will be adopted in Baden and Hesse; but the relations of Bavaria with the Holy See will keep the Imperial Legislature out of the quarrel. The Austrian Concordat came to an end with the personal government under which it had been concluded; but in Bayaria the Concordat is of later date than the Constitution, and it has as good a title to be respected as any other treaty entered into by a Parliamentary Government. The Ultramontanes themselves, however, have taken pains to give the elections an accidental importance even in the eyes of Prussians. To increase the number of their representatives in the German Parliament can do them no immediate service; but it would help to establish two facts which may be of great ultimate value to them. In ecclesiastical affairs Prussia is altogether independent of the rest of the Empire; but the opinion of the German public must influence in some degree the action of the Berlin Government; and if the candidates returned to day should show a larger proportion than heretofore of Ultramontanes, it will indicate that this public opinion is so far unfavourable to the Prussian ecclesiastical laws. And even in Prussia itself there is something for the Ultramontanes to do. The German elections supply a test of popular feeling which is not sup-plied by the Prussian elections. The German Parliaplied by the Prussian elections. The German Parliament is elected by direct universal suffrage; the Prussian Parliament is elected by direct universal suffrage; the Prussian Parliament is elected under a system which gives a few rich voters equal weight with many poor voters. Consequently the apparent gain of the Government even in the Rhenish provinces at the last Prussian elections does not necessarily prove anything as to the temper of the Catholic population. The strength of the Roman Catholic Church in Prussia lies in the lower class of voters, and it is only in the elections to the German Parliament that these are represented in proportion to their numerical that these are represented in proportion to their numerical

As regards any immediate effect upon the ecclesiastical policy of the Government, universal suffrage could avail nothing, even if it were extended to elections. Of the total population of the kingdom only one-third are Catholics, so that even if not a single Catholic vote were wasted, and the whole body of Catholic electors were at the command of the Ultramontanes, there would still be a substantial Protestant majority in the Prussian Parliament. But the proceedings of to-day will show pretty clearly how far the Catholic laity are in accord with the Catholic clergy. Until now there has been no opportunity of determining this, for the Catholic address to the EMPEROR was signed by too small a fraction of the Catholic population to give it any real value. If it should turn out that the Catholic people of Prussia are prepared to stand by their priests, the magnitude of the task which the Prussian Government has set itself will be immensely increased. It is a small thing for a powerful State to dopose a few troublesome bishops, but it is a serious matter to provoke the hostility of eight millions of peaceable subjects. The most headstrong Miniater would be forced to ask himself whether the possible gain is worth the certain loss, whether the alienation of the Catholic laity would not be too high a price to pay even for the humiliation of the Catholic hierarchy. Influential voices will not be wanting to drive these questions home. The EMPRESS is known to be opposed to the ecclesiastical laws, and it is understood that the Crown PRINCE believes that the Government has blundered in over-estimating the power of the Ultramontane party to do real injury to the State. At present indeed there is no room for any suggestions of this kind. The first burst of popular enthusiasm is not exhausted, and the new laws have hardly got into full working. By and by the processes of fining bishops and imprisoning priests will have grown wearisome by repetition; and if it should prove that the only result of the experiment has been to hinder the emancipation of the Catholic laity from clerical control, even the most resolute politicians would begin to doubt whether the experiment had altogether answered. The source of events may be entirely different if it should

turn out that the resisting priests do not very the sympathics of their people with them; and certainly these are some considerations which throw a doubt apan their ability to do so. The educating influence of the State is very great in Prussia. The habit of unquestioning acquiescence in the decrees of the Government is so deeply rooted that it is very much harder to evoke even a par resistance to an obnoxious law than in other counwhere public opinion is habitually critical. The kind of opposition, for example, which has been offered in England to some parts of the Education Act could have no counterpart in Prussia. The Catholic population has fully shared in this educating influence; indeed in some respects it has been more subjected to it than any other class. The generation which has grown up since 1848 has seen obedience to the State placed under a religious as well as under a secular sanction. The Roman ligious as well as under a secular sanction. Catholic Church was on the best of terms with the Government, and whonever this happens, she shows an anxiety to make hay while the sun shines which occasionally overshoots its mark. It is now to be seen whether she has not done so in the present instance. The laity have been taught to regard Church and State as having a composite claim on their allegiance, and now that they are suddenly called upon to dissociate one from the other, they may give the State the preference. It must be remembered, however, that the priests themselves down to 1870 were as submissive as the laity, and as they have now defied the Government, the laity may perhaps display similar resolution. But it is never safe to infer that where two classes of persons are unequally attacked they will be equally stronuous in resisting attack. It is one thing to resent laws which impose fines and imprisonment on yourself, and it is another thing to resent laws which impose fines and imprisonment on your clergyman. All these speculations will in some degree be set at rest by the result of to-day's voting.

It may be asked why the Prussian Government should suddenly have changed its policy towards a Church with which it had for so long a time maintained a good understanding. One reason may have been the irritation of Prince BISMARCK at the boldness of the Ultramontane party in making the continuance of their friendship dependent on the action of Prussia in the matter of the Temporal Power. The German CHANCELLOR is not a man to put up with dictation; and if the Archbishop of Posen hinted at Versailles that the Church might not preach obedience to the Government with so much fervour if the Government did nothing for the Pope, it is highly probable that Prince BISMARCK made up his mind to show the POPE that the favour already shown to the Church in Prussia was a matter of grace and not of right. At the same time there is reason to suppose that the Prince miscalculated the resistance he was going to encounter. Like most proud men, he forgot that others might be as proud as himself, and expected that as soon as he was known to be in carnest in threatening new ecclesiastical legislation the Pope would submit. In that case it might easily have been arranged that nominal obedience to the law should be rewarded by an equally nominal enforcement of it. When it became cqually nominal enforcement of it. When it became clear that this expectation was unfounded, Prince Bis-MARCK had gone too far to draw back without confessing himself beaten, and by this time a new motive for perseverance had presented itself in the extraordinary popularity which the new legislation had gained him. Indeed, if he had foreseen this result beforehand, there would be no need to go further for an explanation of would be no need to go further for an explanation of his policy. All the causes of quarrel between him and either the Liberals or the Conservatives are for the time forgotten; the war with Rome binds the Prussian Protestants to him by ties as strong as those by which the war with France bound the German people to him. As to the future, Prince BISMARCK probably puts much trust in the chapter of accidents, and the particular section of that chapter on which he most relies is the next Conclays. To count on bringing German influence to bear on the Sacred College at a time when the Italian element is so powerful in it, and when the name of Germany is more than commonly offensive to good Catholics, may seem a remarkable instance of counting chickens before they are batched. But Painer Butterer models in the country of the count hatched. But Prince Bismanck probably finds it easy to hope the best when even the worst that he sees reason to fear may not be so very bad.

PER COVERNMENT AND THE POLICE.

clast subject with which Mr. Lows h al since he went to the Home Office has gement of the pelice in London and in the e case of the Metropolitan Police he has had in the car me the abstird misconstruction which had been placed on a reasonable rule as to the responsibility of members of the force for evidence given in support of charges which are dismissed by the magistrates, and to direct that henceforth, when a decision is given which implies that the testimony of the police is negotiated. implies that the testimony of the police is unworthy of credit, the constables who are implicated shall be indicted for perjusy. The result has been that the police have been able in one instance to clear themselves of some very serious imputations on their honesty, and that they to-day to have an opportunity of vindicating their truthfulness in another case which has naturally attracted much attention. In regard to the County Police, Mr. Lows, following up a Circular issued by his predecessor to the effect that no duties should be sanctioned or recognized as police duties unless authorized by the Home Secretary, has prohibited the police from acting as Inspectors of Nuisances. This order has produced a good deal of or numerics. This order has produced a good deal or irritation among some of the county justices, though it is approved by others. At the Devonshire Quarter-Sessions it has been met by the passing of a resolution, on the motion of Sir Masser Lopes, pressing on the Government the necessity of contributing a larger proportion of the expenditure incurred in the maintenance of the policy. It expends the desired that under the circumstances. police. It cannot be denied that, under the circumstances, there are plausible grounds for this application. On the one hand, the Government never hesitates to throw work of its own on the police; and, on the other, it prohibits those who pay four-fifths of the expense of the police from making use of them as they desire. It is clear that the amount contributed on each side for the support of the force should bear some relation to the services which are rendered by the police on either side.

Without entering into the general question of local taxation which has thus been opened up, we may make one or two remarks on the relations of the police to the local authorities on the one hand, and to the Government on the other. As long as the government of London is in the hands of the Vestries, of whose proceedings the community at large knows just about as much as of the doings of the rats in the sewers, and over whom it has scarcely more control, the inhabitants of the metropolis should be very much obliged to the Government for taking the trouble to manage the police for them. The Metropolitan Police may not be quite so well managed by the Home Office as could be desired; but at least we are saved from the jobbery and imbecility of obscure and irresponsible vestrymen. It is possible to get at the Home Secretary in the House of Commons, and public opinion has also some influence on him; but the vestrymen are beyond the reach of public criticism in any form. In the counties the magistrates exercise a certain amount of authority over the police, but they complain that practically in all important matters they have to submit to the decision of the Home Office. This is perhaps an exaggeration, and it is obvious that, if the Government is to contribute at all to the support of local police, it must claim a voice in their management. It is no doubt true that, if any local rate were to be transferred to the State, the police rate might more appropriately be treated in this way than any similar impost; but there are some practical difficulties in the matter which should not be overlooked. Would the local authorities consent to give up such control as they at present exercise over the police? And, on the other hand, could the Government undertake the direct and minute supervision of the police in all parts of the country? If this were done, it would throw an enormous amount of power and patronage into the hands of the central Government, and would be exceedingly apt to lead to chronic local irritation and to perpetual differences between the local and Imperial authorities. Practically, the present arrangement is not a bad one, although it would certainly be well that the duties which the magistrates are entitled to impose upon the police, and the extent of their control over that body, should be more clearly defined, and also the proportions in which the expense of maintaining the police is divided between the local authorities and the divisorument should be revised in accordance with any new mente that may be made.

The question remains whether the pslice are the most suitable persons that can be found for discharging the duties of Inspectors of Nuisances. At first sight there certainly appears to be a convenience in employing them. In the ordinary course of their duties they have to ge about in all directions, and there must be very few bad nuisances which escape their observation. They are also in communication with all sorts of people, and would be likely to hear complaints from persons in the peighbourhood of any nuisance. It may be plausibly argued that as the of any nuisance. It may be plausibly argued that as the police are there already, and are in many ways qualified to discharge this duty, it is at once natural and economical to employ them for the purpose. A separate staff would be costly and would not cover the control of the purpose. costly, and would not cover the ground so completely. This is one side of the question; but there is another side, and Sir T. ACLAND touched upon this other side when he said that "the sight of a policeman going up a man's back"yard was not the best means of inducing him quietly to meet the demands made on his pocket as owner, or on his "time as occupier, to get rid of the cause of disease." It must not be forgotten that the associations connected with the police render them offensive to many persons as the agents of the civil law. As a rule, it is the business of the police to look after all sorts of bad characters, and there is something disgraceful in popular opinion in lt would being in any way in the hands of the police. appear that the irritation of the publicans at the recent Licensing Act has been in a great measure due to the fact that they are placed directly under the same supervision as thieves and vagabonds. It is perhaps difficult to see how a special force could be organized for the purpose of carrying out the Licensing Act; but the objection of the publicans to being placed under the police con-veys a lesson which should not be lost sight of. It is certainly desirable that the new sanitary regula-tions should be enforced in such a manner as to conciliate those upon whom they may be brought to bear.
It is only natural that persons who are put to great trouble and expense in this way should not be in the best of tempers, and it would be highly injurious to provoke them any further by bringing them into what they would consider invidious contact with the officers who have special charge of the criminal classes.

Moreover there is another point which must be borne in mind, and that is the efficiency of the police. Beyond all question the most important thing which the police have to do is to provide for public order and security; and notwithstanding Lord ABERDARE'S "gratifying statistics of the "diminution of crime," which rather show the impunity with which crime may be perpetrated, it may be doubted whether the work of the police in this respect does not tend to become more onerous rather than easier. It is perhaps not desirable that an absolute rule should be laid down that in no part of the country should the police he invested with sanitary functions; but in the majority of cases it would probably be convenient that they should not be employed in this way, both because their own proper duties are quite as much as they can accomplish satisfactorily, and because there is a prejudice against their intervention in civil matters which it is not worth while to contend with. It strikes us, however, that it might be quite possible to utilize the police in their own sphere as an aid to the enforcement of sanitary laws. There is no reason why they should not use their eyes and noses as they patrol their beats; make a note of all the nuisances which they discover for themselves, or to which their attention is called; and then report to the sanitary authorities, who could then investigate the matter and judge for themselves. In this way, economy, efficiency, and convenience might be combined. The sanitary authorities would have the advantage of the vigilant observation of the police, without having to keep up a large staff of watchmen of their own; and, on the other hand, persons who were responsible for nuisances would not be irritated by being placed under invidious

It may perhaps be thought that in these days of blazing principles and grand revolutionary projects, the management of the police is much too humble and common-place a matter to be taken notice of by a heroic Ministry. Yet there is scarcely any subject which at the present time more argently domands attention. It is a familiar boast that the people of this country are peculiarly loyal in their obedience to the law, and in their support of those whose business it is to enforce it; but in recent years dangerous the support of the more

ignorant and violent classes of the community to take the law into their own hands, and to hold themselves entitled to disregard it whenever it does not meet their approval. The whole history of the steps by which the mole obtained legal admission to Hyde Park has a moral which has perhaps not been sufficiently studied. The present agristion of the Trade Unionists for the relaxation of the laws against the entrages by which they maintain the despetism of their Societies points in the same direction. The disorderly and criminal classes may not be increasing in numbers, but they are becoming in various ways more daring and dangerous. In London an alarming number of murders has been perpetrated within the last few years without the faintest trace having been discovered of the murderers; and there are also other indications that neither in quantity ner quality are the police equal to their increasingly difficult and responsible work. The whole subject of the management of the police in the metropolis and threughout the country requires careful consideration; and Mr. Lowe could find no more useful or important employment than to take the subject in hand.

THE PLAGUE OF BOOKS.

lishers' Circular is as melancholy a document as is often set before us. It seems that 3,463 new books of one kind or another have been published in England during the last year. No attempt can of course be made to say how many of them were stillborn, and how many had some faint flickerings of vitality. It is not rash, however, to suppose that a large proportion will only survive, if it can be called surviving, upon the shelves of the British Museum. We wonder that none of the accomplished keepers of that national collection has as yet written an Elegy in a Library. The poor book mummies, ranged in order upon their shelves, are to us a more melancholy sight than any number of graves in a country churchyard. The village Hampden seems to our fancy to be sleeping comfortably under the turi, and we may generally hope that his life was not seriously disquieted by any misplaced aspirations. The ploughman may have had a hard life of it; but his ambition has seldom wandered far beyond the limits of his parish. His life has been narrow, but it has not been wasted. He has done something, however little, in the service of his fellow-men. But those poor books which stare at us so pathotically from their shelves, and which no kind heart will consign to destruction, have a different story to tell. Some few, of course, have been the weapons by which men of genius have conquered the world; a good many more, such as Post-office Directories, Annual Registers, schoolbooks, and the like, are a part of the machinery by which sivilized life is carried on, and their compilers have been employed as usefully as the ploughman. But there is a vast mass of literature to which it is impossible to attribute any utility, either in highest or the lowest sense of the word; it represents the misuse of so much paper and ink, and unfortunately the waste of human industry and the disappointment of human uspirations.

Thus, for example, we find that in the course of last year there were published five hundred and seven new fictions and two hundred and twenty-one new poems. Let us reflect for a moment on all that is implied in this statement. How many poets and novelists are there in existence whose work has the smallest pretensions—we will not say to immortality—but to be read by any but the author's friends? If a foreigner were to ask a well-informed Englishman for a list of the most distinguished of those seven hundred writers, how many could be mention off-hand? We will leave it to our readers to suggest the particular names which would occur in either department of art; but it would be extravagant to say that during the last year twenty poems or fifty novels were published which any rational human being would care to rescue from the waste-paper busket. That is to say, if we were as charitable as possible and extended the limits of our toleration for beyond the really excellent down to that which has the barest possibility of some sort of vitality about it, we could not mention one-tenth of the publications in question as deserving of a moment's notice. Of the two hundred and twenty-one new poems we may say with tolerable confidence that two hundred represent uter failures, and that it would have been good for their authors if they had nover seen the light. We may of course reconcile ourselves to the reflection on the general principle that waste is the law of the universe. As millions of herrings' eggs are produced for every herring that comes to life, so it is inevitable that hundreds of poems should be printed for every one that is read. We could not trust any censor to slay these innocents before their publication; a great deal of printer's ink would be saved, but, on the other hand, a Keats or a Wordsworth wend every now and then be suppressed; and the gain would not compensate the loss. We must suffer the production of any quantity of rubbieh in the hope that here and there some good material may turn up. But the ne

verses for poetry is rather confirmed in his belief when the critics tell him manuscrapy that he has made a first of himself. Gradually, however, the delegion disappears, or the writer becomes convinced that the vindicative nature of critics will always the vent him from obtaining a fair hearing. In either case, the relief to a sensitive mind must be a good deal of bitterness and disappears not what you thought, or that the world is so spiteful that it will never admit you to be what you are. One of these lessure has been forced upon some two hundred English poets in the past year. Two hundred young men and women have discovered themselves to be simple impostors or geniuses doomed to neglect. Most young people of any ability hegin by writing verses; but to get to the point of publication implies a considerable amount of self-confidence and ambition. Though we would not assume that two hundred elever youths—for the versifying impulse generally implies some telent as well as some wanty—have been misled by foolish ambition in this particular direction.

To write a novel generally implies less vanity than to write a poun; but in some respects we feel more sympathy for the four hundred and fifty persons whom we have assumed to have failed in fiction. They often have to suffer in more than in their vanity. There is a popular impression that anybody can write a novel who can obtain a sufficient quantity. anybody can write a novel who can obtain a sufficient quantity of paper and ink; and moreover that the product has a certain pecanizry value. Even an ardent poet is generally aware that his chances of making an income out of his genius are moderate; but many women take to novel-writing as women in a different class take to dressmaking, with a vague belief that it is the easiest mode of making broad and butter. A lady who loses her fortune generally proposes to take in the children of Indian officials; and if that scheme fails, she makes an effort to support herself by fiction. A good many of the novels published represent, we fear, such pathetic efforts of slowly sinking people to keep their heads above water. They are not the product of vanity, but a despairing clutch at the last means of making a respectable livelihood. When, therefore, an utterly and irredeemably bad novel comes before us, we are sometimes moved by a certain sense of respect. There is a pathos about its very stupidity. It suggests a whole record of prolonged family suffering. One sometimes hears in the record of prolonged family suffering. One sometimes hears in the streets a ragged couple with two or three half-starved children attempting to sing a dismal ballad. Assuming that they are not impostors, we pity them in proportion to their utter ignorance of the whole art and theory of music. The greater their incapacity, the more desperate the straits which must have driven them to the more desperate the straits which must have deriven them to such a resource. A detestable novel suggests a similar inference. We see behind it the poor widow left with a large family and a bottle of ink; we think of her desperate attempts to make both ends meet; the gradually increasing difficulty of keeping up appearances; the hopeless can wasing of the patrons of charitable institutions, the declining patience of right relations. institutions; the declining patience of rich relations; the feeble attempts to rub up old literary recollections; the elaborate diplomacy to circumvent some publisher of more good-nature than acuteness; and we feel more disposed to weep than to laugh at the lamentable result. There is not, it is true, a character or an incident in the novel that has not been worked to death a thousand tunes over; no two sentences hang together; and we feel that the most genuine two sentences hang together, and we teer that the third special sentences would have been to crush the whole affair in its manuscript stage. Still it is an attempt to find some more respectable means of livelihood than beggary, and therefore the design, if not the execution, deserves some respect. We have, indeed, no means of knowing how often this charitable hypothesis is realized; but editors of magazines report that their compassion is often invoked by such pretexts. The mention of magazines, moreover, suggests that beyond the mass of published nonsense, there are further masses of presumably still greater nonsense which do not get as fur as publication. When one reflects that the stuff which fur as publication. When one reflects that the stuff which actually makes its appearance is in some sense a selection, that in the lowest depth there is still a lower depth, the mind is almost appalled by the result. It is melancholy to think that necessity or vanity should compel so many people, who might be doing something really useful—washing clothes, for example, or keeping sheep in Australia—to pour out the masses of nonsonse which offer themselves for review. It is still more melancholy to believe that for each of these persons there are ton others, each of whom has received what is called an education, who have gone through the same labours; though luckily their books have only reached the enterpillar stage, instead of coming almost as full-blown butterflies.

blown butterflies.

We have spoken only of poems and novels, which are doubtless the most palpable examples of misplaced energy; but we
night find ground for similar reflections in other departments
of literature. Of the five hundred and shity-four new contributions to theology, how many represent really new thiought,
or real capacity for adapting old thought to new circumstances?
How much is mere ignorant fighting over again of battles
which have been settled long ago? and how much is sheer
twaddle which might be as fitty ranked amongs! the light literature as amongst the theology? People, we many planting seldom
write law books without some kind of qualification. Institute they
were for a class of professional realest; and only investigated in
the chamiled list any special phone for philosophical matter, though
we have painful reasons for Institute that any appears of

libery or undire the arrival the theul intellations by which the Full a of our finishesse and in Theory industry "require a finite qualification. Of books with input that the authors are hungry, or that the readers want is Their authors are hungry, or that the readers want is Their authors are hungry, or that the readers want is Their authors are hungry, or that the readers want is Their authors my serious atvances of knowledge or thought it would seem that the numbers might be reclosed very tendy, and that they might go into a very moderately-sized filtrary. A mediaval Pope, as the Circular rominds us, proposed to seduce all the books in the world to eix thousand; perhaps on the ground that, on an average, not more than one book a year has appeared since the creation of the world which is worth preserving. A philosopher who simed at being a nineteenth-century Pope proposed to limit the library of his disciples to (if we remember rightly) five hundred volumes. The Circular informs us that over ten million books had been published down to the year 1816. According to Comte's estimate, therefore, and counting a volume as a book, we may say that about one book in twenty thousand is worth preserving; whilst, according to the earlier Pope, we might raise the ratio to one in sixteen or seventeen hundred. We confess that the effect of these statistics upon us is tomake us feel as though this last proposal at least eactori bus as statistics upon us in tomake us feeles though this last proposal at least was not very extravagant. If two or three books published in the was not very extravagant. It two or three books published in the last year are destined to permanent vitality, we may congratulate ourselves on our fartility; for there are few years indeed in our past history of which so much can be said. Of the remainder, some may live long enough to justify their publication, and a good many are not books in the proper sense of the word any more than Brankane's Guide. Of the great mass which remains, we can only say that our congratulation must be mixed with much interior that the transfer th misgiving. We have a dim suspicion that, if the placue increases, some barbarian of the future will commit our national library to the flames, and that the abuse which he will receive will be mixed with some of the complucency which one feels when an intolerable incubus is lifted off one's shoulders. Even the boldest antiquaries of the next century may begin to feel that the materials for discovering the character and history of this are a little too

HEAD-MASTERS.

T is evident that the questions which have lately been raised at Rugby and Eton in regard to the authority of the Head-Master over his subordinates go to the very root of the principles upon which such institutions ought to be conducted; and it therefore becomes important to observe what the Public Schools Commissioners k ad to say on this subject, and what as the actual organization of these schools as by law established. These may possibly be room for discussion as to what is theoretically the best way to manage a Public School; but as to what the Public Schools Commissioners thought on this point, and as to the existing state of the law, there is no room for any doubt whatever The Commissioners took care to state their views in the cluarest possible language, and the Act of Parliament in which these views were embodied is equally explicit. In their Report the Commissioners lay down the following proposition:—

lay down the following proposition:

We think it important, on the one hand, that the Head-Master's responsibility should be clear and plum, and, on the other hand, that the powers possessed by the Governing Body should be well underwood, and that they should be duly exercised whenever the exercise of them is really called for. Nor is it difficult to trace out the limits within which, as it seems to these powers should be confined. They should include, at the least, the management of the property of the school, and of its revenues, from whatever source derived; the control of its expenditure; the appointment and dismissed of the Bead-Master; the regulations of boarding-house, of fees and charges, of Masters' stipends, of the terms of admission to the school, and of the times and length of the vacations; the supervision of the general treatment of the boys, and all arrangements bearing on the sanitary condition of the school.

dition of the school.

As regards discipline and traching, the Head-Muster should be, in our opinion, as far as possible, septetered. Dotails, therefore, such as the division of classes, the acheol-hours and actool-houks, the holidays and half-holidays during the school-hours and school-houks, the holidays and half-holidays during the school-time, belong properly to him rather than to the Governing Body; and the appointment and dismissed of Assistant-Musters, the measurements of residual discipline, and the general direction of the course and missiseds of study, which it is his duty to conduct and his business to understand thereughly, had better be left to his hands.

The Commissioners go on to say that "it should always be in-cumbent on the Governing Body, before coming to any decision affecting in any way the management or instruction of the school, not only to consider attentively any representations which the Hand-Master may address to them, but of their own accord to Head-Master may address to them, but of their own accord to consult him in such a manner as to give suple opportunity for the expression of his views." It is pointed out that it is also necessary that a thorough understanding, and opportunities for unreserved commitation, should subsist between the Head-Master and it is recommended that all the Masters should be periodically summaned to meet together in "a ficked Connoil," to addie the Head-Master, but not to hind or control him.

It will be seen that the necessity by the supremental the Head-Master in mand to the internal discullines and manufactured of the solution of the school is distinctly acknowledged by the Commitment of the resonability is to be clear and plain," and, as he is to be held resonable for the school, it naturally follows that the section working of the acknowledged. The relation

to the Assistant-Miniters is also defined with mountaleashie pronision. Their appointment and dismined are to be left in his
hands, and though they are to be at likely to advise him, it is
expressly hid, flown that they are not to present to "hind or
control him in any way." In the Hammery of General Bacommendations these points are again stated in the closecut manner.
"The Head-Minster should have the measured-lied power of selecting
and dismissing Assistant-Masters." "The fished Council should
be entitled to advise the Read-Master, but not to bind or control
him in any way." Again, in the special Report on Eugles we find
it proposed that the Governing Hody shall have general authority
over the achool, but "on some points, distinctly to be described in
our recommendations, on which we desire that the judgment of
the Head-Master shall be final and supreme, we doesn't advisable
"That there be reserved specially to the Read-Master power to
appoint and dismiss all Assistant-Masters in the school, to regulate
the divisions of the classes, and appoint the work to be duse," in.
Nothing can be more distinct or positive than this; and here is the
13th Clause of the Public Schools Act, by which affects was given
to the recommendation of the Cammissioners: to the recommendation of the Commission

The Head-Master of every school to which this Act applies shall be appointed by and hold affice at the pleasure of the new Governing Body. All other Masters chall be appointed by and hold their offices at the pleasure of the Hend-Master.

These, then, are the conclusions of the Public Schools Comsioners, after a careful and searching inquiry; and the law is in accordance with their recommendations. It will be seen that the Governing Body are expected to hold the Isead-Master personally responsible for the management of the school, and to leave the

responsible for the management of the school, and to leave the details of the management, including the composition of his staff of assistants, entirely in his hands.

The grounds upon which the Public Schools Commissioners formed the epinion that the only way in which a Public School can be satisfactorily conducted is to put it as completely as possible in the hands of the Head-Master, and to hold him responsible for it in the fullest degree, may be gathered from their Report, and from the evidence which accompanies it, and upon which they based their recommendations. Rugby at that time was, and had been for many years, a flourishing and successful school: and its for many years, a flourishing and successful school; and its prosperity was attributable to the discreet conduct of the Trustees and their harmonious relations with the Head-Master. Their authority over the whole school was of the widest and most arbitrary kind, but practically they seldom, if ever, exercised it, except in agreement with the Head-Master. They endeavoured to choose an efficient man for the office, and then they left him to manage the school in his own way. "In framing rules," the Commissioners observe, "the Trustees appear to have been Master." "Regulations framed by the opinion of the Head-Master." "Regulations framed by the Trustees for the internal management of the school have been very rare; this management they have in practice delegated to the Head-Master, with the werve of a power to rescind what he may have done, and to refuse their sanction, if they shall think fit, to any alteration of the existing system which he may propose to carry out." Again, "the relation between the Tenstees and the schoolmaster has always been that of confidence. Interposition on their past has been, to say the least, unusual, and the present bleed-Master (Fr. Tample) can call to mind no instance of it within his experience." The Commissioners add that "it would be a matter for prest regret if the possession of powers (by the Governing Body) to establish and modify general rules should ever lead to interference with the Head-Master in his actual administration of them" ; and " ing traditions would strongly discourage such interference."

There is an accumulation of competent testimony as to the necessity for making the Head-Master really master of the school. Dr. Temple, when he was himself Head laster, was very decided and emphatic on this point. In a Report to the Trustoes in 1864 he warned them of the danger of meddling with the Head-Master in the internal administration of the school. "The present system," he said, "has all experience in its rayour, and a constant only experience, but reason. The Head-Master of a school he said, "has all experience in its favour, and I think like this ought to be a num better capable of working it well, and better able to initiate improvements, then any one clee that can be found for the post. If a mistake has been made, and the Head-Master is not capable of this, the worst that can happen is that the school will languish a little, and that improvements will be delayed until the time comes for electing another flead-Master. But this is a very minor evil in comparison with hampering all Head-Masters by subjecting them to constant interference." Dr. Temple's evidence before the I'ubic Schools Commissioners was to the same effect. "The Head-Master," he Commissioners was to the same effort. said, "feels that the whole responsibility is entirely with himself." "Strictly speaking, the Head-Master need commit nebody." Dr. Temple adhered to this view when examined before the Committee of the Flouse of Lords, which inquired into various questions connected with the Public Schools. He pointed out that the working of the system depended entirely on a thoroughly good understanding between the Trustice and the Lead-Master, and that this understanding depended on the Trustices interfering as little as possible with the Head-Master. He added that since he had been Head-Master there had practically not been he had been Head-Master there had practically not been he had been Head-Master there had practically not been he had been he had been the part of the Trustices with his management of the school, and he objected to the proposed new Gaverning Body augmently on the ground that it would be apt to interfere. Parisher, Dr. Tample, as one of the Endowed Schools Commissioners, endersed the following recommendation in the Report of that body:—"To the Riead-Master, in our opinion, should be assigned all the internal discipline, the choice of books and method, the organization, and appointment and dismissal of easistants. With these matters the Governors should not be allowed to interfere." As Dr. Temple has said, these views are consistent not couly with experience, but with reason; and they are held by other authorities. In the House of Lords the Archbishop of Canterbury and the Bishop of London expressed very strongly their opinion that the rule of the Head-Master should be absolute; and Lord Charendon assured the House that the Government "was fully alive to the importance of making the Head-Master independent within his proper sphere." Mr. Bradley, late Head-Master of Mariborough, and formerly an Assistant-Master at Rugby, also urged upon the Endowed Schools Commissioners the importance of leaving the Head-Master "unshackled."

Having before us the views of Dr. Temple, when Head-

Having before us the views of Dr. Temple, when Head-Master of Rugby, as to the only way in which a public school can possibly be managed, and the fatal consequences of interference on the part of the Governing Body, it is interesting to observe how, after he cassed to be Head-Master, and became a member of the Governing Body, he gave effect to these views. Dr. Hayman was appointed his successor on the 2oth of November, 1869. On the 3oth twenty out of twenty-one Assistant-Masters addressed a memorial to Dr. Hayman objecting to Ma appointment. On the 5th or 6th of December these same Assistant-Masters sent a memorial to the Trustees complaining of Dr. Hayman's use of testimonials. On the 7th Dr. Temple wrote a letter to the Trustees, in which he accused Dr. Hayman, not only of dishonourable conduct, but of being "quite incompetent" for his office, predicted the ruin of the "moral tone and discipline" of the school, and intimated that "as an honest man" he should feel beund to let the parents of pupils know his opinion of his successor, and of the dark prospects of the school. It is impossible to exaggerate the flagrant indecency, from every point of view, personal non Dr. Temple's position. It amounted to a threat that he would to all he could to discredit the school, and to drive away pupils, I Dr. Hayman took his place. Yet, at the same time, he was obliged incidentally to confess that he "knew little" of Dr. Hayman except as a student at Oxford in 1845, and that since then he had only seen him when "showing him the routine of the school." On the 20th of December the Trustees unanimously came to the conclusion that Dr. Hayman "had acted with perfect good faith" in the matter of the testimonials, and confirmed his appointment. Before long, however, Dr. Temple himself became a member of the Governing Body, and lod the atack on the authority of the Head-Master which, as Head-Master leagued against him, it was clearly impossible that any Head-Master could discharge his duties in a satisfactory manner. Dr. Temple ha

THE "TOWERS OF SILENCE" CASE.

By way of contrast to calamities which are not the less alarming because they affect only a portion of our fellow-subjects in India, or to expeditions against hill tribes who speak dialects known only to missionaries and philologists, there come occasionally from some one of the Presidencies accounts of social convulsions by which one-half of the community is set in array against the other half. Monster trials are, indeed, one of the familiar products of that civilization to which we flatter ourselves that we are gradually introducing the educated natives. A good, expensive, acrimonious litigation, protracted over a week, highly spiced with personalities, and ending in the triumph of an acquittal somewhat against the summing-up of the judge, and in editorial pmans, can be enjoyed as keenly at Bombay or Calcutta as in Paris or London. The Parsee fraternity at the former Presidency has just enjoyed a lively but costly recreation of this sort. And, without wearying our readers with all the details of a case which, with its appendices in the shape of spirited leaders, fills nearly ninety pages of the very closest print, we will condense into a short space the main issues of a contest for which all the materials were provided within three miles of Government House at Parell. Apart from the peculiar social facts which it brought to light, the trial, famous in India by the above title, has a political and moral significance which cannot be disregarded.

Whatever may be thought of the pretensions of Bombay to become, as is urged sometimes, the chief seat of our Indian Lampire, there can be no sort of doubt that in extent, position, and appearance it is one of the most striking of semi-Oriental cities. Its

capacious harbour, wide at the entrance and terminating in a narrow strait between the laind and the mainland, might easily contain not one, but more, of the navies of the civilized world. The mainland, dimly seen through the heate and smakine, rise up the chain of hills which are termed the Ghants or peaces. A long stretch of rocky land, jutting out into the Indian Ocean, forms what is curiously enough called Back Bay. The northeast creat of this low range or promontory, known as Maleber Hill, has, for some two centuries, been occupied by the Parsece as their place of sepulture. We use this term, though aware that this people are in the habit, not of burning their dead, like the Hindoos, nor of burying them a few inches in the earth, like the Mahommedans, but of committing them to a space enclosed by high walls, where the remains are speedily and inoffensively devoured by vultures and birds of prey. The procession on these occasions is characterized by much solemnity. Near relations are forbidden to approach within three feet of the corpse; those who carry the dead body enter a small building, where they are purified by a sort of penance and prayer. It will easily be conceived that it must be an object of peramount importance with the leaders of the Parsecs, not only to preserve their national burying-ground intact and free from intrusion, but also to add to it, if possible, by acquiring additional strips of the adjoining land. It appears, however, that for the leat ten years various disputes have arisen between the fire-worshippens and other parties regarding the exact boundaries of these extra bits of land, or as to the tenure by which they were held or leased. Adjustments have taken place after due inquiry, and everything was going on without violence or open rupture, until the beginning of last apring. At that time a curious partnership was formed between a Hindoo named Covergee Pragice and a Mahommedan named Yakoob Jumal; and it is quite obvious that mercantile speculation and profit, and not religious or named Yakoob Jumal; and it is quite obvious that mercantile speculation and profit, and not religious or benevolent motives, must have been the means of bringing together two men who otherwise could have had little or nothing in common. Apprehending some difficulty in getting possession of a piece of ground already contested, these worthy partners applied to the Commissioner of Police, who, on hearing of a counter-claim set up by the Parsees, replied, perhaps not improperly, that he should content himself with preventing a disturbance or breach of the peace. Then, relying apparently on that energy and promptitude for which natives invariably give credit to Englishmen, official or unofficial, the oddly-matched couple next called in a master-builder named Duffy, in order to signalize their possession, not by empty formulas, but by practical measures which could not be denied. It is admitted by both sides that this Redemptor set about his business, cum famulis et camentis, in the most complete and earnest business, cum famulis et camentis, in the most complete and earnest fashion. He marked out his boundaries in the presence of the police. His workmen brought materials for the erection of a hut in eight compartments, which was speedily completed; and to this was added a comfortable double-poled tent, from the celebrated manufactory of those articles at Jubbulpore, for the use of the builder himself. The avowed intention of the purchasers was to make roads through the ground, and to cover it with bungalows; while, to complete the occupation, a bamboo screen was crected in front of a small door in one of the walls of the Parsee burying-ground, or Tower of Silence, in order to bar any right of way. Those conversant with the religious and social feelings of Orientals, with their modes of seeking redress, of expounding their sentiments, and of vindicating their rights, will readily guess at the consequences. We should also state that the Parsees appear to have been somewhat irritated by the performance of a ceremony called battakes, which consisted in beating a drum as an intimation that the builder's workmen would begin to blast the solid rock.

Up to this point there is no very material discrepancy between the theory of the prosecution and the points relied on by the defence. But here the stories diverge. The police endeavoured to make out that the Parsees in a body, armed with sticks, and reinforced by large numbers of riotous Hindoos and Mahommedans, Parsees from the mother-country of Iran, and Pathans from Upper India and Cabul, destroyed the hut, burnt the tent, ejected the builder forcibly, and smashed the furniture. The counsel for the defence, the foremost of whom was the late Mr. Chisholin Anstey, advisedly called no witnesses, but simply endeavoured to discredit the testimony for the prosecution and are and to a smaller of the prosecution and the process the second and the process the process to the process the process to the pr was to make roads through the ground, and to cover it with

the theory of the prosecution and the points relied on by the defence. But here the stories diverge. The police endeavoured to make out that the Parsees in a body, armed with sticks, and reinforced by large numbers of riotous Hindoos and Mahommedans, Parsees from the mother-country of Iran, and Pathans from Upper India and Cabul, destroyed the hut, burnt the tent, ejected the builder forcibly, and smashed the furniture. The counsel for the defence, the foremost of whom was the late Mr. Chisholin Anstey, advisedly called no witnesses, but simply endeavoured to discredit the testimony for the prosecution, and to make out that the defendants were in reality the aggrieved parties, and that no riot or act of violence had taken place. The defendants, exactly fifty in number, were arraigned at the Criminal Sessions, before a barrister-Judge of the High Court, under various sections of the Indian Penal Code for rioting, being members of an unlawful assembly, and causing wilful damage to property. Such a case, which, on the Civil side would have been represented by a mere action of trespass or of one for ejectment, and at the Sessions took the form of an ordinary charge of riotous assembly, may appear tame and even commonplace. But there are certain facts which take this litigation out of the category of similar farensic disputes. The Parsees are, as a body, enterprising and loyal. Many of them have given proofs of an excellent public spirit, and several have been honoured with the approbation of the Government and the favour of the Crown. The matter in dispute touched the religious sensitiveness of the whole native community. The cause of action arose at a spot familiar to be been touched the religious sensitiveness of the whole native community. The cause of action arose at a spot familiar in order to support Colonel Handerson, and the foremost manileure in order to support Colonel Handerson, and the foremost manileure in order to support Colonel Handerson, and to he foremost manileure.

of architects acting in behalf of the Dann St. Paul's. Then, the police in all Eastern are always been the mark for covert insinuation i. In the present instance the leading counsel the chempion and defender of the Parsees had, od firth as the cl In 1865, given grounds to the very same community to petition openly against him, and to ask for his removal from the Bench, a seat on which he was temporarily occupying. When, therefore, we consider the place of the occurrence, the antecedents of the chief advocate, the number, character, and religious feelings of the Pareses, and the course adopted by the Government, it is solerably clear that the "Towers of Silence" combined all the materials of a very noisy quarrel. And so it turned out. The case occupied nine days, into which were compressed the speeches for the prosecution and the defence, the examination, cross-examination, and re-examination of, after all, not more than eight or ten witnesses, and the summing-up of the judge. The proceedings were enlivened by constant sparring matches between the main witnesses and the learned counsel. There were one or two "collisions" between the Bench and the Ber. There were some remarks made which were wholly "uncalled for," and others delivered like stage whispers, and intended to be heard all over the Court. Of the public excitement in Bombay and elsewhere during the trial, and on the deliverance of the verdict, it is scarcely necessary to speak. It was what we may expect, with the ther-Sor, given grounds to the very same community to petition fir against him, and to ask for his removal from the Bench, a necessary to speak. It was what we may expect, with the thermometer at 88, when every man knows all the weak points of his neighbours. The prosecution found it necessary to abandon the charge against nine of the prisoners; and the jury, composed of one Hindoo, one Parses, an Eurasian or Portuguese, and at least a property of the prisoners of th seven or eight Englishmen, acquitted the prisoners after a delibera-tion of just one hour and twenty minutes.

It is evident from his language, that the judge did not think that any extreme violence was resorted to, or that a conviction, if obtained, ought to be followed by any very severe measure of punishment. But on a review of all the circumstances it is impossible to acquit all parties concerned in the case, prosecutor, witnesses, advocates, clients, and even the judge himself, of some degree of blame. The police were decidedly wrong in allowing the satute Hindoo, with his Mahommedan yokefellow, to mark out the boundaries of a spotfertile in disputes, and of doubtful proprietorship, under their authority. These two worthies should not have been allowed, after entry fertile in disputes, and of doubtful proprietorship, under their authority. These two worthies should not have been allowed, after entry on their alleged possession, to deposit materials and to commence building until a month had elapsed. By a well-known law, which, if not in force in Bombay, has been applied in hundreds of cases in many other parts of India, no summary title can be conferred on any one who cannot show at least a thirty days' possession. In this case the whole occupation previously to the riot did not cover a fortnight. The Parsees can hardly escape some moral condemnation for the entire destruction of tents, and furniture, which was undoubtedly the act of themselves or their adherents. The Government was ill-advised in committing itself to a prosecution which the ment was ill-advised in committing itself to a prosecution which the opponents broke down effectually without calling a single witness of their own into Court. And the judge went out of his way, moved possibly by the taunts and demeanour of the barristers, to remind possibly by the taunts and demeanour of the barristers, to remind Mr. Chisholm Anstey that the very persons whom he was now so anxious to whitewash, had once been clamorous for his removal from the Bench. The jury, in all probability, as happens in such cases, either thought that the aggression and insults of the two partners almost justified the retaliation, or else could not satisfy themselves that the police had picked out the right men.

The moral, however, to be drawn from a perusal of this trial is not to be measured either by an acquittal or a conviction of the defendants. Litigation, to rich natives, or to influential sections of the community, is their game of politics. Hindoos and Mahommedans, in spite of a great dislike to direct or new taxation, and of occasional fits of penuriousness, will often spend money

tion, and of occasional fits of penuriousness, will often spend money in useful and beneficent works. But they cannot always be opening a market, digging a vast reservoir, or constructing a road of granite. Occasionally they are touched in some tender place, and nothing will then satisfy them but to crush their adversaries, or to defend their own privileges, by hiring the tongues and the togas of barristers at the rate of fifty pounds a day. Still, anything that gives them confidence in the cloquence and skill of advocates, the investigation of the confidence and defend the province of the confidence in the cloquence and skill of advocates, the investigation of the confidence and defend and the confidence in the cloquence and skill of advocates, the investigation of the confidence in the cloquence and skill of advocates, the c in the impartiality of judges, and in the purity of jurymen, in reality familiarises them with our habits and institutions, and reality familiarises them with our habits and institutions, and seaches them that the law courts are much better calculated to decide disputed matters of purchase and succession than hired between with their swords and clubs. There is a political side to all our judicial machinery. And, whatever be the issue of any particular litigation, a step in advance is gained if the natives can be gradually weaned from habits of turbulence, and be taught to handle the weapons of civilized forensic warfare. Reading the trial by the comments of the Anglo-Indian and the native press, we need not wonder why a Presidency was convulsed by a disturbance in which, as far as we can see, the only things damaged were a but and a tent, and the coat of the master-builder, which, ascerding to his evidence, was torn in the soulle, like the garments secording to his evidence, was torn in the scuile, like the garments in Omning's celebrated ode.

THE NEIGHBOUR CHURCHES OF FLORENCE.
TRAVELLER in Italy was lately much laided at by his friends for saying that, for his purposes, Florence was chicaly triends for saying that, for his purposes, Florence was chiefly by to get to Florole and San Miniato. If he had said that

Florence was in itself less worthy of study than Rissol Miniato, the jeers would have been well deserved. But ing to a doutrine which we have tradertaken are almost for which taken travel may be undertaken are almost a fit it is wise to chalk out each journey with a view to a clear or change of chiefs only there is nothing abused. for which makes at each journey with a view to see class or classes of objects only, there is nothing about at Florence as, for certain purposes, the Florence station. There are certain rational purposes of study the illustrious city in the plain supplies less material the illustrious obscure anota which shown the heights on one inustrious city in the plain supplies less material than the comparatively obscure spots which crown the heights on either side of her. As the most renowned and the most abding sest of medieval civic democracy, as the great home of Italian literature, as one of the great homes of Italian art, as the city which has given birth to a longer list of great men than any city since the old days of Athens or Rome, Florence stands forth illustrious above the cities of Italy and of the world. For some centuries Florence was the centre of Italian history, and those was conturies when the the centre of Italian history, and those were centuries when the history of Italy was the centre of the history of the world. Still many ages of important Italian history had passed away before Florence rose to fill any leading place in Italy. It is not till the thirteenth century that she begins to step into the position which in earlier times had been held by Milan. Fow spots in the world call up nobler associations than the open place where her citizens came together under the shadow of the stately palace of her magistrates. But both the historical associations and the material fabrics belong to a comparatively late time. The man who seeks for memorials of classic, or even of early mediaval, days must not go to Florence to look for them. The Roman city founded on Etruscan soil has no traces to show of Etruscan art, and only ver feeble traces of Roman art. She has nothing to set against the amphitheatre or the gateways of Verons, against the unique wonders of Ravenna, against the basilicas of Lucca, even against the few relics of ancient Milan which escaped the hand of the Ine lew relics of ancient Milan which escaped the hand of the Swabian conqueror, against the colonnade of Maximian and the minster of St. Ambrose. Her baptistery stands as her one surviving relic from the days of the truest art of Italy. Her greater buildings belong to the days when Italy had forsaken her native style, and had given herself to the vain attempt of reproducing the forms of Northern architecture on unkindly soil. Florence, in short, soars above all rivals within her own world; but there is an agricer world in which sha has her own world; but there is an earlier world in which she has hardly any share. And those whose immediate studies lie within that earlier world may well, for the while, deem Florence the Fair And those whose immediate studies lie within spot which has less to set before them than her humbler satellites.

From the height of San Miniato on the southern bank of the Arno we look down on the great city itself; we look out on the hill, crowned by the elder Etruscan settlement, where the slender tower of the little duomo of Piesole lifts its head to mark the city which has been almost as eternal in her littleness as Rome has been in her greatness. And we look too on the walls and forts and gates spread around us on every side, and we then feel that the greatest ork of the fair city's greatest artist was that which is not recorded in the list of his praises on his monument in Santa Croce. Grand-ducal rule it was safe to tell how Michael Angelo painted pictures, and carved statues, and raised the Pantheon upon the basilica of Constantine; it was not safe to tell how he wrought a yet nobler work in strengthening the walls of his native city, when she stood in her last days, a spectacle to heaven and earth, when she stood in her last days, a spectacle to heaven and earth, the one spot of free Italian ground which defied the united powers of Pope and Caesar. But to the traveller whose immediate business lies among earlier days, his chief spot of pilgrimage on the left bank of the Arno will be the church of San Miniato Itself.

The hill monastery of San Miniato has one point, and perhaps only one, in common with the metropolitan church of the city which lies at its feet. The duomo of Florence is one of the few

Italian buildings where the outside so far surpasses the inside that we cannot enter one of its doors without a feeling of disappoint-This is most certainly not the case at San Miniato. the general outline of the church and its attendant buildings is decidedly striking, especially to an eye fresh from Rome, where the basilicas, of no very striking outline in themselves, have been so hopelessly disfigured by the vagaries of successive Popes. The traveller through Italy constantly sees some noble hill crest or peak crowned by a town or village, and almost the first thought is how much a picturesque site loses from the utter lack of picturesque effect in the buildings with which it is crowned. He cannot help thinking how different the landscape would be, if the successive architects of a German town had crowned such a site of the cannot have a site of the ca with walls, gates, towers, and spires, with the over-shifting group-ing of church, eastle, and Council-house. At San Miniato, and at Fiesole too, we are less tempted than usual to make this complaint. Neither the monastery of San Miniato make this count plaint. Neither the monastery of San Miniato nor the duome of Fiesole makes the least approach to the picturesque grouping of a German building; but they have more of outline that is to be found in many churches in Italy, and above all in Rome. Both perhaps have about as much outline as an Italian church without perhaps have about as much outline as an Italian church without product and the product of the p the cupola can have. Each has a distinct west front, not merely the cupola can have. Each has a distinct west front, not morely a rough wall to which a west front was to be added some time or other. In each the long line of narrow windows remine untouched, at least in the clerestory. In each the bell-tower, though in itself of no architectural value, has its share in the general effect of the whole. And at San Miniato the castellated monastic buildings adjoining the church, though they have been a good deal disfigured in detail, stand out with more of distinctness and character than is common in Italian buildings of the kind, and they certainly have their share in the general effect which strikes the age of the

traveller as he climbs the hill from the San Ministo gate of Florence. Yet, after all, it is the inside of San Ministo, or at all events the inside together with the west front, which most deserves our study. The visitor to San Ministo, unless indeed he happens our study. The visitor to San Ministe, unless indeed he happens to be looking directly on the campanile, finds his thoughts at once carried back to San Zeno at Verone. In both the, long arcades of the busilies are broken by the great arches spanning the nave, and in both the effect of those spanning arches is to make the column, the natural feature of Italian architecture, alternate with the clustered pier or group of half-columns which carries the thoughts to buildings morth of the Alps. In both the lofty choir is berne up upon the open pillared crypt below, an arrangement whose effect differs almost as much from the dark crypt of an English minster as it does from the confession of a Roman basilles. Thus far San Zeno and San Miniato agree in their main features of construction and arrangement. Where they differ is in the treatment of the nuterial of which each church is built. In San Zeno the alternation of bands of stone and brick, so as to produce a variety of colour—an alternation which was perhaps suggested by some of the later forms of Roman masonry—is introduced in some slight degree, but not enough to perplex the eye, still less to interfere with any of the architectural features of the building. At San Miniato that alternation of the building. black and white, which, when carried to extreme, makes a building lock like a piece of Tunbridge ware, is applied both to a large part of the inside and also to the west front, which, as so often happens, is plainly the last finish of the original building, a finish sppens, is plainly the last finish of the original building, a finish which might be almost called an addition. The good or bad effect of this kind of ornament is one of those things which are very largely a mutter of taste about which it is uscless to argue cover a wall with mathematical figures, traced out in black and white, may often be better than leaving it quite blank; but it is surely a poor substitute either for strictly architectural ornament or for mosaic or painted enrichments of any kind. It may be endured when it fills up the blank space which in a Northern church would be occupied by the triforium; but it has a strange effect when the round-headed windows of the clerestory peep out from between figures of this kind which look like a geometrical puzzlo. In the inside this ornament seems to have been an afterthought; but in the west front, where it was evidently planned from the beginning, it has clearly affected the architectural design, and that not for the better. The wheel of fortune at San Zeno, the arched windows of Pisa and Lucca, could hardly have found a place where the front was to be cut up into a series of fronts and lozenges. Even in the lowest stage, where the range of five arches does suggest the lowest stage of Pisa, the passion for this kind of decoration has quite cut off the arcade from the doorways, leaving the latter simply square-headed, without any attempt to work the arches and Within, the vays together in the number of a tympanum. capitals are, as everywhere, a study. In the nave the columns have classical capitals; the clustered piers and the columns in the erypt have various kinds, classical, quasi-classical, and rude forms which might be cut out into something more enriched. As often happens, a strictly classical feature preserves its classical character, while a greater license is allowed when the feature itself departs from a classical precedent.

The Abboy of San Ministo, within and without, is now set apart for the use of the dead, as a burying-ground and a funeral church. The duomo of Fiesole, to which its tower seems to becken us from the opposite height, is still in the hands of the living. A small basilica with narrow aisles with cross-arms which are something between a Roman chalcidice and a Northern transcot, it has the same kind of crypt and raised choir as San Miniato, but it lacks thouseher spanning the nave. The capitals of the crypt are specially worthy of study for their atter departure from any of the common Italian types. Some of them are by no means lacking in ornament, such as it is; but it is ornament which altogether departs from classical models, and which yet does not bring in the mainal forms of Milan and Pavia. They approach nearer to our own primitive Romanesque; some of them seem to have a near kindred with the strange capitals in the slype at Worcester. Others, especially in the clustered piers of what we might almost call the lantern, present a rich variety of the composite type, but a type which we suspect that a classical purist would be far from admitting as orthodox. Every-whore the transition goes by different paths. Everywhere the classical types, which are the common models of all, show their influence; but they show it in different ways, and architectural specialists could hardly hit upon a better subject than an historical study of the various forms of capital to be seen in the Roman and Romanesque buildings of Italy. We can only suggest such a subject without following it into detail, but we may add that, though the subject may seem a smell one, it is one which, like every other of the kind, calls for real historical knowledge. The man who tries to fix the dates of buildings without knowing what that is, without knowing what the state of things was when the buildings were set up—can never reach to an accure understanding even of his own special walk.

VIVISECTION.

The correspondence which has taken place in the Times on the cabject of vivisection leaves us somewhat in the dark as to the extent to which, and the conditions under which, suspical experiments are made on living animals at Professor Schiff's Physiological Laboratory in Florence. It appears to be quite

certain that a suit was begun by some of Dr. Schiff's as with a view to obtain an interdict against the nuisance which a view to obtain an interdict against the nuisance which they alleged to be caused by the yelling and shricking of under his knife; and there is no reason to suppose that the was brought out of malice, or that the neighbours fancied that they heard sounds which had really no existence. It has, indeed been supposed that it is not the animal or the acceptance with been suggested that it is not the animals on the operation table, has alive, which create the disturbances complained of; and Dr. Schill's those waiting in the courtward outside for their turn to be cu assistant has even gone so far as to insinuate that it is the dogs some of the plaintiffs which are responsible for the tumult-the whole, we are inclined to believe that no very great and can be produced by the cries of the wresched creatures upon which the Profess r is actually making his experiments. It is impossible to suppose that he is at this sort of work all day long; and when he has once begun upon his victim, it may be presumed that he soon makes an end of it. Whether or not the practice of virisection in the Physiclogrical Laboratory is sanneying to the people in the neighbourhood on account of the cries of the people in the neighbourhood on account of the cries of the animals operated upon seems to us, however, a very small part of the question, though it is perhaps characteristic of Italian habits of mind that this should have been made the subground for the proceedings against the Professor and the authorities who have charge of the institution. We are more concerned about the animals themselves. Dr. Schiff and his assistant assert that, if possible, ancesthetics are always applied when it is supposed that the operation will cause intense pain; but this is surface a qualified statement. There may be cases where it is not rather a qualified statement. There may be cases where it is not practicable to use aniesthetics, and a curious discretion is reserved as to whether the experiment is likely to produce pain. We should imagine that all experiments which involve the insertion of a knife into a living animal must of necessity produce pairs, and the Professor's vindication would have been more satisfactory if it had been stated that he invariably rendered his victims insensible before putting them to torture. Dr. Schiff has found an sensible before putting them to torture. Dr. Schiff has found an enthusiastic votory in Mr. Ray Lankester, who has witnessed "his kind and geutle behaviour to the dogs which he keeps in the kennel of the laboratory," and "never saw anything that indicated indifference to the sufferings of the animals operated upon." On the contrary, "the experimenter often endures, with the animal operated upon the gentless for the great and in view the operated upon, the scutest distress for the great end in view—the advancement of science." We have heard before of the angler who twisted the hook into the wriggling bait as if he loved it; and probably no schoolmaster ever whipped a boy without assuring him that his heart ached more than the lad's back. There is, however, a suspicious confusion in Mr. Lankester's story. He states that the experimenter shares the dog's agony, and at the same time he tells us that anaesthetics are used. If the latter statement is true, how is it that the dog should suffer the "acutest distress"? Our see on this point is increased whon we find Mr. Lankester ridiculing "the supposed expressions of pain on the part of the lower animals." These, he assures us, are "very delusive." Of course, if you start with the assumption that when a cat or a dog which is being cut into with a knife screams and structures it is only its fun, and that the "supposed expressions of pain" are very delusive, you can easily soothe your conscience as to any amount of apparent cruelty. Mr. Lankester's testimony that neither at l'Iorenee nor Leipzig did he ever see any signs of indifference to the sufferings of the animals operated upon is somewhat weakened by his candid acknowledgment that he is too much of a philosopher to be misled into supposing that an animal is in pain merely because, in unconscious playfulness, it yells and writhes.

Majondie, who set an infamous example by the atreatites he perpetrated in the name of science, did not attempt to disguise the cruelties he inflicted. "He ne s'amusent pas ici," he said of his victims. It is conceivable that Dr. Schiff's cats and dege de not share Mr. Lankester's admiration for the Professor's "kind and gentle behaviour," and "skifful management" of the lanifs. Possibly when the operator suffers the acutest distress while regarding the supposed agenies of the unimal before him, he may be only under the influence of an amiable delusion; but if Mr. Lankester could have changed places with the cat or dog, he might have been convinced that the delusion was rather the other way. Mr. Lankester, however, is not the only vitness. Dr. Noe Wellerstates that during a long course of study at Florence he never saw or heard of Professor Schiff using chloroform, and that, in his opinion, the Professor is as hardened and heartless as most other foreign experimenters in the same line. "He used occasionally to make an aperture in the windpipe in order to suspend the functions of the larynx, and thus prevent the tortured animal from crying out", and as the animal did not scream, a hasty observer might publicate the lead made over as many as seven handred dogs to the Physical Laboratory, so that the consumption of subjects in which had meast assuredly cannot be excused or justified on schools and this brings us to the next quantities of subjects in vivisection practised? Mr. Lankester, to be considered in mistaken, tells us that "vivisection for the purpose of physiological inquiry is practised by eminent and qualified experimentary he studies, Faris, Tiester, and Wuschen, Edinburgh, Cambelley, Faris, Tiester, and Wuschen, Edinburgh, Cambelley, Faris, Tiester, and with her amount of a subject of physioners and practice of giviention with his amount of the studies.

the second of th

The advocates of vivisection ridicule the sentimentalism which out of more pity for cats and dogs and such "small deer," would obstruct the free course of scientific research. There is, however a healthy and natural, as well as a morbid, sentimentalism; and the objections to the wanton dissection of living animals are of the most practical character. They are based not murely on the sufferings of the wretched brutes, but on the ovil consequences of familiarity with such proceedings to the operators and spectators. It is impossible to doubt that the habitual and spectators. It is impossing to doubt that the habitual terture of snimals must have a beutalizing influence on those who take part in it, especially whon practised as a scientific curioaity or amusement, with a view, not to the discovery of anything new, but merely to the illustration in a vivid and sensational form of what is already well known. No reasonable person would propose to place an absolute restriction on vivise tion, but unquestionably it ought to be limited to those rare cases in which scientific investigation with a view to discovery is being which scientific investigation with a view to discovery is being carried on by a competent person. If it is true, as Mr. Lankester asserts, that "there is not a German University without a Professor of Physiology who practises vivisection continually, "we can only say that it is a disgrace to science. A practice of this hind can be justified only by the highest necessity. It would be childish to object to it when the intention is to ascertain important scientific ts, some of which may possibly be used for the purpose of facts, some of which may possibly be used for the purpose of allovating disease and saving human life; but vivisection is the class-room for the mere instruction of students is an act of wanton and indefensible cruelty. Professor Schiff may have randered a service to science by showing that an animal when punctured in a particular part of the brain "will roll over and over, twisted like a corksurew for hours, days, and even weeks, with sensibility and volition still remaining"; but his stadents should be required to take his word for it. The repetition of such experiments can only gratify a morbid curiosity and deprave both the teacher and his pupils. Reference has been made to a little week on Physiology lately composed by Professor Huxley for the use of young children at school, in which there are certainly some remarks which should have been expressed in more cautious and guarded language. For instance, little boys and girls are advised that greated language. For instance, in the boys and give an additional it is better for testing the presence of sousition to irritate different nerves connected with the chord, rather than the cut end of the cherd itself"; and how to make rabbits blush artificially is auggested as an interesting experiment:—" If in a rabbit, the sympathetic nerve, which sends branches to the vessels of the head, is sut, the ear of the rabbit at once blushes." Considering the natural instincts of children, instruction of this kind would certainly seem to be dangerously suggestive.

A DISSENTING VIEW OF RITUALISM.

Lite. Since the grand Exeter Hall demonstration of last summer meeting after meeting has been veriferously executing confusaion, and one bishep after another has been charging or misching or writing letters on the same entiring topic. One or them have adopted more desstic measures, and have fits on the notable expedient first devised by Bishep Ellicott of must be outling of their supply of mustes. And hence one Venerable personage, whose bump of measures to towards authorities higher than his own is not examinate developed, has publicly specialmed that it is time to break mith the bishops." Checure, when they meet with so little manny

n. A darking de, the Kitualists our expect no qu A slacking philippic from a Disin the way of business, and is no matter for com-at all sure that they will not derive guite as in from the very thoroughgoing onslaught on "Ritudian" d by Dr. Londes the other day before the Baptist Union of Gr tain and Ireland at Nottingham. So important did his at appear to the assembled ministers and delegates that it I Le sid bid prestre printed at their unanimous request for gratuitous distributions this all. Dr. Landels, while fully prepared to accresponsibility of his own convictions, assures us to a gratuate to find them "endorsed by so many but them. brothern, in whose name as well as his own they now appear." The lecture may therefore be taken as sort of Encyclical addressed by the Raptist Union to all whom it may concern. They have now spoken, it would seem, their last word on Ritualism, for they have hunted it down to its last refuge, and even the stern simplicity of Quaker worship is shown to afford no guarantee for exemption from the fatal taint. It is easy, we know, to praise Rome among the Romera and one might brothren, in whose apparer." The lectu easy, we know, to praise Rome among the Romans, and one might have supposed that it was equally easy to abuse Ritualian among the Nonconformists. But it, Landels is careful to explain at the the Nonconformists. But iv. Landels is careful to explain at the outset that the Ritualism he denounces has so many remiscations that what he says "may touch unpleasantly on the susceptibilities" of many of his hearers. "Ritualism is a principle," of which the so-called Ritualist movement is only one particular development or application; and he means to attack the principle. As is natural, he begins by defining it; but his definition is one which, we suspect, no "Ritualist," whether Anglican or other, would be very willing to admit. It is "the principle that a man's safety in his relation to God may be affected by the performance, on him or by him, of an outward coronony, without any change taking place in his own views or feelings." We shall not meddle with the theological controversy, but believers in sacramentalism would probably reply that they do consider the autward rite they do consider the outward rite to effect an inward change; and indeed it is difficult to see, as the an inward change; and indeed it is difficult to see, as the lecturer himself implies, how those who maintain infant baptism can think otherwise. Still less would they be disposed to accept the rest of his definition of "the principle which substitutes the outward for the inward, the mechanical for the spiritual," and associates with this substitution a privileged class of men to administer the ordinance. The writer feels it necessary to insert a caution that the more observance of a ceromony The writer feels it need not be Ritualism; or baptism and the Lord's Supper, which have "a Scriptural basis," would be Ritualism. But then it is essential that the ceremonies should be observed "simply as symbolic representations of spiritual realities," and not as having any efficacy of their own. And he adds, with a possible reference to the interesting selemnity which Mr. Voysey has substituted for baptism, that any "invention of ceremonics which God has not ordamed" is Ritualism.

Dr. Landels 14 no less explicit in tracing the origin than in defining the nature of this spurtual playue. Ritualism is a victous attempt to satisfy two conflicting tendencies of the human heart—the religious instinct and the sense of alienation from the Duty. It bridges over the chasm by teaching men to trust in ceremonies instoad of in God, putting absolution in the place of forgiveness, the mass in place of the stonement, substituting transubstantiation for faith, and biptismal regeneration for inward renewal. The in-criminated liturist, if allowed to roply, would probably again protest that he saw no necessary contradiction between these alternatives and desired no substitution of one for the other. But an Anglican Ritualist would be less disposed to quarrol with the next count in the indictment, which we cannot help shrewdly suspecting had a good deal to do with suggesting the subject to the lecturer, and procuring the unanimous request for its publication by the Eaptist Union. "The seedplot of all this in this country is the Prayer Book of the Church of Lugland" Ritualism in the germ is unmistakably taught in the Services of the Church, and the Ritualists are only consistent in developing it. In fact, no one, we are told, can read these between with unbia sed mind without detecting the presence of Ritualism almost everywhere. Of course, if attaching any value to outward rites is Rithalism, this is true enough. Dr. Landels, however, proceeds to illustrate his charge in detail in a way which will certainly "touch unpleasantly on the susceptibilities" of the Laungeheals, for whom he professes throughout a kind of lofty and half-affectionate, half-contemptious pity in their weak and wilted "connexion with the accursed thing," that is, the Listablishment. The Ordination Service is thing," that is, the Listablishment. The Ordination Service is somewhat quantity described as "a kind of puredy of our Lords appearance to the disciples after His resurcetion," when the Holy Chost is supposed "actually to trickle through the bishop's fuger-tips." The "manipulations" of baptism, including the promises of the persons who are called sponsors, are about equally offensive. And when the unhappy child who has been Ritudistically "sprinkled," in inteney grows to riper years, "the shadow of Davidson," with above the after and is incontinuous. Ritualism" still dogs him at the alter, and is ingeniously discovered in the rulate which forbids the remains of the discovered in the rubic which forbids the remains of the consecrated elements to be pirt to "the legitimate uses of bread and wine." When he is dying littudism enters his sick chamber, "requiring him to make a special confession of his sins in the ear of the priest," and when he is dead the sine dark spectre "lays its clutch on his lifeless remains" in the Burnel Service. The case is, in short, altogether a very deplorable one from the cradle to the grave. "Ritualism bends over her cradle, and utters its falsehoods in the ear of God and man. As he

stands a lisping child by his mother's knee, it instils its poison into his opening mind through the Catechism. It meets him when he approaches the Communion-table, and changes into a superstitious rite the commemoration of his Saviour's love. Into the sick chamber it obtrudes itself, and darkens his death-bed with its shadow; and, as if eager to retain its hold of him to the very last, in surpliced dignity, if you will in surpliced deformity, it stands by his coffin and whines out its falsehoods—I had almost said its blasphemies—by the side of his open grave." Well, indeed, may the privileged children nurtured under happier auspices exclaim, in the words of the well-known paraphrase of Dr. Watte's hynn:—

I thank the goodness and the grace
That o'er my birth have smiled,
That I was born of Baptist breed,
And not a Churchman's child.

For Churchmen, however, and even for High Churchmen who have received this evil training, Dr. Landels is charitably willing to make some allowance on the score of invincible ignorance. "Many men are much better than their system," and he himself knows clergymen of the Church of England whose zeal and devotion he envies and would like to copy. As to the Evangelicals, their blindness is hardly to be excused on the plea of ignorance, and pitiable are their appeals to the bishops, who cannot help them, while "the State, their master, refuses to interfere," and the Ecclesiastical Courts afford them no relief, but approve some of the worst doings of Ritualism—a graceful allusion, perhaps, to the holy-water and biretta, which were the two points, if we recollect aright, condoned in the Purchas judgment. And thus, while the wild boar of the forest ravages the Lord's vineyard, the helpless Evangelicals "flutter and cackle like the tenants of a hen-roost under the midnight invasion of some vulpine foe"—rather an unkind cut from one of those who used to be hafled as "our dear Dissenting brethren." But it is not, after all, the Evangelicals whom the lecturer is chiefly anxious to expose, though their "cacklings and flutterings" serve to point the moral of his tale. They are self-condemned for clinging to a Church which has claimed to be the bulwark of the Reformation, but where really the abomination of desolation stands in the holy place. To have an Established Church is bad enough; but "that public funds should be employed in propagating these wretched soul-ruining superstitions is simply intolerable." Dr. Landels does not share Lord Russell's sympathies with Bismarckism. He wants "no persecution or legal restriction"; but the State Church must be demolished root and branch. If the Evangelicals will join in "this holy crusade" the Dissenters will co-operate with them, but not otherwise. "We are not such fools as to give our support to the system from which this deplorable state of things has sprung." The Liberation Socie

But the most striking, not to say the most amusing, part of the argument is still to come. The Establishment is the "seedplot" of Ritualism; but the noxious weed has spread in rank luxuriance far beyond the established pale. "With the exception of the Society of Friends"—and even that exception, as we saw just now, is a very precarious one—"the hands of other denominations are not clean nor their testimony clear in this matter." One and all, except of course the Baptists themselves, are compromised by their practice of "infant sprinkling." For once we are disposed to agree with the author that, "if the sprinkling of a child be not a Ritualistic act, it is nothing." Nor does infant sprinkling exhaust the Ritualistic corruptions of Nonconformists; they are deeply guilty in the natter of vestments also. We must confess to having been rather taken aback by this charge. Surely, we said to ourselves, the doors of Little Bethel and Ebenezer have never been darkened by the shadow of cope or chasuble. Yet "man millinery" has invaded even those sacred precincts. "A particular dress," which at once ministers to "the craving for the sensuous in religion" and favours "secendutalism," is adopted; in short, not to put too fine a point upon it, the Geneva gown and bands. "Doubtless," adds the writer—but here we really cannot agree with him—"the dress is very graceful." He has himself "often admired it," and he waxes almost pathetic over its seductive graces. "A tall figure, clad in gown and bands, with long clustering locks descending to his shoulders, is an attractive spectacle in ladies' eyes"—that we can easily believe—"and comports well with the claim to saceudotal dignity advanced on his behalf," by whom is not explained. Sad indeed it is to see, as Ir. Landels has before now seen with his own eyes, "a good man," when going to preach at a chapel where "such toggery" is not provided, sending his servant before him to carry the toggery in a bag on his shoulder. It is sadder still to reflect that even "we Baptists," though s

Dr. Landels winds up his address with a great principal ting of "Rule Britannia" to the tens of "No Forest ather perhaps we should have said with a splendid outleant addithyrambie song; for though not in metre, it hardly reads like great "The Britons who have so long boasted of their freedom" are exhorted and entreated by the memory of their markyred fathers, and a great many other things which need not be repeated here, never again to place on their necks the yoke of a hasterd Papery. And then, finally, we have a triumphant pean over the coming glories of Diasent. The Establishment, the great barrier to progress, is falling to pieces through internal strifes. Priestors, is in its death agony, though it dies hard. And "above the confused din a Voice is heard"—but we had rather not finish the quotation. We are almost afraid that, if any wicked Ritualist should east his eye on the lecture, he will be tempted to thank Dr. Landels for proving in such elaborate detail that "the principle of Ritualism lies so deep in human nature that it might well be expected to survive the downfall of the hated Establishment, as it refuses even now to be cast out with the "surpliced deformities" of the Prayer Book.

COLLISIONS AT SEA.

THE circumstances of the collision between the Lock Ears and the Ville du Havre have been investigated both in England and in France, with the comfortable result that the tribunal of each nation finds its countrymen free from blame, while the French tribunal goes further and throws blame on the English crew. It results that intending passengers across the Atlantic must put their trust in Providence, and relinquish all hope in human skill. If on a fine starlight night a steamer and a sailing-ship cannot contrive to keep out of each other's way, we should think that even a seaman would begin to doubt whether, after all, Fleet. Street is not a safer-place than the broad ocean. It is disquisting to remark that there are more and more ships, while the vigilance which used to guide and guard them seems to be diminishing. The maiden who had lost her lover complained that nature allowed rocks to remain beneath the waves; but at least the rocks did remain, and were not always moving about and getting in the way like ships. They did not come to you, but waited for you to come to them. An interesting, and perhaps profitable, essay might be written on that principle of compensation which appears to go far to equalize human happiness in different ages and countries of the world. In the last century you took several weeks in getting to America, but then you did get there, as a rule. Even the rememberers of bloody Mary might do that unpopular Queen the justice to remark that there were no railway "accidents" in her reign. The Chairman of a Railway Company laments that inexorable necessity compels his Board to kill and maim a certain number of persons within a year. The religious and political persecutors of the sixteenth century doubtless took nearly the same view of their position and responsibilities. Perhaps, if one must die before one's time, it might be more satisfactory to lay down life on account of some principle which was at least capable of being regarded as important, whereas nowadays similar sacrifices have to be

high speed without too far encroaching upon their dividends.

The inquiry instituted by the English Board of Trade was intended to investigate the facts of this lamontable collision, and "to prevent if possible the recurrence of such a catastrophe." We wish rather than hope that this result may be attained, but it appears to us that circumstances were as favourable as they are ever likely to be for avoiding that which nevertheless occurred. The second and third mates of the *Loch Earn* were on deck.* The captain was below reading, and had desired that he might be called if there was any change of wind or weather. There was a brisk breeze from SSW., and the weather was clear. The ship was on the port tack, and heading NNW. The second mate states that a few minutes before two o'clock A.M., on November 22, he noticed a bright light on the port bow of the ship. The *Loch Earn* had at this time a red light on her port and a green light on her starboard side. These lights were burning brightly. The substance of the story told by this and other witnesses is that the *Loch Earn* officers held their course after seeing the steamer's white mast-head light, assuming that the steamer would keep out of their way, as she was bound to do. They saw first the mast-head light only, then all three lights, and then only the white and red lights of the steamer. They inferred that the steamer had ported her helm, and, not liking her dangerous proximity, they ported their own helm, but they say that the ship had not time to answer it when the collision occurred. They also infer that the *Ville dis Haure*, and her helm to starboard after their first observation of her, and that thus she was brought into the position to be struck on the starboard side by the *Loch Earn*. As it was put by counsel at the inquiry—"The collision arcse through the waint of a proper look-out on board the *Ville dis Haure*, and her heat the Court was of opinion that the officers of the *Loch Earn* were free from all blame as regarded anything which hed to the

de of the Inter this really be the graving ballet of sink that the efforts of the linglish illoc religies to eng Finally at Trade to present the constructed of similar collisions are likely to end in disappointment. It is of little use to construct an International Code if nations differ irreconcilably as soon as any ones wrises for its application. If it is the inflaxible rule of French Counts to assume that French seamen invariably do right, their decisions under any code of law would come practically to the same thing. There is, at any rate, the fact that the steamer, roughly speaking, was steering east, and the ship was steering north-west, and the steamer was struck on the starboard side. If this be, as purhaps it is, the only undisputed fact in the case, it does not furnish any argument favourable to the French ship. It will be observed that the French Court does not suggest that the Lash Eura had not her proper lights burning, and, if she had. the Look Rore had not her proper lights burning, and, if she had, there was opportunity for the steamer to observe what the ship's course was, and shape her own accordingly. They could tell by the absence of a mast-head light that this was a sailing-ship, and they knew, or ought to have known, the direction of the wind. Her course was necessarily dependent on the wind, and it was, to say the least, very improbable that she would attempt to deviate from it. If the Lock Ears were heading to the north-west with a south-west If the Lock Ears were heading to the north-west with a south-west wind, it would be manifestly more easy for her to turn to her right than to her left. Her officers say that when she turned, which, however, was too late to produce any effect, she turned to the right. The French Court appear to say that she turned to the left; but if she were, as her officers state, close-hauled, that is, as near to the wind as she could lie, she could not have starboarded her helm without coming up in the wind's eye and having to go about. We can only say that it is highly improbable that she would do this. There is more probability than comfort in the supposition this. There is more probability than comfort in the supposition that the French crew were exhausted by the fatigue of watching that the French crew were exhausted by the fatigue of watching through several days and nights of fog; that they were not keeping a good look-out; that the near approach of the Lock Eurn surprised them, and that in their hurry they put their own helm a-starboard, and thus ran across the Lock Eurn's bow, and were struck by her and perished. There seems to have been only one thing that could be fatal, and this they did.

The ordinary rules of the sea to which the French Court refers seem to us to be decisive against the steemer. One of these rules

seem to us to be decisive against the steamer. One of these rules is that a vessel which has the wind free is bound to give way to a vessel close-hauled, and a steamer is to be treated as a vessel which Another of these rules is that, though the has the wind free. has the wind free. Another of these rules is that, though the close-hauled vessel is not bound to give way, she is bound to show a proper light in sufficient time to enable the steamer to avoid collision. The Privy Council, applying these rules to a case before them, said:—"When the ship was first discovered by those on board the steamer, she continued at full speed. It was her duty to give way, and to do whatever was possible to avoid collision. As soon as she discovered the ship, and when she was unable to make out what the ship was doing, she should have eased and stopped her engines, and should have ascertained in what way she might best have avoided collision, and which might probably have been accomplished." Assuming that the Lock Eurashowed proper lights, this judgment appears applicable the Loch Earn showed proper lights, this judgment appears applicable to the case. The look-out man on board the Ville dis Haves says a sail was observed on the starboard side. He and the French captain argue that, because the steamer was struck on the starboard side, the helm of the ship must have been starboarded, which the English witnesses deuy. A French Court may perhaps prefer French inference to English evidence, but we may be permitted to believe that the *Lock Earn* was endeavouring to make her passage, and not capriciously wandering over the set. Suppose, however, that, when collision became imminent, the Lock Earn did starboard her helm, when she would have done better to have ported it, or to have kept her course. Yet the collision would not have become imminent if the steamer had not approached unnecessage. nave become imminent if the steamer had not approached unnecessarily near. She was going twelve knots per hour, and she could take her own course at that speed or check it. But with all the ocean open to her she contrived to put herself exactly in the way to be struck by the ship, and then that ship is declared to have manusured contrary to the International Code. If the first object be to satisfy French susceptibility by repudiating the suggestion that a French ship could make a mistake, and if the facts represent themselves to the attriument of that all the lacts oppose themselves to the attainment of that object, all that can be said is, so much the worse for the facts. It happens, however, that the victims of this disaster are chiefly Americans, and they may repeat that they do not greatly one whether French as French. remark that they do not greatly care whether French or English seamenship be discredited, but if they cannot with reasonable asfety cross the Atlantic, they would like to know the reason why. The most hopeless view of the matter for the passengers is that which suggests that the crew of the Ville dis Havre were so exhausted with watching while there was danger that they fell release and lost their ship when there cutcht to have here real salesp, and lost their ship when there ought to have been none. Probably if the passengers had been consulted, they would have Probably if the passengers had been consulted, they would have contrived to organize among them a sufficient watch to prevent their steamer being run into by a ship. We cannot discover that the ship was in any way to blame, but still it would be prudent in traversing the Atlantic to take into account the possibility of macting a ship carrying inadequate lights, or entertaining an imperfect sense of the obligations of the International Code. It used to be thought that a well-found ship with plenty of see-room was easie, although, for landsman, minerally uncomfortable in had weather. However, and painters have combined to represent the horrors of a

involume with anchors dragging in again direction could do much, but seems Still we did contrive, for the most part, t whereas now danger lurks in active. In whereas now denger berks in safety. In proposition as we have not denger berks in safety. In proposition as we have been dued the elements, we have lost command over correction. We have invented steam, and meanly abolished both the ships and the invented steam, and meanly abolished both the ships and that the demands of French honour may not be found incompatible with the suggestion that a better look-out might have been kept upon this French steamer, and that these was some want of smartness in allowing herself to be run into by an English ship contrary to the rules of the International Code. Figurations were deministive leges subvenient, or, in other words, Look-out is better than law. than law.

THE WORKS OF SIR EDWIN LANDSEER.

THE Royal Academy has made a mistake in devoting the whole of its Winter Exhibition to the works of one man. The remembrance of the collections which for four consecutive years have comprised the rich and varied products of historic schools is not likely to reconcile the public the more readily to partisanship and monopoly. We will not inquire into the reasons why the Academy, which refused to give a limited space to the collected Academy, which refused to give a limited space to the collected works of the late George Mason, A.R.A., has now thrown open its entire galleries to an exhibition of the works of another of its numbers. We can only hope that the precedent will not be followed on the death of other Academicians. We object to the present posthumous collection both in the interest of art and of the artist himself. Little did we think when, on the death of Sir Edwin Landseer, we paid common tribute to a genius which the whole world had long recognized, that a great reputation would have shortly to pass through a cruel ordeal. It is the worst of avenging fortune when the evil which men do is made to live after them; but for such Nomesis the deceased artist has to thank his fellow-Academicians. No painter who ever lived could bear without injury to his good name the indiscriminate display of five hundred works, extending in time from a boyhood of ten to an old age of seventy. Neither do we think that Landseer was one of those exceptional characters of whom posterity needs to know the minutest circumstance. Of Rembrandt, Albert Durer, Laconardo da Vinci, and others we would willingly learn more; but the art of our popular animal painter lies too much upon the surface to demand exhaustive analysis. In the interest also of the public taste one half of this collection were better than the whole; no good purpose can possibly be answered by the exhibition once again of works marking negligence or decadence, such as the "Queen" on horseback (277), and the "Queen landing at Loch Muich" (293). And now, having made this protest, we pass with pleasure to the bright side of the picture.

The exhibition consists of 314 oil pictures, 146 sketches and drawings, and 2 pieces of sculpture—one being the "Stag at Bay" (366), modelled by Sir Edwin, the other the bust of the artist, by Baron Marcchetti. The collection ends with Gallery X-devoted solely to "Proof Engravings touched by Sir E. Landser himself, together with a few other Engravings of well-known pictures not in the Exhibition, and some Etchings." From the large number of contributors we may infer, as indeed we should naturally suppose, that the works of this favourite painter are widely distributed; the lenders amount to no fewer than 130, of whom four of the most prominent contribute as follows:—the Queen, 60; Mr. W. Wells, M.P., 31; Mr. H. W. Faton, M.P., 56, and the Executors of the artist, 133. The last, mostly unfinished, and forming but a part of the works remaining in the possession of the painter at the time of his death, will, it is understood, be brought into the suction room during the coming The exhibition consists of 314 oil pictures, 146 sketches and understood, be brought into the auction room during the coming season, and it is calculated that the present exhibition, if it meet with public favour, will materially affect the prices. The monetary value of the whole collection in Burlington House must be something fabulous. Sir Edwin worked rapidly and persistently; and though the prices he obtained were less than the sums which could at present be realized, it is pleasant to think that in his lifetime he reaped in good degree the reward of his talent and industry. The financial results of the works exhibited may be roughly indicated by the fact that Landseer's personal property waa awom under 160.000l.

was sworn under 160,000l.

The arrangement of the galleries could scarcely have been made chronological without much sacrifice of effect, and yet, as usual, chronology is the clue to the artist's career. Landseer obeyed the all but universal law; he began with care and ended with carelessness, and between the two extremes lay a middle period of mature power. That he had the precocity which proverbially pertains to genius is here made evident, the "Cat Insturbed" (265) is something marvellous for a youth of seventeen, while the "Cat's Paw" (281), painted only five years later, has the firmness, finish, and lustrous colour of a Dutch panel picture. At the age of twenty-four, in the year 1826, the year of his election as Associate, Landseer paid his first visit to the Highlands, and these galleries bear witness that over a period of more than a quarter of a ceuseer paid his first visit to the Highlands, and these galleries bear witness that over a period of more than a quarter of a century, the deer and the dogs, the lochs and the mountains, of the North Country furnished him with subjects as numerous as congenial. During this time he naturally made acquaintance which had its issue in "Sir Walter Scott and Logs" (407), and not a few of the comparatively early works have shown indicate that, for better and for worse, he fell under the influence of Wilkie and the Seotch school generally. "Boy and Girl with Shephard Deg; a Westch" (220), Highland Cabin (187), simple genre. Interior of Highland Hut" (342), year 1831, the "Highland Shepherd's Home" (154), late 1842, all bear traces of the Wilkie and Scotch school. This was a period of asphaltum, with all its penalties; indeed as late as 1840 we find in the famous composition "Laying down the Law" (205) open cracks on the canvas at least one-eighth of an inch wide. But this too was the artist's colour period, as seen in the "Dead Stag and Deerhound" (286), a work of the year 1825, rich and deep in tone, plucky in execution, sharp in touch as Paul Potter at his best. It is interesting, too, at this time, to observe that the painter who altimately stood wide as the poles asunder from the animal painters of Holland went through the probationary pupilage to which all his contomporaries in the same sphere, both at home and abroad, have in turn submitted. Here are landscapes—No. 430 for example—which might have come from the haud of a Dutchman; "Dead Game" (216), date 1827, is after the manner of Snyders; two dogs, "Lion and Dash" (159), dating as late as 1840, might almost have come from the school of Paul Potter; to which may be added Brazilian Monkeys (175), date 1842, finished as a Dutch picture. Again, "Chevy Chase, a Study" (166), recalls the swelling grandione forms and the velocuent action of Rubens, while the sketch of the "Duke of Beaufort as a Knight on Horseback" (375) might be in emulation of Velasquez. But this period is too brief; in other words, the examples are too few which show obedience to the teachings of the great masters who, when rightly used, lead to the near approach and just interpretation of nature.

And yet in the case of Landscer, as of other great artists, there stands out in strongth a middle period, whereof the boundary line, though somewhat uncertain, may be said to extend from 1835 or 1840 to 1850 or 1855—in other words, for twenty years more or less, reaching from the age of about thirty-three to fifty-three. These figures point to the conclusion that the painter, as measured by averages in his profession, was early in maturing, that the period of maturity reaching nearly to twenty years was unusually prolonged, and that the time of decline, also occupying from fifteen to twenty years, was likewise of unwonted length. But that these three periods overlap, and that the corresponding divisions must be taken with latitude, is manifest from the noble, vigorous study made as late as 1869 for the lions in Trafalgar Square (208); yet this exception does but corroborate the universal law, that in the decline of art, whether in a nation or an individual, studies or portraits direct from nature retain longest the all-but lost perfection.

This middle period is made illustrious by works which beyond doubt secure to Landseer a foremost position in universal art, whether the test be the standard of past conturies or the chefs-drawre of contemporaries. Amongst works almost unexampled in power of popular appeal, in pleasing incident and story, in facility and felicity of execution, may be quoted in chronological order the following:—"A Distinguished Member of the Humane Society" (310), date 1838; this portrait, universally known, of a Newfoundland dog, is simple, noble, and wholly undistracted in unity of thought; singleness of conception was a chief source of strength. Next may be named, under the date of 1841, "Eos" (323), the favourite greyhound of the Prince Consort; exquisitely true and delicate is the drawing of the curving back and the tapering limbs; all that the greyhound has of grace and agility is here expressed. In the year 1844, at the age of forty-two, Landseer painted the never to be forgotten "Otter Hunt" (191); the varied attitudes and expressions of these six-and-twenty hounds yelping beneath the writhing otter held spear's length above their heads are among the many proofs that the painter entered heart and soul into the inner nature of the dog. "The Free Kirk" (193), date 1849, is unusually fine in quality; the pigments are gom-like, and the handling shows that play of the brush from a free rotating wrist which was never surpassed by the penmanship of the most ornate of writing-masters. "The Twins" (184), date 1853—a composition of sheep, lambs and dogs; also "The Handom Shot" (217), year 1848, a deer dond in the snow, the young fawn coming, unconscious of misadventure, for its accustomed milk; and "Sheep Lost in the Snow" (229), date 1850, the snow soft, sunny, and shadowy, afford are examples of a sentiment which in this middle period, true to nature, remained still free from sickliness and sentimentality.

mained still free from sickliness and sentimentality.

Over the closing years of this great painter a veil may be fitly drawn, and yet the ruling passion showed itself strong ever and anon well nigh even to death. "The Sick Monkey," remembered in the Academy of 1870 as "The Doctor's Visit to Poor Relations, Zoological Gardens," reverts to that comedy of animal life to which the painter had been long addicted. In the same year appeared "Voltigeur" (411), a full-size and carefully-studied portrait. But as this horse won the Derby twenty years before, we incline to transfer the masterpiece from the third to the second period. Of the scenic, inclodendatic, and sensational style to which the artist surrendered himself under waning powers, the most striking is "The Swannery Invaded by Eagles" (156), date 1869; and of the false and far-fetched sentiment of the same period of decay the most signal example is "The Lion and the Lamb" (307), date 1872, a scene suggested by Isaiah's prophecy of the millennium. Some of the later works, which in charity to a great reputation ought to have been withheld, are known to show kementable confusion of mind and obfuscation of vision. The sense of colour

and the inoviedge of form are alike gene. This hadden genius is not without analogy to the overthrow of Ferner. The greatest of our landscape and the foresset of our winds polaries stumbling with uncertain steps and said genering shades.

A few general conclusions remain to be noted. In the first place, it becomes more than ever clear that Landser's figures are inferior to his animals; with some few exceptions the portraits are of second-rate order. Further it must be admitted that the artist had a most unfortunate eye for colour; hence it happens that many of his compositions tell best in black and white. Also it would appear that the painter, after the first impulse of youth was past, relinquished movement for repose; his animals for the most part are expressive through attitude rather than by action; they may be required; may be meditative, sad, or sentimental, but they are caldon swift in movement or savage in passion. In this they differ from the horses, dogs, lions, and tigers depicted by Rubens, Snyders, Velasquez, and Delacroix. Landseer, in fact, notwithstanding his amazing facility, as seen in the dog "Odia" (200), painted at a single sitting, shows less physical force than delicacy and fluesse; and although he is known to have dissected animals under the eye of Haydon, yet he was, especially when advanced in years, less studious of anatomical articulation than of the curl of a hair and the softness of a cost. Passing from technicalities to conceptions or motives, we might be tempted to pronounce Landseer the greatest of sentimentalists among animal painters; and herein he stands in contrast with such competitors for fame as Paul Potter, Snyders, Troyon, and Rosa Bonheur. But Landseer clears himself form the stands of the competitions with the contrast the contrast of the contrast of the contrast the contrast of the contrast the contrast of self from the charge of sickly sentimentality by showing in the "Challenge" (199), the "Sanctuary" (278), and many other felicitous conceptions, that he was a true poet gifted with a rare sense of dramatic situation, of the artistic capabilities of a story, of the inherent relation subsisting between the animal creation, man, and outward nature. It has been objected that Landseer takes of the inherent relation subsisting between the animal creation, man, and outward nature. It has been objected that Landseer takes pleasure in pain, that his pencil dotes on cruelty, and it may well be questioned whether he did not go beyond permissible limits when, in the "Random Shot" (217), he stained the white snow with the red blood of the fawn; and when he makes the polar bear tear to tatters the last remnants of the poor Arctic voyagers (222). Yet much latitude is justly allowed to the tragic painter or poet. Then again it may be urged that his conceptions are course, as, for example, in "Uncle Tom and his Wife for Sale" (245); the answer to this charge is that vulgarity was the exception, and refinement the rule. Landseer, it may be admitted, does not equal Kaulbach in "Reineke Fuchs," ner Decamps in the comedy of monkeys acting the part of men; and yet he had a keen sense of the humour, fun, and mischief latent in the animal creation—qualities which, mingled as they are with a sympathy and love almost human, make the bond close between man and the lower animals. Did space permit, it would be interesting to inquire which animal owes most to the painter's art. The horse, we think, has been chiefly ennobled by Da Vinci, Rubeus, and Velasquez; but the lien, though not unworthily portrayed by Canova and Thorwaldsen, not to name the painters, has received from Landseer additional majesty and power. The stags of our English painter may possibly be a little theatrical; they tread the ground like an over-conscious tragedian; yet with what noble pride do they carry the head and breathe the mountain air, while their horus announce combat and victory. How tender, too, and timorous are the gentle and defenceless deer! But, on the whole, we incline to think that Landseer lavished most affection upon dors; he makes them the servants, the companions. the whole, we incline to think that Landseer lavished most affection upon dogs; he makes them the servants, the companions, the friends of man; he almost endows them with a sense of duty and the faculty of speech. Altogether, not the artist only, but even the naturalist, must confess that Landseer has done well for the animal creation; he has ennobled and adorned the domesticated creatures which share with us our modern civilization.

REVIEWS.

LIFE OF SPENCER PERCEVALS

A S a contribution to political and Parliamentary history Mr.

Spencer Vulpole's work possesses considerable value. Having himself probably lived from his earliest years among politicians and statesmen, and being evidently familiar with the biography and history of the period on which he writes, Mr. Walpole is fully aware that adherence to Mr. Perceval's doctrines in the present day would be a mere anachronism. As a biographer and as a descendant he keeps his enthusiasm within reasonable bounds, and he may be readily forgiven for holding the opinion that his ancestor was great as well as good. Almost any person would be inclined to regard his grandfather as a great man, magnen Menter directly if he had happened to be Prime Minister; and Mr. Walpole process that in some respects Mr. Perceval was above medicarity. The Life would have been more interesting if it had not been strictly confined to Mr. Perceval's public caneer. Something is said of his success at the bar; many extracts from his speeches are given, and his contests with political opponents and rivals are resorded

The Life of the Right Hon. Spencer Percesal; including his Covernor deace with numerous Distinguished Percent. By his Grandson, Spencer Walpole. London: Hurst & Blackett. 2874

inality it has not occ Minister minister must have had a private life, sectionly in which he was known, and in this ad family. The correspondence with numerous, announced in the correspondence with numerous, announced in the correspondence. a parametric content of the second to the second and in this case a large and attacked family. The correspondence with numerous distinguished paramet, announced in the litle-page, is strictly official, consisting of formal explanations of reasons for taking and refusing office, of invitations to Canning and to Castleragh and others to join a Government from which they hald aloof, or of minutes entimitted to the King or the Prince Regent. It is incidentally stated, and it was otherwise known, that Mr. Perceval's conduct in private life was exemplary, that his amiable temper and pleasant manners endeared him to his friends, and that Mr. Wilberforce admired his "noble" conduct in once patting of the meeting of Parliament from a Monday, lest the members should be tempted into the sin of travelling on Sanday. Whether Mr. Perceval ever read a book, or discussed an interesting topic, or told a story, or made a joke, or laughed at one, cannot be discovered from his grandson's account of those parts of his life which alone he thinks worth recording. The most amusing passage in the book refers not to Mr. Perceval, but to a very different person who was destined to be one of his successors. In a latter of thanks addressed to the Minister for his selection of Mr. Peel to second the Address in 1810, the first Sir Robert Peel says of his een that "he possesses capacity, industry, and virtuous labits, and under the guidance of a judicious and well-informed friend he may become a useful member of society." It is generally thought that Peel did ultimately become a useful member of society, which are held on such points as the conduct of the opinions which are held on such points as the conduct of the a question which may be differently answered according to the opinions which are held on such points as the conduct of the Peninsular war, the Orders in Council, and the Catholic claims. If it is desirable that society should do what it likes, or rather that full effect should be given to the opinion of the majority for the time being, Mr. Perceval was, not excepting Lord Eldon, the most useful member of society in his time. Interested conformity would never have enabled a Minister so thoroughly to represent the opinions and resingless which found a still more perfect and the opinions and prejudices which found a still more perfect and more exalted type in George III. Mr. Perceval was thoroughly sincere in his hatred of the French, in his devotion to the King, and, after the death of Pitt, in his distrust of statesmen who incurred suspicion by brilliancy and versatility. He had perhaps a stronger hold on the country than on the House of Commons, although he was one of the ablest debaters and one of the boldest politicians of his time. The King trusted him more implicitly han any other of his Prime Ministers except Addington, and Mr. Perceval's resolute and disinterested opposition to the personal wishes of the Prince of Wales proved to be the most effectual method of ultimately establishing his ascendency over the Regent. Mr. Walpole's narrative partly explains the otherwise paradoxical preference of the friends of Pitt and of the Tory party for Perceval. over Canning. It appears that long before he had attained a leading position in Parliament, Pitt on the eve of his duel with Tierney told Ryder, who was his second, that in the event of his death Percoval would be better able than any other successor to cope in debate with Fox. It must be remembered in 1798 Canning was only a young saurant to Parliamentary influence: Canning was only a young aspirant to Parliamentary influence; and that Dundas almost alone among the Ministers shared with Pitt the burden of debate.

From his earliest youth to his tragic death Perceval's career was cary and prosperous. He never wanted opportunities, and it may be added that he never wasted them. The younger son of an Earl, he entered Parliament as soon as he left college as member for a family borough, and to a steady and increasing practice at the bar he added a number of legal appointment which were conferred in her added a family borough. recognition of his rank, of his personal merit, and of his Parliamentary services. He married early a lady of considerable fortune; but a large family prevented him from ever becoming rich. As Attorney-General he made in one year more than 9,000£, and when he left the bar for political office his practice was worth between 4,000l. and 5,000l. a year. At that time the office of Chancellor of the Exchequer was absurdly underpaid with a salary of 1,300l. To make it worth Perceval's acceptance the Chancellorship of the Duchy of Lancaster was annexed to the Exchequer; and in the first instance the appointment to the Duchy was for life. In deference to objections mised in the House of Commons, Perceval finally accepted: the Chancellorship of the Duchy on the usual tenure, nor was there any foundation for the charges of jobbery and grasping which were founded on the carlier arrangement. During the eighteenth century and at the time of Perceval's ap-During the eigenventure products to make a permanent pointment, it was the common practice to make a permanent vision for a Minister by a sinecure or a paneloss. If Perceval had survived his edder brother, Lord Arden, he would have succeeded to a patent place of 12,000l. a year. In the present day the Minister disposes of the Duchy of his own convenience. Long before sent day the minister emposes of the Duchy of a entirely for his own convenience. Long before seion to political effice Persavel had become one of ding opponents of Cathelic Emancipation; but it is secretion to pursuents of Cathelic Human institutes; but it is markable that in a speech in favour of the Union in 1799, he exceed a hope that the measure would premote the welfare of both agelome "by diminishing purhaps the monanty for longing alive political distinction. heterom Cathelic and Protestant, and by me giving them. (the Cathelius) all the full blessings of the English Constitution, which they at present imperfactly mjoy." Bight

years afterwards, as Ministerial leader in the Home of Commission, he asserted that "it was a psculiarly, seared daty of the Ming to defend the Established Church" from a danger which consisted in the proposal for enabling Catholic officers to hold high commands in the samy and the navy. The intermediate process of convenious had been practical and perfectly intelligible. When he spale is support of the Union Bill, Percevel was a follower of Pitt. In the following year he became Solicitor-General' under Addington, Opposition to the Catholic claims from that time to the fittal illness of George III, had come to be reserved as a condition of new-

Opposition to the Catholic claims from that time to the fatal illness of George III, had come to be regarded as a condition of passonal loyalty; and even the Ministers of 1806 shrank from a cellision with the invincible projudices of the King. It is always easy to find an excuse for a convenient course of action; yet it now appears surprising that politicians of nearly all parties should have been for several years so extraordinarily survious to apare the royal feelings. By a natural consequence Perceval pashedly succeeded in persuading himself that the policy which had brought him into power coincided with his conscientious convictions.

In matters relating to foreign policy Perceval can scarcely claims the rank of a statesman. In 1800, when he had already attained a considerable position in the House of Commons, he was guilty of the impropriety of denouncing Bonaparte as a faithless usurper, a Corsican adventurer, and a hypocritic. All these epithets may have been more or less applicable; but the only instead in the overture for peace which the First Consul had addressed to George III. It was equally indecorous and impolitio to addresse personally offensive language to the chief of a Government with which it might at any time be advisable to treat. Mr. Walpole supplies an explanation of the attack on Bonaparte mathem in at the same time marvallons and probably true. About Walpole supplies an explanation of the attack on Bonsparts which is at the same time marvellous and probably true. About the same time Percaval published a pamphlet to prove that certain verses in the 1th chapter of the Beels of Daniel had been faltilled by Napoleon's career in Italy, Egyps, and the Holy Land. With the habitual license of interpreters of prophecy, the parts of the King who exalts homself, and the King of the North, and the King of the South are distributed according to the fancy of the commentator, so as to lead up to the prodetermined conclusion. The King who "mither regards the God of his fathers, clusion. The King who "neither regards the God of his fathers, nor the desire of women" is the Pope; the King of the South is the King of Naples; and the King of the North is not a king at all, but the French Republic. On this precious foundation a responsible moreher of Parliament thought hisself justified in abusing the First Consul; and the author of a dissertation which would have done discredit to Dr. Camming lived to be Prime Munister of England. It is true that a statemen may in the intervals of business pardonably amuse himself with a hobby or a crotchet; and Mr. Perceval's conjecture that Daniel's King of the South was the King of Naples is perhaps one degree less absurd than Lord Palmerston's opinion that the plays of Shakspearo were written by Bacon, or than Mr. Gladstone's identification of Latona with the Virgin Mary. The difference is that the capricious fancies of recent Ministers had no tendency to influence their political conduct. The Duke of Wellington is said to have believed that the descendants of the ten tribes of Israel were to be found in the North American Indians; but he would never have supported a project for restoring them, at the expense of England, to their native land. Long after the rejection of his first proposal of peace, the Corsican usurper had reason to congratulate lunself that the English Minister so little resembled the King of the North as not to be disposed to come against him in Spain and Portugal like a whirlwind.

As Attorney-General in Addington's Administration, Perc was fortunate in being associated with a Cabinet in which there was not a single considerable Parliamentary speaker. The Prime Minister was as narrow and as bigoted as his legal colleague, and he was less capable of taking a leading part in debate. When, after the recommencement of the war, Addington was compelled by public opinion to make room for Pitt, Perceval retained under Pitt his office of Attorney-General, on receiving an assurance that Fox was not to be a member of the Government. During the ill-assorted Administration which included Greaville, Fox, as Sidmouth he took an active part in opposition; and he declined an overture to join the Government which was made through Lord Ellenborough after the death of Fox. When the Duke of Portland in the spring of 1807 became nominally Prime Minister, Perceval was selected as Chancellor of the Exchequer and leader of the House of Commons. On the retirement of the Duke in 1809, his claim to the office of Prime Minister was by the favour of the King and of the magniture of the Posius amband to the hicker. King and of the majority of the Tories preferred to the high pretensions of Canning. The inequality between the competitor pretensons of Canning. The inequality between the competitors for office was less apparent to the politicians of that day then to for office was less apparent to the porticisms of that day sum posterity. If Perceval was neither a man of genius nor a great orator, natural aptitude and long practice had made him a powerful debater; and probably his smeere participation in the prejudies of his party was itself an element of Parliamentary strength. Mr. Walpole tells in unnecessary detail the old story of this quarrel between Gastlereagh and Canning; and his usual impartiality deserts him when he discusses the competition for office between Canning and Perceval. There may probably be some foundation for the impression which Canning cortainly produced on his contemporaries of his tendency to intrigue; but his application to the Duke of Portland, that Castlereagh should be removed from the control of the War Office, was both direct and justifiable. Neither the Prime Minister nor Lord Castlereagh's near kinsman, Lord Canaden, had the courage to make an unpleasant communication, and Canaing himself probably shrank from the task of accusing a colleagus to his face of incompetence. It was natural that whan Castlereagh discovered the concealment which had been practised, he should vent his irritation on his original assailant; but there can be little doubt that Canning acted on a sound judgment of the public interest. The imputations which Mr. Walpole throws upon Canning's conduct on the retirement of the Duke of Portland seem to be wholly without foundation. Canning plainly told the King and Perceval that the Prime Minister ought to be in the House of Commons, that Perceval and Canning himself were the only available candidates for the office, and that he would not hold office under his rival. It is true that some time afterwards he was willing to accept the Foreign Office under Perceval, if the other terms of an alliance could have been arranged; but the charge brought against him by Mr. Walpole is neither that he was deficient in patrictic self-denial nor that he was inconsistent, but that he intrigued against Perceval. Canning understood better than Perceval the necessity of ability and statesmanship in the conduct of affairs during a great national crisis. The only three persons in England at that time competent to hold the office of Foreign Minister were Lord Grenville, Lord Wellesley, and Canning. Lord Grenville had unfortunately allied himself with Lord Grey, with whom he entirely disagreed on the policy and conduct of the war; Lord Wellesley, after serving for a time as Foreign Minister under Perceval, resigned his office in consequence of disagreement with his chief and his colleagues; and Perceval, though he professed to court the alliance of Canning, refused, notwithstanding Lord Wellesley's recent recommendation to entrust him with the conduct of Foreign Affairs. If Lord Wellesley and Canning had formed a Government, the Peninsular War and the great English general on a fixed allowance. W

Pitt is to Addington
As London is to Paddington.

PIKE'S HISTORY OF CRIME IN ENGLAND.

No doubt there is a good deal of exaggeration and absurdity in the talk which we sometimes hear from Teutonic enthusiasts about German science and German research. But a book like Mr. Pike's History of English Crime forces us after all to acknowledge that, whatever exaggeration there may be in such talk, there is a certain amount of incontestable truth in it. Mr. Pike's book is precisely the sort of book which would be impossible in Germany. It is the book of a clever, hard-working man, with a great fund of self-confidence, a profound contempt for previous inquirers, and a resolute determination to begin at the beginning of things, and to do all his work for himself. He announces with a flourish on his title-page that his work is "written from the Public Records and other contemporary evidence"; and this flourish of "independent research" is maintained throughout every page. That there is anything like an historic school of inquiry in England, that any definite conclusions have gradually been arrived at by the successive efforts of previous inquirers, that, even if such conclusions had been arrived at, any particular respect would be due to them, are thoughts which never trouble Mr. Pike. With him history is no progressive science, but a field of inquiry where adventurers of a free and independent sort may at any moment rush in and turn a "first sod." A few years ago he made a raid upon English history by the bold denial that it was English history at all. It was Roman history, it was Celtic history, it was what you will, but it was not the history of Englishmen. The evidence of Beda and of language was jauntily upset by the evidence of Mr. Pike's hatter. It is true that the hatter only proved at the best that Englishmen were not High Germans, whereas Beda and language stated clearly enough that they were Low Germans; but distinctions of this sort hardly occur to the inquirer who is bent upon "originality," and whose first plunge into science is a header. We should hardly have cared to recall this early extrave

contempt, has in the end proved too much for him, makin his present volume he practically lays his theories and admits that all he has to do with in his present book, the customs which with little modification, constitute for many confusies the customs which with little modification, constitute for many confusies the customs which with little modification, constitute for many confusies. In other words, he deals with English society on the rational ground that it is a society of Englishmen.

The "History of Crime" indeed is a work of very different stamp from Mr. Pike's speculations on the origin of the English race. There is a great deal of reading in it, and, so far as it goes, the reading is of the right sort. Even if we do not admit Mr. Pike's dogmas about "contemporary authorities" in all their amusing narrowness, they save him from that indiscriminate reli-

amusing narrowness, they save him from that indiscriminate reli-ance on authorities that are no authorities which still ruins half the works that protend to deal with historical subjects. There is something attractive in the energy and zeal with which Mr. Pike sets to work, in his air of thorough honesty so far as his lights go, and in his clear way of stating both his arguments and his conclusions. The real fault of the book lies on the surface. The sions. The real fault of the book lies on the surface. The first result of a little reading is to stir in most people the wish to write a big book. The result of a good deal of reading is to make most people shy of undertaking even a little book. Big subjects have a perennial charm for a certain class of both writers and readers, and every year is pretty sure to bring with it its crop of "Histories of Religion," and the like. Orude generalizations, however, are year is pretty sure to bring with it its crop of "Histories of Religion," and the like. Orude generalizations, however, are better than that despair of generalization at all which floods us with tracts and memoirs and works of mere detail, and we are far from quarrelling with Mr. Pike merely because he has undertaken a big subject. His misfortune is that he has undertaken it without any adequate realization of how big a subject it is. To write a History of English Orime supposes as its first requisite a certain philosophic quality in the mind of the writer. He can hardly get on, for instance, without some previous investigation of the question of crime in itself, without examining its relation to forms of social life or of religious thought, without contrasting the different conceptions of crime which have been formed at various periods of the world's history, or among various races at any one period; or, again, without some attempt to determine the proportion which crime has generally borne to virtue in human communities, or the influence of crime as a whole, or of the various classes of crimes, on the well-being of peoples. It would be easy of course to lose oneself in a mere haze of cupty phrases in trying to lay down such a philosophical groundwork for the treatment of the subject, but it is clear that without some sort of groundwork the subject cannot really be treated at all. From any sense of difficulty on this score, however, Mr. Pike is absolutely free. He dashes into the middle of things without treather treathers. sense of difficulty on this score, however, Mr. Pike is absolutely free. He dashes into the middle of things without troubling himself about groundworks or philosophies. He talks of "crime" throughout as if it were some definite and well-understood fact, or order of facts, in human life, which needed no sort of investiga-tion or definition. Gradually one comes to see that the standard which Mr. Pike silently assumes is that of his own day. Whatwhich Mr. Pike silently assumes is that of his own day. Whatever is forbidden by modern law, whatever jars against modern conscience, is crime, and has been crime ever since an Englishman set foot in Britain. The standpoint of the book throughout is that of the present. There has been such a long and widespread reaction against the historic tone of the eighteenth century that we seldom meet a book nowadays which looks down on the past with the hoity-toity air of Robertson or Hume. But Mr. Pike is determined to revive the hoity-toity school. His book from beginning to end is a series of variations on a single theme, and that theme is his own immense superiority to the fathers that begat him. Every page is as full of the "barbarism," the "brutality," the "ignorance," and the "superstition" of the past; of declamations against its priests, and sneers at its heroes, as if it had been written when Voltaire was the rage, and the fops and philosophers of the last century were looking down with a severe self-complacency on the men of the Dark Ages. the Dark Ages.

The choice of such a point of view relieves Mr. Pike, no doubt, of some of the difficulties which the adoption of a more philosophic and historic groundwork would have brought on him; but it by no means helps to give truth of colouring to his statements, or weight to his conclusions. No doubt Hume would have smiled approval when he read that

The policy of the Church was to persuade mankind that ne civil contract was of any avail to constitute marriage, that the cohabitation of a man and a woman was in itself unholy, and that nothing but a religious bond or sacrament, accompanied by the blessing of a priest, could render it inoffensive in the eyes of God.

Unluckily this flight of anti-clerical fancy breaks down before the simple facts that the Latin Church faithfully preserved on the subject of marriage the rule of the civil law, that the validity of a marriage contract between the parties themselves, and without a priest, was asserted by the schoolmen, and that "consent" was recognized as the essence of the marriage bond by the Council of Trent. Gibbon, fresh from his golden picture of the Empire under the Antonines, would no doubt have adopted the golden picture which Mr. Pike, by way of contrast with the barbarism of the English conquerors, has given of Roman Britishn. "If you would know," he makes an imaginary Provincial recews." If you would have an imaginary Provincial recews. The inquirer of the age of Constantine, "whether such barbare hat to trust the evidence afforded to your seases every hour of the

The close of his first apter furnishes us with an excellent enaction. napter furnishes us with an excellent specimen of Mr. Pike's spagement of such matters. Just as the centuries before the Republic are all one to Mr. Parker in his Roman inquiries, so the six inmidred years before the Conquest are all one to Mr. Pike. They are despatched in a hundred pages, and wound up in a general sketch in the "grand manner":—

sketch in the "grand manner":—
Such was the aga immediately preceding the Norman Conquest. To the great of the savage for flocks or for hunting-grounds had been added the thirst of the trader for wares and for coins; but the townsman had done little as yet to soften the manners of the runtic marender, and force was the ralling principle within the wells not less than without. There were restrictions, and polics, and punishments in abundance; watch and ward upon the highways, and watch and ward at the gates. Even to entertain a guest for moter than one night in a town was to be responsible for his good conduct. But all these laws served only to show by contrast the lawlessness, violence, and recilessness of the people. Life continued to be bought and sold; properly was secure only to him who hed the power to hold it. A permanntly settled government, which, whatever be its form, is the truest friend to civilization, and the greatest enemy to crime, was a bleasing of which the idea was as yet hardly concaivable. The curse of the barbarian conquest still weighed heavily on the land; and when Lanfranc, an Italian monk accustomed to the manners of Norman nobles and Norman elergy, became Archbishop of Canterbury, he was appealed by the manners and customs of his flock. To him a war between ford and lord, between town and town, could not, after his experience of life, have appeared an extraordinary event. To him it might have seemed wrong, but not strange, that a bishop should assert territorial or even spiritual rights by violence. To him slavery was not unknown, nor, parhaps, even an indefensible institution. But beyond all this there were features in the English life of his time which almost drove him to despair. To be the Primate and to be the friend of the Conqueror seemed to him no compensation for the necessity of living in a country so uncivilized as England; and he addressed the Pope in no hesitating language with a request to be relieved from the intolerable responsibility of his position. "Let me," he said,

We have no intention of course of dealing with every statement We have no intention of course of dealing with every statement in this long invective. The way in which Mr. Pike has dealt with Lanfranc and Lanfranc's letter is quite-enough to relieve us from the task of inquiring about "the greed of the savage," or the impossibility of conceiving a settled Government under the administration of Earl Harold. What is inconceivable to us is that the historian who deals so freely with "the age immediately preceding the Conquest" should not have discovered, from both the Norman and English accounts of the time, that England was far sheed of Normandy in those industrial arts which are the surest ahead of Normandy in those industrial arts which are the surest ahead of Normandy in those industrial arts which are the surest test of civil order, or that the England of Godwine and Earl Harold was a paradise of peace and good government compared with the Normandy of the earlier life of Duke William. As to wars "between lord and lord, between town and town," or the violence of bishops, or the evils of slavery, whatever knowledge Mr. Pike may have of Lanfranc's thoughts on these matters, he cartainly did not get all this fine talk about them out of Lanfranc's letter. Had he taken the trouble indeed to remember the date of the letter, he would have seen that it had nothing to do with the letter, he would have seen that it had nothing to do with the time he was pretending to describe. Lanfranc's elevation to the Primacy came about when William's work of the sword was done, and, instead of illustrating "the age immediately pre-ceding the Conquest," it illustrates the age immediately follow-ing it. But in the way of illustration it does not go very far. Lanfranc tells the Pope that he is tired out of his life by the "perturbationes, tribulationes, damna, obdurationes, cupiditates, spurcitias, tantumque Ecclesia casum," which he sees around him spurcities, tantumque Ecclesia casum," which he sees around num in England after the war. He is a quiet man and a scholar, and he would infinitely prefer his cell and his books. He is annoyed that his excuses were not admitted by the Legates, that "adversus hec imbecillitas mearum virium, morumque indignitas prolata in medium nihil profuit, excusatio incognitæ linguæ gentiumque nullum annd eos locum invenire prævaluit." With medium nihil profuit, excusatio incognite lingue gentiumque barbararum nullum apud ece locum invenire prævaluit." With Lanfranc, of course, "barbararum" simply meant "foreign." With Mr. Pike the poor word expands into "godless tribes of barbarians." We wonder that his literal construing did not find in the other phrases of the Primate about himself a confession of Lanfranc's physical imbecility and of his gross immorality.

But even had Mr. Pike started with a better point of view and more knowledge of facts than he seems to possess, he could hardly have failed to be led wrong by the method he has adopted. His aim throughout is to look at things in a legal rather than in an historiam way. His authorities are mainly the codes and penitentials of earlier times, or the statutes and court records which preserve the criminal

way. His authorities are mainly the codes and penitentials of earlier times, or the statutes and court records which preserve the criminal procedure of the middle ages. Even if he were successful in his effort, the result would be a history of penal laws rather than a history of crime. The two subjects are perfectly distinct. The study of penal laws tells us indeed what acts were noted as crimes at a given time, and what measures were judged most effectual for checking them. But of their causes, of the political or social or religious circumstances out of which they spring, of the crimentances or influences which sause them to be regarded as crimes of the relation which they bear in the meas to the temper of the people at large, or at the relation of panishment either to

the offences it endeavours to suppress or to the phasester of society which inflicts it, such a study tells as little or nothing, we draw our notions of the sighteenth century from its pattures alone, we should look on it as an era of exceptional cre in the history of the human race. We know such a conducted in the history of the human race. statutes alone, we should look on it as an era or exceptions of the human race. We know such a conclusion would be ridiculous, but we only know it because we study eighteenth-century orime as a part of the study of eighteenth-century society. It is easy for Mr. Pike to quote sentences of death, or mutilation for what seem to us minor offences, and on the strength of those quotations to declaim about the "ferceity" of the laws of Ælfred or of Cnut. But whether these laws were "ferceious," that is to say, unnecessarily cruel, or not, depends on a number of complex social circumstances which the laws by themselves give us little help in ascertaining. It has been acutely pointed out that much of the mildness of the punishments of to-day depends on the existence of an efficient police. If this means of precention were taken away, we should probably be forced to fall back again to a very considerable extent on the determine to lies of the last continue. very considerable extent on the deterrent policy of the last contury. The mere difficulty of finding gaols in earlier days—a difficulty at once aocial, political, and economic—would of itself determine to a great extent the character of penalties. If a man has to be punished there and then, there is little to choose from but accurging, or mutilation, or death—all of them punishments of the "fercoious" sort which appear so terrible to Mr. Pike. Mutilation—the most revolting penalty of all to modern eyes—was often the only means of effectually preventing a repetition of the crime. In our own of effectually preventing a repetition of the crime. In our own day we prevent a forger from forging by shutting him up in a gool without his tools. Earlier England, being without gaols, was driven to effect the same purpose by cutting off the hand which forged. In other words, a History of English Crime means, if it means anything at all, a history of English society. Had Mr. Pike realized this very simple fact, he would hardly have entered on his work with so light a heart, and he certainly would not have brought it from Hengest (not to mention the Rumans) down to Henry VII. in a single volume.

MRS. SOMERVILLE.

WITHOUT forming what is ordinarily called an eventful career, the life of Mrs. Somerville is marked by a degree of interest far boyond that which attaches to the lives of many men and women who have gone through more stirring scenes, or who have shown more striking traits of temperament and chawho have shown more striking traits of temperament and character. It is the unobtrusive record of what can be done by the steady culture of good natural powers, and the pursuit of a high standard of excellence, in order to win for a woman a distinguished place in the sphere habitually reserved to men, without parting with any of those characteristics of mind or character or demeanour which have ever been taken to form the grace and glory of womanhood. Far from setting up for herself a conscious and deliberate rivalry with men in a field of intel-lectual labour which is not as a rule open to her sex, or vaunting herself on the attainment of an eminence unknown to any woman of our day, Mrs. Somerville was content to give quiet scope to the tastes and inclinations which led her to the study of science. The last person to see in herself the gonius who was to assert woman's descrated rights, and win back from men their usurped dominion of the realm of knowledge, she lent no countenance to those of her sisterhood who shrick against the conventional to those of her sisterhood who sarries against the conventional relations which are supposed to oppress them, and who bring not a tithe of her mental power to the struggle for intellectual supremacy. It was no more timidity of disposition, but instinctive delicacy of soul, which made her feel that there was a line drawn by nature between the spheres of usefulness or duty of women and of men. Hence the thoroughly femining tone which showed itself in all her tastes, and tempered her environmentalism. Not a tinge of what is subgarily known as severer studies. Not a tinge of what is vulgarly known as blueness was to be detected in her demeanour or her literary work. Neither prude nor pedant, she could enter freely into contact with the world, and enjoy society in its most varied aspects without contracting a shade either of coarseness or of affectation. Such as she was when supremoded by course of the could be supported by the course of the cou affectation. Such as she was when surrounded by crowds of the first men of the day, unmoved to vanity by compliments and praises such as no other woman has heard in our time, such she also was in the quiet of her home and in the discharge of family and household duties. From problems of the highest order in mathematics and physics she would pass with a mind as clear and a care as conscientious to the provision for domestic wants, for the health of husband or child, or even the light amusements and health of husband or child, or even the light amusements and pleasures of the day. Fresh in spirit, and of a temperament to grow even kindlier by years, she could enter to the last into the enjoyments of youth, and had a zest for the pleasures of children. Her physical powers of sight and hearing were but slightly shated with her ninety years. She could to the end find a refreshing change from her graver labours in painting, in modelling, or in lacework, a branch of art in which she peculiarly excelled, keeping alive her interest in the progress of science by procuring the latest and best works on every subject, as well as by correspondence with the foremost scientific men in England and on either continent. She was thus able to make her adopted home for years a kind of centre of interest to all who were engaged in the spread of

^{*} Personal Recollections from early life to old age of Mary Somerville with Selections from her Correspondence. By her Daughter, Martha Som ville. London: John Murray 1873.

on any arthur

physical knowledge, contributing as she did to the advancement

by revised editions of earlier compilations.

Our gratitude is due to Miss Somerville for the judgment and good taste which she has displayed in compressing the present memoir within a reasonable compass. For once, indeed, we are tempted to wish that she had allowed herself wider scope. At a time when every second-rate man of any popular note has his literary monument in the form of two or more bulky volumes, it is not every daughter who would be found to limit within a single octave of less than four hundred pages the record of a life so laborious and a character so beautiful as that of Mary Somerville. Had Miss Somerville but brought together, after the usual fashion of memoirmongers, the letters written to or by her mother for only a single year of her long life—letters, moreover, bearing names not of mere nobodies, but the most illustrious in science, literature, or art—the nobodies, but the most illustrious in science, literature, or art—the work would have expanded into an historical catalogue of the intellectual magnates of the age, while the barest summary of her studies and writings would have formed an epitone of its scientific gains. As it is, Mrs. Somerville's own simple notices of successive periods of her life, with occasional letters intersparsed, are suffered to tell their own tale; the gaps being filled up by such slight paragraphs from her daughter's hand as may serve to link together each episode, and give the necessary details of circumstance or time. Strongly averse as she ever was to gossip or revelations of private life or intimate correspondence, where the server was to gossip or revelations of private life or intimate correspondence, the would have appreciated the feeling which has kept these pages free from the intrusion of anything of the kind. Such detached recollections as she was induced to note down during the last years. recoil the intrusion of anything of the kind. Such detached recollections as she was induced to note down during the last years of her life, together with a few letters interesting from the eminence of the writers or as landmarks in the pathway of learning, make up the biography of a woman devoted from first to last to her family duties and to scientific pursuits. Even beyond her intellectual gifts, rare as these were, her daughter may well lay stress upon the moral energy and perseverance with which, in her thirst for knowledge, she overcome obstacles which seemed insuperable, debarred as women then were, especially in Scotland, from anything like true education. It was in a sort of intuitive way that she entered at an early period upon studies of which she had scarcely heard the names. Nor was it till widowhood gave her comparative freedom of choice that she could devote herself to the pursuits which became the task of her life. From her father, alboit an able and distinguished admiral, Mary Fairfax received albeit an able and distinguished admiral, Mary Pairtax received anything but encouragement in her early studies of nature or books; nor is it true, though it has repeatedly been said, that her first husband, Mr. Greig, lent her any more countenance or aid of this kind. Taking ne sort of interest in science or literature, he shared to the full the common prejudice of the time against women of learning. The first person to discover the young girl's high capacity and to encourage her love of study was her nucle by marriage, afterwards her father-in-law, Dr. Somerville, minister of Jedburgh. Her artless picture of herself in her ville, minister of Jedburgh. Her artless picture of herself in her carliest days represents her as a lonely child, picking up shells along the shore of Burntisland, on the coast of Fife, opposite Edinburgh, or gathering wild flowers and gorse on the heath-clad links beyond the town, having neither dolls nor playmates; knowing every bird by its flight or its song, but shocking her father on his return from sea by her savage ignorance of writing or accounts. At the age of ten she was sent to school at Musselburgh for a year of misery, from which she returned home, as she marvely says, like a wild unimal escaped from a cage, to revol once more in the curiosities of the sea-shore, sitting up half the night to watch the stars or the aurora, and having an instinctive horror, which clung to her through life, of being alone in the dark.

It was, oddly enough, in a Magazine of Pashions that she first hit

upon what became the great study of her life, and puzzled herself to find out what was meant by algebra. This must have been at about the age of fourteen or fifteen. About the same time she took lessons in landscape-painting from Nasmyth, who spoke of Miss Mary Fairfax as the cleverest young lady he ever taught, and who also helped her to understand Euclid and Robertson's Navigation. Her drawings at this time are highly praised in a pedantic letter from Dr. Hugh Blair. So much admired was she for her good looks as she grew up that she was called the Rose of Jedwood. This beauty of hers, together with her youthfulness of manner, in keeping with her light and graceful figure, was conspicuous to the keeping with her light and graceful figure, was conspicuous to the end of her days. At Edinburgh, in spite of the rigid Calvinism of most of her family, she had the opportunity of seeing Mrs. Siddons and John Kemble on the stage, and contracted a passion for Shakspeare. Postry and works of the imagination had a charm for her from the first; and no girl more enjoyed dancing, or had more numerous partners at balls. At the same time a degree of diffidence, mainly attributable to the seclusion of her early years, forbade her taking a leading part in conversation or speaking across a table. Through all her amusements, severe as the winter might be, she rose at daybreak, and, wranged in of diffidence, mainly attributable to the secusion of her vary years, forbade her taking a leading part in conversation or speaking across a table. Through all her amusements, severe as the winter might be, she rose at daybreak, and, wrapped in a blanket, no fire being allowed, read algebra or the classics till breakfast-time. If tired in mind, as she was often conscions of becoming in spite of her perseverance, refreshment was sought in poetry, or in stories of ghosts and witchcraft, of which she was constitutionally fond, being what the Scotch call serie when in the dark or by herself, although having no actual belief in ghosts and feeling a proper soom for spirit-respects. Her maxings with her consin Mr. Samuel Greig, in 1804; took her to Beaden, where she was left very much alone, to the advantage of her

mathematical and office studies. She now litera enjoyed the Opera. Is seems queer to hear her equal of the ness and formality which she found in the Chinek of Easervices after those of the Scottish Kirk. But those, its membered, were the palmy days of parson and clerk. After years of married life she returned to her father's house at the land a widow with two sons. Of these one died in child The other, Woronzow Greig, lived to repay much of his methocare, and to verify many of the aspirations poured forth in haffectionate and thoughtful letters to him; he died within the la affectionate and thoughtful letters to him; he died within the leavaine years. Free to exercise her own predilections, ahe now moved more systematically her mathematical studies, tackling the Professor at Edinburgh University, a course of reading which might well look formidable at the time; especially as all the books were in French, owing to the deployably low elds of mathematical science in Great Britain. She had the valuable help of Professor Playfair, then an elderly man, who encouraged her in getting through the Mécanique céleste.

After several offers of marriage, and after enduring much impar-

After several offers of marriage, and after enduring much imper-tinent consure of what her family decumed her foolish manner of life and studies, her marriage with her cousin William Semesville-opened to this brilliant and active-minded woman a corner in which she found sympathy with her intellectual tasts which she found sympathy with her interestal tastes, and stimulus to her energy for culture. A traveller, a naturalist, a good classic, and a critical writer of English, free from Scottish prejudice, her partner for life was one to share her studies, and to be her support and companion in society and in travel. The record of their life, of the people of mark they associate with, the foreign lands they visit, and their collection of objects and instruments connected with scionce in its various branches, shows life flowing on smoothly and congenially, with the sense of toil well spent and fruits of intellect happily gathered in. Geology and miserale are among the first of their joint studies, and the extravegat of their cabinet of specimens is criticized. Acquaintance wi the Herschels opens up practical astronomy. In London, Arago and Biot, who had heard of the English lady reading In Place, express surprise at her youth. At Paris friendship is renewed with these savants, with whom are met La Place himself, Arago, and Professor Humboldt; Cuvier does the honours of the Jardin des Plantes, and Gay-Jussac and Larrey entertain her with chat. How Madame La Place receives her in bed, and how she delights in Talma and Madlle. Mars, are samples of her lighter manner of writing, while she chronicles by the way what she gains from each man of genius or learning, or each sight of the master works of science, art, or nature. Geneva she met Mrs. Marcet, whose Conversations on Chemistry were said by Faraday to have first opened his mind to the wonders of that science. There, too, were Sismondi and De la Rive. A letter from De Candolle, whose acquaintance she had made there, gives shortly afterwards some excellent hints for the prosecution of the botanical studies in which she had already made The interest which she takes in the most diverse much progress. branches of knowledge makes every one forward to bring her the first intelligence of anything new or of significance. Dr. Young is eager to submit an Egyptian horoscope he has that evening deciphered from a papyrns of the age of the Ptolemies. Wollaston hurries to Hanever Square to show by means of a small prism in a darkened room the seven dark lines he had discovered crossing the seler spectrum, the germ of the most important series of modern discoveries in Habbage discourses over his analytical engine. J. Herschel exhibits nebulæ and binary stare in the field of his great reflector. Ada, Byron's daughter, afferwards Lady Lovelace, compares difficulties with Mary Somerville in mathematics. Among her most intimate and valued friends was Maria Edgeworth, to which number were later added Joanna Buillie and her sister. Your by year her acquaintance and correspondence grew until they included well night every name of distinction in literature or.

It was in a letter from Lord Brougham, March 27, 1827, that the first overture was made which led to Mrs. Somerville's writing the epitome or popular exposition of La Place's great wer writing the epitome or popular exposition of Lis Place's great werns which has become so widely known as the Mechanism of the Mechanism of the Mechanism of the Mechanism of the Indian of her need of firmer mastery of the calculus, and of the difficulty of supplementing La Place with the diagrams or figures indispensable for the kind of work in contemplation. The counsel and aid of Herschel during the progress of the work, with the acknowledgments of Whewell, Penceus, and other mathematiciens, were the autemat of that full and reconstructions. mathematicians, were the carnest of that full and permenent nition which her book has had ever since. The flattering less Biot, which is appended in the present memoir to these elegatestimonials from home friends and admirers, was followed up a shower of honours from abroad, as well as from scientific to in these kingdoms. The writer's bust, by Chantrey, was place the great half of the Royal Society; the great of a pension of a year was announced in a handsome letter from Sir R. Res which another root, was added later by Liord Russell. The next of the Sounces was carried through in Paris, and we tedious work, the writer's health being delicate. She waste in till one o'clock, sanding the proof absort through the Machinery, was published on harreture to Chantrain 1835. By the white was discussions of the form and rotation of the substantial waste and placetime and the general analysis of the straights of the straights. Biot, which is appended in the present memoir to the and the general analysis of the stiral

The second self-second second second

LUCIUS DAVOREN.

A strong Y used to be told in one of the midland counties of a man who had risen from small means to considerable wealth, but whose words had grown bigger almost fister than his riches. One day, when a porter had brought a parcel to his house, he spoke to the man in such fine language that the poor fellow gazed at him for a while in dumb surprise with eyes and mouth alike wide open. At length recovering a little, and remembering that after all his rich neighbour had started in life much such a man as he was himself, he thought he would show that he was his match in lengthy words such as passed all understanding, and broke in upon him with shouting out "Catalogue! There now, what do you say to that?" Since we first heard this story, we have not read a chapter of Miss Braddon's writing without feeling moved to shout out "Catalogue!" several times. It is not that the language merely is so big; overything is equally big—the plot, the incidents, the characters. We are not surprised that in an age when money is made so fast, and so many illiterate people find themselves suddanly rich, her books should be so popular. Just as these people change their whole manner of living—houses, lothes, food, and everything—so they think it needful to change their language too. But big words—at all events, the big words of fashionable life—are not to be learnt in a moment. Much no doubt may be done in improving one's language by a steady attendance at Vestry meetings; but then, Vestay English, though pompous enough, is somewhat wanting in polish, while the matters on which it is employed are sadly vulgar. But Miss Braddon's talk is finer even than that of the Vestry of Marylebone or St. Pancres, while the peculiar crimes in which she delighte are, as every one knows, what more than anything else characterizes good society. Hence her books are eagely sought after by people who, without any learning, have either pushed up to wealth, or arequashing up, or at all events hope to push up. By a careful study of them every one hopes that wh

The be should always speak of it as "the initiality stage of his exect." If the southry doctor same to see the slift abilities of the street. If the southry doctor same to see the slift abilities of them "as if this morning visit to the slick child was conservant to him "as if this morning visit to the slick child was conservant supercrogatory." His butter he should sleways address as his supercrogatory." His butter he should sleways address as his detective's men, he would call them "ministes," and whan he had let them into his house, would describe it as their "induction." He would never get into a cab, but would "transfer himself" into a hansom, and would toll the "charioteer" to "convey him at full speed." When he came to a new house, he would remark that it had no originality in its physicanomy." If he happened ever to go down so low in life as to be in a room that opened straight on to the street, he would say to a visitor, "I shall ring for Selly and tell her to show you to the door," though it will be "only a formula." If he lost his hair he would wear, "by way of succedaneum, a gold embroidered anoking-cap." Ho would "emerge" from his room, have "a saintillation of the truth," and get his wife—his lady we ought to say—to "relegate" a too forward housekeeper "to her original position of maid," where she should again bring up "the massive silver equipage" whenever a lady was on the point of "officiating at the tea-table." At the same time that he learnt all those grand new words, he would remember that an Oxford man, nay even a Balliol man, who if we mistake not was also a Rugby man, introduced in the story a pleasing change by such a phrase as "jawing away like old hoots." He would learn also, in common with Miss Fraddon and the Times, always to talk of "aversion from anything and not, as every body else does, Oliver Goldsmith included, aversion to anything. It would seem to show that he must know enough Latin to be aware of the derivation of "aversion," and would make his

The plot of Lucius Dancen is simple enough. Lucius and his friend (reoffrey Hossick, the Balliol man, are starving in a tent in "the hyperborean chaos ruled by Beath," when

A voice, a human voice, brestor the dead allense; a wild face, with bright fierce eyes peers in at the entrance of the but, from which a long hand has dragged aside the tarpaulin that serves for a screen against the kean northern winds, which creep in round the angle of the rough wooden peech.

The face belongs to neither Indian nor half-breed; it is as white as their own. By the faint light that glimmers through the parchasant windows they see it scrutinizing them interrogatively, with a piercing scrutiny.

For the present this mysterious stranger, himself half-storved, is contented with murdering their guide and burning his body in the fire, though whether for the sake of eating him, as Lucius believed, or of robbing him, as he himself says in a muttered soliloquy, is not made clear. "Better to be thought a cannibel than a thief," he says by way of comfort, though why so we do not make out, as he had been thieving all his life. Lucius warms him that if he ever comes back to the tent he will shoot him like a dog. He does come back and he gets shot, while Lucius is for years tortured with the reflection that he is himself a murderer or something very like one. The reader of course knows that this mysterious cannibal or thief will turn up again, though he has got a bullet in him in "the hyperborean chaos," and for all that we are told is miles away from any help. Very dear in the eyes of Miss Braddon are all her villains, at least until she has got them well into the third volume. Before this fellow Matchi, or Vandeleur, or Sievewright, as he is known in different parts of the book, killed the guide, he had aroused Lucius's suspicion by the wendertul way in which he played on a violiu which happened to be in the "hyperborean chaos." He seized it as soon as he saw it and

Presently there arose in that low but a long-frawn wailing sound; a minor chord, that seemed like a passionate sob of complaint wrung from a heart newly broken; and with this for his sole prelude the stranger began his theme.

Some years before a stranger in England, who "played like a devil," had run away with Lucius's only sister. Of course in the end it turns out that this is the man; but though, as one of Miss Braddon's characters says, "these extraordinary coincidences hardly surprise me," yet in the case of this diabolical fiddler there are so many extraordinary coincidences that we, at all events, are surprised. For he turns out to be not only the husband of Lucius's sister, but also the supposed father of Lucius's future wife, while the third man of the party, Geoffrey, by the strangest of all coincidences discovers the deserted wife, and falls in love with her without finding out for a long time that she had ever known Lucius or the villain. Everybody is recognizing in everybody else something which somehow or other reminds him of something or of somebody. For the moment Lucius had to own that "it was too wild a fancy to conceive for a moment that he had encountered that man whom he had hunted for all over England, and even out of England, here in this primeval forest." But though now he felt that the fancy was "an evidence of a brain enfeebled by snxiety and famine," yet afterwards he knew that it was well founded. On his return to England he becomes acquainted with an old-curiosity dealer, and says of his face, in speaking to himself, "there is something in it—something that seems like a memory or an association—which strikes me more forcibly than the face itself." This old gentleman turns out to be the villain's father, the grandfather, as it was supposed, of the gril with whom Lucius falls in love. Geoffrey Howard, when he fell in with a public singer, found that "her full,

[&]quot;Lucius Desuren; or, Publicane and Simura. A Novel. By the Author of "Ludy Andley's Bearet," dec. &c. 3 wife. London: Manusch & Qa. 1873.

clear, grey eyes reminded him curiously of other eyes, yet he knew not whose." She turns out to be his friend's sister and the villain's wife. Lucius, again, when called in as a surgeon to see a sick child, found in its face "something which impressed him curiously—something that seemed familiar—familiar as a half-remembered dream. Good Heaven! was it not his dead sister's face that this one recalled to him—the face of the little sister who died years ago?" It turns out, of course, to be his own niece, the villain's real child. The villain's supposed child, as we have said, Lucius marries, without, to our surprise, first discovering in her eyes that kind of resemblance which ought to have existed between a man

kind of resemblance which ought to have existed between a man and a girl who had for years been passed off as his daughter.

Then, too, the people in the story have presentiments, or feel influences. The old grandfather, who had some years before driven away his wicked son, began all of a sudden to have "an overpowering sense of approaching evil." "I feel," he said, "that something, or some influence inimical to myself, is near at hand, overshadowing and surrounding my life with its evil power." The old gentleman was more than justified, for the villain, who had of course escaped from the gun-shot and "the hyperborean chaos," had found out that in his old house in Wapping there was hidden staircase which led up to a passage in which a panel opened right into his bedroom. The villain had learnt the existence of this passage from the house-agent, and, making use of it, not only opened right into his bedroom. The villain had learnt the existence of this passage from the house-agent, and, making use of it, not only plundered his father, but even put small doses of arsenic every night into his medicine. Meanwhile the hero Lucius, suspecting the some foul deed was being wrought, had brought about the "induction" of the "minions" of the private detective, while he himself hurried over to Rouen to follow up a track he had come upon as to the real parents of Lucille, the girl he was in love with. For, if she was the villain's daughter, as he had feared, and if the shot he had fired at him in the chaos had killed him off, as he fully believed, he was, even for one of Miss Braddon's lovers, in a somewhat awkward position. Not every young lady would marry a what awkward position. Not every young lady would marry a gentleman who had killed her own father, even supposing that he was a cannibal, and not a thief. Fager as we were to arrive at the end of the plot, so as to learn that Lucille was not the villain's daughter, eager as we were to get the villain himself killed off, so that his wife might become a widow and marry Geoffrey, yet that his wife might become a widow and marry Geoffrey, yet Miss Braddon very properly reproves our impatience by giving a minute description of the table-d'hôte of an hotel in the town of Rouen, with its "prosperous progressive air." Lucius at last brings his inquiries to a happy end, and hastens back to Wapping just in time. The villain had got into his old father's room, and, inding that poisoning had not answered, had raised a knife to stab him. But here Miss Braddon shall speak for herself:—

Rapid as Ferdinand's movement had been towards the bed, Lucius had been quick enough to intercept him. By the bedside of the intended victim the two men struggled, one armed with that keen knife, the other defence-less. The struggle was for mastery of the weapon. Lucius seized the murderar's right wrist with his left hand, and held it aloft. Not long could be have retained that flerce grip, but here his professional skill assisted him. His right hand was happily free. While they were struggling, he took a lancet from his waistgont pocket, and with one rapid movement cut a vein in that uplifted wrist.

Ferdinand then rushes with all his force on the oaken panel, breaks through it, but brings down with it "a huge beam that had sustained the wide old chimney shaft. That mighty crash was succeeded by a rushing noise from a shower of loose bricks and plaster, then one deep long groan from below, and all was silent." We had seen, when that chimney shaft was brought in towards the beginning of the book, that it was meant to fall on some one's head, and so we were not half so much surprised as doubtless was the villain. He was not, of course, killed outright, but lived long enough to enable Miss Braddon to trade on repentant death-beds as well as on murders. "There are some things," she says in this very work, "which no woman could write." It would have been happy if among these things had been such a story as Lucius

OLIPHANT'S STANDARD ENGLISH.

WE are glad to see Mr. Kington-Oliphant come back to serious work. His Life of Frederick the Second, published now some ten or a dozen years back, had quite enough of good stuff in it to make it a pity that he should waste himself on Lairds or Ladies of Gask, or on an Historical Society formed under the inspiration of Dr. Charles Rogers. We now gladly welcome Mr. Cliphant, in his present volume, as a recruit to the band of those who is the hard statement of the second statement of the second statement of the second seco give themselves at once to trace out the history of our language and to do what they can to set a barrier against further inroads of corruption. Mr. Oliphant's book is the exact opposite of Mr. Fitzed-ward Hall's book on a somewhat kindred subject. Mr. Oliphant's object is perfectly plain to see; he writes in a pleasant and flowing style which it is easy to follow; he does not abuse anybody; and he writes in the interest of good English instead of bad. That such a bage is a sign of the later which have been readed within the later was readed. vast steps which have been made within the last few years by clear and scientific views of history and philosophy. Mr. Oliphant, it is plain, is not a mere compiler, but one who has thought and studied for himself; but it is equally clear that he has thought and studied under the guidance of the best recent writers on his own

and on kindred subjects. We can hardly suppress that have written his book if Dr. Mosris and same written before him. The characteristic feature of the book is that it gives the results of their researches and of Mr. Cliphant's swa in the form of a narrative, not of a grammar or discussion on grammar, but of a story that may be read. Mr. Cliphant modestly says that he does not profess to write a History of the English I anguage, and that he has specially to do with the growth and destiny of one particular dialect of that language. Still his book comes nearer to a History of the English I anguage than anything that we have seen since such a History could be written without confusions and continudictions. There is no halting or stumbling about Mr. Cliphant; he fully takes in those simple truths as to the history of car tongue which we may make bold to say that the philologers had to learn from the historians. Mr. Cliphant firmly grasps the truth that English is English, and always has been English, and not anything else. In clearness and precision he is a century or two in advance of Mr. Marsh and writers of that date. Such a sentence as the following goes a long way to mark the progress which we as the following goes a long way to mark the progress which we have made :-

The poem, part of which I have set out above, is the earliest long specimen of an English riming metre that is still popular. Having been compiled somewhere about 1160, the work stands about half way between the Beowulf and the last work of Mr. Tennyson.

If we have any fault to find with Mr. Oliphant's general treatment of his subject, it is that we think he assigns too much importance to Scandinavian influences on English. Yet he quite avoids the error which is all but universal when people once get among Danes and Northmen. He never puts on the Berserker madness, nor pours out any of the conventional rubbish which it is usual to

pour out while under its power.

The title of Mr. Oliphant's first chapter marks the progress which we are making step by step towards grasping the mysterious truth that we really are ourselves. Its heading is "English in its earliest shape." Twenty years ago the first chapter of a book on "Standard English" might very likely have begun with some babble about "our British forefathers"; it would almost certainly have gone off into some confused talk about Saxons, Danes, Normans, what not, as equal elements in the making of the mongrel speech of a mongrel people. A step onward, and we might have been told that English was derived from Sanscrit—perhaps through High-German; and this would at least have called out a feeling of thankfulness that we were not told that English was derived from Lichney. Mr. (Wishort begins her telling his configuration that English Mr. Oliphant begins by telling his readers that English —the English tongue which we spoke when we came hither, and which we speak still—is one sister and Sauscrit another, and that, though Sanscrit commonly keeps older forms than English, yet here and there English has kept an older form than Sanscrit. And here and there English has kept an older form than Sancert. And so he goes on, clearly tracing out the true relations and the true history of our speech. It is something to hear Beowulf spoken of as "the old epic, written on the mainland, which sets before us the doughty deeds of an Englishman, before his tribe had come to Britain." Twenty years ago such words would in most ears have sounded as words without a meaning. Now the truth which they set forth is clear to thousands of learners, though here and there a teacher may try to put back his stock of tares in the field where good seed has been already sown. Mr. Oliphant shows all along that he has been working his philology, as alone it can be safely worked, under the wing of history. If we have anything to quarrel about with Mr. Oliphant, it is that, though he distinctly marks out the dis-tinction between High- and Low-Dutch, he hardly brings it out with enough of prominence. We just now need Mr. Skeat's true with enough of prominence. We just now need Mr. Skeat's true and bold saying as to the real relations between our own speech and the leading Teutonic speech of the mainland. Our younger brothren who "essen" and "trinken" have done great things in many ways; in some ways they have done greater things than we have ourselves; but we will not give up our birthright to them for the most tempting mess of pottage that can be put before us.

We must however thank Mr. Oliphant for one saying on this head:—"English, in respect of the Nominative Plural, comes nearer to the Mother Speech than German does." This truth needs well beating into people's heads, when we remember that there are those who iancy that the English plural s comes from the French or Latin. But we are not so ready as Mr. Oliphant is to set our seel to the saying of Garnett:—

seal to the saying of Garnett:-

We have a great regard for the Dutch, a still greater for the Germans, and an absolute enthusiasm for all the sons of Odin, whether Danes, Swedes, Norwegians, or Icelanders.

Low-Dutchman, Dane, High-Dutchman, is the right order, and we decline to get up any enthusiasm for sons who cut their father short of his rightful w, any more tenthusiasm for anybody, it is for that handful of Frisians—Englishmen left behind—who looked for that handful of Frisians—Englishmen left behind—who looked on as neutrals while Dane and High-German, intruders both of them were striving which should root out the true speech of the classt England. There is a great deal of truth in the point brought out by Mr. Oliphant that the Danish invasions in the ninth and tenth by Mr. Outpeant that the Danish invasions in the minth and tental centuries did much, within the districts which came under Rewish influence, to begin that work of breaking up the old inflexions which went on more fully after the coming of the Normans. This kind of corruption, as Mr. Oliphant says, is sure to happen whenever two kindred dialects clash together. And there is the further fact that so many Danish words appear in shortened forms as compared with their English cognates. And no one doubts that there

^{*} The Sources of Standard English. By G. L. Kington-Oliphant, M.A. London: Macmillan & Co. 1873.

was where it is just that and a Denish the Minnest Interest at Haptish and a Banish word or form
is simply due to the critical kindsed of the two. But howsever this may be Mr. Cliphant has in any case done good
service by bringing out clearly the part of England in which
the classical English of our own time arose. One of the things
which it is hardest to make people understand is that the local
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
dislects of any language are not corruptions of the polite and
therefore, some that the polite and literary speech is simply
one of those dialects, which, by some chance or other, has come to
the front, and has driven its fellows into obscurity. Careful
students have long known that classical English, "Standard
Haglish," is the dialect of some of those shires whose waters, by
various channels old and new, find their way into the Wash
Some have specially mentioned Northamptonshire, some Huntingdonshire, some even the more Danish Leicestershire; Mr.
Oliphant delights to place the exact spot where the English Some have specially mensioned and Lolectershire; Mr. Oliphant delights to place the exact spot where the English tongue began to grow into its now received shape in that smallest of shires which, in the time of Domesday, was not yet a shire. Mr. Oliphant is very fond of talking of Rutland—he knows too well to talk of "Butlandshire" any more than of "Cumberlandshire"—as the centre of "the New English." Yet the man to whose influence he chiefly attributes the final triumph of this dislect did not write in Rutland, but in the greater shire of Lincoln, though not far from the borders of its small neighbour. This was Robert of Brunne, or Robert Manning, who wrote his "Handling Synne"—a translation of a French poem—in 1303. If so, "Standard English" is in truth the tongue of Holland rather than of Rutland—another puzzle, if any one likes to use it, for those who can hardly be persuaded that we have a Holland within our own seas. Mr. Oliphant draws out the characteristic features of Robert Manning's language, in order to show that those points of difference both in grammar and in vocabulary which distinguish or unrerence both in grammar and in vocabulary which distinguish the later English from the elder first show themselves to any marked degree in his poem. He then shows the steps by which this East-Midland dialect gradually became the classical speech of other parts of England. And he remarks that Dante and Robert Manning began to write in the same year. Strange indeed it is true more to widely difference in grant and an arrival to the same year. is if two men so widely differing in general renown can really be shown to hold places answering to one another in the history of their several languages. But Mr. Oliphant's view of the case is, to say the least, one which quite deserves careful weighing. One of the most curious things is that Robert Manaing's work is found in a transcript made by a Southern scribe sixty years later, who, over many words of the original, wrote words which he thought clearer. For the greater part the later words are those which we should now best understand. Still Mr. Oliphant truly says:—

Some of Robert's words, that needed explanation in 1360, are as well known to us in 1873 as those wherewith his transcriber corrected what seemed obsolete. Words will sometimes fall out of written speech, and crop up again long afterwards. Language is full of these odd tricks.

Another view of Mr. Oliphant's is that the great flow of French words into English in the thirteenth century was largely owing to the preaching of the Franciscans. They, as he says, mingled with all classes, and formed a tie between speakers of French and speakers of English:-

speakers of English:

A new link, as we see, was thus forged to bind all classes together in godly fellowship; nothing like this Franciscan movement had been known in our island for six hundred years. The ()ld was being replaced by the New; a preacher would suit his tales to his listeners: they cared not to hear about hinds or husbandmen, but about their betters. He would therefore talk about ladies, knights, or statesmen; and when discoursing about these, he must have been almost driven to interlard his English with a few French words, such as were constantly employed by his friends of the higher class. As a man of learning, he would begin to look down upon the phrases of his childhood as somewhat coarse, and his lowly hearers rather liked a tarm now and then that was a little above their understanding what is called "fine language" has unhapply always had charms for most Englishmen. It would be relished by burghers even more than by peasants. The preacher may sometimes have translated for his flock's behoof, talking of "grith or pais, road or croix, steven or voix, lof or prase, switedious or trickerie, stead or place." As years went on, and as men more and more aped their bettefn, the French words would drive out the Old English words; and the latter class would linger only in the mouths of unland folk, where a keen antiquary may find some of them still. So mighty was the spell at work, that in the Fourteenth Century French words found their way into even the Lord's Prayer and the Belief; the last stronghelds, it might be thought, of pure English. It was one of the signs of the times that the old bods made way for the new prechar; prayer and praise both come from France.

The Franciscans and the other friars very likely helped; but the

The Franciscans and the other friars very likely helped; but the rush of French words into English was a sign of the general change which was going on. As all natives of England began to feel change which was going on. As all natives of England began to feel themselves Englishmen in opposition to Brabancon mercenaries and Poitevin and Savoyard favourites, the barrier of language broke down. Even the confirmed use of French in public documents, which is one of the features of the thirteenth century, is not a sign of the further degradation of the speakers of English; it is a sign that the speakers of French were no longer looked on as strangers.

We cannot follow Mr. Oliphant as he traces the way and down.

We cannot follow Mr. Oliphant as he traces the ups and downs of our language down to our own time, ending with a vigorous chapter on "Good and Bad English in 1873." We think he a little everdoes it in the Danish—we wish he would not talk about direction; but we can thoroughly recommend his book.

THE WILD NORTH LAND.

WHY, Captain Butler expects his readers to inquire, why abould he have crossed the snowy wilderness of North America in winter and alone? For a reply to this most impertinent question he refers us to the title-page and to the book itself. Examining the title-page we find a motto from Mr. Tennyson's Ulyssee. "I cannot rest from travel, I will drink life to the lees," says the old hero, and he adds that he has "become a name for always roaming with a hungry heart." Translating this into prose, we may say that the love of glory and the love of adventure appear to be Captain Butler's ruling passions. His love of glory has, we may hope, been fairly gratified by the reception given to his former very pleasant book of travels, the Great Love Lone; and if such literary laurels are insufficient, we sincerally hope that he may be successful in acquiring professional honour in the swamps of the Gold Coast, where he talls us that he is now employed. Certainly he seems to have some excellent qualifications for the task. The love of adventure breathes through every page of his book, and gives it a pleasant flavour of originality. Many excellent travellers become intolerably dull as soon as they take a pen into their hands; they write so coldly of the loveliest scenery and the most expiting parils that we fancy them yawning across a whole continent. I lantain Ruther on the other hand, succeeds in infecting as with they write so coldly of the loveliest scenery and the most exciting perils that we fancy them yawning across a whole continent. Captain Butler, on the other hand, succeeds in infecting us with the spirit of enjoyment. When we ask in cold blood whether his journey can really have been pleasant, we have certain qualma about giving an affirmative answer; but so long as we look at it through his spectacles, we feel disposed to write off at once to Fort Garry and order a team of dogs and a couple of half-bread trappers to accompany us to the Rocky Mountains. Perhaps Captain Butler's manner is occasionally rather too flippant; there is, so to speak, a certain military awagery about him, and he is ant so to speak, a certain military swagger about him, and he is apt to express his contempt for civilians and for all commercial views of to express his contempt for civilians and for all commercial views of life with some unnecessary asperity; once or twice, more-over, his pen rather runs away with him, and leads him too far across the borders of common sense into the region of fine writing. Here, for example, is a sentence which is the worst that we have found; and which we certainly cannot admire from a literary point of view, whatever may be the merits of the sentiment. He finishes an assault upon the Utilitarians in these words:—"In hours when life and honour lie at different sides of the 'to do' and 'not to do,' men will go back to times when other men, battling with nature or with man, cast their veto. sides of the 'to do' and 'not to do,' men will go back to times when other men, battling with nature or with man, cast their veto on the side of honour, and by the white light thrown into the future from the great dead past, they will read their roads where many paths commingle." It is only fair to add that Captain Butler, being on his way to Coomassie, has been unable personally to correct his proof-sheets, and it would therefore be cruel to judge of slight defects with any severity. Indeed we have nothing more to say against him. His book carries us along with it; and that is the one essential and sufficient merit in a book of travels.

The merit will appear the greater when we take a dispassionate view of the pleasures of American travelling. Captain Butler passed the early winter months in a hut at the forks of the Saskatchewan. The cold often reached seventy degrees of frost. There was no communication with the outer world, and his only visitors were an Indian family who camped in the neighbourhood, rightly calculating that it was easier to sponge upon the white man for food than to hunt deer for themselves. In the beginning of February Captain Butler set out for his long march to the Rocky Mountains, the date being fixed by the advantage of crossing the plains whilst the frozen rivers and lakes still made sledge-travelling possible. The advantage would seem to have been dearly bought. Captain Butler's pages are a series of snow-pictures which make a London winter seem like tropical heat, and the memory of it might be ed, but for a certain observation of Shakspeare's, to cooled him even on the Gold Coast. He is always crossing frozen lakes or rivers where the icy wind sweeps down from the Arctic Ocean and makes a temperature of many degrees below zero all but intolerable; constantly he has to sleep out at night under the open heaven, and be thankful if he can persuade a dog to lie on the top of his blanket; he has to rise at two in the morning, and occasionally to travel for twenty-four hours in succession, with inflamed ankles tortured by the unaccustomed strain of snow-shows. Only at rare intervals he comes to some solitary fort where a Scotch or English servant of the Hudson's Bay Company, with two or three Canadian half-breeds and a straggling body of Indians, are in a state of hybernation. His human fellow-travellers were in a state of hybernation. This numan tenow-traveners were scarcely capable of adding much charm to society. During one part of his journey, for example, he had three servants; one a Swampy Indian, described as "negatively good" when alone, but "positively bad" when associated with others worse than himself. Another was a handsome French half-breed, described as a sulky good-for-nothing fellow, and a confirmed liar, with whom it was as difficult to make friends as with a fish to whom one had said a state of the state of worm. His motive for travelling was the desire to run assistant a girl with whom he had previously run away from some other place. Captain Butler's third companion was one Harper, whose character we are left to infer from the chief anecdote related about him. He had been sent from a fort to bring home some mouse in company with a young clerk unaccustomed to travelling. As they were crossing a frozen lake, a terrible storm came on. The

^{*} The Wild North Land. By Captain W. F. Butler. London . Sampson Low & Co. 1873.

men lost their way; and Mr. Harper, we are told, descried his companion, and then exceeded in making his own way to the fort. An expedition was immediately sent out for the missing man under the guidance of Hasper; but the story goes on that this gentleman, in order to avoid any chance of his former treachery being discovered, deliberately led the pasty in an utterly wrong direction. Another expedition, however, luckily found the descried wanderer, who had been out for five nights of cruel frost, and who had only been saved by the lucky discovery of a hot spring. On the whole, it must be admitted that such an anecdote was scarcely calculated to increase Captain Butler's confidence in his travelling companion. In one way or another, however, he crossed the frozen wastes without any serious adventures, and reached the base of the mountains as the snows were disappearing in the beginning of April. The passage of the deep gorges or casions which cut through one of the great ranges provided new excitement of a different kind. Captain Butler, with companions of a more trustworthy kind, attempted to force his way up a mountain terrent, with a large cance containing the baggage, and too heavy to be carried. He gives a very spirited description of the adventure; how they were dashed against rocks and furced down rapids; how the cance was upset and the baggage lost; and how, after many alternations of successandfailure, they were at last on the point of being finally beaten, when they had a lucky meeting with a certain "Cornish Peto," a distinguished miner in those regions, who hospitably received them and helped them over their difficulties. The caron once surmounted, the chief perils of the journey were surmounted. A few days more brought the travellers to the furthest outpost of the miners, and thence Captain Butler descanded by a comparatively civilized track through British Columbia.

Columbia.

As we take leave of him, we are inclined to repeat the question, Why did he make the journey? But we admit that we have received an implicit answer. Captain Butler has succeeded in impressing upon us, and therefore must have felt himself, the poetical side of his experiences. A description of the view from a hill called the "Spathenaw Watchi" gives the keynote of the sentiment. The area is so vast, he says, "that endless space seems to find embodiment, and at a single glance the eye is satisfied with imprensity. These is no mountain resume to come up across with immensity. There is no mountain-range to come up across the snow-line, no river to lay its glistening folds across the middle the snow-line, no river to lay its glistening folds across the middle distance, no dark forest to give shade to foreground or to fringe perspective, no speck of life, no trace of man, nothing but the wilderness. Reduced to its own nakedness, space stands forth with almost terrible grandeur." The whole description is forcible, and expresses a feeling which is often enjoyed in a degree upon Mont Blanc, or even Hen Nevis. But a mountain in a civilized region cannot express the utter savagery of a mountain in the centre of a still scarcely inhabited continent. Captain Butler afterwards mosts with plenty of forests, rivers, and mountain-ranges to frame and diversify his pictures. But they all repeat much the same sentiments, though in varying language. Everywhere the torrible grandeur of virgin nature oppresses the imagination. This vast region, with its innumerable rivers whose imagination. This vast region, with its innumerable rivers whose uncouth names still sound strange to our ears, but which must some day flow through vast breadths of cultivated land; these mountains unknown to fame, but yet rivalling in height and (if one of the pictures be accurate) surpassing in strangeness of form one of the pictures be accurate) surpassing in strangeness of form the greatest Alpine peaks, seem to indicate a continent just coming into life and suggest infinite time as well as space. Still free from the mushroom growth of American cities, they recall geological instead of historical epochs, and the bear, the buffalo, the beaver, the red man who still linger amongst them, are like twilight phantoms just disappearing before the survise. The sun twilight phantoms just disappearing before the sunrise. The sun indeed is rising in a rather questionable shape. Such forerunners of civilization as some of Captain Butler's companions are many degrees inferior to the poor savages who still swarm these wildernesses. He speaks kindly, though sensibly, of the red men; and without concealing the vices which they have inherited from their ancestors or caught from the white ruffians who visit them, he mentions some touching instances of fidelity and good feeling which can be detected even in these outcasts of the world. We fear that it is needless to discuss the propriety of the advice which he gives to missionaries, inasmuch as it is only too probable that the flocks will vanish before the missionaries have learned, if they have need to learn, a better method. civilization as some of Captain Butler's companions are many deas only too probable that the flocks will vanish before the missionaries have learned, if they have need to learn, a better method. But we cannot part from Captain Butler without saying a word about another of his companions. An admirable dog called Cerf-vola followed him in his former journey; and, after two years' separation, greeted him with affection on his reappearance. Cerf-vola followed, or rather led him across the continent, first harnossed to a sledge, and afterwards promoted to be a friend at large. His manners and customs are described with equal kind-liness and humour; and we feel that Cerf-vola has a right to be placed in that catalogue of admirable dogs who are not quite good placed in that catalogue of admirable dogs who are not quite good enough for canonization, but who deserve some sort of posthumous celebration for their lofty moral qualities. Cerf-vola, not being suited by nature for African travel, was left in friendly hands in America; and we hope that his days may be long and well fod. As he appears on one occasion to have digested a fish-hook without perceptible mischief, we may hope that his constitution is unimpaired by his many toils, and that he will pass into a venerable old age, southed by the mamory of many adventures, and honoured, as he deserves, for unflinching fidelity.

POLICIAL OF SIR HOPE CHARGE

In was then the other branches of the carries as continue and justified by the facts of the Indian mutiny is related in the interesting journal which records Sir Kape Shants meaning periences. Sir Hope Grant commanded the savalry, first of the field force which fought the Delhi campaign, and afterwards of the army which under Sir Colin Campbell finally put there is mutiny; and his life during that period seems to have been as from the swager which even brave men sometimes exhibit, and which came to but convey to the reader a very strong impression of the narrator's personal galiantry and of his mediat, stanightforward, and kindly disposition. It is not an easy task for a principal actor in such scanes to describe them without sither levening he vivid effect of the picture by keeping his own part unduly in reserve, or indulging in egotium. But the proper mean has been very happily preserved in this jeamed. It has no protensions to literary excellence, being, in fact, the record briefly jotted down from day to day of a ment whose life was passed in the saddle, undergoing extraordinary fatigues and exposure, and was obviously not written with any view to sublife of a cavalry commander in those stirring times. It is generally supposed that the work of a siege falls mainly to the dismounted branches of the service; but during the four months' campaign before Delhi which goes by the name of the siege of that plane, the cavalry appear to have had as active a time of it as the most ardent soldier could wish for. Here is one listle incident, an attack on the rear of the camp (shortly after it was established before the city) which Brigadier Grant was despatched to repel, his command comprising at first only cavalry and artillery, on ground which appears to have been very unfavourable for their action:—

To my surprise I found the enemy in position half a raile further on to our proper rear. On seeing my small force they opened a heavy fire against us. . . . It was wonderful to see how the shot and shall fell among us without doing much harm; a grape-shot tore a pistol out of my holster-page, and I never saw it again. Our little army in camp, aroused by the firing quickly turned out to support us, and we had a hard tussle for the mastery till 11.30 at night. The remaining squadrons of the 9th Lancers and the Guides horse charged a large body of the enemy on the Subzi-Mundi road; but with a ditch and houses on each side was paralysed, and our loss was severe. Among those who fell, I grieve to say, was Licutemant-Colonel Yule, of the 9th Lancers, as fine and gallant a soldier as over lived. Captain Daly (commandant of the Guides) was very severely wounded through the shoulders upon this occasion.

The advocates of mounted riffemen will claim this instance in favour of their proposed tactical reform. A small force of this sort would probably have been of more value here than cavalry and horse-artillery, whose gallantry on such ground was unavailing, and who, it is to be feared, were not able to inflict on the rebels anything like the same amount of loss as they suffered themselves:—

As long as daylight lasted we drove the rebels back; but when darkness ensued they got round our flanks, and two of my gune (Money's, I think) were in the greatest jeopardy. I therefore collected a few men together and charged the enemy. A Sepoy within five yards of me fired at my horse, and put a bullet through his body close to my leg. It was singular he did not aim at me; but in all probability he thought it best to make sure of killing the horse, and that then, to a certainty, the rider would fall into his hands. I felt that my poor charger had received his death-wound; yet he galloped on fifty yards through the throng of rebels, and then dropped down dead. I was in rather an awkward predicament—unhoused, surrounded by the enemy, and, owing to the darkness, ignorant in which direction to proceed—when my orderly, a native Sowar [trooper] of the 4th Irregulars, by name Booper Khan, rode up to me and said, "Take my horse—it is your only chance of safety." I could not but admire his fine conduct. He was a Hindoostance Museulman, belonging to a regiment the greater part of which had mutinied; and it would have been easy for him to have killed me and gone over to the enemy; but he behaved nobly, and was ready to save my life at the risk of his own. I refused his offer; but taking a firm grasp of his horse's tail, I told Rooper Khan to drag me out of the crowt. This he performed successfully and with great courage.

Rooper Khan refused persistently the present of money which Brigadier Grant pressed on him; all he asked for was a recommendation for promotion to his commanding officer, which the reader will be glad to know was obtained for him, as well as the Order of Morit.

This is by no means the only instance recorded in this journal of losses suffered by cavalry from their being brought into places where they could not act. On the morning of the atorm of Delhi, for example, Brigadier Grant was directed to take up a position with the cavalry and horse-artillery on the open plain between the walls of the city and the siege batteries, in order to prevent the onemy making a counter-attack upon the latter (which were quite onemy making a counter-attack upon the latter (which were quite time been only partially carried, the Brigadier command was thus expused to the full fire of twenty-four-pounder grape from one of the bestions which was still held by the enemy, while drawn upon an epen plain without cover of any sort; and there the drain factor held its ground for the best part of the morning, unable to inflict

A Incidents in the Super War, 1857-58. Compiled from the Private Journals of Sir Hope Green, G.C.B. Together with some Explanatory Chapters by Henry Knollys, Captein Royal Artiflesy. Landon Blacktoned & Sons. 1873.

50

this distance of time have flowber troop—which, after being shoot distance of time have flowber troop—which, after being shoot distance of time have flowber troop—which, after being shoot distance at the few months of the storm remarks their distinct of horse at the minuses and intro-sight in action. The 9th Lancese had forty-two man and intro-sight in action. The 9th Lancese had forty-two man and intro-sight in action. The 9th Lancese had forty-two man and intro-sight in action. The 9th Lancese had forty-two man and intro-sight in action. The 9th Lancese had forty-two man and intro-sight in action. The 9th Lancese had forty-two man and intro-sight in action. The 9th Lancese had forty-two man hid in the sight into the second have hid and two wounded. Ladging from the account one horse hilled and two wounded. Ladging from the account the parpose in view—namely, of preventing a counter-attack of the mining against the open limbs of the British troops—if held in reserve under cover until such an attack was actually made. But orders must be obeyed, although given by commanders who, engaged in another part of the field, cannot themselves judge of their effect; yet the illustration is a striking one of the wester of war, apart from the loss that occurs in necessary operations.

With the fall of Delhi, however, the campaign may be said to have iderely begun for the cavalry. A force was immediately detached to open communication with Sir Colin Campbell, in the direction of Campbers, and to reinforce him with the cavalry and horse-artillery of which he was greatly in need; and to the command of this force Sir Hope Grant, now promoted to the rank of major-general for services already performed, was eventually appointed, and his journey down the country with only his brignde-major for escort to overtake it was not the least perilous of the many dangers encountered. On joining the main army under the Commander-in-Chief, General Grant was appointed to the command of the cavalry division, and the duty of protecting the communications of a stationary force was now exchanged for one of constant movement in campaigning over the open plains of Upper India, a duty for which his iron constitution must have been almost as valuable a quality as his personal gallantry. The spirit of the mutineers was now broken, and there were no more great actions to be fought; but the heavy aggregate losses of the cavalry in their numerous encounters may be inferred from these pages, the foot-notes of which show how great a number of the officers referred to as being engaged immediately under Sir Hope Grant's orders fell in the course of the war. It is satisfactory to observe from the same foot-notes, that a large proportion of the gallant survivors have now reached a high place in the profession.

Eventually, Lucknow being finally captured, Sir Hope Gront was appointed to the command of the Oude division, and in that capacity had a very active share in the final suppression of the mutiny; and when in 1860 a force of two divisions was organized for war in the north of China, he was selected, with the unanimous approval of the army, for the chief command. The journal stops at this point; but the country knows how well the advance on Pekin was carried out, while the quiet modesty with which the commander, after performing this important service, returned to the ordinary duties of a peace command, is equally characteristic with the tone exhibited in this journal of the gallant author's soldierlike and unaffected character.

With Sir Hope Grant's journal is interwoven a sort of narrative of the mutiny by his late side-de-camp, Captain Knollys of the Artillery, which is very fairly done. But it is surely rather a straining after first cances to say (as at p. 2) that "the rebellion of 1857 was heralded by many minor outbreaks, the most notable of which occurred in 1806"; one might as well say that the Reform Bill was heralded by Magna Charta. And it is taking up perfectly untenable ground to talk about "the sweeping, and therefore imbecile, criticism which thoughtless medicerity is wont to lavish on thoughtful ability"—the criticism being that passed by Lord Cazning and Sir John Lawrence on the proceedings of Grencals Anson and Barnard. The fact seems to be that the former had no opportunity of exhibiting any military talents he may have possessed, and therefore whether he possessed them or not cannot now be told. The collection of the needful transport to enable the force collected at Umballa to move on Delhi was rather a matter for the commissariat and staff than the Commander-in-Chief. There is no reason, with our present lights, to suppose that Goneral Anson unduly delayed the salvance on Delhi, but equally there is no reason to suppose that he displayed any extraordinary energy in the matter, or that he made any mark one way or the other. His early death renders it imposible to say now whether he would have proved at all equal to the emergency; but if the post of commander-in-chief ought to be filled by a real soldier, then it was not properly filled by a man who, except in title, had little more to de with the profession practically than any other English guntleman. Of course those who were responsible for malking the appointment had no aspectation that General Anson would be called on while holding. It is do more than look dignified and draw the handsome emolutions of the office; but, considering how many deserving soldiers of marit were available at the time—including the mean afterwards channel of those officers who have giv

he was not strong enough to fill, and that it was a floaterate that which gave a firmer band and closes hand in his place. Equally for the country and the army, must be presented the chance which brought up to the chief command a versame like. Sir Colin Campbell, in whom the troops and the country had perfect confidence. The statement at p. 203 that "poor floateral Anson and Sir Ffenry Harnard strappled mandally, and were as the high road to success, when their spirite and under the unjust tain!" [of criticism] is more nousenes, and utterly innocurate as a statement of fact. Why should the doubt of a general from cholera be put down to a sinking of spirite any more than the doubt of grivate. Jones from the same disease? General Anson moreover doubt when only a few marches out of Umballs on the way to Dalli, and before it was known whether there would even be any lighting, much less whother it would be successful; and since he was cut off at the time from all communication with the South, none of the criticianus from an incompetent public about which Captain Knollys is so indignant could possibly have reached him. If—as far as sould be known from his antecedents, and so far as was determined by anything done by him during the few days between the outbreak and his douth—General Anson was a fit man to command the Indian army, then military experience, knowledge of war, and a high-reputation among the troops he is leading are not important qualifications for a general. The fact is, no army has suffered so much at different times from jobbery in the appointment of commanders as the British army, and, kooking back on the disasters inflicted on it under the guidance of such leaders as Howe, Clinton, Dalrymple, the Pulse of Yerk, and Elphinstone, one cannot protest too strongly against the pestilent dectrine that anybody is good enough to be a general; for that is what Captain Knollys's argument comes to, if, as he implies, General Anson was in the night place during the

DISTINGUISHED PERSONS IN RUSSIAN SOCIETY.

THIS is a very remarkable book. Written by some keen observer who is thoroughly well acquainted with what is going on in the past and present capitals of Russia, and who unites a vigorous and trenchant style with an implicit faith is his own knowledge and sugacity, it appeals to the popular judgment of Western Europe with a voice which will not be denied a hearing. Thoroughgoing unmitigated denunciation soldom fails to create an impression, and, as our author not rarely indulizes in the most sweeping censures, he will probably convince at any rate the least informed of his readers. In dissecting a character he seldom allows the edge of his sarcasm to grow dull; in besmirching a reputation he selects the blackest of staining fluids. One rises from the perusal of his pages with a general idea that Russia is a land wherein no good thing exists, that Russian society is a mere concourse of idiots or intriguers, and that no Russian statesman or publicist is worthy of much consideration, unless it be M. Waluieff or fluron Firels, otherwise called Schede-Ferrotti. Unfortunately Russian society has at various times laid itself open to the satirist's attack, and at the present moment there are many reasons why its brilliant vanities should excite the wrath of a lover of progress, of a believer in the beneficial effect of liberal institutions. Many reasons there are also, though of a different nature, why such wrath, when expressed in the guise of readable satire, should excite the curiosity and gratify the taste of the readers of the News Freix Presse, in which well-informed journal the sketches now before us originally saw the light. In England antipathy towards Russian is fed neither by the religious animosity nor by the political alarm now prevailing in Austria, but still room will doubtless be found in our literary circles for an essayist who knows how to paint Russian statesmen sufficiently black.

By far the most "distinguished person" in Russian society, if we may judge by the amount of space conceded to him, is General Ignatisff. While Count Schuvaloff occupies only seventeen pages, and no more than twenty-six are allowed to Prince Gortchakoff, no less than fifty-eight are assigned to the dangerous representative of Russia at Constantinople. Sprung from the race of petty nobles "which is as numerous as the sand of the sas," be does not belong to the circle of men "whose birth smoothed their future path." For some years after entering the army he led a life unknown to fame, except in so far as that he "received the Crimean medal is remembrance that for a whole summer, with sharp sabre, he had walked up and down the empty streets of Roval with their stinking water-casks." But after the war he became attached to the suite of General Muravieff in Eastern Siberia, and, being seat to-China as "Ambassador Extraordinary," he concluded the treaty by which Russia obtained so large a cession of territory south of the Amoor. "From that hour he was regarded as the star of Russian diplomacy, as a man who appeared for the present only too young to obtain a post of the highest rank." He was, therefore, after being employed for some time in Central Asia, appointed to succeed Prince Labanoff-Rostofsky, when that diplomatist setted in 1865 from Constantinople. His rapid advance had been favoured by two circumstances. One was that he "had by his marriage with a Princess Galitzyn secured the goodwill of the high seistocracy who were still influential in personal quartions." The other was that he had won the favour of the old Russian national party,

^{*} Distinguished Persons in Russian Stockety. Translated from the German by F. E. Bunnett. London; Smith, Elder & Co. 2872.

which was about that time at the height of its influence. To the Moscow publicists, most of whom "do not belong to the citizen class in the West-European sense, but to the lesser nobility," he class in the West-European sense, but to the lesser nobility," he was especially welcome, it seems, as a diplomatist "who could not be seduced by the most brilliant successes to exchange his easy

plebeian manners for aristocratic coldness and reserve."

plebeian manners for aristocratic coldness and reserve."

There is "something supernal and incalculable," observes our essayist, "in the relations between Moscow and Byzantium which have existed for a thousand years." It may be as well to remark that no mention of Moscow prior to A.D. 1147 is to be found the Russian chronicles, and that its importance for a considerable space of time after that date was very small, so that the author's "thousand years" must be set down as merely a rhetorical flourish; but the statement is in other respects correct. Nor is he far wrong in asserting that "all that the Russian possesses of genuine idealism is here concentrated. At all times when a war with Turkey is in question, a readiness for self-sacrifice is shown in the masses which otherwise it is in vain to seek for." And therefore, while Russian interests have repeatedly been watched by Turkey is in question, a readiness for self-sacrifice is shown in the masses which otherwise it is in vain to seek for." And therefore, while Russian interests have repeatedly been watched by heretics and infidels on the banks of the Thames, the Seine, or the Spree, "diplomatic usage allows no one to be invested with the representation of Russia at the Bosphorus but a professor of the Greek Orthodox religion of the State." Long before Moscow was founded, relations of the most intimate kind were kept up between the Varangian rulers of Kief and the Emperors of the East. From Byzantium Vladimir I. obtained the creed and the bride in whose favour he discarded his pristine faith and his previous consorts; towards Byzantium his subjects, and those of his successors, long looked for a supply of light and culture, of luxuries, and of ecclesiastical dignituries. Towards the same holy city, holy although occupied by "pagan Tartars," the Moscow Tears cast many a look of longing affection, especially after the alliance of Ivan III. with the nicce of the last reigning Paleologus had blended their religious enthusiasus with their political interests. At a later period Catharine II. looked forward to restoring the cross to Santa Sophia, and "dreamt of transporting her capital to that grand 'Serai-Spitze,' whence the old palace of the Sultans in its incomparable position looks down upon the Bosphorus"; while in our own days Nicholas fully expected to hurl the crescent from the walls of "Taargrad," and set up a Grand-ducal Constantine as ruler over the city of Constantine the Great. The Crimean war dispelled, at least for a time, all dreams of consummating this end by force, and Russia found herself commelled to adont a different line of tactics. the city of Constantine the Great. The Crimean war dispelled, at least for a time, all dreams of consummating this end by force, and Russia found herself compelled to adopt a different line of tactics. Prince Labanoff-Rostofsky, General Ignatieff's predecessor at Constantinople, is described by our essayist as knowing well "how, as a gentleman, to maintain the dignity of Russia outwardly"; but as being "in no wise fitted for his position." His successor was a diplomatist of a very different type. From the first day of his appearance in office he displayed "that unbounded self-contidence which is wont to be as ruinous to mediocre talent as it is in-dispensable in men of cenius to the full display of their newers": which is wont to be as ruinous to mediocre talent as it is in-dispensable in men of genius to the full display of their powers"; and he acted with a proportionate vigour. During the Bulgarian disorders of the years 1867 and 1868, our author justly remarks, "the Russian Embassy at Constantinople stood universally under the strongest suspicion of having been their originator, in-tellectually and materially." When the Cretan insurrection broke out, that Embassy proved more than ever "the central and rallying point of the Grock element"; and General Ignatieff became in a short time "the most popular personare with all became in a short time "the most popular personage with all Orientals speaking the Greek language," and his policy seemed to open "a new era of Russian splendour and Russian grandeur on the Bosphorus." But when in the autumn of 1863 the Porte broke off all diplomatic relations with Greece, and the Greeks looked in vain to Russia for the aid which they had been induced to expect, vain to ituse a for the aid which they had been induced to expect, General Ignation as popularity wanted rapidly both in the East and at home, and "in the course of the year 1869 the idea was just as strong of recalling the General from Constantinople as in 1868 was the enthusiastic desire of making him Chancellor of the Empire." Fortunately for him the Franco-German war led to the abrogation of the Treaty of Paris. "Russia at the beginning of the year 1871 held as nowerful a nonition in the Fast as held over the abrogation of the Treaty of Paris. "Russia at the beginning of the year 1871 held as powerful a position in the East as had ever been assigned to her since 1853," and "the Father of Lies," as the Russian Ambassador was styled, "was decorated with a high order of merit, and remained at Constantinople." After the death of Ali Pacha in 1871, when the Porte, which had hitherto a stood entirely on the side of the Patriarchate in the Greek-Bulgarian Church question," changed its policy, and "henceforth expressly took the side of the Bulgarian efforts at independence," General Ignaties became once more "the hero of the day, the man of the future." But only for a moment. His policy in favour of the Bulgarians drove the Greeks "into fanatical hatred against everything that bears the Russian name," His policy in favour of the Bulgarians drove the Greeks "into fanatical hatred against everything that bears the Russian name," and now "the Greek journals speak of 'Moscow' only in the tone of the most passionate animosity and hostility." In the opinion of his by no means friendly critic, "to the national zeal for one Slavonic race in the Balkan peninsula he has accrificed fellowship with a body of clergy who dominate over the entire Christian life of the East"—has committed indeed one of those mistakes which are so much worse than a crime

Such, in a condensed form, is the essayist's sketch of the career of General Ignaties, one which of course need not be accepted without the grain of salt customary in similar cases. Possessed of that self-confidence with which he credits the General, our author never hesitates and never doubts; all his portraits of people whom

he dislikes exhibit the same hard outlines and shadows. We have selected from among the "distinguished persons" whom he describes one of those whose name the familiar to the English public. The majority are but little known to the general reader, who probably cares but moderately about the fortunes of Count Protessoff, the Counts Adlerburg, Countess Antoinette Bludoff, or even "The Brothers Miliatia." M. Waluieff, however, may some day become familiar to English society, if it be true that, "unless all indications are deceptive, he will be Brunnow's successor in London." Count Peter Schuvaloff has lately figured in a not unimportant manner among us, and the name of Prince Gortschakoff is, of course, a household word. The esseys devoted to these three statemen will probably be read with interest, and not without edification, but we have not left ourselves space for more than a passing reference to their contents. In the sulogiums bestowed in the opening essay on the late Grand Duchess Helen every one must coincide who is in any way acquainted with the noble life led, the good work accomplished, by that truly royal lady.

The chapter headed "Authors and Journalista" contains a considerable amount of information about the Russian publication the

derable amount of information about the Russian publiciats of the present day. Towards them our author is by no means well inclined, and he makes many unkind remarks about their sayings and doings, more especially about those of the editors of the Goles and the Petersburg Erchangs Journal. The "Concluding Remarks" which occupy the final chapter are shrewd and sensible, and the prophecy with which it closes is one which is not unlikely to be fulfilled. In our author's opinion "the first day of violent commotion will, without doubt, burst asunder the covering which the popularity of Alexander II. has spread over the crater." The "support of absolutism," he thinks, has been thoroughly weakened, the aristocracy having lost its influence over both the middle class and the peasantry, while "irresistibly the independent and unfettered middle classes press, with all the intelligence of the army and the civil authorities, into the foreground of the scene." derable amount of information about the Russian publicists of the

HIBBERD'S AMATEUR'S GREENHOUSE AND CONSERVATORY.

MR. SHIRLEY HIBBERD'S name will deserve to be remembered post fata for the bons he has conferred upon flower-lovers of limited income by his suggestive hints how to make their homes happy through the intelligent utilization of floral resources. The clerk or artisan's window-garden owes him not a little many a home is indulted to him for bright and incorporate little; many a home is indebted to him for bright and inexpensive ideas about rustic adornment; and his latest offering to the floriculturnl world is "a handy guide to the construction and management of plant-houses," furnishing systematic information on the greenhouse department of plant-house construction and plant cultivation as distinct from the stove, orchid-house, or tropical-plant house. The value of this volume to amateurs of moderate means and appliances cannot fail to be great, because its author, whilst alive to the requirements of more sumptuous structures, keeps their particular case well before his mind's eye. Wholly free from bombast and vainglory, he never expatiates on the wonders of "my garden," but, writing for the large number of readers who would fain cherish a few treasured plants under glass during the inclamant season yet during to do no consistently with accommon inclement season, yet desire to do so consistently with economy and prudence, he has put together a series of hints on greenhouses and conservatories, and the fittest tenants for them, which we do not hesitate to pronounce more practical and practicable than those of his bulkier contemporaries.

those of his bulkier contemporaries.

A cheerful guide is the best man for a trying journey, and as many dabblers in floriculture will, in perusing this work of Mr. Hibberd's, be reminded of past stumbling-blocks and quagnires, it will be no small gain to them to start afresh with one who makes the best of such appliances as lie in his way, and does not despise simple expedients. For instance, if the only site that can be found is in a low and swampy position, he will not bid the amateur renounce the idea of a greenhouse altogether, on the ground that the only place for the furnace will then be in the water. For such a site he would recommend Musgrave's slow-combustion stove, which is a stove simply, and not a boiler, and, whilst extremely moderate in price, is the only thing of the kind which can safely be placed within the plant-house. In the roughest and most useful house Mr. Hibberd ever had, one which did for many stove-plants and many far less delicate specimens, this Musgrave stove was found to afford sufficient heat where, owing to the water in the soil, it was impossible to get heat where, owing to the water in the soil, it was impossible to get sufficient depth to make a proper stoke-hole for a furnace. Again, the tame-spirited florist might say in his heart that, because camelias do not care for as much light and air as heaths, and geraniums want more warmth than either, and because he cannot afford halfwant more warmth than either, and because he cannot afford halfa-dosen houses, he would give up the idea of plant-houses attogether, or only go in for some one class of plants. Not so Mr.
Hibberd. For a plant asylum open to divers classes he commends
a "well-built span-roofed house with brick sides, low roof, ample
ventilation, and a sufficient service of hot-water pipes," and he
assures us that in such a house "a very miscellaneous assumblage
of plants, including some that properly belong to the stove, mage
be grown by one who has acquired a little experience." Nay,

The Amateur's Greenhouse and Conservatory. By Shirley Hilbord. Illustrated with Coloured Pintes and Wood Engravings. London: Groom-bridge & Sons. 1873.

win if a smein-roof house in out of the question, a lasti-to, we are

The best house we over just for emintential work of the useful kind—for the graph and propagating besiders, for the production of graphs and encumbers, it safe keepings of a number of stove plants, and for growing tomatous and altitud—was a lean-to with a low roof and walk sank below the level, the safe walk of which was built of old floor-boards, placed double and filled in

From one so disposed to make the best of what comes to hand it is interesting to learn what the ideal should be; and this, we gather, is one good span-roofed house, ranning north and south in a quite sunny spot, and as large as the purse will allow. A large body of air conduces to equable temperature. Then the roof should be as low as may be; for the nearer the plants are to the glass the better; and in a question between wood and iron rafters, the latter, though dearer, should be preferred as giving more light, which in many cases, especially in our climate, is life to the plants. As to heating which is easier for a large house than a small one, the flue system is superseded by hot water, both on account of the room occupied by which is easier for a large house than a small one, the five system is superseded by hot water, both on account of the room occupied by the flues, and their liability to crack, and so to poison and destroy the plants. For the hot-water system the saddle-boiler—either the flat saddle or the double L saddle—is the best working boiler, though doubtless the upright tubular gives more power, if at the cost of much more fuel. One contingency in the case of boilers as well as flues is their occasional bursting but this is most in the case of the tubular being improved dupler. case of boilers as well as flues is their occasional bursting; but this is met in the case of the tubular boiler by an improved duplex edition of the original patent, so constructed that in case of an accident to any part, that part can be detached, and the heating business, instead of breaking down, proceeds without interruption. The setting of pipes only needs skilled workmen, well impressed with the necessity of a continuous, though gradual, rise from the level of the boiler to the level of the pipe's extreme distance from it, and of an escape of air through a reed-like pipe at the highest point. The gas-heating system may in towns, and with skilful management, be an economy over the hot-water system; but from what we read it is a ticklish business, and it is obviously limited to houses near to, or having their own, gasometers. Mr. Hibberd to houses near to, or having their own, gasometers. Mr. Hibberd does not notice the newest mode of heating plant-houses—Cowan's patent for heating them with the aid of a limekiln. This is of more interest to large than to small proprietors. The cheapening of coal would be little gain if we had not where to dispose of our lime; so that with regard to this patent we must endorse the sound words of the editor of the Garden:—"For a large place where lime can be consumed, with coal at its present price, no doubt it is a

To recur for a moment to the difference between the span-roof and the lean-to house, it is clearly brought out in these pages that the latter can never be more than a cool greenhouse, though the Paxtonian span-roof may be heated to the pitch of a stove "by driving the fire a little." The Paxtonian is perhaps the best of the portable houses, dear of course to the hearts of come-and-go tenants. The travels of one of these surpass in interest the locomotive powers which have been found at a pinch in a corrugated iron school. Mr. Hibberd gives us the ground-plan and sections of a portable house twelve feet long by eight wide, with side lights five feet high from the base, and roof ridge eight feet from the floor. This a correspondent of his removed bodily sixty miles by rail:—

We put three spokes under the base of the house on each side, six spokes in all, and two men to each spoke carried it to the ruilway truck, and thence to its new site, in perfect safety and without driving a nail. The house and twelve dozen plants were carried in perfect safety a distance of sixty miles on the North-Eastern Railway for 25s.

We have no doubt that novices will find much useful learning in the chapter headed "The Amateur at Work," but it is unnecessary to retail it at secondhand. More to our purpose is a glance at the greenhouse herbaceous plants, with which the author would fill houses of low pitch of brick pits impervious to frost, to bloom their one season, and after that to be replaced by others. "The essence of success in this that to be replaced by others. "The essence of success in this department consists in a fresh stock of plants every year." This section includes annuals and perennials, many of them hardy, all capable of increase by division, offsets, or seed sown. Among these are several varieties of outdoor favourites, choice asters of distinct character and dwarf proportious, in pots; the Spirses Japonica, before its outdoor time, in the beautiful spring growth, and under its less known name of Astilbe; balsams, dielytras, hyacinths, with divers kinds of lily and iris. Apropos of the indoor culture of bulbs, we are informed that most of them. though needing rest, cannot endure coddling. And iris. Apropos of the indoor culture of bulbs, we are informed that most of them, though needing rest, cannot endure coddling. Hundreds and thousands die annually from too great nearness to the heating-stove, whereas, if dried off gradually, bulbs so preserved would flower with double the strength of others wintered in a high temperature. Among the lilies cited in this chapter is an Australian species with showy orange flowers, Blandforthis Cunninghami, keeping green all the year, and the American Calochortus, with large white flowers blotched with colours, which, like the other, need not be dried off. The directions for growing these are the same as for the Ixis and Sparaxis, and those obtains Cape bulbs, Hypoxis and Moraca. A beautiful Cape iris, called Schizostylis coccines, introduced a flow years since by Messus. Backhouse, is hardy enough to be planted in a sunny spring border; and if potted and housed in September, will yield a profusion of scarlet flowers from October up to Christmas. Another grand section of Irids, the Tritonias, may also be treated

like the Ixias, and Tritonia aurea may be trusted out of doors in winter, as the Ixia and Sparaxis are in the Channel Islands. In the selection of hysointhe Mr. Hibberd counsels the choice of hard, sound, well-ripened bulbs, as the soft and spongy will not give fine spikes of bloom. Dumpiness, he says, is a sign of poor roots, and when such is the case you cannot draw up the spikes with paper caps. Though it is a wests of times to pob hyacinth bulbs for a second season, it is just as well to plant them out in shrubbery or garden hedge without breaking the roots, in which case they surprise us, when half-forgotten, with their welcome garlands of bright and fragrant flowers. Under the same head of herbaceous greenhouse plants are placed the families latter class love sunshine, and suffer from the misapprehension that they are better for shade. To us the curiosity of the chapter is the recipe for transforming the mignonette from an angual into a perennial of giant dimensions. Out the flowers as fast as they ome, and never allow a single seed-pod to form. The proce come, and never allow a single seed-pod to form. The process may be assisted by increased root room and liquid manure; and the details of raising fine bushes of mignonette in the thirty-two size pots, as well as of tree-mignonette and pyramidal mignonette growing may be found in pp. 94-6, with an engraving of a specimen bush that cannot fail to set adventurous amateurs upon the experiment. In a chapter on the greenhouse culture of the chrysanthemum, the engravings of specimen convex Pompon chrysanthemums" and "specimen pyramids" disclose shapes and developments undreamed of by most country cardinars, and vet perfectly attainable with due head to country gardeners, and yet perfectly attainable with due heed to the directions for training these choice sorts into mushroom,

with the herbaceous immates of the greenhouse may be associated soft-wooded plants, which are raised from cuttings, or less commonly from seed. They require for the most part the same conditions. Two important members of this large class, the pelargonium tions. Two important members of this large class, the pelargonium and the fuchsia, are treated of in separate chapters; but amidst the general mass occur the calceolaria, petunia, and verbens. Normust we omit the easily nurtured Deutzia, one variety of which, D. gracilis, furnishes a lovely display of elegant white flowers in early spring, and the odorous heliotrope, which, more susceptible of frost than geranium or verbens, may be cherished in a cool house into a flourishing pot plant, and in the border of a warm conservatory into a fine flowering wall or trellis plant. The greenhouse culture of violets is recommended in the same chapter. To get a supply of the Russian and Neapolitan sorts, lift the plants in October, and put them in frames on a gentle hotbed of leaves, keeping the lights off till there is a chance of frost, and watering them, stuadily when it them in frames on a gentle hotbed of leaves, keeping the lights off till there is a chance of frost, and watering them stoadily when it can be done safely. "A plantation for the purpose should be made every April, by putting out young rooted runners in beds of rich sandy loan with which charrings from the smother-heap have been mixed." The greenhouse sorts, V. arbores, and V. hederaces should be grown in rich sandy soil, and, after flowering, put out of doors in the shade till September. Planted out in April and potted up in September, the double Russian violets make beautiful pot plants for the conservatory.

Although it is impossible even to glance at the diverse sections of greenhouse plants which we have left unnoticed—hard-wooded, hard-leaved plants, chimbers, succulent plants, orchids, and pitcher-

hard-leaved plants, climbers, succulent plants, orchids, and pitcher-plants, &c—or even at the chief members of each section, it is quite safe to promise the reader that his labour will not be lost if he devotes deliberate attention to them. If we have a fault to find, it is that in the case of the less common plants—e.g. in the hard-wood chapter—and in the descriptions of the Habrothamnus, Hebeclinium, Erythrina, Compholobium, &c.—the author is a little too brief and vague, and credits the reader with too much acquaintance with each subject's hue and habit. Yet who would quarrel with this, while to all our prime old favourites he gives such intimate and careful attention? Nothing can be tenderer than his pleading for light, air, and coolness for the heath and the epacris, whose greatest fees are darkness, daup, and artificial heat, or his solicitude about the judicious use of the kuife, and the forbearance of the finger, which by nipping or stopping might prevent a pyramid of bloom. Nor, though aware that camellias like an "old, dark, and somewhat dirty house," and are in their native woods predisposed to shade, does he acquiesce in the slovenly mode of modifying the sunlight, but suggests divers modes of artificial shading as well as of other untidotes to the drought and thirst which are most inimical to cannollias and azaleas. The shedding of buds, which often dannts the inexperienced camelliagrower, is often the result of letting them first get dust-dry, and then have the relief of water too late. As might be expected of such a veteran, Mr. Hibberd conveys his information pleasantly and gracefully, sometimes indeed with a little playful irony; as where he says of orange and lemon trees raised from seed by lady gardeners, that the wonder is, not that they don't bear, but that the seeds germinate, and the plants live at all:-

They are generally potted in black mud, low down in the pots, as if mud reason a scarce article; they are watered and ventilated by accident rather than by system, and their tenacity of life affords a delightful proof of the accommodating spirit of the citrus tribe, which have this good quality at least, that they love life too well to be easily pushed out of it.

Let us hope that our floricultural lady readers will not resent this language, but condone it for the sake of the solid worth of the book and its charming coloured plates and wood-cuts.

TWO GIRLS.

TWO GIBLE.

NIEDMORE has made a decided advance in his new hook. But, though Two Girls is an imprevenent, both in power and maniliness, on A Shapt Gold King, there is stiff lacking that steady grip on the subject and that artistic vitality which mark the master-hand. Hence, though we can praise this later work in comparison with the former, we cannot praise it unconditionally. The characters want more movement, more life-likeness. They are of the labelled kind, rather than of those which express themselves by growth and evolution; and we are bidden to believe them to be so and so, rather than forced to recognize them believe them to be so and so, rather than forced to recognize them as the suther intended we should see them by the truth and vividness of his portraiture. This want of vitality is more remarkable in Oscar Welvertree, the hero, than in any other personage of the drama, save perhaps Irma Flaubert. We are to understand that Oscar is, theoretically, ossentially masculine and trustworthy; a young man of honest principles and honourable conduct; but we find him in practice more weak and wavering than the feeblest woman, dishonourably impulsive, dishonestly repentant, cowardly as well as rash, and acting like a fool shading off into a villain to the "two girls" who make the story, leaving us in doubt whether most to despise or condemn him. He is in love with Cecily Aucott, she also with him, but he allows himself to be swept away by a mere physical attraction so far as to make passionate love to Irina Flaubert, which he confirms by an offer of marringe, though she would have been well enough content with freer ties. His passion, however, soon passes—sooner, content with freer ties. His passion, however, soon passes--sooner. we fancy, than is quite natural; and a fortnight's absence in England, where his mother does, is sufficient to chill the ardour which only so short a time ago nothing less than marriage would satisfy. Add to the sobering effects of this death the unexpected presence of Cecily, and we have our fickle hero torn from the new love and once more transferred to the old, while in honour bound

.No one can claim essential manliness for a man who knows his own mind so little as Oscar Welvertree knows his, and who is so easily improssed by his transient fancy and fugitive passions. The vory ossence of manliness of nature is to have a clear vision and a determined will, and all those creatures who, as the Americans call it, "slop about," now taking one shape and now another, now yielding to one impulse and now madly devoted to another, though they may be interesting—which is doubtful—are certainly not manly. It is unfortunate when the here fails so unmistakably not manly. It is unfortunate when the hero fails so uninistalably as Oscar Welvertree; for the whole book gets a feeble and confused character, and everything else suffers by contact. Or perhaps it would be more correct to say that the same want of clear draw and solid treatment which has made a muddle of one person makes also a muddle of another. Thus Beddingly Aucott, Cecily's father, is no more distinctly drawn than his desired son-in-law meant to be individual enough. A philosophic freethinker, devoted to music, pottery, and his daughter, kind if arbitrary, liberal if crotchety, he is less than he is described to be. His chief actions are, the one to propose his daughter Cacily as a wife to young Welvertree when he believes that Welvertree has money, the other to tell Cecily that she is to many a certain M. Edonard de Banville after Oscar, who refused her when she was offered to him, is ruined, and when the two young people have met so often that Oscar repents his former renunciation, and her love, which grew to a certain height at first starting, has had time to develop still further. Beyond this, if we add that he is organically diseased and fore-sess death with calmness, and is taken ill after dimer at his club, we see but little or nothing of Beddingly Aucott in action, which is a pity, as he might have been made of great value in the picture, and one of the chief actors in the drama. The character as intended would have been a clever and subtle study, but, as actually presented to us, it is less effective than disappointing.

The first sketch of Cocily is charming, and gives us hopes of a al herome, fresh and hyung. A gul who is "healthily upright, healthily stout," with "wrists which were strong rather than alender," and "hands which were useful rather than delicate, well alender," and "hands which wore usenu maner than the covered with resy-white flesh, new browned and freshened by sun and sea," strikes a line turn note at the beginning; and when we have innocent trust in a stranger, read further, and come to her innocent trust in a stranger, and her womanly capability in the matter of the omelette, we naturally believe that she will remain flesh and blood all through, and not vanish into vapour as is too much the oustom with young ladies in novels. But we are bound to admit that she does not fulfil the fair promise of her beginning, and that she does run into sand like, too many of her kind. The strong life fadee out of her, and she becomes more and more of a mere puppet, a out of her, and she becomes more and more of a mere puppet, a marionette made of pasteboard and danced by strings. She retains no distinctiveness of tone or speech, no individuality of action; but talks and thinks as Occar, as Irma, as Boddingly all talk and think; and finally she only passes across the stage as a well-looking "super" who does duty for the prima doma. The sole bit of vitality kept by her is her love for and trust in Occar, who, however, ill deserves either. We are sorry that she does not remain distinct to the end. Sibe begins so well and makes such a pretty picture on the ramparts of Montreuil—her girlish love for the handsoms young strunger, in that sweet stage of "the orange without any find" as thy old song says, is so tenderly indicated, and her

whole personality is so charming—that we lessent power which lets her meander through space as a sketch for the second half of the book, and we will will be the work and been stronger for his work and better plete worthily what he began so well.

The story is of the simplest kind—merely the sandars of Oscar Welvertree between love and passion, doubt as a rapid fancy and a halting will. On his first acquaints the Aucotts at Montreul he is immensely struck by E whom, however, he says to himself he has only free pathy, admiration, not love of that burning and absert which naturally leads on to marriage. Hence, when he offers her to him, more Guilson, he referses her; not so mut the Englishman's diskile to have his wife schools for him the Engiselman's distinct to have his wife schools for Aun, as a cause he does not love her. And though the news which he heard that very day of grave consilications in the City, is especially in the bank of which he is a sleeping pastness, won have been reason sufficient why he should decline a proper made in the full belief of his affluence and security, yet it has real influence on his decision. "If I examine my fealings," says.—" rapidly, it is true, but I think not inserrectly—i delifted the kind of love for Miss Aucout without which I should deep to may that I could be prove than a friend to have." He the dare to say that I could be more than a friend to her." gnes on to say:--

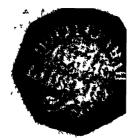

If the relations between the sexes were freed from some detestable restrictions, which tend to pen up people's souls as you pen up a fluck of sheep, I should avow that I feel towards her the most cordial friendship: something very much like affection, caused by I know not how much goodness, sweetness, brightness, in her character, in her life-yes, and in her face.

To which Mr. Beddingly Aucott makes answer:—"What more would you feel?" being "really sufficiently French to consider this declaration to express more than all that could be needed before marriage." The negotiation, however, comes to nothing, and Welvertree goes back to England and his ruin, and soon forgets even the "cordial friendship" with which Cecily Aucott had inspired him, "cordial friendship" with which Cecily Aucott had inspired him, and which he had not wished to confound with love. Presently father and daughter drift over to England, and then Welvertree, partly incited thereto by a shadowy kind of jealousy, makes it clear to himself that he does love Cecily, and that in the face of the circumstances in which they all find themselves—he a very poor man of letters, and she negotiated for by her father with M. Edouard de Banville—he must forget her at any cost. He takes the way of forgetting her according to the old plan of one nail knocking out another, and the second nail is Irma Flanbert.

Irma Flaubert is an actress, poor, passionate, a good girl on the whole, though she did once drift into the deep waters and save herself from starvation by selling more than her chairs and tables. She and Oscar fall in love with each other, but her love is the more intense, and, we may also add, the more fierce. She would have belonged to him on any terms; he, oblivious of Cecily, and of worldly wisdom as well, proposes marriage, and means it. His mother's death calls him to England, and breaks a fascination which had very little to do with the imagination but much with the senses, and a charte meeting with Cecily brings back that veering and inconstant thing which does duty for the hero's heart to the old point of attraction. He goes to Irma hero's heart to the old point of attraction. He goes to Irma to tell her that all is over between them, when he is stricken with brain fever in her room; and the actress, to make sure of the questionable prize she has won, keeps him during this illness, buys a wedding-ring, and gives herself out as his wife. And now comes what seems to us the utterly base and indefinishe part of the story. As Oscar recovers, no sense of gratitude or tenderness possesses him for the woman to whose care he owes his life; nothing but the prization of feeling hunself in her power and of sealing to take adventure of her starting of the starting of th her always about him. He takes advantage of her, absonce on her always about him. He takes advantage of her, absence, one day to run away, like a coward slave who is afraid to face his master. And Irma in despair flings herself into the river; affect which he quite tranquilly marries Cecily, and, because he makes a "clean breast" of it, thinks he has done all that duty to the living and honour to the dead demand. Yet the author can talk of his hero's manliness, and find excuses for an action which had nothing in it but cowardice, selfishness, and ingratitude.

Of the manner of this story we would say that, better written than A Snapt Gold Ring, it still is not well written. It is monotonous in its short antithetical sentences, and all the characters speak exactly like each other, and all exactly as the author writes. Also there are too many italics. No school ril eyer because her most gushing letter much more heavily than Mr. Wedtspre has scored the manuscript of his novel; and the reader's intelligence as to where to lay the emphasis, and how to distinguish between the pronounc, is accounted as nought. With all these arrivals drawbacks, however, the diook is an advance on the earlies and so far Mr. Wedmore may be congratulated. But he has great deal to learn yet before he makes real way towards action success, and he has some faults to avoid which as present own his highest marits. He has also to learn the exact measure of his powers better than he seems to know it now; and to avoid the the which depend for their interest on subtle delineation and subtle snalysis, in neither of which is he as yet sufficiently interest to successful.

SPAIN. THE Spanish Ministers in their address to the nation wisely discountenance the convocation of a Constituent Cortes. It was formerly thought that new Constitations were only required at considerable intervals, though there are some indications that the English Parliament, which possesses full constituent powers, will be asked to re-open at an early date the settlement which purported seven years ago to be durable, if not final. In Spain overy party which finds itself temporarily in power enacts a new Constitution in the futile hope of perpetuating its own supremacy. Universal suffrage and vote by ballot have in that country placed the control of the elections entirely in the hands of the Government for the time being. Within two years the Liberal Union under Sagasta, the Progressist party when Zorrilla was Minister, and the Federal Republic administered by Figureas, have successively obtained over the ming majorities. If Castelas had enjoyed an opportunity of appealing to the constituency, he would have been supported by a vote as unanimous as that which would at this moment approve the enterprise of Pavia and there are some indications that the English Parliament, would at this moment approve the enterprise of Pavia and the administration of Serrano. It is known that one of the causes of quarrel between the Cantonal Republicans and CASTELAR was his intention of filling up the numerous vacancies in the Cortes with the more eminent members of the different Conservative parties. Although Parliamentary government has never been acclimatized in Spain, the prosent Ministers, if they retain power, will sooner or later summon a Cortes for the purpose of rendering their own authority ostensibly legal; but there will not be the smallest reason for making such an Assembly Constituent unless they have the unexpected courage and good sense to reverse many foolish and mischievous principles of former constitutional legislation, and especially to restrict the suffrage. It is perhaps on the whole well that no Spanish Government talses any notice of constitutional prohibitions which interfere with its freedom of action. The Cortes of 1869 carefully provided that the so-called guarantees of personal liberty and of the freedom of the agent should not be in any circumstances suspended. Since that time there have been three or four suspensions, of which the latest was decreed last week by the present Gevernment. It is impossible to apply Habeas Corpus Acts to a country in which the commander of the garrison of the capital proceeds on his dismissal to raise the rebel flag in a fortified scaport. Not a year ago a Spanish Minister amounced that he would never consent to employ force against insurgents who held his own political creed. When

probably have negotiated with him and his colleagues of the Junts on equal terms. The knowledge that the sloge would be prosecuted in carnest naturally convinced the rebels of the impossibility of further resistance. Although a more criminal enterprise than the declaration of the indepencriminal enterprise than the declaration of the independence of Murcia has seldom been undertaken, the insurgents, by the long continuance of the contest, might have thought that they had acquired the rights which belong to belingerents. The Government has never been able to assert supremacy at sea, and for several months the operations of the besiegers on the land side were confined to a blockade Internal order second to have been tolerably maintained in Carthagers, nor have the lenders been accused of attacks of life or property. A distinction might perhaps fairly have been made between the treasonable conduct of civilians and the violation of military duty by Conternal and other officers. On the other hand, the recent disturbances at Barcelona and other places furnished an additional reason Barcelona and other places furnished an additional reason for treating the rebel leaders at Carthagena with severity. The end of the struggle is not the least surprising part of the transaction. The rebel leaders and the convicts whom they had armed gave the most conclusive answer to the demands of unconditional surrender by fighting their way out to sea through the blockading squadron, and by finally escaping to a French port in Algeria. The French authorities will probably at once deliver the Numancia to the Spanish Government; and it may be hoped that the Spanish navy will at some time recover its reputation for efficiency and loyalty. Now that the Cautonal insurrec-tion has been suppressed, STRRANO will be at liberty to con-centrate his efforts on the termination of the civil war in the North. It is already announced that some of the be-sieging army of Carthagens has marched to Valencia to operate against the Carlists

The late events at Madrid must have been no less unwelcome to the Carlists than to the more turbulent section of the Republican party. The Conservatives of Spain have never during an entire generation shown any leaning to the fallen dynasty. In France the supporters of Constitutional Monarchy not long since thought it necessary to recognize the pretensions of the legitimate heir. The Orleanists of Spain have long since finally broken with the family of the absolutist Pretender. In both countries politicians of the absolutist Pretender. In both countries pointciaus have great difficulty in forming a just estimate of the influence of the clergy; nor is it cortain that the Spanish Legitimists enjoy, as in France, the exclusive favour of the Holy See. The late Queen was almost as strongly devoted to her confessors and her miraculous nuns as to more secular favourites; and only a year or two here her dethermoment the received from the Poly, the against insurgents who held his own political creed. When all the commonplaces of right and wrong are disputed or reversed, liberty of thought and speech ceases to be either possible or desirable. Freedom of the press is an absurdity when newspaper writers openly preach reballon, mutiny, and murder. If the military rule which fill prevails in spain is objectionable in itself, it is nevertheless both the financial consequence and the indispensable remedy of the proclamation of the Federal Republic, to which none but revolutionary anarchiests were likely to adhere.

The late Government is perhaps entitled to the credit of the decisive success which has been attained by the decisive success which has been attained by the likely ing five at Carthagens. The army was organized by the siege to a general who was not a member of the Palace of the Embassy at Rome for the Republican party. The anterior partition of the palace of the Embassy at Rome for the Republican party. The anterior partition of the palace of the Embassy at Rome for the Republican party. The anterior partition of the palace of the Embassy at Rome for the Republican party. The anterior partition of the palace of the Embassy at Rome for the Republican party. The anterior partition of the party to Catholicism; but, in the exercise in the Cortes. The later which are represented to the rank of the Republican party. The anterior partition of the palace of the Embassy at Rome for the Republican party. The anterior partition of the party to Catholicism; but, in the exercise of the Republican party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but, in the exercise of the party to Catholicism; but,

would justify the rejection of aid which might be afforded from any quarter to the task of maintaining or restoring order. An alliance of the prescut Government with the

clergy would be natural and easy.

The suppression of the Cantonal rebellion will enable the Government to dispose of a large military force; and possibly Serrano may think it desirable to assume in person the command of the army. In the autumn of 1872 he pro-cured the submission of the Carlists by a display of superior force, and also by conceding to them extraordinarily favourable terms. The partial advantages which they have obtained since the renewal of the war may be in great measure attributed to the general disorganization which followed the establishment of the Republic. The Pretender profited first by the general prejudice against a foreign King, and afterwards by the merited unpopularity of the dominant Republican faction. The present Government, though it has not sprung from any formal process of election, represents the national feeling and opinion more nearly than the late Cortes or their Ministerial nominees. It appears that in the course of the winter the fortune of war has been almost equally balanced, with perhaps some advantage to the Carlists. According to the latest accounts, the Carlist forces had occupied strong positions near Bilbao, but it was thought that in consequence of the inferiority of their artillery, they could not hold the town, even if it were evacuated by the Government troops. Mornoses or his successor will probably be directed to avoid any decisive conflict until he can be largely reinforced. It is scarcely possible that the Carlists should keep the field if the strength of the army of the Government is doubled. The artillery, which had been almost annihilated by factious intrigues during the administration of ZORRILLA, has now been restored to officiency by the return of the officers who had resigned their commissions. A deputation of their body presented an address of thanks to Castelan on the eve of the change of Government. The present Ministers have dismissed the mutinous adventurer General Hidalgo, whose appointment to command the artillery had been justly resented as an insult. The first want of Spain is internal peace, of which the attainment may perhaps not be distant. Order, national solvency, and prosperity will perhaps follow in their turn, if only a few years are allowed to pass without a revolution and without the assembling of a Constituent Cortes; and it would seem that this is the view which is taken by the new Ministry. They speak of the Consti-tution of 1869 as a model formed of wax or soft clay, which—with the omission of the Monarchy as a merginetail—is to be "cast in imperishable bronze by the aid of the "strong rapuld and hard chisel of the Dictatorship"; and it is clearly intended that and Cortes shall be called until the Government has restored order to its own satis-

----THE NEWCASTLE CONTEST.

THE roturn of Mr. Cowen by a majority of a thousand votes shows that extreme Liberal opinions still hold their command of some of the great Northern constituencies. At the last general election the Conservative candidate, Mr. HAMOND, who has been the Conservative candidate on this occasion also, polled only 2,725 votes against 6,674 given to the lower of the two Liberal candidates. On Wednesday 6,353 voters polled for Mr. Hamond, and this might seem to show a very great increase in the Conservative feelings of the constituency. But the election of 1868 did not indicate the real strongth of the parties. 1847 an election was held immediately after the repeal of the Corn Laws, the Conservative candidate was only beaten by 300 votes. There was no contest for several years afterwards, but in 1859 a Conservative candidate started and was beaten by very nearly the same number of votes by which Mr. HAMOND has been defeated now. ln r868 Mr. HAMOND, although a Conservative, declared himself a supporter of the disestablishment of the Irish Church, and very naturally the Tories did not as a body vote for him. What is true, therefore, is that in 1868 the Contenvatives abstained in large numbers from going to the poll, as their candidate differed from them on the main question of the day. Now that the Irish Church question is settled, they have been free to vote for their candidate, and they have brought him up to the same position as their candidate compiled aftern years ago with regard to the Inberal acadidates returned in the election of 1859. If there had William .

really been only 2,725 Conservative voters in 1868, there were now 6,353, this would show a progress of Con-servative feeling in Newcastle which would be more indicative of a Conservative reaction than the success of Couses tives in many recent elections. But this is not the case, and all that can be said is that the Conservatives, having now had at last an opportunity of accertaining their real strength, find that their real strength is about as great as it was in 1859. It has been a fair contest, and the Liberals have held their ground. Both the candidates with men of local consideration. Mr. Cowkn added to his other properties that of being the good file men. other recommendations that of being the son of the mem-ber whose recent death had made the election necessary; and Mr. HAMOND was able to boast, with pardonable gratification, that so useful had he shown himself to local interests that he was the man always selected to go to London to watch over the concerns of the borough when they came before a Parliamentary Committee. Both candidates appear to bave been personally popular, and each declared that, though he hated his opponent as a politician, he loved him as a man. Both spoke fairly well, and precisely in the same style. The oratory in favour at Newcastle is of a very florid type. The tall talking used on every possible occasion is quite beyond the imagination of persons accustomed to the frigid atterances of London. Mr. Cowen, who seems to be surrounded by every possible comfort, and merely wished to get into Parliament if he could, conceived it to be appropriate and thrilling to offer himself as a dying martyr, and courageously compared himself to Socrates, the Apostles, the Crusaders, LUTHER, and especially WINKELHED. He announced that he was perfectly ready to gather all the spears of the Tories into his breast, and let the Liberals mount over his corpse, if only they mounted to victory; which was as odd a way of describing that he wished the Liberals to send him alive and well to take a house in London and walk down to Westminster, as could be imagined. The Chairman of Mr. Hamono's Committee showed that it is not only the candidates themselves who are expectation in Newcastle to be poetical; for, in speaking of his personal affection for Mr. Cower, whom politically he detect, he vowed that he should always be ready, "at "minimate hour," to get up and do him a service. Both candidates also showed some courage in dealing with the crotchet-mongers, and both tried to get the support of crotchet-mongers without actually making common cause with them. The election could not therefore have depended on any great difference of personal claims. It was a purely political trial of strength, and the Liberals won.

But there is one way in which Conservatives may derive much comfort from the Newcastle election. The kind of Litteralism which triumphed at Newcastle is not the kind. of Liberalism that is likely to triumph at the next general election in most English boroughs and counties. was a very advanced style of Liberalism that Mr. Cowen represented. It was the Liberalism of theoretical Republicanism and the Trade Unions. There can be no doubt that soveral large towns, and probably Newcastle among them, will persist in returning members whose Liberalism is of this bright hue. It was in voin that Mr. Hamond stigmatized Mr. Cowen and his supporters as a band of Mazzinians and Communists, and travestied. French history by declaring that it was those who were faithless to the Emperor that lost two provinces for France. He was eloquent, but he was eloquent to no purpose, against the dictation of Trade Unions. Those who did not care whother Mr. Cowen was a friend of Mazzinians and Communists or not, and those who liked the dictation of Trade Unions, carried the election. There were of course many side issues. There was the Irish vote, which was offered to the candidate who would go most distinctly for Home Rule; and perhaps Mr. Cowen may have been thought to go a little further of the two, although what they said came to much the same thing, which was that they would vote for Home Rule as soon as they could see what it meant and could be sure it would do no harm. There was also, of pourse, the eternal Beer, issue; and although both residentes announced that they would support ample confidentiation being given for all vested interests. Mr. HAMMER seems to have been thought the more beauty of the two in his defence of the great rejective description bear. the two in his defence of the great principle of paying beer sellers for not being allowed to sell beer. In Lowest if the was rather imprudently candid on this bear, for his sixed how a nation that had paid alone corpora for not being allowed to go on keeping their black brothers in chains.

ht likely to overlook the claims of the this was putting heer on an unpleasantly low and naturally absorbed such a high-spirited body as a lineased vistuallers. But the main question really demained the election, and the main question was whether stie would or would not return a man who offered himself as a theoretical Republican, and as the friend and ally of Mr. Bust, the Trade Union candidate for Morpeth. Newcastle has answered that it is prepared to return such a man, and the example of Newcastle is likely to be imitated such men will do the Conservatives much more good than harm. In most English boroughs and counties a Liberal of Mr. Cowen's school would have no chance at all, and yet Liberal candidates will find it difficult to repudiate all connexion with those very advanced Liberals by whose side they are anxious to sit at Westminster. They will be asked questions which it will be very difficult to suswer, except by either terrifying their own more timid or moderate supporters, or by making it clear that, as compared with an influential section of their own party, they are just as much Conservatives as their Conservative opponents; and if they take the latter course, many voters will ask themselves why, if both the candidates are Conservatives, they should not vote for the one who honestly calls himself a Conservative? The gentlemanly, moderate, fair-minded Liberal may expect to have a bad time of it at the next election, unless he has peculiar local influences at his command, or has a very conspicuous superiority in rank,

wealth, or ability. It must be also borne in mind that nothing will be so dangerous to Liberal candidates as the conversion which the Conservatives have so rapidly and so completely undergone. They have been educated, and have educated them-selves, until they have got to be exactly like moderate Liberals. This is very gratifying to moderate Liberals generally, but it is very bad for moderate Liberal candidates. The Conservatives have taken the word out of the mouth of the minister, and moderate Liberals are too late when they shout that it was a whale. Mr. HAMOND'S political opinions, so far as they can be ascertained through the haze of Newcastle poetry, are precisely those of an old Palmerstonian Liberal. He wants Free-trade, and, of course in a purely theoretical way, a reduction in expenditure; he wants poor people to be allowed to send their children to what schools they like; he calls on independent workmen to resist the tyranny of the Unions; he objects to giving the county suffrage to labourers, on the ground that we cannot be always having Reform Bills. He does not stand up for any abuses, or wish to repeal any of the measures that Liberals have carried. He is the Palmerstonian Liberal of 1859, and Mr. Cowen is, to put his case at the best, the Brightite Liberal of 1859. If the contest in 1859 had been between these two sections of Liberals, the latter would have triumphed in a few large towns, but the former would have had an overwhelming majority in the country. The contest was not then between these two sections of the Liberal party, because the Conservatives then existed and had to be fought. Now there are no Conservatives. The Reform Bill of 1867 commenced the process of their gradual extinction. They have been improved by Mr. DISEARLI out of existence. Names keep up distinctions after distinctions have ceased to have any real force, and traditions and habits and old memories and private interests concur to inspire a belief that there must be a difference somehow between Moderate Liberals and Conservatives. But indefinite persuasiens of this sort soon give way before the silent pressure of facts, and the electors will soon realize that a Moderate Liberal is a Moderate Liberal who wishes to get into Parliament by the help of an attorney in one street, and a Conservative is a Moderate Liberal who wants to get into Parliament by the help of an attorney in another street. If, then, all Moderate Liberals attorney in another street. II, then, an account to vote are so much alike, why should voters be expected to vote at the next election for the one who calls himself a Conservative? Because the constituencies are tired of the Glapeross Government. In its turn a Conservative Covernment will come in, will blunder, or save itself from liturdering by sheer feebleness, and will inspire a feeling of weariness and diagnet; and then Mr. Demart, if, as we trust may be the case, he is still alive and well, will have to move to the other side of the Rouse, and some one size at the place.

f * } , THE BENGAL FAMINE.

R NGLISHMEN are accustomed in critical times to occur the work of the Government done in open day, and for this reason they are apt to be unfair judges of Governments which are not in a position to pursue the same ocurred. This will help to explain the criticisms passed on Lord Nourrebrook's action in regard to the approaching famine. What is known is that the Government of India is in possession of the best information and the most intelligent suggestions which it is possible to obtain on the subject. What is not known is the precise scope and extent of the measures which it is taking, or is prepared to take, to apply this information to the actual necessities of the case. No doubt it would be more satisfactory to the English public if they could be admitted to the Vicknor's confidence. But it argues great ignorance of Indian affairs to assume that nothing more is being done than what is reported.

If Lord Normannook were to disclose the full extent of his preparations, the magnitude of the coming dissetor would probably be immensely increased. The reason of this is hinted at in a letter from Mr. R. H. Wilson, which appeared in the Times of Thursday. Mr. Witson points out that there exists all over India a "delicate and complicated " commercial machinery, by means of which food supplies "are usually collected and distributed. . . " with larger or smaller stocks of grain are to be found in "every village." Hence the "immense importance of so "regulating special measures that they may impede as "little as possible the action of private traders." For on the action of private traders the bulk of the food supply of Bengal must depend even in time of familie. "With "five years of preparation instead of five weeks, "it would still be absolutely impossible for Government "to distribute food in every village." But the action of private traders may be interleted with in two ways. One of these would be the way deprecated by Mr. Wilson, that the Government of India should embark largely and generally in the corn trade, and so rum the private traders. This measure is not demanded in England. But there is a second way which might have scarcely less muchievous consequences, and that is the menutions exposition even of the limited extent to which the Government does propose to embark in the corn trade The native dealers are very ignorant, very suspicious, and have a profound belief in the omnipotence of Government. It is not difficult to see how a class of persons in whom these qualities are combined would be affected by detailed statements of all that the VICEROY is going to do. They would at once jump to the conclusion that they were to be exposed to a ruinous competition on the part of the Government, and they would consequently either close their stores and carry off their grain to some safer market, or, at all events, take no steps to keep up the supply. If the telegraph between England and India were in the hands of the Government, it might be possible to send home news in reliance on the impossibility of its being re-exported until the time when it could do much harm had passed away. But with a telegraph open to all comers, any facts that may be known in London in the morning are known in Calcutta in the afternoon, and thence circulated over Bongal. The exact information, therefore, which is naturally desired in England must be withhold in deference to higher considerations than the gratification even of a legitimate and praise-worthy curiosity. It is better that the Vicenov should be suspected of having done too little than that the disclosure of his having done enough should create a new demand which it would be beyond his power to fulfil.

There is one point, however, on which more information might perhaps be given without any appreciable harm. Sir George Campbell is still, it seems, pressing for a prohibition of exports. It has been argued in England that this measure cannot be urgently required, because, if scarcity prices rule in Bengal, it must be to the interest of the traders to keep their rice for home sale rather than to export it. Dr. Hunter's valuable work on "Famine Aspect of Bengal" Districts" supplies a reason for doubting whether this argument really applies. "I am told," he says, "that "the retail price of rice in Europe may rise a few farthings a pound without causing anything like a sudden sessation of consumption. But in Bengal two farthings make, the whole difference between a famine warning and the famine point, and three and a half state of famine. It is also therefore that a difference of a few farthings.

"does not cause a cessation of the demand in Europe, exportation will go on although these same few farthings "portation will go on although these same lew larthings "may mean starvation for the Bengal peasant." Dr. Hunter estimates that $9\frac{1}{2}$ millions of the Bengal labourers do not earn more than $4\frac{1}{2}d$. a day, and that upon this $4\frac{1}{2}d$. three persons have on an average to be supported. In prosperous years four pounds of rice may be bought for 11d. In famine years the price usually rises in January, and four pounds of rice cost 3d. When the pinch comes, four pounds of rice cannot be had under 5d., a halfpenny over the total earnings of one-fourth of the families in Bengal. A difference of a halfpenny in the pound, which in Bengal is the difference between scarcity and famine, means to the European consumer merely the difference between using a little more or a little less. It diminishes exportation from India, but it does not put a stop to it. The statistics of actual export bear out this stop to it. view. For the ten years ending December 31, 1872, the average yearly export of rice from Calcutta was nine millions of maunds. During 1866 the export amounted, in spite of the famine, to five millions of maunds, and during the ten months of actual scarcity between January and October the export was not much short of four millions of maunds. In the face of these figures it seems hard to justify the continued refusal to prohibit exportation. There is no consensus of Indian authorities against such a prohibition, for the VICEROY and the LIEUTENANT-GOVERNOR are at issue upon this very point. There may be a balance of good reasons against Sir George Campbell's proposal, but, if so, they are not well understood in this country. Dr. Hunter disclaims any intention of advocating prohibition, on the ground that such a measure involves considerations of public policy which lie outside his proper subject. But he adds that the question has never been adequately discussed by the light which the figures we have quoted shed upon it. No doubt Lord NORTHBROOK has fully explained his policy to the SECRETARY OF STATE, and we do not know that there can be any reason against so much of his explanation being made public as to clear up what at present seems the neglect of an obvious means of lessening the pressure of This is said of course on the assumption that the VICEROY'S reasons are of a kind which hold good under all circumstances. It may be, however, that the Government of India contemplates a prohibition of exportation at a later date. The experience of 1866 shows that there is still a great deal of rice which may be kept in Bengal instead of being exported to Europe, and any explanation which would in the least degree tie the Vicenov's hands, or commit him to a policy which he may hereafter see reason to modify, is altogether to be deprecated.

A further question of great importance is raised by Dr. HUNTER'S book. Taking the VICEROY'S statement that the population in peril of famine amounted to twenty-four millions, he estimates that not more than 2.75 per cent. of this population, or 666,000 persons, can ever be thrown upon State relief. This number would have to be provided with one pound of rice per day, and if to the cost of this is added the cost of special public works, the total outlay required will amount to about half a million sterling. But, in accounting for the strangely small number of persons who in the famine of 1866 sought gratuitous relief from the State, Dr. HUNTER uses these significant words:—"At the outset of a famine the people "fall back upon roots, and various sorts of inferior green food. The children and the weaker members of the " family die, and those who survive eke out a very insuffi-"cient quantity of rice by roots and wild plants. The wages "which would not suffice to feed an average family of four " are sufficient for the two or three members who survive. "The rural population enters a famine as a frigate goes into " battle, cleared of all useless gear and inefficient members." If the data on which the calculations of the Government of India are based are the same as those given by Dr. HUNTER, the English public have a right to ask whether a larger expenditure might not save the lives of some at least of these inefficient members. Is it absolutely necessary, for instance, that the children should die ? Might not relief be brought to them sufficiently early to prevent the people from falling back upon that "inferior green food" which is not sufficient to support health, and consequently will not support life in any but the strong? It is unfortunately true that no efforts, however gigantic, or however sustained true that no efforts, however gigantic, or however sustained, can avert a great deal of intense suffering. But the success of the Government of India in mitigating suffering

will bear some proportion to the magnitude of its aims, and it would be reassuring to know that, in determining what it shall attempt, it has not entirely excluded from consideration that "useless gear" of which, on the most hopeful estimate, so much must perish.

THE GERMAN ELECTIONS.

THE general results of the elections to the German Parliament are known, but the real significance these elections can only be estimated when the details are published. The issue raised was whether Germany approved the ecclesiastical policy of Prince BISMARCK. In Prussia the issue was whether the country not only approved Prince BISMARCK'S ecclesiastical policy generally, but whether it would support him in the maximular but whether it would support him in the particular measures which he has taken and is taking to put down his ecclesiastical enemies. Germany is not asked to adopt the Prussian method of dealing with the priests, but it is asked to say that it is in a general way ready to uphold the principle that the claims of the nation are to be considered superior to the claims of the Church so far as the nation and the Church come into conflict. Prince BISMARCK has obtained in Germany a success of very much the same kind, and of very much the same extent, as that which he obtained in Prussia. The candidates of neutral shades and hesitating opinions have been forced out of the field in both the electoral spheres, and men of marked and definite opinions have been successful. The number of the Ultramontane representatives has been increased in the German Parliament, their party having a gain of thirty seats; but on the other hand the Ministerialists are a stronger and more compact body than they were. Prince BISMARCK can reckon on a majority of 50 in a Parliament of about 400, and this is a very considerable majority, and may content any Minister. The minority, too, is a divided minority, and is separated from the majority by very varying lines of division. The Ultramontanes have 100 members, and they will work together just as the 225 members composing the Ministerial unijority will work together; but the other 72 members of the minority are marked off from the Ministerialists by the representation of opinions or interests which can only in very exceptional circumstances lead to combined action. There are 12 Socialists, whereas in the late Parliament there were only 5. Then come the representatives of nationalities—Poles, Danes, and Alsatians. That at last there should really be 15 Alsatians sitting in a German Parliament, even if there have been some little difficulties in getting candidates, and in getting voters to the poll, and even if to a man they are sure to vote against everything he proposes, is not the least of Prince BISMARCK's triumphs. Lastly, there is still a fraction left of those who are of undecided or neutral opinions. There are doubtful Liberals and doubtful Conservatives, and there are a few Particularists, who are elected, as Home Rulers are elected, to go to a German Parliament and state that they wish there was no German Parliament to go to. In one way or other it is probable that 170 members of the new Parliament are opposed to the Government or disaffected to it, or not sure whether they will support it or not; and some occasion might possibly be found when they would all combine, although it is very difficult to imagine what question producing such a result could be raised. But in the ordinary conduct of affairs the compact Ministerial majority would face a minority that was bound together very loosely, and all the acts and all the principal votes of the Parliament will be such as to uphold Prince BISMARCK, and back him in his quarrel with the Papacy. Not that, probably, he will want the German Parliament to do anything very definite to help him. It is enough for him to point to the constitution of the Parliament as a proof that the decisive majority of Germans is with him, and not doubting or leaning towards his adversaries.

But it is only when all the details of the elections are known that it will be possible to decide whether the defeat of the Ultramontanes is real or apparent. They have gained 30 seats, and it will be interesting to know how and where they have gained them. In Bayeris the clerical party has returned 28 members as against 21 Liberals. At Cologne universal suffrage has reversed the recent verdict of the restricted suffrage of Prussis, and the Liberal candidate has failed. In Franconia, too, the electical party is known to have been successful. But, on the other hand, in all the large towns of Germany, including Munich, the Liberals have carried their candidates, and an Old

sturned by a town with a Catholic Blue of the Ballen of Laborale have been returned to Blue modeling and in Wurtemberg two-thirds of the recessful candidates are Ministerialists. The Ultramonates had an increase of strength in the elections to the results. Parliament, and it will probably be found that may have succeeded in winning several seats in the German arrigament among Prussian constituencies. Parliament among Prussian constituencies; but as they have certainly won seats in Bavaria and Franconia, and probably elsewhere, they cannot have won as many Prussian seats for the German Parliament as they won for the Prussian Parliament. They will probably therefore be found to have succeeded less in Prussia with universal suffrage than they succeeded with the restricted suffrage of Prussia. We cannot be sure of this until we know all the details, but it seems scarcely possible that universal suffrage should have given them better results in Prussis than the restricted suffrage gave them; and this shows that their hold on the lower orders in Prussia is not such as to cause Prince BISMARCK any great additional alarm beyond that which he must have felt from the beginning of the struggle. No doubt universal suffrage s been of use to them if Germany is taken as a whole. Their gain of thirty seats shows that their hold on the lower orders is a strong one. But their defeat in Baden, Wurtemberg, and the large Catholic towns, shows that it is not a very strong one. They have done their worst, and their worst cannot seem to Prince BISMARCE very bad. This does not show that Prince BISMARCK very pad. This does not show that Prince BISMARCK's policy is a wise one, or that he has not good reasons for accepting some sort of compromise directly he has made them feel his strength. But it certainly shows that Germany is with him and not with them. not with them, and that the very dangerous experiment of universal suffrage has not on this occasion done the national cause as much harm as might have been feared. It is also to be observed that, if universal suffrage has helped them, it has also helped the Socialists, and when the Parliament begins its work, the Ultramontanes will be as much embarrassed as helped by their allies. If they are to give Prince BISMARCK any serious trouble, they must work in unison with the Socialists, whom the respectable classes of all creeds despise or dread, with the Poles and Alsatians, who represent an abiding hostility to Germany, and with the Particularists, who regret that the German Parliament should exist at all. They will therefore run counter to the national feeling on political as well as ecclesiastical grounds, and they will be subjected to the reproach, so serious in German will be subjected to the reproach, so serious in German eyes, that they are but one section of the enemies of social order and of the Fatherland. What is happening in Germany is, indeed, very much the same as what is happening in Iroland. There the priests, in order to retain their hold over the lower classes, have taken up the cry for Home Rule. But the Home Rule movement, as the Limerick contest shows, passes, by an easy and rapid bound, into Fenianism. English feeling is roused, and the Ultramontane party in Ireland is credited not only with its own montane party in Ireland is credited not only with its own peculiar faults, but with designs adverse to the whole system of English government. The next Imperial Parliament will be very unlikely to listen to any such measures as Mr. Gladstone's unfortunate Irish University Bill, not only because there is in England a growing dislike of clerical dictation, but also because political differences have arisen to widen the breach between the supporters of the English Government and the Irish pricethood.

On the eve of the Prussian elections the Government was able to produce the famous correspondence between the Pops and the Emperor which caused so much excitement in Prussian constituencies, and which proved of considerable service to the national cause. Prince BISMARCE has had again a similar piece of good fortune, and has been able to publish the text of a Papal Bull determining the mode in which the election of the next Popz is to be conducted. The clerical journals deny the genuineness of this document, and stoutly assert that Prince BISMARCE has been housed. But experience has shown that inconvenient documents are always declared to be the inventions of enemies, and that the denial is a matter of ordinary form. The probability is that Prince BISMARCK has taken care to be right before has committed himself, and even the derical journals admit that the Pore has recently made some new regula-tions as to the election of his successor. There is said to be a Bull in existence with the thulling title "Presente bidevere," which provides that the Cardinals shall most in the presence of the coupe of the present Pors, and

shall then and there elect by adoration a nomines of Pros IX. The Ball published by the German journals has a greater semblance of probability about it. For it pro-vides that the election shall take place in Mossec, or in some French town, or in Malta, and that the Cardinals may during the lifetime of the present Fore make such arrangements with regard to the details of the election as they may think proper, and the Pore leaves them quite free to conduct the election as may seem best to them, without any regard to the established customs and ceremonies hitherto observed on such occasions. The Pors has no doubt two objects in view. He wishes to insult the Italian Monarchy, to pretend to be in deadly fear of its violence, and to hold it up to the execration of the faithful as a tyrannical Power which will not even allow a few honest Cardinals to meet together to elect under divine inspiration a new head of their Church. The Cardinals will scarcely be so injudicious as to go to France and thus stamp their new oreation with the impress of a special French influence; and we trust they will not go to Malta and place the English Government in the embarrassing position of seeming to countenance the fiction that the Italian Government ment would use violence to control their decision. To Monaco there are no such objections, and it will be some-thing for that obscure little town if it is able to boast that it can offer the one last refuge where gamblers and pricets are free to do whatever they like. When they arrive at the place they have chosen, the Cardinals are to conduct the election in accordance with any arrangements they may have made for the purpose during the present Pore's life; and although they are to wait until he is dead before they discuss who is to be his successor, those who are allowed to decide beforehand how the election is to be conducted will be sure to have made up their minds, not without some gentle direction perhaps on the part of the present Pore, and will have taken care so to frame the mode of election that the success of their caudidate shall be secured. The customs and ceremonies which the Bull permits the Cardinals to disregard were all designed to prevent previous arrangements of this sort being made, and to allow the Cardinals time and opportunity enough to attend more or less to the representations of outsiders, and especially of the great Catholic sovereigns. Prince BISMARCK is said to have announced that Germany will not recognize a Pope elected as the Bull provides, and will treat the Papal See as vacant in spite of the election. The Cardinals would not perhaps be much frightened at this, but it becomes a much more serious matter if a Catholic Power such as Austria has remonstrated against the proposed method of election. Widespread doubts as to the validity of a Papal election would be disturbing and dangerous to the Church in many ways. But ecclesiastical ingenuity is not likely to fail on an occasion so well fitted to call it forth, and the Cardinals, if left to do as they please, will be sure to find some means by which they may at once effect the two main objects of insulting the Italian Monarchy and securing a new Pope of the type of Pius IX., and yet prevent there being any grave question as to the validity of their proceedings.

ADVANCED LIBERAL MEMBERS.

OF two young and rising members of the ultra-Liberal or democratic party, Sir Charles Dilke has lately been more moderate in his language than Mr. TERVELYAN. expediency of reviving the discussion on the Civil List is more than questionable; but Sir C. DILKE must in all fairness be taken at his word when he declares that he would no more insult HER MAJESTY than poison her, and that if he were capable of committing either offence he should feel inclined to jump off Westminster Bridge. Although Sir C. Dilke has never retracted the opinions which were unluckily published on the eve of the PRINCE of WALER'S illness two years ago, experience and reflection have perhaps convinced him that he had committed the error of attacking English institutions at their strongest point. Aristocracy is much more unpopular than royalty, because it more glaringly offends the passion for equality. The Theorem is it some sense above the reach of envy; and, notwick and ing all strictures on the Civil List, the revenues of the Crown, as compared with the incomes of dukes and millionaires, offer but little provocation to cupidity. To some political observers, on a comparison of England with France, with Spain, and even with the United States, a Queen reigning by undisputed hereditary right seems the cheapest of

luxuries. Sir C. Dilke, though he is probably still in theory a stern Republican, judiciously acquiesces in the continuance for the present of a system which seems to satisfy the com-munity in general. Mr. TERVELYAN, who would appear everything else, and gowern exclusively by counting heads, has never professed himself a Republican. The destruction of the Church, of the landed gentry, and, as a necessary consequence, of the House of Lords, will provisionally satisfy his philanthropic aspirations. It must be extremely pleasant to hold opinions which can by no possibility clash with the prejudices of democratic assemblies. Liberals whom Mr. Thevelyan compassionately censures are not only afraid for the Constitution and for society, but they are perfectly certain to suffer whatever inconvenience attends resistance to the will of the majority. Those among thom who feel that Mr. Thevelyan's ability justifies attention to his speeches are not reassured by the results which he anticipates from the success of his present agitation. His former statement that he had never heard an argumont against the enfranchisement of farm-labourers was answered by the admission that uniformity of suffrage would undonbtedly conduce to symmetry. The opponents of the measure approbend, not that electoral districts with equal votes will disfigure the map of England, but that a monopoly of political power conferred on a single class, and that class the least fit to exercise it, will produce mischievous legislation. In his last speech Mr. Thevelyan repudiated the argument from symmetry, and avowed his belief that household voters in counties would, amongst other achievements, alter the tennre of land, which has with all its defects been founded on the judgment of those who own land, and of those who are likely to buy it. To reconstitute landed property in accordance with the theories of artisans and labourers is an enterprise from which timid Liberals will expect little satisfaction. Only the most extravagant land reformers have hitherto committed themselves to the proposition that land ought not to be the subject of purchase and sale. It is for the present thought sufficient to provide that the buyer shall not receive full consideration for his purchase-money. When, at some future period in his career, Mr. TREVELYAN comes to a question in which he is no longer in accord with the multitude, he will, like other men of intelligence and honesty, abide by his own convictions; but he will at first fool a shock of painful surprise.

In his speech to his constituents at Chelsea, Sir C. Dilke kept clear not only of the Republic, but of the Civil List, and he abstained from attacking the Church, the land, the House of Lords, and the other ordinary objects of demo-eratic dislike. Neither the Income-tax nor the Tea-duty eratic dislike. Neither the Income-tax nor the Tea-duty can be numbered amongst the ancient and sacred institutions of the country; and if taxation can be reduced without injury to the public service, no political party is interested in maintaining the present revenue and expenditure. Not confining himself to general assertions of administrative extravagance, Sir C. Dilke entered with commendable industry into various details; and finally enunciated to his gratified constituents the undeniable proposition that, if the expenditure could be reduced by six millions, ten and sugar, and some could be reduced by six millions, ten and sugar, and some other articles, might be relieved from taxation, while an additional four millions of saving would enable the Government to dispense with Schedule D of the Income-tax. When the sky falls there will be a large capture of larks. The legitimate cost of government becomes every day larger, not only in consequence of the growth of wealth and population, but because new social wants from time to time require, administrative provision which is necessarily oxpensive. Referring to the Report of the Committee on Civil Expenditure, Sir C. Dunk quoted some trifling items of outlay which seem to him unnecessary or excessive; but it is remarkable that in two instances the present LORD CHANCELLOR had hesitated to sanction reductions which to Sir C. Dilke appeared obviously reasonable. Lord Skindren, who is as strict an economist as any member of the House of Commons, probably knows the nature of the duties which are attached to some of the offices of his Court and his staff under old-fashioned titles. If Purse-bearers and Gentlemen of the Chamber really enjoy sincoures, Sir C. Duke will have been right in desiring that their salaries should form the nucleus of his saving of ten millions. It cannot be said that his speech threw any light on the feasibility of more serious reduc-tions. He is justified in quoting in support of his opinions the authority of the Schumor-General, who will unfortunately be compelled to suspend his economic effects as long as he holds his present office.

No ultra-Liberal can be expected to neglect an appropriate of congratulating his audience on the presence the Cabinet of a Minister who has repeatedly pledged his self to all the extrement doctrines of his sect. Even as the recent date of Sir C. Disan's speech, Mr. Baisar b condemned in a published letter the policy of the Ashant war, for which he, in common with his colleagues, is responsible. According to Sir C. Dilka, Mr. Briogra is not only a host in himself, but he is himself the Cabinet. follows that the Cabinet condemns the Income-tack which Mr. GLADSTONE has repeatedly vindicated and re-enacted, and the Education Act which Mr. FORSTER, as the Minister charged with its administration, is fully determined to uphold. Less sanguine admirors of Mr. BRIGHT rather incline to the opinion that his function in the Government is to profess popular doctrines, while his colleagues charge themselves with the conduct of affairs. If the electors of Chelsea take an interest in the next Budget, they will derive more instruction from the opinions of Mr. GLADSTONE than from the speeches of Mr. BRIGHT. , It cannot be said that their able and well-informed member contributes largely to their financial education. Neither six millions nor ten millions are as yet even prospectively saved; and if the task were by some miraculous process accomplished, it by no means follows that the Income-tax ought either to be abolished or to be largely medited in principle. The crude proposal of exempting all traders and all members of professions, including some of the richest subjects in England, has been contomptuously rejected of late by many Liberal speakers. One blot in the system, which is pointed out by Sir C. Diere, could be easily obliterated. It is a hardship that the owners of appell incomes aboutly be taxed while artisans of some small incomes should be taxed, while artisans of equal means and with smaller claims on their resources are universally, though illegally, exempted. The increased cost of living would justify an extension of the limit which is at present imposed on the incidence of the tax. On the whole, Sir C. Duke's speech is moderate and creditable, and there is no occasion to criticize his colleague. As Sir H. HOARE probably shares Sir C. Dilke's admiration for the Minister who is himself a Cubinet, he may probably consult the soundest and most instructive document which has lately proceeded from his pen. In his concise and exhaustive commentary on sermons, Mr. BRIGHT forcibly expresses his wonder how any man can week after week say the same things about the same subject to the same audience. "I should have thought," said the great orator, "that success "was impossible, and I sometimes doubt whether anybody "ever succeeded." It cannot be said that Sir H. HOARE'S discourse formed an exception to the ordinary fate of political preachers.

FRANCE.

FOR the moment all parties may be satisfied with the end of the Ministerial crisis in France. The Duke of Broglie has found that he can compel the submission of the Assembly by the threat of resignation. The Extreme Right has found that, by choosing its opportunity well, it can force the Minister's hand, and drive him to employ a weapon which is always weakened by use. The Right and the Right Centre have found that their joint majority is strong enough to stand the secession of a few extreme partisans. The Opposition can point to the facility with which the vote of last week has been cancelled in proof of the want of self-respect which comes over an Assembly which knows that it is not respected out of doors. however, we look beyond the moment, the right to be content with events is very unequally distributed. The Extreme Right and the Left have each won a substantial advantage. As regards the former, it is impossible to insure that no deputy belonging to the majority shall ever be absent, and even the present Assembly may occasionally resent being told on the Monday to cancel the vote of the previous Thursday. This tends to give the Extreme Right: a degree of importance quite out of proportion to its numbers. Whenever the Ministerial whip has been used a little less vigorously, or answered to a little less results, the malcontents will feel that their day has come again. The exhartations to remember the dignity of the chan in which the Left indulged on Monday were only make it more clear that by disregarding them the the would divertised of its last title to consideration

electors who persist in minuraing supresentatives hostile to the present distinguent will know what to think of a Legislature which is content to surrouder its boasted st the bidding of its own nomines. Duke of Baccus has less reason for self-congratulation. He has seen how uncertain his majority is, and he must know that the work that lies before him is calculated to maken his command of it still further. The Mayors' Nomination Bill offends a few unusually consistent members of the Right; the impending constitutional legislation cannot be otherwise than offensive to the whole of the party. M. DE FEARCLIEU has sense enough to see that to strengthen the hands of the Central Government is no real guarantee against revolution. The Central Government has hever been stronger than when M. GAMBETTA was at the head of affairs, and the measures which make it more powerful for Conservative ends when the Conservatives are in office will make it more powerful for Radical ends when the Radicals are in office. mass of the Right do not look so far into the future. are told that the Mayors' Nomination Bill ensures them safety for the moment, and they obey their instincts in making an immediate snatch at it. But when But whon they come to discuss the conditions under which France shall be governed for the next seven years, they will be forced to consider what they are doing. Constitutional legislation means legislating about a Constitution, and it is difficult to do this without giving some additional validity to the form of government in favour of which the laws are made. The Right will certainly resent being asked over again to recognize that Marshal MacManon is President of the Republic for seven years. They hold that the law of the 20th of November was designed to prevent the Radicals from agitating in favour of a more definitive Republic than that which France at present enjoys; but they deny that they thomselves lie under any corresponding prohibition. On the contrary, their theory is that the final cause of Marshal MacMahon's official existence is to give them time to reconstruct the monarchical plans which were shattered by the publication of the Count of CHAMBORD'S letter. An understanding of this sort will be hard to maintain, when the nature and limitations of the authority to which it refers are being debated.

On Monday the Duke of BROGLIE contrived to satisfy the Right by assuming that the opposition to the definition of Marshal MacMahon's position would come from the Left. The Marshal's power, he declared, was a power invested with all the rights that legality can confer, and above all, with the right of defending itself against those who ignore or assail it. If any one, for example, should repeat M. Grévy's assertion that the Assembly has no power to delegate its authority for any longer term than its own life, and that a law which pretends to do this is invalid, he ought to be considered as a rebel. The Right were greatly pleased at this illustration. There was something gratifying in the reflection that M. Grevy had only escaped being a rebel by a day or two, and that if he had made his speech after the law was pussed instead of before, he would have been guilty of treason. But by and by they will come to remember that if the law of the 20th of November is to be defended against attack, it can hardly be defended against attacks from one quarter only. When M. PICARD described the existing Government of France as the Republic presided over by Marshal MACMAHON, he was interrupted, as soon as the word Republic was out of his mouth, by cries of "Never!" With great advoituess he made these shouts the occasion of a prophecy that when the Duke of Broglie should have to make a similar declaration he would excite similar nurmurs. The Prime Minister was not called upon to make a similar declaration on Monday, but a day must come when he will have no choice but to do so. If France make a similar declaration on Monday, but a day must come when he will have no choice but to do so. If France is to enjoy a seven years' truce under Marshal MacMahon, his authority must be pretected against Legitimists as well as against Radicals. To do the Duke of Brogliz justice, there is no symptom that, if left to himself, he would desire anything better. Whatever may be his ideas as to the ultimate Government of France, he is probably persented that Marshal MacMahon should be the

him to put himself forward as a pretender. Any fature movement in favour of an Orleanist restoration must, in appearance at least, be the spontangeus act of the mation. But when the Duke of Brogues comes to give effect to his when the Duke of REGGLES comes to give energy so are wishes, and proposes to hedge the Parsiner's chair with some little apology for divinity, how is he to make sare of a majority? The Right will not do snything to make their intended agitation in favour of a Restoration more perilous; the Left Centre will want to establish Marshal MacManon's power on a more Republican basis than is likely to approve itself to the Duke of Brocker; and the Right Centre are not strong enough to stand by themselves. Eight Centre are not strong enough to stand by themselves.

The Paris letter in the Times of Thursday contained an ominous suggestion as to what might have been done sup-posing there had been a serious defection on the part of the Right. "The probabilities," says the writer, "would "then have been in favour of a dissolution of the Assembly, " without any immediate prospect of another being imme-"distely summoned. France could get on very well for a "time without it." That there will be a serious defection "time without it." That there will be a serious defection on the part of the Right before Marshal MacManon's position is finally settled is extremely probable, and in that case, if a sufficient reinforcement cannot be obtained in the Centre of the Chamber, more unlikely things have happened than the suspension of Parliamentary government which the Times' Correspondent—always well informed as to the intentions of the Government-here hints at. The Duke of Browner and his party would greatly dislike such an expedient, for their love of the forms of representation is as remarkable as their carelessness about its substance. But if the choice lies between a dissolution followed by the return of a genuinely Republican Assembly, and a dissolution followed by an interval of personal government, there is little doubt that they would prefer the latter. This possibility goes some way to explain the persistent silence of M. Turke during the recent debates. It is important that the Left should show a certain amount of resistance to the Government, because without this a party cannot be kept together. But it may be equally important that this resistance should not be successful. If the Left were to make the defeat of the Government their paramount object, it is possible that by some sustained display of Parliamentary eloquence and Parliamentary strategy this object might be unexpectedly attained. But if its attainment were followed by an immediate suspension of Parliamentary government, the last state of the Republican party would be worse than the first. They would be powerless to make head against Marshal MacManon's legions, and time, which now makes for the Republic, would then make for its advorsarion.

AMERICAN SOCIALISM.

ARGE bodies of unemployed workmen at Chicago and I in some other American towns have lately advanced in public claims which are, for obvious reasons, confined in Europe to Socialist clubs and periodicals. A deputation of workmen informed the Corporation of Chicago that they were bound to provide out of the municipal revenuer employment for all who required it at the usual wages, in conformity with the Eight Hours Law. As the law was passed for party purposes, and as it is well known to be inoperative except in the public offices, there is a humorous impudence in the demand that paupers should be restricted to eight hours' work, partly at the expense of industrious artisans who habitually work ten or twelve hours. The applicants, indeed, by no means consider themselves as objects of charity. One of their leaders threatened the Mayor and Aldermen with punishment for the delay in relieving distress which had already occurred; and he further announced his intention of ripping up, it may be hoped in a metaphorical sense, the intentines of the Council. The assemblage, or the demagogues by whom it was guided, had previously announced its intention of proceeding to an equitable distribution of property; and some thousands of workmen carolled their names as members of the luterantional Society, which has always professed similar dectrines. Some journalists profess to consider the new Socialist moveto the ultimate Government of France, he is probably perfectly content that Marshai MacManon should be the ruler for the next seven years. Even if he still cherries the Orleanist designs said to be attributed to him by the Extreme Right, he must know that this is not the time to produce them. Though the visit of fount of Paur to his cousin may not him the Church of the younger meanth to a self-inflicted Right of the younger meanth to a self-inflicted Right. The revolutionary designs of the Chicago work-exclusion from the Throne, it has made it impossible for men are more openly seewed than the intentions of the ment as alarming; but a large deduction ought generally to be made from American prophecies of evil. One of the most popular newspapers in the United States was lately troubled with anticipations that General Gaant might, in

PRESIDENT; but they are almost equally unlikely to be carried into execution. The true men in old English phrase, or the men who have something to lose, are in the United States far more than a match for the promoters of an equitable division of property who would in ruder ages have been described as knaves; nor indeed is there reason to suppose that the agitators and their followers are in earnest. It is probable that they may cause some trouble if the stagnation of business continues, but in the worst of times the demand for labour in America exceeds the supply, although local and temporary congestions may sometimes happen. At the time when the workmen at Chicago were threatening the Town Council, large bodies of men on the railways in the West had struck against a proposed reduction of wages. The traffic was for a time disorganized, and some acts of violence were committed; but in a week or two the men returned to work at the reduced rate, and the Companies resumed the business which had been interrupted. The invincible elasticity of American resources always proves sufficient for the occasion.

It would be surprising if men who profess to be starving deviated from the national habit of verbal exaggeration. The fluent and imperfectly educated orators who conduct political discussion in the United States always use the strongest possible language to express opinions which are often tame and commonplace. The Chicago workmen, if they took the trouble to examine the speeches of Republican and democratic politicians, might perhaps be able to prove that the justice of their demands has been often acknowledged when it was supposed that the admission would involve no practical consequences. Sycophancy to the working-man, which is sufficiently common in England, is more unblushingly and not less insincerely practised in America. The Eight Hours Bill was passed because no party chose to lose votes by opposing a mischievous scheme which was likely to disappoint its promoters. If the limitation of the hours of labour of grown men is a proper object of legislation, it may be plausibly contended that the provision of adequate wages is also a public duty. There is probably some foundation for the characteristic suspicion that the Socialistic clamour of the unemployed workmen was partially the result of a job. There is something business-like in every American Utopia; and it was thought that the demagegues who insisted on the immediate construction of public works for the benefit of the labourors might perhaps be prompted and paid by enterprising contractors. In the United States every transaction which involves public expenditure suggests the opportunity of obtaining private profit. Political managers and ingenious speculators have long since discovered the opportunities which the sovereignty of the multitude affords for corruption. A speculative manager would think little of buying up a branch of the International Society, either for political or commercial purposes.

The International Society, which the Chicago work-men joined for the purpose of vexing and frightening their fellow-citizens, would certainly not have taken root in America, even if it had not apparently broken down in Function. The English workman are tired of listening to Europe. The English workmen are tired of listening to half-intelligible declamations on universal destruction, The English workmen are tired of listening to although they may not be unwilling to vary their demands for increased wages by denunciations of the existing order of for increased wages by denunciations of the constraints of the organization of strikes to demonstrations that wages, whether high the constraints of slavery. The late Constraints of slavery. or low, are merely instruments of slavery. The late Congresses in Switzerland have been attended by constantly dwindling numbers, and one of two rival governing bodies has trunsferred its residence to New York. The fundamental doctrine of the Society is repugnant to all American habits of thought. At one of the earlier Congresses the delegates, including some representa-tives of English Trade Unions, pledged themselves never to desert their order by raising themselves into the class of capitalists. It may be safely assumed that no native American workman intends to remain a workman for life, or to neglect the first opportunity of becoming a tradesman, a clerk, or perhaps a farmer. In a country where shoemakers become Senators, and where a journeyman tailor was not long since President of the Republic, it

as much labour as possible on immigrants and foreigners. If the clamorous mob of Chicago is principally Irish, it will be easily cajoled, and in case of need it will be reduced forcibly to order. Of a thousand American workmen, five hundred will in the course of two or three years have found for themselves some easier and more attractive occupation than manual labour. If relief works are temporarily established, it will probably be found that the demand for labour will be reduced to small proportions.

Even if the great preponderance of force were not on this side of law and order, it would be extremely difficult to accomplish the equitable distribution or systematic plunder of American property. There are no large estates to divide among new bodies of freeholders; and when every man who derires a farm of his own can easily obtain one under the Homestead Law, direct spoliation of actual owners would be both paradoxical and dangerous. A dominant rabble might perhaps effect an equitable distribution among its might perhaps effect an equitable distribution among its members of furniture, plate, the stocks of tradesmen, and other tangible kinds of personal property; but the wealth which excites the cupidity of demagogues is for the most part of a comparatively impalpable nature. Commercial capital and credit and shares in industrial undertakings would not be easily reduced into the possession of new and unauthorized owners. There is no reason to suppose that discontented workmen in any part of the United States will attempt to assert by force their claims to the property of their neighbours. In no country are riots more summarily suppressed, although extravagant language never provokes interference. French and Spanish Communists may perhaps boast of logical and Spanish Communists may perhaps boast of logical consistency when they occasionally take up arms for the promotion of anarchy and plunder. In America, as in England, the ready transition from foolish words to wicked acts is not regarded as a merit. Nevertheless it would be unwise wholly to distrust the inferences which the pupils of International teachers in Europe and America habitually deduce from their avowed principles. From the doctrine that it is the duty of Governments and Legislatures to increase by artineral means and communication of property. In latures to increase by artificial means the remuneration of clamour for the equitable distribution of property. In England democratic orators constantly associate the alleged insufficiency of agricultural wages with the exclusion of farm-labourers from the blessings of the franchise; and, as far as they have any meaning, they intend to persuade their clients that votes for members of Parliament would bring them higher wages, better homes, and greater material prosperity. The Chicago workmen know both that they can vote to their heart's content, and that they still are dissatisfied with their wages, or with the demand for labour. It is natural that they should proceed to divide property equitably, or rather to talk of dividing it.

MR. GREGORY AND EDUCATIONAL STATISTICS.

MR. GREGORY has at length secured the opportunity which he has so long desired. After vainly striving first to persuade the Education Department not to pass the statistics of the London School Board, and next to persuade the House of Lords to reject the Bills founded on them, he has now got himself elected to the offending body and is in a position to implore it to amend its own ways. Wednesday last he brought forward a motion reciting that the statistics on which the estimates of elementary school accommodation are based have been challenged, that some of the new Board schools are asserted to be very close toexisting voluntary schools, and that the proposed Board schools will accommodate too many boys and too few infants, and proposing that a Committee be appointed to examine into each of these allegations, and to report to the Resyd thereprop Board thereupon. The first two premises on which Mr. Gregory rests his proposal are absolutely indisputable. The statistics of the London School Board have been challenged; they would be unlike every other set of educational statistics if they had not been challenged. The first move where shoemakers become Senators, and where a journeyman tailor was not long since President of the Republic, it
is a wester of time to attempt any organization of a class
which is constantly shifting its component parts. The
dignity of labour is proclaimed on innumerable platforms,
because at any given time there are many working-men
who have votes; but it is well known that the American
citizen is constantly and successfully contriving to devolve The state of the state of

posed to have been arrived at by its predecessor. Nor is it denied that same of the schools which the Board proposes to build are placed very near to existing voluntary schools. The plea of those who defend the choice of sites is that it was impossible to place them anywhere else. A great many conditions have to be satisfied in the selection of a school site; and in London it was far from easy to be places of ground which answer to those various requirements. If sites otherwise satisfactory were rejected because there happens to be a voluntary school close by, it would often turn out that no alternative sites were fortheoming. In the abstract, no doubt, it would be better if the new school could be set down further off. But supposing that the site fixed on is the only one that can be had, or that it is nearer the children who are expected to attend it than any other, the neighbourhood of the voluntary school is evidently the consideration that must give way first. It is not so bad to have too much school accommodation as to have too little.

When therefore Mr. Gregory asks for a Committee to inquire whether the statistics of the London School Board have been challenged, he must be taken to mean that the Committee shall inquire whether the challenge which has undoubtedly been offered has been shown to rest on good grounds. In the same way, when he proposes to refer to this Committee the question whether some of the sites selected are not very near existing voluntary schools, he must be supposed to imply that they have been so placed without just cause. It is due to him to say that he imputes no bad faith to the late Board; he only maintains that their desire to do what was best for London had been alloyed by an error of judgment. Whether Mr. Gregory's charges are well or ill founded, there is ample reason why they should not be referred to a Committee. In the first place, the process of going over all the statistics must necessarily be a long one. If it is worth doing at all, Mr. Gregory will be sure to think that it is worth doing thoroughly. He hints, among other things, that a large number of the parents who were asked whether and where their abilities are at calculations. whether and where their children were at school either neglected or refused to give answers. So far as the statistics are in fault on this account, they can only be put right by directing the officials of the Board to make their inquiries over again. As regards the alleged injury done to voluntary schools, a Committee of the House of Lords contrived to fill a fair-sized blue-book in taking evidence on merely a few such charges, and there is no reason to suppose that a Committee of the London School Board would be able to investigate a larger number of cases in a shorter time. Now no public gain that could result from the labours of Mr. Gredour's proposed Committee would compensate for this delay. The preparation of these statistics, and of the estimates based thereon, was the principal work of the late School Board. If their successors, instead of starting from the point already reached, insist on going over the old ground again, the next three years may pass away and find the task of providing elementary education for every child in London hardly further advanced than it was in 1822. What hardly further advanced than it was in 1873. has Mr. GREGORY to offer in return for this imminent danger? A possible saving to the ratepayers' pockets. It is highly important that the London School Board should not spend more money than is needed for the object it has to accomplish. But it is better that the object should be accomplished even at the cost of a little unnecessary outlay than that the object should be left unattained in deference to a misplaced regard for economy.

This is not the only reason why Mr. CREGORY's motion ought to be rejected. Let it be granted that the statistics are faulty and the estimates founded on them exaggerated, there are two considerations which serve to deprive this fact of all real importance. One is the immense yearly increase in the population of London. If the figures of the School Board accurately represent the educational wants of London at this moment, it is certain that before the schools which they propose to build in order to meet that want can be finished, the growth of the population will have outstripped their present estimates and they will have to prepare new calculations and new proposals in order to right a new deficiency. If the present calculations are somewhat in excess, this necessity will not arise quite so some the population may only have grown up to the new subsole by the time they are opened, instead of having already gone beyond them. If schools could be built in

ing they must stand empty a year or two until the children wanted to fill them grow up into school age, or are imported by that stream of immigration from the country which is always setting towards the capital. But since to find the sites and to build the schools will take some considerable time, Mr. Gregory has really no case. While the schools are building the children for whom they are designed will gradually be gathering to fill them. The other consideration is the probability that the amount of efficient educational accommodation has been exaggerated in the statistics of the late Board. In estimating the number of children for whom places in elementary schools have to be provided, those who are being sufficiently educated in what are called private adventure schools are omitted. In the first instance the tendency is always to overrate the number of children thus disposed of. The reason is that, though these private adventure schools are almost invariably inefficient, there is at present no adequate means of discovering their inefficiency. The Liverpool School Board have been so impressed with this difficulty that they have suggested that no attendance at private adventure schools shall excuse a child from the operation of the compulsory by-laws unless the school be under Government inspection. That some such measure will have to be inspection. That some such measure will have to be adopted unless compulsory attendance at school is to be reduced to a farce may be taken as certain. The desire on the part of parents who wish to profit by their children's labour to evade sending them to schools where they will be obliged to attend regularly is very great, and the private adventure school gives them the means of doing this. As time goes on it will be found that many of the children now supposed to be receiving elementary education are receiving nothing but the name of it, and when these have to be transferred to efficient schools, Mr. Gregory will not find that there are many vacant places in the schools the buildthat there are many vacant places in the schools the building of which he is so anxious to defer.

THE TRADE-UNIONIST CONGRESS.

THE Trade-Unionist Congress which has this wook been THE Trade-Unionist Congress which are million of sitting at Sheffield is said to represent a million of working-men; but it is difficult to form an exact estimate of the relative numbers of Unionist and non-Unionist workmen in the country. The Royal Commission which inquired into the subject a few years ago stated that the Unionists alleged that they were about half of the whole number of workmen, while other estimates made them out to be only a fourth. The statistical question, however, is not a very material one, for whether the Trade Unionists are few or many, they are entitled to freedom and protection within reasonable limits, and the same must be said of the non-Unionists. A series of resolutions has been passed by the Congress, demanding the repeal of various legal restrictions which are supposed to be chiefly directed against the different kinds of molestation and intimidution by which the Trade Unionists are in the habit of enforcing obedience to their mandates. Mr. H. CROMPTON, assuming to represent the Unionists, lately intimated that he could not condescend to let the world know what amendments he thought to be desirable in the present state of the law, unless employers of labour throughout the country would first apologize for having calumniated the members of these Societies by suggesting that they ever countenanced picketing, rattening, or any form of violence or injurious interference with other people. The puerile insolence of this proposal is unfortunately characteristic of the spirit in which the claims of working-men are too often pleaded by distempered advocates of another class. It is only justice to the Unionists to say that they are themselves neither so impertinent nor so unreasonable as their injudicious friend. They think that, instead of hiding their opinions in order to spite society, the best they can do is to make them known as widely as possible. It may be remarked, however, that they are more emphatic in proclaiming the wrongs which they imagine they suffer than precise in stating what changes in the law they really want. They desire it to be understood that they do not ask that Trude Union outrages should be altogether exempted from criminal penalties, but only that they should not be punished under the present laws. To the question, under what sort of laws, then, they would be willing that these offences should be punished, the answer is rather vague.

It is creditable to the common sense of the members of

It is creditable to the common sense of the members of the Congress that they appreciated the danger of mixing themselves up with the revolutionary propagandists of the

Continent. An address was received from the Universal League of Workmen at Geneva, and a reply to it was drawn up which was objected to by an exceptionally wild delegate on the ground that the references to peace in every sentence were insulting to the League. He thought "the "word peaceable occurred too frequently, as it was a re-" flection that the men who had addressed them had not been "peaccable." In the end the Congress decided that it would be as well not to send any reply at all, but to appoint a Committee to try to discover, if possible, what the Universal League was, and what were its objects. It having been incidentally remarked that none of the names attached to the Goneva memorial had ever before been heard of, it was pertinently replied that perhaps that made it more likely that the memorial was signed by real working-men. A glance at the reports of the Sheffield Congress will show that the names which are there most conspicuous are sufficiontly well known, and are not the names of genuine workingmen, but of journalists, lecturers, and agitators of various kinds, who have undertaken to represent them. The Criminal Law Amendment Act, the Master and Servant Act, and the Law of Conspiracy, were attacked in successive resolutions, and it was resolved that no vote should be given for any candidate at the elections who would not pledge himself to support the repeal of these obnoxious restrictions on the freedom of the Unions. The objection to the Criminal Law Amendment Act is that it is "a special law against a part " of the population in respect to crimes of violence which "all classes of citizens can commit and do commit." Mr. CROMPTON might be asked to withdraw this calumny on all classes of citizens as a preliminary to argument, but other people are not so childish as he is. It is enough to say that the Act is not a special law against a part of the population, but only against certain specified offences, and that those who desire to avoid the penalties which it imposes have only to refrain from committing the offences in question. The Act applies equally to employer and employed, and though it is quite true that all classes of citizens can commit such offences, it is practically only Unionists who do so. we has to be shown is, not that the Act interferes with the peculiar system of the Unions, but that the offences against which it is directed are really innocent and beneficial. A special law against a form of public mischief which cannot otherwise be got at effectually is a very good thing; and Master and Servant Act is condemned because it does not adequately define the offences it creates, and attaches a criminal punishment to a civil breach of agreement. In point of fact, the Act does not attach a criminal punishment to a civil breach of agreement, unless the imprisonment of a man who cannot pay a fine or compensation is a criminal punishment. It is only in the case of aggravated misconduct or injury, and where a pecuniary payment will not meet the circumstances of the case, that imprisonment is inflicted without the option of a fine. This imprisonment is inflicted without the option of a fine. Act, it should be added, also applies indiscriminately to employer and employed. The definition of offences is always a difficult matter, and it is impossible in every case to specify with minute and absolute precision every possible variety of an offence. This is a difficulty which pervades the whole of the Statute-law. The Law of Conspiracy was also denounced on account of its vagueness, and it cannot be denied that it has this defect. The subject is one which deserves attentive consideration, and on which the opinions of the Judges might usefully be taken. But if the law is to be revised, this should be done generally, and not in a partial form so as to allow exceptional privileges to a particular class of the community. The outery against this law is connected with the punishment of the ringleaders of the gas-stokers' plot to inflict a monstrous public injury on the inhabitants of London as a means of coercing their omployers. These men were convicted of having conspired to commit an aggravated breach of contract, which was a more serious offence than if any of them singly had left his work. The whole question turns on the amount of danger to the public from certain proceedings; and there is no principle more firmly established in English law, or in itself more sound, than that a combination to combination to combination to combination to combination. tion to commit an offence requires to be dealt with more stringently than an isolated act of misconduct of the same

There may perhaps be some details in which the Criminal Law Amendment Act and the Master and Servant Act may be improved; and if the Trade Unionists have any paramond definitions of molestation, intimidation, and

1

other offences to suggest, they are entitled on every ground to a respectful hearing. It is impossible, however, to sur-render the principle of those measures without the greatest danger to personal liberty and social order. An employwrote a letter the other day complaining of the oppress of the Unionists in requiring him, under threat of a strike, to dismiss a man in his employment who for some reason was obnoxious to them. It is obvious, however, that the Unionists were strictly within their legal rights. They are perfectly entitled to dictate to their employer, if they choose, to take the property of the part of the choose, not only whom he may employ, but what he shall himself eat, drink, or wear, or the fashion of his wife's bounets. No matter how absurd or unreasonable the dictation of workmen may be, as long as they confine themselves to giving notice that they will not renew their contracts unless their demands are complied with, they have a perfect right to please themselves. There may be good or bad reasons for insisting upon a workman being discharged; but his companions are clearly entitled to determine whether they will continue to work with him. Working-men now enjoy the utmost freedom in this respect. They can demand what wages they please, fix their own hours, and lay down regulations for the management of the business in which they are engaged. On the other hand, however, an employer is not bound to submit to this dictation, and if he can get men to work on his own terms, it is necessary that they, too, should be protected in the exercise of their freedom. As far as we can see, the laws which are attacked by the Unionists do not go a step too far in this respect.

M. PROSPER MÉRIMÉE.

THE reception of M. Mérimée's successor at the French Academy, coinciding pretty closely with the publication of Mérimée's letters to a lady whose name is still mysteriously reserved, has occasioned a good deal of talk about a man who was himself neither particularly interesting nor important. A high place certainly cannot be assigned to Mérimée's literary works. He was a master of style, and nothing can be more admirable than the artistic finish of some of his short histories and stories. But there is nothing in the substance of them to make them live. In the élau of genius, in breadth of view and sympathetic suggestiveness, Mérimée was altogether deficient. His earliest effort was a series of plays purporting to have been written by Clara Gazul, a Spanish dramatist, and translated by M. Joseph L'Estrange. This was followed up by the Guzla, a pretended translation of Illyrian poems by one Maglanovich. It is needless to say that Clara Gazul and Maglanovich were equally imaginary creations, and that the works attributed to them were composed by Mérimée himself, who even went so far as to give a biography and portrait of the Illyrian bard. In 1828 Mérimée and Ampère had planned a trip to Illyria in order to study the primitive poetry of that region. Money alone was wanting, and Mérimée suggested that, instead of writing a book when they came back, they should write the book first in order to raise money for the journey. As it happened, the visit was never accomplished; but Mérimée was delighted to find that his fictitious verses had attracted the attention of two grave German doctors. Mérimée's later writings are chiefly distinguished by a tone of cynical irony, which is sometimes so disguised as not to be immediately perceptible. He is fond of mystification, of throwing the reader off his guard by an affectation of simplicity and ionocence, and of wrapping up his meaning so that it is rather hinted than expressed. Any one who has compared the pamphlet on his friesal Beyle—which was privately circulated as a sort

Mérimée's culogist at the Academy discovered that one of his ancestors invented the familiar fable of "Beauty and the Beaut"; but it is more to the purpose that his mother, who was an artist, had such a faculty for story-telling that she used to keep children who were sitting for their portraits spellbound by her marratives. Mérimée's father was also a painter, and he himself inharited not only the family taste for art, but a certain degree of artitude fire it as an exercise. It was the Second Empire that brought Mérimée to the front. His literary efforts received a reflected lustre from his rank as a Senator and his official position as Inspector of Public Monuments. The Emperor was analous to secure literary distinction for his Court, and Mérimée was a man who made good his footing there in other ways from the greater part of the Empire he lived on the most minimal was a man to the Emperor in preparing his literary and confidential terms with the Imperial density. The first of the Emperor in preparing his literary and almost glacial manners, he was accompanied amusing, and took infinite pains to the most indifference. He man the manners are securing amusing, and took infinite pains to the most indifference.

Complete State of the State of

with the Empress and her mother; he wrote books and stories for them; kept them supplied with all the gossip of the day; suggested assuments; was dramatist, actor, and stagesignated amusements; was dramatist, actor, and stage-manager by turns; and was always ready to execute delicate commissions for them requiring tact or taste. He soon became indispensable person, and an unfailing guest at Compiègne, fontainebleau, and Biarritz, as well as at the Tuileries and St. Cloud. When Mosquard died there was some talk of Mérimée succeeding him as the Emperor's private secretary and right-hand man. It is only fair to say that he filled a difficult position without any sacrifies of dignity or self-respect. Even in his most relaxed moments his manner conveyed a warning against undue familization; and though he owed his advancement to his favour at Court there was nothing servile or interested in the favour at Court, there was nothing servile or interested in the services he rendered. In his letters to the unknown lady he speaks of the Emperor as "mon bourgeois," and calls himself the "Empress's buffoon"; but assuredly he would have allowed no "Empress's buffoon"; but assuredly he would have allowed no one elso to call him so, and his efforts to amuse were the result of a loyal and sincere attachment. He who has sneers for everybody elso has always a kindly word for his Imperial friends. His political leanings were naturally towards an absolute monarchy. He had a personal hatred of vulgarity, Parliamentary intrigues, and the stupid brawling of the mob. "I have spent twenty-four hours," he writes, "in a deputy's house, and if I had any ambition to become a politician, this visit would have completely changed my mind. What a trade! what people it is necessary to see, to mannge, and to flatter! I should say with Hotspur, 'I had rather be a kitten and cry mew!' Slavery for slavery, I prefer a despot's court; at any rate, most despots wash their hands." This was in 1845. When the Revolution came he had the greatest repugnance to the Republic; but he does not appear to have been at first strongly attracted to the Empire. Julius Carsar had been one of his early studies, and from disliking he had come round to admire him. In 1841 he held that Carsar, in his first political years, was "une franche 1841 he held that Omean, in his first political years, was "une franche canaille," but the "devil of a man kept on perfecting himself, and would have become honest if he had only been allowed to live." In 1855 Mérimée had become as ardent a worshipper of the Dictator as his "bourgeois" could desire.

As the name of the lady to whom Mérimée wrote the numerous letters which have just been published is a secret, it is natural that there should be much curiesity to discover it; but even if it were known, scandal would hardly be gratified. As far as the were known, scandal would hardly be gratified. As far as the letters relate to the writer and his correspondent, they seem to us very dull reading. There can clearly have been nothing more tender than friendship in their attachment—at any rate on the lady's side. It appears that in six years they had mot only six or seven times, and that, counting up the minutes they had spent together, they had been in each other's company only some three or four hours in all. Their meetings seem to have here always brief and snatched at long intervals; and the to have been always brief, and snatched at long intervals; and the letters give one the impression rather of an intelligent woman letters give one the impression rather of an intelligent woman pleased with a clever man's wit, and the man flattered by her sympathy, than of a pair of lovers. Down to his mother's death in 1352, when he was forty-nine years of age, Mérimée lived under her care, "reposing absolutely on her," says M. de Loménie, "all the material cares of his existence." After his mother's death her charge devolved on two of her friends, who almost invariably accompanied him, and watched over him. These were two English ladies, and M. Taine describes the trio marching along in silence, Mérimée in the middle, with one elderly devotre carrying his bow (he had taken to archery for his health), and the other his box of water-colours. M. de Loménie attributed Mérimée's melancholy to his isolation as a hachelor; but porhaps M. Jules Sandeau was

the had taken to archery for his health), and the other his box of water-colours. M. de Loménie attributed Mérimée's melancholy to his isolation as a bachelor; but perhaps M. Jules Sandeau was justified in declaring that he was born one. He was certainly not the man either to inspire or to return an ardent passion. The academical philandering of the letters is tedious after you have read one or two; they are interesting only when they afford glimpses of the society in which the writer lived.

Although Márimée's writings are probably not much read in this country, he was himself a frequent visitor here, and was well known in a certain section of English society. He was rather proud of his knowledge of English—one of his six languages—and kapt himself well acquainted with our current literature. But he had not much sympathy with the nation. "The English," he wrote, "are individually stupid, but in mass an admirable people. Everything that can be done with money, good sense, and patience, they do; but they know no more about art than my cat." The new House of Commons is "a frightful monstrosity," and shows "what can be done with an utter want of taste and two millions sterling." The orstory is equally bad; "nothing more verbose, more polomouchs, and blagmeur" can be imagined than the majority of the speakers. Lord Palmeston, with his bushy grey whishers, struck him as a "gay gerilla"; Cobden pleased him only because he was "the very opposite of an Englishman," in never uttering commonphaces, and having few prejudices; Mr. Gladatone seemed to him "in some respects a man of gentus, in others a child; there is something in him of the child, the states—and the from." He found the slowness of English diamental products, and one in the child, the states—and the from." He found the slowness of English diamental products, and the from the Capucins. I am particularly regions against the control of the products and the free in the products and the free inches long in one great allowed the free inches and the free inches lon

It is part of the hypocrisy of these people. They love to show strangers that they are suber, and having taken huncheon they don't dine." Once we find the poor man hid up at an hotel with a bad cold, and nothing to drink but port wine; and it is impossible not to sympathize with him. What disgresse him most is the herissonners of the English. At a country house, he says, they cannot help talking a little at dinner, but afterwards they break up into isolation, one with a book or newspaper, another writing letters. On the other hand, a Frenchman takes the trouble to amuse himself and in doing so amuses others.

On the other hand, a Frenchman takes the trouble to amuse himself, and in doing so amuses others.

Mérimée gives us some lively "interiors" at the different Imperial palaces. All is not unalloyed happiness at Court. He grouns over knee-breeches and reckless changes of temperature. From Compiègne he writes, "One can't sleep in this place. The time is passed in being frozen or reasted." And again, "We load here a terrible life for the nerves and the brain. We have rooms better the former in severe and the continuous that the former in severe in the rooms. here a terrible life for the nerves and the brain. We have rooms heated to 40 degrees in order to go into the Forast in an open char-d-banes. It freezes at 7 degrees. We return to desse, and find ourselves in a tropical temperature. How the women stand it I can't think. I neither eat nor sleep," At Fontainebleau it is much the same. "We took a stag yesterday, and dined on the grass; the other day we were soaked with rain, and I caught cold. Every day we eat too much. I am half-doad. Destiny did not make me for a courtier." At Biarritz he was almost happy. "To day we have to dress but the rest of the time there is not the "To day we have to dress, but the rest of the time there is not the least toilette. The ladies dine in high dresses, and we of the ugly sex in morning coats. There is not a château in France or England sev in morning coats. There is not a château in France or England where one is so free, and without etiquette, nor where there is a châtelaine so gracious and so good to her guests." There are many American visitors at Biarritz, and when they come to the Imperial villa Northerners and Southerners—it is 1862—have to be parted on different sides of the room lest they should eat each other. A dull time at Compiègne is enlivened by the arrival of the Buke of Athol and some of his kinsmen, "four Highlanders in kilts." "It is droll enough to see their eight bare knees in a drawing-room, where all the men wear knee-breeches and tights"; but much consternation is produced when they whirl round to the strains of the barnine. One day the Prince Imperial—"un drôle d'enfant, mais barpipe. One day the Prince Imperial—"un drôle d'onfant, mais quelquefois terrible"—gives a dinner-party to his young friends. "The Emperor himself mixed the champagne with seltzer-water, but the ellect was just the same as if they had drunk the undi-They were all drunk a quarter of an hour afterwards, and my ears still ache with the noise they made." Now there is a Spanish dinner in the Forest, or a picnic on the grass, "like bonnetiers from the Rue St. Denis." Another time he writes, "Since my arrival I have led the agitated life of a manager. I have been author, actor, and director. We have played with success a piece a little immoral, of which on my return I will tell you the story." There was also a characte about which some fears ware returned by forehand, but a swang lady when have played in it. were entertained beforehand; but a young lady who played in it said assuringly, "Oh, it will be all right; we shall show our legs in the ballet, and that will do for everything." "N.B.," says Mérimée, "this lady's legs are like flageolets, and her feet anything but aristocratic."

There are other signs of the taint of Bohemianism which was the fatal cancer of the unhappy Court. A sketch of a ball at the Hotel d'Albe (belonging to the Empress's sister) may match with the famous Correspondent of the Telegraph's account of other Imperial festivities:-

the famous Correspondent of the Telegraph's account of other Imperial festivities:—

The costumes were very beautiful; many of the women very pretty, and the age showing its audacity. (r.) The women were decolletes in an outrageous way, both above and below. On this occasion I have seen a sufficiently large number of charming feet and many garters in the waltz. (a) Crinoline is declining. You may expect that in two years the dresses will be short, and that those who have antural advantages will be distinguished from those who have only artificial ones. There were Englishwomen who were quite inerogables. The daughter of Lord——, who is charming, was as a Dryad or something mythological, with a robe which would have left all her breast bare if this had not been remedied by a maillet. . The ballet of the "Elements" was composed of sixteen women, all pretty enough, in short skirts and covered with diamonds. The Naisds were powdered with silver, which, falling on their shoulders, resembled drops of water. The Salamanders were powdered with gold. . The supper-room, with a gallery round it, the domestics in the dress of pages of the sixteenth contury, and the electric light, resembled the feast of Bulthazar in Wrowthon's (sic) picture. It was no use for the Emperor to change his domino; he was recognized a league off. The Empress had a white burnous, and a black loup, which did not disguise her in the least. Many dominos, and, for the most part, very stupid. The Duke of ——was got up like a tree, a disguise, after the story about his wife, a little too remarkable. If you do not know this story, here it is in two words:—His wife went to Bapst and bought a set of jewels at 60,000 franes, saying she would send it back next day if it did not suit. She sent nothing back. He was told that they had been sent to. Portugal, but finally they were found at the Mont-de-piété, where the Duchess of ——paid 15,000 franes to withdraw them. This is the eulogy of the time and the women!

By the side of this picture maybe placed a descript

By the side of this picture maybe placed a description of the company at Marshal MacMahon's recent ball:—"A severe propriety of tenue was observable, and a remarkable absence of very low of tonus was observable, and a remarkable absence of very low dresses and those sleeveless corsages which one so often sees in the front boxes of the Italian Opera House. Young girls, as a general rule, were as simply dressed as any of those who figured at the Coart balls of Queen Victoria twenty-five years ago." Perhaps a little-public decency will not be thought too reactionary.

When the Emperor began to affect Liberal measures. Merinder was clear-signed enough to see the hopelessness of the experiment. In December 1867 he writes:—

What shall I say of the politics of M. Ollivier and the rest? There is no se in their turning their phrases so elegantly, and affirming that they are

profoundly convinced; they seem to be second-rate actors who imitate the first rôles in a way that deceives nobody. We are growing smaller daily. There is only M. de Bismarck who is a true great man.

And again in June 1869 :-

What afflicts me most in these sad affairs is the profound stupidity (b*tise). It makes one hide one's face. The danger is that there is a sort of emulation for stupidity as for everything else, and between the Chambers and the Government, God knows what may be done!

In his next letter he had grown more desponding:-

I am sure that we are going to have in words and deeds enormities for which there will not be enough boiled potatoes. Alas! that may finish by projectiles of a harder kind! What a misfortune that the modern spirit should be so flat! Do you believe it was ever so bad before! There were ages when people were more ignorant, more barbarous, more absurd; but there were here and there some grand geniuses to make compensation, whilst now, as it seems to me, there is a levelling down of all intelligence to the lowest point.

In November he met M. Thiers at Cannes, and found him "brought back to common sense by the immense folly of the country," and ready to fight again, as in 1848. But Mérimée doubts whether he does not overrate his strength:—

It is much easier to break the bags of Eolus than to mend them and make them air-tight. It seems probable that we shall have a fight; the Chassepot is omnipotent, and can give the populace of Paris an historic lesson, as General Changarnior said. But after having tried this, what is to be done? Personal government has become impossible, and Parilamentary government without good faith, without honesty, and without skilful men, appears to me not less impossible. The future and the present are very dark for us.

Then comes the war, and at the end of August Mérimée is not without hope of driving out the Germans, or, better still, burying them all in France. But oven then "we shall not be at the end of our miseries. This horrible butchery, it is idle to dissimulate it, is but a prologue to a tragedy of which only the Devil knows the end. A nation is not shaken with impunity as ours has been. It is impossible that, from our victory as from our defeat, there should not spring a revolution. All the blood that has flowed will flow to the profit of the Republic—that is, of organized disorder." Mérimée left Paris by one of the last trains before the city was invested. He died at Cannes on the 23rd September.

DENTISTRY.

its fascination. Most people have something to say about it, as about other subjects on which they have thought or felt, and ideas usually press for utterance in proportion as they are numerous and vivid. Knowledge which has been borrowed from books, or gathered in hours of dissipation, is communicated with carelessness, languor, and hositation. But personal experiences of a nearer and profounder muture, which have absorbed one's whole attention at the time and left a deep impression behind them, cannot be recalled with equal indifference. Whilst they stimulate the whole mind to unaccustomed activity, persons not at other times noted for eloquence betray a sudden affluence of words, a surprising vigour of style, and unsuspected resources of illustration. Should a conversation begin to turn upon dentistry, every one must have observed with what difficulty it is drawn away to some more cheerful, but less exciting, topic. Several persons talk at once, and though all profess to aid in the diversion, the subject has what psychologists call-great "ideal persistence," dies hard, and tends to come to life again at intervals for some time after. In this respect it is like talking about ghosts in the dark, when there is a general sense of uneasiness and a general desire to pass to something else, but there is always some one with a more harrowing story than any which has yet been heard, which it is impossible to refrain from telling and impossible to refrain from listening to. Only there is this difference, that ghosts are now pretty well recognized as part of the popular Aberglaube, as Mr. Matthew Arnold would say, and the terrors they arouse within us are somewhat mild even at midnight; whereas the existence of dentists may be verified—and indeed we often experiment on them, and they on us—so that they are placed far beyond the reach of scepticism even at noonday. On this account they are the more interesting in a scientific age.

It may seem that, since dentistry is so familiar a topic, it must be needless to expatiate upon it, and certainly to say anything strikingly novel about it is more than can be reasonably hoped. But we remember that Dr. Johnson praises Gray's Elegy in a Country Churchyard on this very ground, that it contains nothing new, but only what had previously occurred to every one else; and to attain as great a reputation as that celebrated piece ought to content a moderate ambition. Moreover, to say what has previously occurred to every one else has the advantage that it assures you of the sympathy of your reader, if you should be so tortunate as to secure one. Now it has probably occurred to most people that dentistry is about the loast enviable of professions. It is not merely the character of the work that makes it so, for all professions have unpleasant associations to which their members are inured by custom; taste is proverbially arbitrary; and it is even intelligible that a man who has the gift of delicate manipulation may feel attracted to a pursuit which affords so many opportunities for its exercise. But it is the feelings with which a dentist is regarded by his patient which, if he knew them, would regarder his position so peculiarly uncomfortable. A man was suffer many things of his doctor, and still regard him with

gratitude and friendship. He may be ruined by lawyers without conceiving any personal antipathy toward the practitioners whom he has injudiciously employed, but may content himself with indulging in a diffused hatred of the law as a whole, and whatever has to do with it, and vent his rage in vague maledictions against lawyers in general; which can have only a very harmless incidence upon any one in particular. But let him once go to a dentist, and the is likely to come away with a definite and abiding horror of that dentist himself and not another. It is notorious that many people dread to meet their dentist in the street. If they do meet him they are variously affected, according to temperament. Some can scarcely restrain themselves from headlong flight, others are ready to faint on the spot; a few involuntarily clench their fats, the blood rushes to their faces, and they feel prompted to assault him. But these last are few indeed. Most of us are at once "Gorgonized" out of all thought of active resistance, and even the idea of escaping dies ineffectually within us. In agricultural ages, and still in country districts, the enraged bull plays a prominent part in nightmares; but this traditionary bugbear is threatened to be supplanted. In future people will eat a heavy supper with the prospect of passing an uneasy night in that curious and complicated piece of mechanism, the dentist's armchair; holding on firmly by the bottom, now being screwed up, now down, to get a favourable light; their heads rolled to this side or to that to meet the exigencies of art, whilst the peering eyes of their favourite operator come and go, and a confused clatter of steel is heard during the intervals.

And yet the dentist does not seem to deserve so hard a fate. Divested of the terrors with which imagination clothes him, he is seen to be our own flesh and blood. A judicious blending of mildness with firmness appears to be necessary to the ideal character of his profession, and it is remarkable how many members of the profession realize this ideal, or make laudable approximations to it. Sometimes indeed a falling away from the standard may be noticed in either direction. Excessive sympathy may lead a dentist to sacrifice firmness to mildness, and this perhaps is the worse error of the two. For he ought to consider his patient's condition; how distracting pain renders it difficult for him to make up his mind, or else prompts him to determine rashly; how, too, he is probably quite ignorant of the true cause of his suffering, and equally ignorant of the proper remedy. It is therefore the part of a good practitioner to decide for him, and, if the worst must come and the last office be performed, to jog the elbow of his resolution. But other practitioners are either so sensible of this, or are of such an autocratic disposition, so determined at any rate to have the game (if the expression be allowable) in their own hands, that, sacrificing mildness to firmness, with harsh voice and rough manner they bully and intimidate their patients, as though the latter were not abject enough already, or as though the dread and fear of dentists needed any adventitious aid. The cumning middle course, however, seems to be this—knowing what treatment is best for the patient, to get him to adopt it as if of his own choice. He is then buoyed up and consoled during the operation by a flattering senso of mild heroism, whilst, if anything should go wrong, the operator is to a great extent absolved from blame. And to do this well a character of mingled mildness and firmness, with some knowledge of human nature, is best adapted. And there is no profession in which the knowledge of human nature in relation to physical pain may be sooner ga

men; and the reason of this seems to be the same as that of their more patient endurance of many other bodily ailments. For during illness men are more fidgetty and morose than women, because they are accustomed to greater activity, have a stronger passion for freedom, and feel the restraint of helplessness more oppressive. And if, when the worst has come, at the dentist's, seated in the chair of fate, with the last agony imminent, any one retains enough presence of mind to attend to his own emotions in those trying circumstances, he will confess, we believe, that the actual pain is not worth making a fuss about, but that the intolerable part of it is—O for a euphemism!—in plain English, it is the submitting to the first grip and putting oneself so utterly in another man's power. It is this "representative" element of the torture that puts our virtue to the test; and let none pretend to make light of it. But fortunately it is of short duration, and is far better than the melady it cures. So that a man's loyalty to reason may almost be measured by his willingness to go to the dentist's when his time has come. No imaginary horrors deter the sane man, but he goes into the very chamber of horrors, like Rinaldo into the enchanted wood. And ever after when passing the house he will say to himself, "I have been there and still would go, on sufficient occasion."

nately it is of short duration, and is far better than the malady it cures. So that a man's loyalty to reason may almost be measured by his willingness to go to the dentist's when his time has come. No imaginary horrors deter the sane man, but he goes into the very chamber of horrors, like Rinaldo into the enchanted wood. And ever after when passing the house he will say to himself, "I have been there and still would go, on sufficient occasion."

Certainly a good dentist deserves to be called the Friend of Man. And therefore we read with pleasure in the Medico-Chirurgical Review that during the last ten years no branch of surgery has made so much progress as dentistry has done; for during many dark ages, with respect both to science and to practice, it was in a very backward state. Not very long and, it is aversed, blacksmiths were much in favour as operators in this department—a fact which seems to require explanation. It will purhaps be surmised that they were recommended for the work by their great bodily strength. But the obviousness of this secount of the matter is delusive; the true theory must be sought in a more roundabout way. And if, in the first place, we remark that the blacksmith anciently discharged the functions of a farrier, perhaps this will be thought not to cost much light upon the subject, but

rether fiself to need illumination. Remembering, however, that to the minds of our forefathers the offices of barber and surgeon to the minds of our forefathers the offices of barber and surgeon seemed naturally to go together, we cannot be surprised that to the same minds it should appear part of the fitness of things that the blacksmith who shoed a horse should also doctor it. And the mane minds it should appear part of the fitness of things that the blacksmith who shoed a horse should also doctor it. And now, as Mr. Spanear would say, observe the implication. In doctoring a horse it must sometimes have been necessary to extract a tooth, and it was at once inferred that he who could extract a tooth, and it was at once inferred that he who could extract a horse's tooth à fortiori could draw a man's. And that he did liften draw, to admiration, both the tooth and the man may be imagined. Figure the blacksmith with his patient careering round and round the forge, emulating the dealings of Achilles with Hector, and then listen to those who deride what they call the merely material civilization of the present day. Great is the transition from the blacksmith's shop to the modern dentist's ingenious armchair—we had almost written easy-chair. On the other hand, it may be that the need of dentists has much increased with civilization. It is commonly believed that savages have excellent teeth; and although we are now-adays in the habit of suspecting such beliefs, this one seems probable, if we consider how necessary good teeth are to them. To any one who is anxious to prove "material civilization" a mistake, the inquiry may be suggested, What effect has the invention of knives and forks had upon the teeth of those nations that have condescended to adopt the use of them? For these pernicious utensils plainly render good teeth less a necessary of life than they were before, so that people with bad teeth now survive, transmit their degenerate natural weapons to their descendants, and so on. And, therefore, to Mr. Galton and others who are anxious to guard the interests of the future by promoting marriage on scientific principles, we may suggest the propriety of including sound teeth in the list of excellences required of those who are anxious to guard the interests of the inture by promoting marriage on scientific principles, we may suggest the propriety of including sound teeth in the list of excellences required of those about to marry. The priest or registrar might call upon the parties to a proposed marriage to produce, among other certificates, one showing that they themselves had sound teeth, and likewise their fathers and mothers, their grandfathers and grandmothers, and such other relatives as the savants may think a sufficient guarantee consists respectively. against reversion. Or perhaps these matters are to be left to the young people themselves, and a man's asking a girl if she has ever suffered from toothache may one day be a recognized way of hinting that he is coming to the point.

But if such means of securing the peace of posterity fail, others may be devised. Amidst the press of unexpected ideas, projects, and events, it is daily becoming more difficult to detect an absurdity at first sight; and so the following ingenious speculaabsurding at first sight; and so the following ingenious speculation which has been started may yet be realized. What if here after every one on arriving at a certain age should be bound to yield up the natural teeth, and receive in exchange an artificial set warranted not to ache, and which might be renewed from time to time in case of their ceasing to fit, being swallowed, stolen by garotters, or other accidents which already are not unexampled? It would demand some courage perhaps once in a lifetime, but that must be better than once a turned at travelet. that must be better than once a year as at present. Besides are there not anæsthetics? And moreover stern laws, backed by a public opinion instructed in what truly makes for social welfare, would, as in Sparta, deter the youth from showing the white feather, and they would sit down smiling; just as some tribes of American Indians with whom beards are unlashionable, on reaching the age when rudiments of beards appear, submit, it is said, to have them plucked out hair after hair by squaws, and account it a wirtue not to groan or wince, though they are the old squaws who virtue not to groan or wince, though they are the old squaws who do it. By thus losing all our teeth at once and as a matter of course, we should no longer be haunted by the regretful feelings which now disturb us, as, wandering about the world, visiting many cities, and perhaps many dentists, we drop them as pledges of mortality, one here and another there, and already long before death reflect that our bones lie scattered on every shore. And this will be a relief to many persons; for how imagination follows those fragments of our being, whoever is familiar with folklore knows well. knows well.

We have said, perhaps somewhat hastily, that dentists are our own flesh and blood; but at any rate this acknowledgment does not extend to those dentists who put horrible signs of their profession outside their houses in the public streets. What we refer not extend to those dentists who put norrible signs of their profession outside their houses in the public streets. What we refer to is too hideous to describe with decency, but every one must understand us. Such things can only be in place in a scientific museum. The only device to be compared to this one is the pirate's flag with its skull and cross-bones, but the flag is much the less revolting of the two. We should have thought such a mode of advertising would have been considered unprofessional, and we are sure it cannot be attractive.

THE NEW BULL ON PAPAL ELECTIONS.

WHETHER the precise text of the Bull Apostolics Sedis
W Museus as given in the Kolnische Zeitung—for the form cited
is that of a Bull, not of a Brief—is genuine or not, it would be
premature as yet to pronounce. The rumour that some instrument
of the kind was in contemplation, if not actually drawn up, has
long been widely credited, and, in spite of previous denials, seems
now to be virtually admitted by the Papai organs. And, indeed,
the extreme likelihood of such a step being taken under existing
circumstances and in the present temper of the Curia would alone
no far to authenticate the popular belief on the subject. Nor shall

we probably be far wrong in assuming the substantial accuracy of the alleged document, even supposing the exact form has not been preserved. Meanwhile two questions of no little interest at once preserved. Meanwhile two questions of no little interest at anonsuggest themselves, which have been freely discussed during the
past week, sometimes with more ingenuity than knowledge, in the
papers, both English and foreign. Are the changes enacted, or
proposed to be enacted, within the compatence of the Holy
See? and will the new regulations about Papal elections be
acquiesced in by the various European Powers without prejudice
to the general acknowledgment of the successful candidate for the
tisma? To the second inquiry it is of course impossible to
gives more than a vague and conjectural reply. The Italian
Government might not unnaturally resent the removal of the
Conclave from Rome, where there would be no real danger of
its freedom of action being impeded; and Prince Bismarck has his
own reasons for eagerly solving any available weapon in that deadly own reasons for eagerly selzing any available weapon in that deadly warfare with the Roman hierarchy to which he has committed himself. But meither the Italian nor the Prussian Government has any traditional claim to a voice in Papal elections, and it is not easy to see what special interest France, Austria, or Spain—which have hitherto alone exercised the right of veto—can have in quarrelling with arrangements which would make the choice of a non-Italian Pontiff a little less improbable, though any abrupt non-italian Fontill a little less improbable, though any abrupt change of the kind might be thought generally objectionable as involving a risk of future complications. The precedent of the Vatican Council, where the representatives of Clatholic Governments were for the first time excluded, has indeed created a very natural expectation that the right of veto will be challenged on similar grounds. But there is no allusion to this matter in the text of the new Bull, and a claim which has no technical support in But there is no allusion to this matter in the any written record would hardly be thought to require formal abrogation. At the same time the prudence of the proposed innovation may fairly be questioned when there is nothing to interrupt vation may fairly be questioned when there is nothing to interrupt the due carrying out of the ordinary ceremonial at the Vatican; while on the other hand the increased facilities of communication and locomotion afford opportunities for a representation of the electoral body more complete than on any former occasion. It is always rather a perilous experiment to change your front in face of the enemy. And, beyond a vague sense of alarm, there seems no particular reason for a change of front just now. All the precedents cited point rather in an opposite direction,

This brings us to the other question, which, if not more important, is at least capable of being more fully and definitely answered. The remark of the Times that "from an ecclesiastical point of view the right of the Pone to issue the above decree cannot be doubted

the right of the Pope to issue the above decree cannot be doubted after the Ckeumenical Council" may be true in the abstract, but is wholly irrelevant. Still less is his claim based, as has been absurdly asserted elsewhere, on some shadowy prediction about the Pope who sees the years of Peter choosing his own successor. His right to issue such a Bull as that ascribed to him—which is of course to issue such a Bull as that ascribed to him—which is of course a very different thing from his discretion in the use of it—rests on much surer ground than any old sdage or any general inference from a novel dogma which is both openly challenged and very largely disbelieved, even where there is no public protest, within the limits of his own communion. It is not only admitted by canonists, but illustrated by a few striking and very sufficient precedents, both ancient and modern. The case will be made clearer if we briefly recall to the memory of our readers the leading statutes on which Papal elections depend. Without dwelling on the earlier history of the Papacy, it may suffice to state here that Nicholas II., acting under the advice of Hildebrand, issued in 1059 the Bull which may be called the Magna Charta of the Sacred College, confining the elective franchise for all future time to the Cardinals exclusively. This fundamental law has only once been superseded, under very This fundamental law has only once been superseded, under very exceptional circumstances, and by a higher than Papal authowhen the great reforming Council of Constance, after getting rid of three Popes, nominated a Committee of its own members, of whom only half were Cardinals, to elect a new Pontiff. The second great ordinance on the subject was promulgated a century later by Alexander III. at the third Lateran Council in 1179. The Conclave which elected Alexander by a majority of votes had been the scene of a disgraceful tumult, and the election was contested. He accordingly lost no time in ordaining that henceforth no Papal election should be valid without a majority of two-thirds of those voting. This ordinance also has held good ever since, except in one instance, to be presently mentioned. The third organic law of the constitution of Conclaves is the one mainly affected by the at the Second Council of Lyons, and regulates in minute detail the forms to be observed in Papal elections, including the ten days' interval between the decease of one Popo and the assembling of interval between the decease of one Pope and the assembling of the Conclave to elect his successor, the clausura, or locking up of the Cardinals during the period of election, the place of meeting, and various other details. To this may be added the Bull issued by Gregory XV. in 1621, prescribing the ceremonial and the different methods of election, which is, however, based entirely on earlier authorities. These latter statutes, as well as some subsequent Bulls authorities. These latter statutes, as well as some subsequent Bulls expanding or reproducing the former regulations, are suspended by the Bull ascribed to the present Pope. A brief retexpent will be enough to show that he has full authority for taking such a step. The famous Bull of Gregory X. was actually abrogated by his successor Adrian V., who reigned barely a month, and remained in abeyance during six pontificates, till Gelestine V. renewed it. Gregory XI. ventured on a still more sweeping inservation. He had put an end to the Seventy Years' Captivity by

his return to Rome; but there was grave cause for apprehension that the restoration might be only temporary, with a body of Cardinals chiefly creatures of the French Crown and likely to be exposed to strong pressure. He accordingly issued a Bull suspending every existing regulation about Papal elections, including the famous decree of the third Lateran Council requiring the thirds of the votes and this held measure was seted ream and two-thirds of the votes, and this bold measure was acted upon and

generally approved.

But the most memorable as well as the most recent example of such an extreme exercise of Papal prerogative occurred less than a century ago, and it is this precedent by which Pius IX. is supposed to have been chiefly guided in framing his Bull. There is something almost romantic in the later vicisaitudes of the reign of Pius VI. and the strange shifts to which he was driven to maintain his authority under violant pressure from without. It is only. of Pius VI. and the strange shifts to which he was driven to maintain his authority under violent pressure from without. It is only, however, with one chapter in that eventful history that we are here concerned. Early in 1797, when the States of the Church had been invaded by the French army, and the Papal plenipotentiaries had been constrained to sign the disastrous treaty of Tolentino, it was felt that some provision ought to be made for the emergency of the next election. A Brief, which is a less authoritative and more ephemeral document than a Bull, was drawn up in the February of that year, Attentis Peculiaribus Prasentibus, absolving the Cardinals, for the next occasion only, from the obligatory interval of nine days before proceeding to a new election. But the rapid march of events rendered the promulgation of this Brief superfluous; and in the following December, two days after Joseph Bonaparte, the diplomatic representative of the French Republic, had quitted Rome, the Bull Christi Ecclesiae Regenda was issued, formally enacting the dispensations contained in the contemplated Brief, but extending them to all cases of grave peril threatening the legitimate action of the electoral body. Even this, however, proved inadequate to the gravity of the crisis. In February 1798 Rome had been converted into a Republic, and the aged Pontiff was a prisoner—not in name or imagination, but in fact—in a Carthusian monastery near Florence, while the Cardinals were dispersed over Italy and beyond it. The situation was obviously a critical one, and Cardinal Antonelli—no relation of his present namesake—having contrived to obtain access to the imprisoned Pope, submitted to him the draft of a Bull which not only dispensed with all tain his authority under violent pressure from without. It is only, and Cardinal Antonelli—no relation of his present namesake—having contrived to obtain access to the imprisoned Pope, submitted to him the draft of a Bull which not only dispensed with all existing regulations about elections, except the obligatory majority of two-thirds, but authorized the Cardinals to vote by proxy, and even suspended the prohibition against any dealings in the nutter during the Pope's lifetime which dates from a decree of Pope Symmachus in the fifth century, and is enforced with fieres and multiplied anathemas, as was his wont, by Paul IV. in the Bull Cum secundum Apostolum. But Pius VI. shrank from so extreme a measure when he found the prevalent opinion among the Cardinals was against it. Another draft was prepared, this time by Michele di Pietro, Apostolic Delegate at Rome, which was approved by the Cardinals, and finally took shape in the Bull Cum nos superiori anno executed by Pius VI. on the 13th of November, 1798. Except in the permission of proxies, which is omitted, the Bull is still fuller in its dispensations than the rejected draft of Cardinal Antonelli. It pensations than the rejected draft of Cardinal Antonelli. It authorizes consultation during the Pope's lifetime among the Cardinals on every point except the person of his successor, suspends the obligatory delay of nine days, the clausura, and the

suspends the obligatory delay of nine days, the clausura, and the local limitations, empowering the Conclave to be held in any Catholic country where the larger number of Cardinals might be assembled. A somewhat similar document was drawn up by Gregory XVI. during the insurrectionary movements at the beginning of his reign, but was never published.

There is nothing in the alleged provisions of the Bull Apostolica Sedis which goes beyond the Cum superiori anno of Pius VI., on which it is closely modelled, the only novelty being the strange suggestion—which certainly does look almost like a satire—of "the Principality of Monaco, some French city, or Malta," as the place of the Conclave. There is the same liberty conceded of indefinitely hurrying or indefinitely postponing the election; observing or not hurrying or indefinitely postponing the election; observing or not observing the clausura; of concerting measures, if necessary, during the life of the Pope, with the one reservation of not discussing the names of particular candidates; the same entire freedom of choice as to locality, and the same general extension of these discussions the life that the same general extension of these discussions. pensations to all future cases of emergency. It may be worth remembering that the Conclave which actually assembled at Venice after the death of Pius VI., so far from showing any special haste in its procedure, lasted for above two months, and was nearly ending in the very exceptional method of election "by compromine" and a by delocating the fearbhing to a small Committee of mise"—i.e., by delegating the franchise to a small Committee of Cardinals—when at the nick of time the votes of the Cardinals concurred in the elevation of Pius VII: to the Papacy. What was really abnormal in that election was the transference of the Cardinals conclude from Papacy. was really abnormal in that election was the transference of the Conclave from Rome to Venice, for which there were obvious reasons. But why Pius IX. should "fear that the next election cannot be freely conducted in Rome," is not more easily explicable than his ground for styling himself, and encouraging his advocates and admirers, whether journalistic or episcopal, persistently to style him, "the Prisoner of the Vatican." There is, indeed, as much or as little reason for this strange theory of imprisonment holding good after his decease as during his life. But do the Cardinals seriously believe in it now? And, if not, are they likely hereafter to make a troublesome and rather undignified pilgrimage to Malat or Monaco for the sake of perpetuating an illusion which they do not share?

they do not share?

CHARITY ELECTIONEERING.

TIFIE gentlemen who are endeavouring to effect some refirm is the system of election to charitable institutions have longly their first pattle and have been defeated. A motion was proposed their first battle and have been defeated. A motion was proposed at a meeting of the British Orphan Asylum recommending some moderate changes, and was thrown out by an overwhelming majority. The meeting declared their own perfect satisfaction with their own arrangements; and after denouncing with great, energy the wickedness or folly of everybody who proposed any alteration, went back to their homes in a high state of virtuous salicomplacency. There is nothing in this which is in the smallest degree surprising. Every attack upon a good old steady-going abuse is invariably encountered in the same manner. When people were in the habit of suggesting that workhouses were not managed to ideal perfection, the first assault was always met by a chorus of virtuous indignation. A number of immaculate persons held up their hands in holy horror at the thought that any outsider should presume to dispute the purity of their motives or the held up their hands in holy horror at the thought that any outsider should presume to dispute the purity of their motives or the
wisdom of their measures; the Guardians held meetings at which
the voices of a wretched minority were drowned in stamping and
cheering; they passed votes of thanks to the master, and the
master testified in his turn to the wisdom of their superintendence;
and everything would have been made pleasant if it had not
been for the intrusive impertinence of the outside world. The

and everything would have been made pleasant if it had not been for the intrusive impertinence of the outside world. The whole course of proceeding indeed is so well understood that it may easily be reduced to fixed rules, which are applicable not merely to workhouses or to voluntary charities, but to every corporation which is accused of imperfection.

The first thing to do is, of course, to abuse your opponents. Writers in the press are notoriously ignorant and venal; they are always pandering to the worst popular passions, and are generally a contemptible set of beings. We have no desire to dispute an argument which is too universal in its application to have much point in any particular case. It merely means that the press is generally unfavourable to the existing system, a fact which our readers may interpret according to their own opinions. But the arch-enemy in this case is that mischievous body, the Charity Organization Society. This malevolent body goes about making itself exceedingly disagreeable to the quiet easy-going institutions, and it has lately become the parent of a noxious child, called the Charity Reform Association. What diabolical motives can be at the bottom of this movement is a hitherto unsolved mystery. Some suggestion, indeed, is thrown out that the agitation is due to the "cold and selfish views" of people who do not want to subscribe. Sir Charles Trevelyan and his friends may be honourable men (we have not observed, at least, that their honour is disputed), but they are tools in the hands of designing people who only want to save their own pockets. We will not inquire into the plausibility of this theory; it is one that naturally commends itself to a certain class of minds, to which it would be a more waste of time to offer anything like reasoning. Motives, however, are inscrutable; and, however questionable may be those which actuate the Charity of minds, to which it would be a more waste of time to offer anything like reasoning. Motives, however, are inscrutable; and, however questionable may be those which actuate the Charity Organization Society, we must admit that its professions at least are honourable. Nobody can seriously deny that it would be an excellent thing to establish a mutual understanding among the innumerable charities of London. Their purpose is, or should be, to give help to the deserving poor. The natural result of their interference is that the funds intended for this nurpose are intercepted by designing beggars. The Charitable this purpose are intercepted by designing beggars. The Charitable Organization Society professes to help the charities by enabling them to form an alliance against their common enemies. So far their function is admitted to be legitimate. But the Society proceeds to say that the system of voting charities encourages and stimulates mendicity, because, by its nature, it excludes any effective supervision of the appeals put forward. A body of two or three thousand subscribers cannot possibly scrutinize the claims which come before them, and, in fact, do not profess to do so. They naturally therefore give an advantage to worthless claimants. If this charge is ill-founded, its error should be exposed; but it is simply irrelevant to abuse the motives of those who put it forward. irrelevant to abuse the motives of those who put it forward. Sir-Charles Trevelyan may be only wishing to save the pockets of the stingy; but his argument is not the less legitimate. If the money is spent in a demoralizing fashion, it had better not be spent, even though the stingy benefit by the change. The imputation is one which the charities are bound to meet fairly, and an attack on the motives of their opponents is at best nugatory, if indeed the use of such an argument be not an implicit confession of weakness.

The sbuse of adversaries is of course associated with praise of one's own virtues. We, say the charities, are the official representatives of all the Christian virtues; and if you attack us, you attack the Sermon on the Mount. Any suggestion that any other motives than those of the purest philanthropy can be at work is repudiated

the Sermon on the Mount. Any suggestion that any other motives than those of the purest philanthropy can be at work is repudiated with disgust. Mr. Banting, for example, declares it to be "perfectly sickening" to read what has been said of paid officials being the main obstacles to any change. Ferhaps it is as probable that the officials are biassed by their stinginess; but we fully agree that all such imputations, if they are made, had better be dropped. We dealty whether the authorities of these charities are quits equal to the apostles, but we have no doubt that they are well-meaning proper. The real accuration against them is very different. It is not that they oppose change because they want to live comfortable places, but that they oppose it from that means obstructiveness which comes over all established corporations

The British Coulons should be seen that it has existed for fact, it was all the time been a model institution. We do not fill installer list; that every body knows that an association which is taked for facty six years is sure to have developed a limit of the control of the particle from the control. The legal fiction which represents corrections are come to have their vanity interested in the reputation of the institution. They have a very natural dislike to hear their dislike to the analyses which has taken up so much of their lime and attention can be based upon false principles. They enjoy the little hit of patronage and power which is conferred upon them, not for any reasons that can be fairly called improper, but as people always enjoy anything which distinguishes them from their neighbours. The smallest distinction which a man can acquire gradually assumes an importance in his eyes altogether disproportionate to its intrinsic value; and the little sphere within which he is supreme is surrounded by a halo of senetity. Corporations thus become unreasonably conservative by the very law of their being. Their members forget that they are, after all, only means to an end, and regard them as an essential part of the British Constitution. And therefore it would have been very surprising if an attempt to point out the existence of human frailty in any institution of forty-six years standing had not been met by a shout of indignation. Indeed it would have been quite as surprising as that such an institution should be free from the abuses which always accumulate in the course of a generation or two.

an institution should be free from the abuses which always accumulate in the course of a generation or two.

The only answer, then, which is at all relevant is a proof that the charges made are really false or grossly exaggerated. The denial was, of course, made in general terms so far as the British Orphan Asylum was concerned. We have no means of judging of the merits of this particular case; and we should be glad to believe that this particular body is liable to none of the complaints which have been put forward, with a considerable mass of evidence, by Sir Charles Trevelyan and his friends. We will hope that votes have never been sold or exchanged; that the best candidate has always been elected; and that friends. We will hope that votes have never been sold or exchanged; that the best candidate has always been elected; and that nobody has been kept waiting for an unreasonable time. But the question was not brought before the meeting in these terms. The proposal made by Mr. Simpson did not go to a complete alteration of the system, but merely to adopting precautions against some probable abuses, the existence of which in many other cases has been sufficiently established. He proposed arrangements which would make trafficking in votes difficult, which would discourage canvassing, and which would put a stop to the evils resulting from the ing, and which would put a stop to the evils resulting from the public polling-days. But he did not propose to take away the power of election from the subscribers. Yet this simple proposal was received with so much indignation that its supporters could not obtain a hearing. The reason was the old "thin end of the wedge" argument. In other words, the subscribers positively refused to histor to any proposal which might might price to be abused. refused to listen to any proposal which might mitigate the abuses connected with their present method of exercising their power, because they feered that such a proposal might lead to a loss of the power itself. Possibly they were vise in their generation; as possibly they were making a great blunder. At any rate, this mode of meeting the charge amounts, so far as it can be said to be anything but the expression of an unreasoning prejudice, to a passionate assertion that the system and the abuses must stand or fall together. We do not suppose, for example, that anybody will deny the system of trafficking in votes to be objectionable. Mr. Banting, the enthusiastic advocate of things as they are, attempted to throw doubt upon its existence or its frequency—though both appear to us to be established on undeniable evidence—and said that, if it existed, he would most gladly have exposed it. Why then show the arrest with him refract to the mean three with a research to the mean three with three with three with the mean three with the mean three with three with the mean three with three with three with three with the mean three with he, or those who agree with him, refuse to take means for rendering it impracticable? Mr. Banting says that subscribers can stop it for themselves by not trafficking. Certainly they can, and so might corruption at elections be stopped by the simple process of not bribing. When an evil exists, it is no excuse for not taking precautions against it that it would not exist if people never acted as experience proves that they always will act. The system not make writer but thes received described to be only exists, but has received a legal sanction. It is admitted to be only exists, but has received a legal sanction. It is admitted to be mischievous, and yet the subscribers to the charity will take no measures to prevent it, because they are afraid that such measures would lead to the loss of their power of election. It is impossible to say more distinctly that the subscribers admit that their system is liable to gross abuses, yet prefer retaining the abuse to parting with any fragment of their power. The public at large will have to consider whether, after such an admission, they should not insist upon the abuse being shated as a condition of further subscriptions. If a man asks us for money, and admits that part of acriptions. If a man sake us for money, and admits that part of it may be badly spent, and refuses to adopt my security for spending it better, we should say that his request—not to use a

spending it better, we should say that his request—not to use a stronger word—is a daring one.

Meanwhile we are assured that the system, had or good, must go on because it is democratic; because it is in harmony with the spirit of the age, because these are abases in Church patronage, and because competitive examination is the practice in all multic departments. Each arguments might perhaps he hast left to minwar themselves. We may, however, my briefly that, if an avilla very common, that is the more mason for trying to remedy it. Democracy, as even its advocates will allow, hearmony incommendances, and everybody who is not a limiting to it as inspitable.

Even Mr.

Disseli admits that the "apirit of the age" should be upderstood with a view to opposing, as well as with a view
to encouraging, it. If there are shoses in Church paircosage,
the scorer they are runedied the better. As his compatitive examination, we are by no means disposed to fall down
and worship that popular ided. The presentent seems to us to
tell in the opposite direction. Sensible people generally admit
that the competitive system has been pushed to an extreme, and
that it is time to see how we can most some of the many evils
which it has produced. But competitive examination at least professes to be a means of selecting the most qualified candidates by
qualified examiners. If candidates were chosen for every office by
universal suffrage, without reference to their fitness, we should be
worse off than we are. Now the system of election to charities
expressly repudiates all examination by qualified persons, and
therefore differs from the system of competitive examination be really an expression of the apirit of the age, it would be
impossible for the spirit of the sge to condamn more emphatically
the system of election, not by qualified examiners, but by a blind
scramble of irresponsible voters.

THE EXECUTE VISITATION.

THE rule by which discussion of a pending trial is forbidden seems by common consent not to be held hinding in the case of ecclesiastical trials, at all events when they do not involve the moral character of any one. While therefore the Court which was lately open at Exeter still stands adjourned, we have no scruple in following the example of other papers in making our comments on some of the questions at issue, and especially on the question which, from a constitutional point of view, is by far the greatest of all

which, from a constitutional point of view, is by far the greatest of all.

With the views that we have always put forth on these matters, no one can be surprised that we should be well pleased to see a Bishop exercising a practical jurisdiction in his cathedral church, and to see that jurisdiction, after some damus seemingly made for form's sake, fully admitted by its Residentiary body. On the other hand, we are no less sorry that the occasion of calling that jurisdiction into play should have been what it has been. It is most likely that in the case of the Chapter of Exeter, or of any other Chapter, some real abuse might be found in reforming which the Bishop's jurisdiction might be profitably exercised. But it is impossible not to feel indignant at seeing the Dean and Chapter called in question, not for anything which may really need reform, but on account of an objection, whether honestly superations or merely spiteful, to a part of the great work of restoration which is going on in the minster. There are parts of that restoration which, to our mind, are open to grave objection; there may be questions of taste as to the rereduce itself about which the present case has arisen. But these points are nothing to the purpose. The Dean and Chapter are called in question on a mere vulgar cry of Popery because of the sculptured ornaments of the rereduce. Under such a charge they must have the hearty sympethy of all who do not wish to see our churches brought again into a state of Paritan barcness. What we insist upon is that this question must be in no way and adopt with the question of that jurisdiction should have been raised about such a matter; but it is plain that the lishop's authority will be just as much asserted by a judgment in favour of the Chapter as by a judgment against them. Nor can it be thought that the Bishop in any way prejudges the matter by holding the Court. By holding the Court he asserts his jurisdiction, but he in no way gives any suspicion as to what his judgment will be. One or two cavils

The real point at issue with which we are concerned is the jurisdiction of the Bishop in his own church. That the Bishop has jurisdiction in the matter seems to be fully decided by the opinion expressed by Mr. Justice Keating, and by the submission of the Dean and Residentiary Canons to that opinion. In all these matters there are two questions which must not be confounded; what the law is, and what the law ought to be. We have our own views, founded alike on ancient practice and on modern expediency, as to what ought to be the relations between a Bishop and his cathedral church, and also among the several members of such a church. But we have never ventured to think that, among the vast mass of local statutes and general Acts of Parliament by which such points have to be settled—local statutes differing in each place, and Acts of Parliament which so two Courts ever seem to understand in the sameway—our notions would always be found to be exactly what a Judge would declare to be the existing law. In such matters the right course is, first to find out what the law is, then to consider whether the law needs mending in any point, and by what authority n may be mended. But if the law as it stands turns out not to need mending, so much the better. If any other competent authority decided

that a Bishop has no jurisdiction within his own church, or that a that a Bishop has no jurisdiction within his own chirah, or that a small oligarchy within the Chapter has a right to shut out the Chapter in general, we should accept the statement of the law, but we should hold that the law needs mending. But when a high authority decides that the law on an important point is as we should wish it to be, we at least have nothing to complain of.

Before the Court opened, a silly letter from the Dean of Exeter, not in any way committing any of those members of the Chapter whose words might be looked on as of some weight, went about the papers, talking about the question lying between "episcopal supremacy and cathedral independence," or words to that effect. Dean Boyd has perhaps some confused notion about magnifying his

Dean Boyd has perhaps some confused notion about magnifying his Dean Boyd has perhaps some confused notion about magnifying his office. It has perhaps already been magnified by sacrificing one of the ancient buildings of the city to the requirements of decanal splendour. It has perhaps to be magnified again by talk about "cathedral independence." It may perhaps be necessary to the greatness of a Dean to mutilate a Vicar's Close on the one hand and to defy a Bishop on the other. Sons of Levi of this kind sometimes take too much upon themselves. It was hardly worth while for the coursel on the other side to eneal of the Dean's letter as a times take too much upon themselves. It was hardly worth while for the counsel on the other side to speak of the Dean's letter as a contempt of Court. But we should like to ask Dean Boyd whether he knows the meaning of the words "ecclesia cathedralis"? What and whose does he think the "cathedra" is? At Exeter at least he cannot help seeing it, and he might not unreasonably have asked what it meant. Some members of the Chapter of Exeter are not wholly ignorant of ecclesiastical matters. But their chief would seem to have looked on the might recovery in Exeter. are not wholly ignorant of ecclesiastical matters. But their chief would seem to have looked on the mighty canopy in Exeter choir with the same kind of wonder with which the baby in the nursery rime looked on the little twinkling star. "Cathedral independence," we suppose, means that four or five clergymen, meeting in some hole or corner, are to do exactly what they please with the mother-church of the diocese; to shut out, if they please, their brethren from their Chapter-house, their Bishop from his throne, and the people of the diocese from the nave which was built for them. "Cathedral independence" seems, in Dean Boyd's language, to mean independence of the "cathedra" and of him whose the "cathedra" is. If this claim were once to be established, we can only say that the sooner Deans and Chapters come to an end the better.

The one principle to be maintained throughout in all questions of

The one principle to be maintained throughout in all questions of this kind is the defence of the rights of the whole Chapter, of the Bishop, and of the people of the diocese, against the encroachments of the little knot of Residentiaries—Residentiaries, we are bound to say, who at Exeter better deserve that name than at some other to say, who at Exeter better deserve that name than at some other places. It is curious to see how things can be turned about when it is convenient. The Bishop's citation was addressed to the Residentiary body personally. The reason is plain; the act, lawful or unlawful, was their act; it was not really an act of the Chapter, but of a few members of the Chapter who have drawn to themselves the rights and powers of the whole body. Those members therefore only are cited. To this citation the counsel for the Dean and the Canons cited takes objection. If the Bishop meant to hold a Visitation of the Chapter, he should have cited the whole Chapter, and not some of them only. The Prebendaries, Dr. Deane emphatically says, are members of the Chapter. The Residentiary oligarchy is thus judged out of the mouth of its own counsel. We trust that Dr. Deane's words will not be forgotten. At Exeter at least the Residentiary body cannot after this, for At Exeter at least the Residentiary body cannot after this, for very shame, shut the doors of the Chapter-house on any of those whom, through their own mouthpiece, they thus strongly and eagerly affirm to be members of the capitular body.

whom, through their own mouthpiece, they thus strongly and engerly affirm to be members of the capitular body.

In how great contradiction and confusion the whole question is involved is made plain by Dr. Deane's arguments. Dr. Deane is no doubt a learned lawyer; but it is just possible that a learned lawyer may sometimes not see his way quite so well in these matters as a layman who knows something of the real history and constitution of capitular bodies. At all events, unless Dr. Deane has been strangely misrepresented by his reporter, his arguments at different parts of his speech certainly seem a little contradictory. He first says, "The Bishop's jurisdiction was one as qua Visitor, and not as qua Ordinary." Directly after he says, "Over the fabric of the cathedral, neither when in visitation, nor when not in visitation, had his lordship any jurisdiction whatever." But presently he admits "that the Bishop had a general right qua Ordinary to visit the Dean and Chapter, but that he had no authority in the visitation to order anything to be done in the cathedral, though he might inquire into what was being done." On this Mr. Justice Keating very naturally puts in, "I don't understand what is the jurisdiction you admit." Then Dr. Deane goes on to say "that jurisdiction with regard to the fabric lay with the Archbishop," and "that the visitation of cathedral churches lay with the Metropolitan of the province." But directly after Dr. Deane believes "the appeal would be to the Metropolitan, and not the Dean of Arches." The lay mind asks, if the Métropolitan is himself the Visitor, from whom is the appeal to be made to him? Presently he "relies upon the absence of proof that the powers of visitation had been exercised in anything like modern times." A layman might be glad of a definition of "modern times." A layman might be glad of a definition of modern times." A layman might be glad of a definition of modern times." A layman might be glad of a definition of modern times," or oven of the vaguer "anything like mode

Council of 1848, which, while "abolishing peculiar jurisdiction, excepted the Cathedral Church of Exeter, which was to remain subject to the same jurisdiction and visitation as before." In the same breath Dr. Desne, who had before objected to particular members of the Chapter being cited, argues that "the Bahop's jurisdiction as Visitor was confined to the individual members of the Chapter, and did not extend to the fabric of the church." By way, we suppose of province this we are told that Rishes Terms the Chapter, and did not extend to the fabric of the church." By way, we suppose, of proving this, we are told that Bishop Lamplough in 1672 made a visitation in which he "inquired into the state of the fabric." Dr. Deane assures us that Bishop Lamplough. "did not go into the question whether the law had been broken." The lay mind might think that, if no charge was made of breaking the law, there was no reason why he should go into the question. Altogether we gather from Dr. Deane's argument, at least as it is reported in the Times, that the Bishop is Visitor, but not Ordinary; that he is Ordinary, but not Visitor; that he can visit, and that he cannot; that he has authority over the fabric, and that he has no authority; that he has jurisdiction over the Chapter as a body, but not over its individual members; that he has jurisdiction over the individual members of the Chapter, but has jurisdiction over the individual members of the Chapter, but not over the Chapter as a body. Altogether we hope that the Dean and the cited Canons of Exeter feel comfortable in the quagmire of contradiction in which the theory of "cathedral inde-pendence" has landed them and their counsel.

The clear and truly judicial speech of Mr. Justice Keating, in

which he gives his reasons for his advice that the Bishop has jurisdiction, is a marked contrast to the contradictory talk of Dr. Deane. The Judge either knew beforehand or wisely took the trouble to get up for the nonce the history of the institution with which he was dealing. As Dr. Deane gives no definition of "anything like modern times," we do not know whether he looks on the thirteenth century as coming within that range; but Mr. Justice Keating at any rate does not think it beneath him to go back to those times of our history when our cathedral churches, like most of our other institutions, gradually put on their present shape. The words of the Judge are, many of them, very weighty. They have almost, as after Dr. Deane's argument could hardly be avoided, even by a Judge, a certain human touch of sarcasm:-

He did not understand that it was seriously disputed that the Bishop had a right to visit the cathedral in some capacity. No doubt it was suggested that the cathedral was a peculiar within the jurisdiction of the Dean; but he did not think that either according to law or on the evidence there was any foundation for saying that at any time this was the case. It would have been a strange thing if it had been.

He then goes on with a history of the Deanery, its original foundation by and dependence on the Bishop, and adds:—

It would have been a strange state of things if the Dean so appointed should have had such control over the cathedral as to practically exclude the Bishop from it. But there was no ground for supposing that such a state of things existed, or that any such right had ever been claimed on the part of the Dean.

He then goes on to trace the history of visitations, even in days which we suppose are a little like modern times, to upset the notion that the visitatorial power was in the Archbishop, and specially goes on to enlarge on a visitation held in 1662:-

That visitation was an important one, because the record which existed showed that at that visitation the Bishop exhibited articles to the Dean and Chapter in reference to the fabric. If nothing had been done beyond inquiry it might have left the matter in doubt, but they had the answers to those inquiries under the hands of the Dean and Canons.

The fact that no visitation seemed to have been held for nearly two hundred years he explained by the other fact that, from the year 1700 to the last avoidance of the see, the Bishops of Exeter had been members of their own Chapter, holding the dignity of treasurer. Altogether we may look on the doctrine of "cathedral independence "as pretty well upset by the judgment of Mr. Justice

Kenting.

To that judgment the Dean and the cited Canons had the good sense to submit. The jurisdiction of the tribunal being thus established, the case was then argued on its merits. Of this stage of the proceedings we shall at present say nothing.

THE ART OF BLUNDERING.

A CURIOUS correspondence has been going on in the Times in regard to the parentage of George Canning, which may perhaps suggest to some of those dreary people who are always crying out for new domestic diversions the idea of a game for long winter evenings. A succession of writers engaged in pointing out the errors of those who have preceded them each fall into blunders on their own account. A game of this sort fall into blunders on their own account. A game of this sort would be exceedingly well adapted to ordinary human nature. The correspondence originated in a correction by Mr. A. G. Stapleton, the author of a biography of Canning, of a mis-statement in reference to Canning in Mr. Spencer Walpole's Life of Spencer Perceval. Mr. Walpole had remarked that Canning was "the son of a diareputable actor," and Mr. Stapleton wrote to the Timesto point out that this conveyed a very erroneous notion of the stateman's parentage. "Mr. Canning's father," said Mr. Stapleton, "was a gentleman who practised at the Irish Bar, and who was the eldest son of an Irish country squire, possessed of a considerable landed estate. It married an actress, and for this act his father disinherited him of the present Lord Garvagh, who now possesses it. His third son was the father of Lord Stratford de Redeliffs. Mr. Canning him-

sulf inherited a small estate (Kilbrahan, county of Kilkenny) from his grandfather, and it was from the income derived from this property that he had funds amply sufficient to defray the expenses of his education at Eton and Christ Church." To this Mr. Walpole replied by a frank acknowledgment of his error, which indeed, as he pointed out, he had already corrected in the Errata inserted after the list of contents. "The mistake," he added, "of course arcse from my inadvertently confounding Canning's father with his father-in-law, 'a performer of celebrity in his day, but of wild habits.' See Ann. Reg. vol. lxix. p. 478. As Mrs. Canning my field her second husband when her son was a child, the mismaked her second husband when her son was a child, the mistake, much as I regret it, does not affect the argument in the passage in which it occurs." This was an unfortunate postscript, for it laid Mr. Walpole open to the attack of Mr. Philip Kent, who showed that Mr. Walpole, who fancied that he had inadvertently confounded Canning's father with Canning's father-in-law, had in reality confounded Canning's father-in-law with his stepfather. "Canning's father-in-law," said Mr. Kent, "was not a disreputable actor; nor was he an actor at all. Is it possible that Mr. Walpole does not know the difference between a stepfather and a father-in-law? Canning's father was the son of an Irish squire, his stepfather was an actor, his father-in-law was the Duke of Portland."

"Beware of superfluous explanations" is the moral of this instructive correspondence. We have seen how Mr. Walpole tripped in this way, and Mr. Kent is similarly presented with his heels in the air. "S. S." rushes in to show that Mr. Kent is not more correct than Mr. Walpole, and that if the latter confounded a stepfather with a father-in-law, the former confounded a father-in-law with a brother-in-law. "The Duke of Portland, the father-in-law of the processor." brother-in-law. "The Duke of Portland, the father-in-law of the present Duke, was not the father-in-law, but the brother-in-law, of George Canning. He and the Duke married the two co-heiresses of General Scott, who was said to have made a large fortune by gambling." And then he goes on to tell "a curious story" connected with these marriages. General Scott by his will forbade either daughter to marry a peer. Canning refused to take advantage of the forfeiture clause when his sister-in-law married the Duke. The story was frequently alluded to when Lord George Bentinck became a political personage. If "S. S." had been wise he would have shunned postscripts too. He could not resist the temptation, however, to bring in his curious story, and so has to take the consequences. "W. T." contradicts him on the subject of the alleged forfeiture clause. in his curious story, and so has to take the consequences. "W. T." contradicts him on the subject of the alleged forfeiture clause. "Major-General Scott, of Baicombie," says "W. T.," "had three daughters. They were not 'co-heiresses'; on the contrary, three-fourths of their father's large fortune (nearly a million sterling) was settled upon his eldest daughter; there being, no doubt, a clause in his will under which such fortune was to be forfeited in the event of her marriage a year, or even the heir-preguentive clause in his will under which such fortune was to be forfeited in the event of her marrying a peer, or even the heir-presumptive to a peerage, in which case it was to devolve upon her next sister with the like prohibition. The eldest daughter, however, rendered this prohibitory clause inoperative by a deed executed previous to her marriage with the then Marquis of Titchfield, afterwards Duke of Portland, so that no such opportunity arose as that on which 'Canning refused to take advantage of the forfeiture clause when his sister-in-law married the Duke,' as stated by 'S. S.' The second daughter married Lord Doune, heirapparent to the earldom of Morsy; the third and youngest daughter marrying Mr. Canning, and eventually also becoming a peeress." "Altogether," says "W. T.," "a rather satirical comment upon the gallant General's prejudice against any matrimonial alliance with the peerage of his country."

We have here, it will be seen, what may be fairly called an epidemic of inaccuracy. George Canning cannot be considered a very obscure person in English history. His antecedents and family connexions were very well known when he was alive, and it is very obscure person in English history. His antecedents and family connexions were very well known when he was alive, and it is not very long since he died. His biography has been written more than once, by Mr. Stapleton, by Lord Dalling, and by others; and there were, we should have thought, few subjects on which there was less likelihood or even possibility of error. Yet we find Mr. Walpole mixing up, first Canning's father with his stepfather, and next his stepfather with his father-in-law; Mr. Kent mistaking his brother-in-law for his father-in-law, and "S. S.," while correcting this error, falling into one himself as to Canning's right to insist upon his sister-in-law's forfeiture. On such treacherous ground we are almost afraid to step ourselves; but we suspect Mr. Stapleton is not exact in saying that Canning's father was disinherited for marrying an actress. Canning's mother was certainly on the stage, but our impression is that she did not enter that profession until after her husband's death, when her circumstances compelled her to seek a livelihood, and that her fault in old Canning's eyes was simply her lower social position and want of fortune. This is the version given in the Annual Register, where it is also stated that "Mrs. Canning, being left destitute by her husband's death, first set up a small school for support, and next attempted the stage." Her sebut is said to have taken place at Old Drury, under the suspices of the elder Sheridan, and "she actually ventured to play Jane Shore to Garrick's Lord Hastings." This attempt failed; but Mrs. Canning is admitted to have had considerable theatrical talent, and to have been "very successful in Both and in various provincial companies." Her second husband was Reddish, a clever, but dissolute, actor, who died in York Lunatic Asylum. She afterwards married "a respectable lineadraph" of Exeter, named Hunn, who was smitten both with har, and the stage, and left a good business to become a very bad

sctor. Mrs. Hums survived her third husband. George Casaing was always extremely kind and attentive to his mother, visiting her as often as he could at Beth, and never failing to write her a letter every Sunday. The histrionic element in his character was no doubt hereditary. Lord Dalling takes a similar view. "Canning's father," he says, "the eldest of three sons, George, Paul, and Stratford, was disinherited for marrying a young lady (Miss Costello), without fortune. After her husband's death, Mrs. Canning, left without resources, attempted the stage." It remains to be seen whether "W. T." may not yet be tripped up in his turn; but for the present he seems to have brought the game to an end by making a correction without at the same time committing a blunder of his own. The question of the forfeiture would seem to be settled by dates. The Marquis of Titchfield married General Scott's eldest daughter in August 1795, Lord Doune having married the second daughter in the previous February. It was not till 1800 that Canning married the remaining daughter, and the question of a forfeiture must have been actor. Mrs. Hunn survived her third husband. George Co February. It was not till 1800 that Canning married the remaining daughter, and the question of a forfeiture must have been settled before that time.

It cannot be denied that this is a hasty, superficial age, and that looseness and inaccuracy are unpleasantly prevalent; and this correspondence would seem to be an illustration of the general frame of mind. Phrases are caught up and repeated from mouth to mouth, without any one attempting to test them or analyse what elements of truth, if any, they may contain. One sort of authority is supposed to be as good as another and better too; and if a statement once appears in type, it enjoys free currency unless by chance some suspicious or scrupulous person should happen to snap at it. A question arose in a court of law the other day whether an anonymous school-book could be accented as adequate proof of an anonymous school-book could be accepted as adequate proof of an historical fact of which no other evidence was forthcoming. In private life it appears to be usually enough for any one who has advanced an assertion to say that he is sure he read it somewhere. Of the confusion of dates and persons there is no end. The story of the American tourist who called a Roman church an obelish, or the American tourist who called a Roman church an obelish, and was corrected by his daughter, who said she was ashamed of his ignorance in not knowing that it was a basilish, might probably be matched at home. The origin of the mischief is probably to be found in the absurd assumption that it is necessary for everybody to be supposed to know everything offhand. Lord Macaulay would not have whipped his schoolboy for not being able to say on the instant who was Canning's father or structure. able to say on the instant who was Canning's father, or stepfather, or brother-in-law, but he would have been justified in administering a castigation if the lad had volunteered information on the without having taken the trouble to verify it. is nothing which should be distrusted so much as loose impressions of historical circumstances; and even in the smallest matters it is always worth while, for the sake of the habit, if not of the particular fact, to be at a little pains in order to be exact. If this lesson can only be taught in the new schools, it will do more for the country than almost anything else. As a game, however, the art of blundering might be made very amusing. A great deal of humour and ingenuity might be shown in contriving corrections of other people's blunders which should involve a blunder of one's own. It would be just the thing for that curious form of imbecility which delights in drawing-room games, and which does not see that after dinner it is much better to go to sleep than to keep awake in order to make a fool of oneself.

A CENTENNIAL TEA-PARTY.

THE blessings which the world owes to American independence are likely to be largely mitigated by the supposed necessity of holding festivals in commemoration of its establishment. It is a serious and disquieting reflection that something remarkable happened in every town and village of the old States of the Union nappened in every town and vinage of the old states of the Chion rather less than one hundred years ago, and a period of centennial celebrations will shortly commence and last until everybody is tired of them, and probably much longer. The organization of these festivals has already reached a completeness which is alarming, and the only hope of bored humanity is that the Americans may, to use their own phrase, "discount" the excitement, and become tired of the commemorating business almost before it has fairly started. The Declaration of Independence was made at Philadelphia on the 4th of July 1776, and preparations has been adelphia on the 4th of July, 1776, and preparations have been already commenced for reminding the nation as a nation of the scenes which made it a nation, "which cannot effectually be some at any other place." This admission of the citizens of Philadelphia is unfortunately only binding upon them, and Boston and other this according to oversign their neculiar festivals which cities are already proceeding to organize their peculiar feativals, while New York, having been held by the British throughout the war, cannot decently commemorate anything until all the other cities have had their turn, and therefore offers an exceptional opportunity for peace and quietness during the next few years.

The "centennial enterprise" has already produced a "teaparty" at Philadelphia in celebration of an event which actually party" at l'hiladelphia in celebration of an event which actually occurred at Boston. The centennial journal—for of course there is one—carefully observes that this proceeding at Philadelphia was without prejudice, as lawyers say, to the rights of Boston to celebrate in magnificent style "the centennial of noble epochs in her particular history." And Boston, we believe, has had its traparty too. At Philadelphia there was an "immense and grand gathering," and there were "grand anniversary exercises, and

"eloquent speeches," and, more appalling still, there was a reproduction of the poetry of the commemorated period which might at least have been allowed to rest in merited oblivion. It used to be thought that a Tyrtseus was necessary to a national war, and certainly if a bad poet could make bad soldiers, we need not be surprised that the American armies were not particularly efficient. The boarding of the tea ships in Boston Harbour inspired a local and contemporary poem which contains the lines :-

Equash into the deep descended Cursed weed of China's coast, Thus at once our fears were ended; British rights shall ne'er be lost.

By "British rights" were of course meant those rights which the By "British rights" were of course meant those rights which the Bostonians claimed as British subjects, and which the Home Government, if it had been wise, would have conceded to them. The poet, who calls himself "Britano-Americanus," exhorts the captains of tea ships to hoist sail for home, and

Tell your masters they were dreamers When they thought to cheat the brave.

When they thought to cheat the brave.

The "celebrating exercises" of the 17th December at Philadelphia "appropriately commenced" with a Children's Tea-Party. The scene presented by this Tea-Party was of the most animated character, and is expected to make a lasting impression on the younger guests, and it doubtless will if they had what an English boy would call "a good tuck-out." An important epoch in national history will be thus transmitted through another generation, with a vividness exceeding even that which long lingered in the memory of those who passed through the actual scenes which the day's "exercises" celebrated. The children of 1873 doubtless performed the tea and cake exercise creditably, and they are not likely to object to be feasted in order to teach them to remember that the children of 1773 were starved. We think that the best part of the "celebrating" programe is theirs, since they get as much "ice cream, cakes, and fruit" as they like, and are not compelled to listen to orations. But the all-absorbing theme was the "Tea Party Proper," which was indeed an exercise for all concerned. "The quaint, but eminently becoming, costumes of our maternal ancestors were on hand in every variety." Elderly ladies looked charming, and all others actually bewitching, in the simple costumes of a century ago. If this statement of the reporter be really true, there is more to be said for centennial festivities than we had thought. That which is simple is possibly, although not probably, cheen and it was certainly new, and is declared to laye beau. thought. That which is simple is possibly, although not probably, cheap, and it was certainly new, and is declared to have been pleasing. "The assembling of the Executive Committee was one of the grandest scenes ever witnessed within the walls of this We who have never been inside the building called, we believe, the Academy of Music, at Philadelphia, are quite willing to believe that an Executive Committee of a Tea-Party, or even an actual Ten-Party, would look grand in it; but we think that in this poor old world, and in any building which this antithat in this poor old world, and in any building which this antiquated London could supply, an Executive Committee of a Tear. Party could scarcely have what could be called a grand effect. Many of the ladies were white caps relieved by coloured ribbons, and this "colonial attire" attracted general attention, and tended to enhance the scene. Among the distinguished persons present is mentioned Colonel Wood of Virginia, "who was in charge of the Confederate pickets at the battle of Gettysburg." It is pleasant to observe the favour with which the newspapers of Northern States often speak of the leaders of the Southern "rebels." They cannot halp honouring the skill and courney shown by the side opposed to help honouring the skill and courage shown by the side opposed to them; but it seems to us strange that they cannot understand that the same feeling animated Virginian gentlemen in rebelling against both King George III. and President Lincoln. However, it is satisfactory to see North and South combined in celebrating their common independence, although the accompanying effusion of toa and talk may be to our taste excessive. The "exercises" were opened by an address of the Hon. II. W. Armstrong, who, in behalf of the Women's Branch of the Centennial Commission, bid the guests welcome. We do not know why the Women of this Branch did not select a speaker from among themselves. They could doubtless have found a competent female orator, but perhaps they remembered that in the days of Martha Washington and caps female orators had not been invented. Where they found had a restrongly female orators had not been invented. We gather from Mr. Armstrong' speech that there will be in Philadelphia in 1876 a combination of "a centennial festival, with an Exhibition of Art and Industry;" and a tremendous combination this will really be. We may main some slight idea of it by imagining that Mr. Cole C.B., and Mr. Butt, the Home Ruler, could associate their energies to organize "a grand demonstration of national progress" in Dublin. One has been so bored with Exhibitions, and one feels so capable of being bored by commemorations, that when it is proposed to unite the two tortures in one, the prospect of resulting misery to oneself

the two tortures in one, the prospect of resulting misery to oneself and one's fellow-creatures becomes appalling.

It appears that Philadelphia is to be called the Centennial City. The Committee which sits there has inspired a Southern sympathizer with the "sentiment" that it is a bridge to span the chasm of the dreary past, an abyas to bury "in the tomb of all the Capulets" the accribities of former conflicts, a rainbow of hope to guide the future of American progress. If tea and tall talk can make a pleasant evening, the prospect of a "centennial anniversary" every day for two years may perhaps be agreeable. If all possible fine things have been said about freedom before the day of indenandence arrives, the only course will be to say them pendence arrives, the only course will be to say them over again. An enthusiastic orator anticipates that Europeans will come to Philadelphia to the Exhibition and festival, and

will be so delighted with what they see and hear that a universal Republic of States will occupy the world. We think it much more likely that the returned travellers will gramble at their hotel bills. It may perhaps be a relief to Virginians to turn from the recent to the distant history of the Union, and if they can derive comfort from a six months' celebration, by all means let them have it. They intend to begin on the 19th of April, the anniversary of the battle of Lexington, and finish on the 19th October, the anniversary of the surrender of York Town. Considering that these events were senerated not by air worths only, but by five years, it is a mercy of the surrender of York Town. Considering that these events were separated not by six months only, but by five years, it is a marcy that the centennial rejoicings will not be extended over an 4 Mill period. A Virginian editor reminds his readers who may be anxious about the weather, that as the ceremonies will extend over spring, summer, and autuum, they will probably find some days to suit them. The exploits which will be commemorated by patriotic orators have long since assumed a mythic character, and even a reader of history cannot be expected to remember after ten that the "battle" of Lexington consisted of a march of many miles by a column of regular troops, whom the remember after tea that the "battle" of Lexington consisted of a march of many miles by a column of regular troops, whom the patriots "potted" from behind trees or hedges. We believe that the battle of Bunker's Hill is viewed through a halo of poetry (usually of the worst kind) as a victory of the patriots; but if Americans cannot learn their own history accurately at home, they find some facilities for doing so in Europe. It is curious to observe that a small inn at Saarbrucken, which has been visited by many tourists of all nations since the first scene of a great war was played there, is adorned not only with tokens of German exultation of a "loud" character, but also with a print of "the fight at Bunker's Hill," which shows clearly which side were winners in that strife. A judicious orator would dwell less upon the victories of his countrymen in their contest with the British Crown than on their constancy under defeat, privation, and dismion among themselves. The Duke of Wellington had the good sense to know that even in the battle of Waterloo there were many blunders and shortcomings, and he preferred that it should be looked at as a whole without too much searching into details. Our own national plan of self-glorification is perhaps preferable to the American. We always assume after dinner—and perhaps could do the same after tea—that our army and navy always have been, and always must be, victorious; and that the supposition of defeat, past or future, is simply absurd and incomprehensible. This is far better than going into particulars which those who know practically what they are talking about must feel are of varied character. A general said of his regiment, which claimed to call itself cold and bold, that it was the said of the character of the said of the old certainly, being the 10th of the line, but as for boldness he had run away three times with it himself. However, let the Americans celebrate as they deserve the virtues by which their fathers either gained victories or repaired defeat; and if by this process the can propagate the same virtues among themselves, the world will gain more than we expect from "centennial anniversuries."

A CHAPTER OF FRENCH HORRORS.

OUR readers may remember being startled soveral years ago by On theillingly sensational letter written by a traveller in the Southern States of the Union. We forget the precise line on which he professed to have travelled; but each stage of the fearful journey had been enlivened by some strange and sanguinary incident. There were one duel, several assassinations, and a child or so thrown on the furnace of the engine, &c., &c. Unfortunately, the traveller's tale turned out to be a hoax, although the audacious and imaginative writer had merely intended to exaudienous and imaginative writer had hierary intended to example agreeate and improve upon the probable. Recollecting how the public credulity had been played upon in that case, we were at first inclined to receive with scepticism the monstrous succession of mysterious murders which were first noticed at length in the columns of the Figure. The Figure is more famous for the ingenuity of its fictions than for the accuracy of its facts, and we were inclined to presume potential starting and accuracy in the columns of the presume and the columns of the columns of the second of the columns. and we were inclined to presume, notwithstanding an extreme circumstantiality of detail, that these horrible stories were merely a froak of that journal in its wildest vein. Unhappily it would seem that we were wrong in our surmise, and that the Fiyaro was right in its statement. The district of Limours, in the neighbourhood of classic Rambouillet, and only some eight leagues distant from Paris, has been the scene of the most extraordinary series of cold-blooded has been the scene of the most extraordinary series of cold-blooded crimes. The wonder is that we have not heard much more of them long before this, for no fewer than nine persons have been murdered for certain, and, dating from the 24th of last September, the nurders have extended over a period of three months. If we may credit a Correspondent of the Daily News, whom frequent sojourns there have made familiar with the district, the primitive confidence of the people made the commission of the crimesthe essier, although we should fancy that confidence must have been radely shaken some time ago. Locks and bolts were scarcely known in the district although the peopling were in the habit of hoarding the district, although the peasunts were in the habit of hoarding their savings in their cottages after the manner of their class. The first murder took place, as we said, on the 24th of September. The victims were a woodranger and his wife in the service of the Marquis de la Ferté, and living in a cottage in immediate communication with the homestead of the chûteau. Indeed the only path to their dwelling is said to have led through the homestead; and it seems odd that, although nothing had been seen of the couple for three days, it was only after that time had elapsed that any one troubled

himself to ge and look after them. When search was made at last, a double murder was found to have been perpetrated. The bodies had been decapitated with the expertness of a practical hand, and both were shockingly mutilated. All the drawers and cupboards had been ransacked, and a quantity of burned papers lying in the grate showed how deliberately the murderers had conducted the search for plunder. The scene of the next crime was the house of a cure. It was clear that the criminal was the house of a cure. acquainted with the habits of the reverend gentleman, and expected to and him absent from home, with the house left in charge of the housekeeper. The housekeeper was arrunging the fire, when she turned round on hearing a noise behind her. The when ane turned round on hearing a noise behind her. The noise was caused by some one securing the door to prevent its being opened from without. At the same time she saw a man enter from the opposite side who struck her down. The Curé, who was in his room above, heard the sounds and gave the alarm. Although the men were disturbed, the woman was left for dead. She recovered, however—it is the only case in which the assassins did not make sure work—and described the man she saw as about and downed in a green whouse the man she saw as short and stout, and dressed in a greasy blouse. The third and fourth murders were those of a tailor and his wife. The third and fourth murders were those of a tailor and his wife. The man had the reputation of being rich, and he proved to be so, for the murderers were supposed to have carried off large sums in coin and bonds, while they missed a sum of fourteen hundred francs that was stitched up in the dress of the woman. The tailor had been murdered while smoking in his garden, his wife had been surprised while washing the dishes. The fifth case was that of a wealthy and miserly peasant, killed in his own farmyard. To get at him his murderers had to pass and repass along the village street, and in front of a couple of cases, at the very hours when they were most crowded. It is significant that in this case the pictures had been torn down behind which the farmer was actually in the habit of concealing money. His son was arrested on suspicion; he had been heard more than once to wish for his father's death in order that he might come into possession of his property. Fortunately, however, for the young man, the sixth and seventh murders came off while he was yet in custody, and restored him to liberty. Two elderly sisters living together in a lonely seventh murders came off while he was yet in custody, and restored him to liberty. Two olderly sisters living together in a lonely farmhouse were killed under much the same circumstances as the farmhouse were killed under much the same circumstances as the tailor and his wife. The one sister had been struck down as she was carrying a pail of milk to the dairy; then the assassin had entered the house, and disposed of the other, who was confined to bed by rheumatism. In this case also the house was full of repositories where property was secreted, as the visitors must have been aware. They made the closest search all over the premises. Everything likely to cover a hollow space was broken to pieces or turned outside in; the very mattresses were ripped open. By way of raising himself to pursue the investigation more conveniently, one of the brutes had taken his stand upon the face of the corpse. As it was, they overlooked a couple of hoards hidden away under the tiles of the flooring. The cighth and ninth numbers were those the tiles of the flooring. The eighth and ninth nurders were those of a couple of itinerant fishmongers; and there would appear to be a report of a tenth and eleventh. At least a peasant declares that he saw a spring-cart driven past him by moonlight, with a couple of bodies with their throats cut hanging out behind. any other case we should have taken for granted that the pensant had invented the story for his own glorification, or had mistaken slaughtered pigs for murdered men. But if all the rest be true, as we have no sufficient reason for doubting, there would be nothing incredible in a sequel so natural.

What strikes us most in the whole matter—and what, indeed, might almost warrant disbelief of the whole story—is the very small sensation that has been created by a succession of crimes which is perhaps unprecedented in its way. The first of the murders took place nearly four months ago, and although we do not doubt that there has been excitement enough in the immediate district, it would seem to be only now that they have been noticed in the journals of the capital. The list has been made up and brought down to the present time by the Figure; yet, for aught we know, it may have received further additions while we are writing. For a nervous and excitable people, it must be said that the French take these things exceedingly quietly. We have made talk enough here in England about the Hoxton murder, the Greenwich murder, the Great Coram Street murder, and a good many others in which the police have been at fault. We have made talk enough, and yet not sufficient; for Scotland Yard seems to have put its "clues" aside in pigeon-holes, and our murderers are enjoying themselves at large. But Paris is only beginning to talk now about murders committed almost in its bankeue when they have mounted to nearly a dozen. We have said much that is severe about our English detectives, and yet we have said not a whit too much unless they have been made the victims of a most unlucky combination of ill-luck. But the gentlemen of the Rue de Jerusalem show to no greater advantage than those of Scotland Yard, and their boasted finesse seems to have become an obsolete tradition which only survives in the romances of the late M. Gaboriau. After several of the crimes had been committed certain tramps and vagabonds were taken up on suspicion. That may have been the folly of thick-headed local gensdarmes; for if one taking in the business is more conclusively demonstrated than another, it is lat the murders must have been the work of residents. The murders were evidently conversant with the habits of the neithbourhood, down to the most minu

the pictures tanging on his walls. Hence we have the recorded of the police parrowed to a district lying within a disnited redius, and we must remember that all the neighbours satually become spies on stealthy murderers in a quiet reval district. If a man is seen at an unaccustomed place at an unasconable hour, people will talk; he can hardly wash the blood-stains from his clothes or hida away a blouse he has been in the habit of wearing without the risk of provoking awkward remarks. What is more, the inquiry would seem to be narrowed still further by cartain facts which appear to be admitted. The mode of mutilating the bedies seems to point to the crime being the work of a butcher, and this presumption is strengthened by the evidence of the card's housekeeper as to the looks and dress of the man who attacked her. This clue indeed would appear to lead so nuturally to a solution of the mystery that we are inclined to believe it a false one. But whether it he so or not, we are brought back to the point we started from—namely, that a couple of professional murderers are actually perpetrating crime upon crime, under the very eyes of the most skilled detectives of Paris, and with the whole neighbourhood excited and watchful; which is not a pleasant reflection for timid Frunch people. To us the story seems only another illustration of what we have long been persuaded of, that nerve is far more essential than talent to successful murder; and that a stelld man, who is sufficiently cool and brutal, who has no delicate fibres in his moral framework, and is neither troubled with pity nor remorse, may, as a rule, dely anything but accident in perpetrating crimes with impunity if he only exercise ordinary prudence. Whether ruffians like the undiscovered criminals of Limours may not have been trained in the evil school of the invasion, and have become case-kardened and brutalized by the horrors inseparable from it, is another question. We should think it emimently probable. The peasant soon gets need to the terrors of death

REVIEWS.

ARNOULD'S MEMOIR OF LORD DENMAN *

SIR JOSEPH ARNOULD deserves thanks for a very careful and interesting biography of a distinguished judge, a sterling patriot, and an admirable man. Lord Demman's connexion with great political events—his part as one of Queen Caroline's law officers, his zealous advocacy of the Roform Bill, and his ardent opposition to the slave trade and slavery—would ensure for his biography a high degree of political interest; this interest would necessarily be enhanced by his conspicuous course as Chief Justice of England in great trials like that of Privilege of the House of Commons, and the O'Connell Appeal Case, but the great charm of this biography is derived from the man's guileless and honourable character, and his fulliment of the private relations of life as husband, father, and friend. Sir Joseph Arnould justly observes that "Demman, though of a high order both as an advocate and a judge, was of a still higher order as a man and a citizen."

His father was Dr. Thomas Denman, the very eminent physician and accoucheur, who had come up to London from Bakewell in Derbyshire, where his father had been a medical practitioner, at the age of twenty, the possessor of 75L, and who died in 1815, in the eighty-third year of his age, full of medical fame. His father's elder brother, Dr. Josoph Denman, had continued their father's practice at Bakewell, and become a provincial medical celebrity, and died in 1812, at the age of 82, having no children, and leaving Denman, his nephew, the reversion after his widow of the bulk of his property, including Stony Middleton in Derbyshire, which Denman improved and made his country house. The mother of Denman was a Miss Brodie, of Scotch descent, and sister of the Rev. Peter Brodie, rector of Winterslow, in Wiltshire, who was father of the eminent surgeon, Sir Benjamin Brodie. Denman had two sisters, twins, eight years older than himself, and no brother; both sisters married physicians, Sir Benjamin Brodie, and Dr. Baillie, brother of the authoress, Josana. The young days of the future Chief Justice were passed among highly-cultivated middle-class relatives. At the very early age of three and a half he was sent to a preparatory school in Noriolk, under Mrs. Baibauld, where he stayed three or four years, and was thought by his sister, Mrs. Baillie, to have imbibed the Libers! political principles of which afterwards, at Eton, he was a purnacious advocate, and which marked his whole life. At St. John's College, Carubridge, he diligently studied classics,

^{*} Memoir of Thomas, First Lord Demman, formerly Lord Chief Justice of England. By Sir Jeseph Arnould, late Judge of the High Court of Bombay. a vols. London: Longmans & Co., 1873.

but took no honours, from his inability to master the quantity of mathematics which in those days was a necessary condition for competing in the Classical Tripos. His two chief Cambridge friends, who were friends till death, were John Herman Merivale, an accomplished lawyer, known in literature as the chief contributor to Bland's Greek Anthology, to which Denman also contributed, and Lancelot Shedwell the future Vice-Chancellor. and Lancelot Shadwell, the future Vice-Chancellor.

Denman's correspondence with Mr. Merivale is a very agreeable and important element of these volumes; there is much interesting correspondence of and with other friends, private and public; but the most valuable original contribution consists of two autobut the most valuable original contribution consists of two autobiographical narratives—1. of Denman's connexion with Queen Caroline (1820 and 1821); and, 2. of Denman's public and professional life, from the death of the Queen in 1821 to the formation of Canning's Ministry in 1827. These are both full of interest. Sir Joseph Arnould would, we think, have done better if he had given them entire. Denman had much reason to be satisfied with the success of his earnest, nervous oratory on the Queen's trial:—

I had the satisfaction of learning that my speech against the second reading of the Bill had acted forcibly on many of the peers. The Queen entered the House on that occasion while I was speaking, and remained to the conclusion. She came afterwards and found me alone in her apartment, where she greeted me with this compliment, "My God, what a beautiful speech!" I was reposing, much fatigued, on one of the sofas, and had thrown my wig on the other. When she entered, I expressed great distress at having taken so great a liberty with her room, and she answered me laughing, with an allusion to what I had been saying about the preamble of the Bill, "Indeed, it is a most unbecoming familiarity."

For his last great effort, which gained him the undying hatred of George IV. and also the displeasure of the Duke of Clarence, afterwards William IV., whom he apostrophized as a slanderer.—"Come forth, thou slanderer, and let me see thy face"—he had the aid of weekly repose and recreation at Holland House, and of friendly suggestion from the Para. suggestions from Dr. Parr :-

While we were calling our witnesses, and I was at Holland House on Sundays and at home in the evenings, anxiously sifting the minutes of evidence, Dr. Parr was my frequent correspondent, pointing out illustrations of many parts of our case from history and classical literature. He earnestly besought me to look into Bayle, and weave into my summing-up allusions to Judith, Julia, and Octavia. The two first seemed to me inapplicable; the third flashed upon me like lightning. In a moment I resolved to make the unhappy wife of Nero my heroine, and indeed the parallel was perfect. I was deeply smitten, too, with the honest chambermaid's Greek, but, trembling as to the effect it might produce, I wrote back to ask l'arr whother I could venture to bring it forward. He, in reply, at first suggested a method of periphrasis, but, at length, recurring to it in the postscript to a long letter, he burst out, "Oh dear, Mr. Denman, I am for the word itself—don't be squeamish." My speech was as successful with a view to my own reputation as my friends could desire.

The "honest chambernesid's" plain speech to Tigellinus was

The "honest chambermaid's" plain speech to Tigellinus was intended by Denman for some of the witnesses against the Queen; but George IV. took it to himself, and never forgave Denman. Sir Joseph Arnould is needlessly faint-hearted about this passage in the speech, and is unpleasantly and unjustly spiteful to Te Parent.

As this quotation stands in Hansard's roport of the speech, it is clear from the context that it was intended to apply, not in any way to the King himself, but to witnesses like Majocchi, and Sacchi, and Rastelli—discarded menials, who came forward with perjured evidence to betray their former mistress. The King, however, as will be seen hereafter, suspected that it was meant for himself (nor, indeed, is it at all certain that Parr might not have so intended it), and his resentment, naturally enough, was deadly, and for many years unappeasable. Denman would have done much better not to have given way to the suggestion of the officious and overrated old pedant.

Denman's meaning, as Sir Joseph admits, was clear; it was no fault of his that George IV. misunderstood him. Pythias had addressed not Nero, of whom George IV. would have been the counterpart, but Tigellinus his tool. Parr's advice was sought and welcomed by Denman, and there seems no pretext for charging him with officiousness. Sir Joseph twice suggests that Parr might have meant to attack George IV. Why should he? Dr. Parr at least understood the Greek of Dion Cassius and the Latin of Tanitus.

For seven years after the Queen's death Denman was refused the rank of King's Counsel, thereby sustaining serious injury; and it was the general belief, and his own, that he suffered generally on account of his having been one of the Queen's counsel and lawadvisers, and of the bold tone which he had assumed. In 1828 he learnt from Lord Lyndhurst, then Lord Chancellor, that "the real cause of the King's deep and abiding resentment was his firm conviction that Denman's Greek quotation from Dion Cassius conveyed, viction that Denman's Greek quotation from Dion Cassius conveyed, and had been intended to convey, a specific personal imputation against the King of being stained with a practice of revolting depravity." As soon as Denman learnt this, he felt it right and was anxious to deny the intention which the King imputed to him. Lyndhurst could not help him, for the King had forbidden him, and had forbidden Lord Eldon before him, to mention Denman's name to him. Denman then applied to the Duke of Wellington, the Prime Minister, who, frankly stating the difficulty, undertook to overcome it, and was in time as good as his word. Denman thus described in a letter to his wife, July 23, 1828, his interview with the Duke of Wellington:—

I am just come from the Duke. He says that there are feelings in the King's mind which it may still take some time to remove; that the Chancellor has really had no opportunity, and has shown a friendly disposition; that I must leave it to them to consider the bast mode of doing it, and whether the one or the other should be the proposer; that many feel-

ings as strong had been got over, but pressing the matter unreasonably could only defeat the object, as some feelings last longer than others. He said, however, repeatedly, "I'll do it," and with a most marked and animated manner. "You may rely on me, I'll do it. The King must be made sensible how unreasonable such feelings are. I should like to feel my way a little, but even if I find the subject is not agreeable, I will yet press it, not-withstanding." I told him that my present object was not to ask for a slik gown, but merely to remove the imputation, which I considered important even as a preliminary towards getting the slik gown, and absolutely necessary for my character. He said he understood me perfectly, that it was a fit thing to be done, and "You may rely upon me, I'll do it."

And he "did it." Denman again tells the story:-

On December 1, 1828, I met the Lord Chancellor by his own appointment at the Duke of Wellington's office in Downing Street. The Duke spoke to this effect: "Mr. Denman, we have gained this point, but I never had a tougher job in my life. His Majesty certainly took great offence at this speech of yours, and had charged both Lord Chancellor Eldon and my Lord Chancellor (Lyndhurst) never on any account to mention your name to him. He has at length, however, permitted the explanation to be made, and has ordered that a patent of precedence be made out for you.

Congratulations poured in on Denman from all quarters on Congratulations poured in on Denman from all quarters on the act of justice at last done him. Denman never forgot the great service handsomely rendered to him by the Duke. But the King, after he had forgiven, still cherished resentment. About a twelvemonth after this reparation, the illness of the Recorder of London rendered it necessary that Denman, as Common Serjeant and Deputy Recorder, should attend the King to present the Recorder's report. The King was indignant. A letter from him to the Duke of Wellington is now published, by the present Duke's permission, in which the King stooped to write:—

I must express to you my extreme surprise, my dear Duke, that you should suggest to me that I should either decline to receive the Recorder's report to-morrow or submit to the indignity of receiving the Common Serjeant to fulfil the duties of the Recorder on the occasion, when you cannot fail to know the insult which I have received from that individual, and you ought to know the irmness of my character in not bearing an insult from any human being with impunity. . . . I must express a hope that this will be the last time I shall be troubled relative to Mr. Denman, as no consideration will ever induce me to admit that individual into my presence.

It seems incredible that this should have been written to the It seems incredible that this should have been written to the Duke twelve months after George IV. had accepted through him, and acted on, a solomu denial by Denman of the offence of which the King had suspected him. William IV. behaved very differently. Denman, in the exercise of his duty, had stigmatized him as a slanderer. When Lord Grey, on the formation of his Ministry, proposed Denman for Attorney-General, William made no objection. When, in November 1832, Denman was made Chief Justice, the King made some opposition; but it was in the interest of Lyndhurst, who desired the appointment. The King had been reminded against Denman of his speech at the The King had been reminded against Denman of his speech at the Queen's trial, and he then replied that "he had long since forgiven all that, and almost forgotten it." He afterwards cordially consented to making Denman a peer.

sented to making Denman a peer.

Lord Denman had—perhaps unfortunately for a judge—the faculty of strong language; his emphatic English was the telling part of his eloquence; but he made no enemy save (leorge IV., whose enmity was certainly no dishonour; and the high respect entertained for his character always ensured thorough belief in his sincerity, even from political opponents. It was the Duke of Wellington's personal respect for him which secured the Duke's zealous good offices for the conciliation of George IV. Sir Robert Peel on one occasion, during the passing of the Reform Bill, criticizing a speech of Denman, felt it necessary to declare his "high respect for the learned gentleman's private character, also his high respect for his consistency in public life." Eminently characteristic of him are the words which he introduced into his O'Connell judgment, when, denouncing the inintroduced into his O'Connell judgment, when, denouncing the incomplete and mutilated array, he declared that, with such a practice, "trial by jury itself, instead of being a security to persons accused, will be a mockery, a delusion, and a snare." His relations with his brother judges in the King's Bench were always most cordial. They one and all, during seventeen years of his Chief Justiceship, felt respect and affection for their chief. His was a character to be loved-truthful, firm, and tender. His letters to his wife are models of manly tenderness. Generally sympathetic and genial, he had his dislikes, and it need not be said that the dislikes of such a man are instructive. He and Lyndhurst had been intimate companions on circuit. Lyndhurst was then as strong a Liberal as Denman; Denman never forgave his political tergiversation, and always distrusted him for want of principle. He was furious with him for what he considered him nor want of principle. He was furious with him for what he considered his ungrateful conduct in 1834 to Brougham, who had, with Lord Grey, made him Chief Baron. "The Chancellor [Lyndhurst] evidently seeks to recommend himself to the Duke of Cumberland," he wrote to a daughter, "by his personal rudeness to the man [Brougham] who, in his utmost need, made him Chief Baron." He generally calls him Mephistopheles. He had an aversion also to Lerd Campbell, grounded on attacks on himself and colleagues for their course in the topheles. He had an aversion also to Lerd Campbell, grounded on attacks on himself and colleagues for their course in the privilege question; and he took the strong step of a formal protest to Lord John Russell, after he had resigned the Chief Justiceship, against the appointment of Lord Campbell as his successor. Lord John Russell, in replying to Denman's protest against the appointment of Lord Campbell, admitted that Lord Campbell's, criticisms on the judges of the Queen's Bench were indecorous. He wrote:-

I do not think that the passages you refer to are written in a becoming spirit towards the Judges of the Queen's Bench. No one can be more persuaded than I am that in the decisions given on Privilege, as on all other

cases, rome but, a superdentious seems of duty was allowed to prevail. I wish therefore, East Damphell had not expressed himself in a manner that many be considered offensive by the present Judges of the Queen's Hench,

Lied Deman died in September 1854, in his seventy-cirth year; he was of a long-lived family. It was nearly five years since he had retired from the Chief Justiceship. For two years before his death he had been in a painful state of inability from paralysis to speak or write; but his understanding had been unimpaired, and he could enjoy reading and being read to. He delighted in receiving letters from his friends, and, unable to reply, solaced himself by copying in a formal print-hand a passage which particularly pleased him, and sending it to the writer as an acknowledgment. One of his last years:—"We all of us loved and reverenced him before as deeply as we thought it possible; but his noble contancy, his uniform good-humour, his unweared and heroic patience under suffering, filled us with a new sentiment of the profoundest veneration." One of Samuel Rogers's letters to him will show the feelings with which Denman's friends regarded him:—

My dear Friend,—How can I thank you for your many kind inquiries after me, and for the little book, which I have read with great delight? Your friendship and your benevolence never sleep night or day. As for me, I am as well as I can hope to be, and you are always in my thoughts. I can never forget you, here or hereafter.

Lord Denman has many claims to respectful remembrance as a politician and a judge; but superior to all these is his title, from the whole tenor of his life, to be regarded as one of the most virtuous and loveable of men.

A HASH OF BOSWELL'S JOHNSON.

When the celebrated Round Robin was laid before Dr. Johnson in which he was asked by his friends to write Goldsmith's epitaph in English and not in Latin, we are told that, "upon seeing Dr. Warton's name to the suggestion, he observed to Sir Joshua, 'I wonder that Joe Warton, a scholar by profession, should be such a fool.' He said, too, 'I should have thought Mund Burke would have had more sense.'" We would like, in somewhat politer language, to express our astonishment that Mr. George Henry Lewes should have in any way put his name to such a work as this. He is a scholar by profession as much as Joe Warton. He admires Boswell's Johnson so much that he says, "It is for me a sort of test-book; according to a man's judgment of it I am apt to form my judgment of him." He describes it as a work "which has delighted generations, and will continue to delight posterity;" and yet he writes a preface for a man who has not only ventured to abridge it, but who, while abridging it, as he calls it, has thrust in on every page the most foolish impertinences of his own. Mr. Main may, if he pleases, patronize Johnson—"Samuel" he familiarly calls him—with one hand and Boswell with the other; but Mr. Lewes thinks he admires Boswell, we should say, to judge from his preface, that he but very little understands his merits. He says, "Even the staunchest admirers of Boswell's Life must admit that it is three times as long as need be." He had himself, he tells us, entertained the notion of "re-writing Boswell," intending "to preserve all that constitutes the essential merits of his work, and merely to adapt it to the more exigent tastes of our day." Happily for Mr. Lewes's reputation, "scientic pursuits absorbed," he writes, "all my energy, and left me neither time nor strength to turn to literature." We shall next have some artist proposing to repaint Hogarth, preserving of course all that constitutes the essential merits of his pictures, or adapting Gil Blas to the more exigent tastes of the day.

The question, after all, lies in a nutshell. Is this wonderful biography nothing more, as Mr. Lewes says, than "the thin soup of Boswellian narrative and comment in which the solid meet of Johnson was dished up"? Supposing for a moment that the description is a correct one, shall we enjoy the meat the more—to follow out Mr. Lewes's metaphor—if it is fished out for us by some cook, however skilful, while the soup is thrown away. But we do not allow that Boswell's narrative is anything like thin soup, any more than we allow that it is a defect that he belongs "to a period of literary culture in many respects unlike, and even opposed to, our own." Mr. Lewes looks upon Boswell as a man who had a marvellous skill in reporting conversations, and whose "eternal merit" it was "to have deeply reverenced the man whose littlenesses and asperities he could keenly discarn, and has courageously depicted." Mr. Lewes must, indeed, have allowed scientific pursuits to have absorbed all his energies to the neglect of literature, if he has never noticed that to these great qualifications for writing Johnson's Life was added also a dramatic power of which even Goldsmith might not have been ashamed. How few scenes there are in any play which, even when acted before us on the stage by the best actors, seem half so lifelike as the dinner at "Ressieurs Dilly in the Poultry," where Wilkes and Johnson met! Does Mr. Legies suppose the wonderful merits of that some are due merely to Boswall's whill in reporting conversations? Could Goldsmith himself, if he had lived to be present at that first of all dinners, have told the

P. Life and Conservations of Br. Ramuel Johnson (Journal chiefly spen Bossel). By Alexander Main. White a Preface by George Henry Louves. London: Chapman & Hall. 2874.

story better, even with the help of Boswell's notes? How happy is Boswell when he writes:—"I was persuaded that if I had come upon him with the direct proposal, "Bir, will you dine in company with Jack Wilkes?" he would have flow into a passion, and would probably have answered, 'Dise with Jack Wilkes, Sir! I'd as soon dine with Jack Ketch." How humorous is the touch when he describes his exultation at having at last got the great man off:—"When I had him fairly seated in a hackney-couch with me, I exulted as much as a fortune-hunter who has got an heiress into a post-chaise with him to set out for Gretna-Green." But the whole scene is inimitable. We must remember of course that the conversations in this brilliant scene were supplied for Boswell. But, on the other hand, does he not show almost such an insight into the comic side of human nature as we find in Addison, when he sets forth the manner in which Wilkes by means of politeness and of reast veal overcomes the great man's "surly virtue"? But it is scarcely worth while insisting on this point. Men who delight in literature as literature would as soon wish to see Trieram Shandy cut down to one-third of its size as Boswell's Johnson. Without doubt "every one must admit that" Sterne's great work "is three times as long as it need be." In fact, if the "thin soup" were sacrificed, and nothing but the "solid meat" rotained, the nine volumes of Trieram Shandy might easily enough be brought down to one. If men of literary teste, the only competent judges, do not in reading Boswell for the second, or third, or tenth time, skip two-thirds, or one-third, or even one-sixth of what he has written, then Mr. Lewes is clearly wrong. It may be, however, that people who have time to read the hundreds of columns of the Tichborne trial, with the daily page of "descriptive narrative," have no time for anything in the way of literary meals, oxcept for bolting solid meat," and that they cannot take in those accompaniments which render it agreeable to a oultivated taste. We doubt

Much as we dislike an abridgment at all, we should certainly not have troubled either ourselves or our readers with the one before us if only it had been done with moderate care and ability. But it is difficult to say which of the two is the greater—Mr. Main's carelessness or his conceit. He has evidently taken Mr. Carlyle for his model, and talks of "Samuel" as naturally and as easily as the great historian does of "Oliver." "Belonging to Christ Church College," we read, "there was a tutor whose lectures Samuel prized very highly." If Mr. Main in writing Johnson's early home life had called him "Samuel," and not Johnson, as Hoswell always called him, we should have thought that he was foolish in making the change, but we could not have condemned him for want of accuracy. But at Oxford his hero was of course Johnson, and nothing but Johnson. Ilaving shown his perfect familiarity with the great man by the condescending use of his Christian name, in a page or two further on he thus encourages him:—

Take courage, brave, manly, honest heart; failure there can be none for such as you. A place is preparing for you in the Great City, and you have been preparing for it by this long stern discipline of sufferings nobly borne and sorrows told only to yourself—and One Other.

If Mr. Main wishes to pose as a pigmy Carlyle, he would do well to choose for his hero some one not quite so big as Johnson. Perhaps Lord Aberdare or Mr. Monsell might with propriety be invited to take courage under the title of "brave, manly, honest heart." But "Samuel" had better be left alone.

We have not had patience to look far into his book, but where we have looked we have found that even in his paraphrasing Mr. Main has often blundered. At times he succeeds, we must admit, in merely changing simple English into fine English, without making any material change in the facts. Thus, when we read in Boswell that Johnson "strove to overcome his hypochondria," Mr. Main writes, "he tried to exorcise the evil spirit." Again, in the first page of his book we read, "The young woman's mind was beginning to give way under the weight of unrequited affection." In Boswell the passage stands, "it so preyed upon her mind that her life was in danger." In his school days Johnson is described as being "from the beginning ἀναξ ἀνδρων, a king of men." According to Mr. Main, he "was the undisputed intellectual monarch of the Institution." Lichfield Grammar School an Institution! Let us be thankful it was not an Academy. We will give, however, a longer paraphrase, not selecting by any means one of Mr. Main's worst pieces of writing, but a fair average passage. Boswell gives the following account of Johnson's first evening at Pembroke College, Oxford:—

His father seemed very full of the merits of his son, and told the company he was a good scholar, and a poet, and wrote Latin verses. His figure and manner appeared strange to them; but he behaved modestly, and sat silent, till upon something which occurred in the course of conversation, he suddenly struck in and quoted Macrobius; and thus he gave the first impression of that more extensive reading in which he had indulged himself.

"The tastes of our day" must be very "exigent" indeed if they cannot be satisfied with such a narration as this. At all events, if, like the rest of Boswell, it is three times too long, Mr. Main takes a very strange way of shortening it. Here is his paraphrase:—

His father accompanied him to Oxford, and, in presenting his son to the

в 2

large one.

University Magnates, was loud in the precise of his boy. Johnson and manner, indeed, occasioned some surprise; but his modesty and we behaviour in their pressure made a favourable impression on the on in the course of convensation, also, he had an opportunity of eviden great amount of his reading.

Boswell, of course, even though he suffers under "the impersonal defect of belonging to a period of literary culture in many respects unlike, and even opposed to, our own "-or rather, perhaps, we should say because he suffers under it—never dreams of describing the company assembled in the rooms of a college tutor as "the University Magnates." He had not studied the Daily Telegraph, just as Johnson—our authority here is Mr. Main—"had not read Sartor Resertus." But, putting aside the fine language altogether, Mr. Main makes one statement which is incorrect, and another which rests only on an inference. So far from Johnson's father presenting him to the University Magnates, all we know is that "he found means to have him introduced to Mr. Jorden, who was "he found means to have him introduced to Mr. Jorden, who was to be his tutor," and that in Mr. Jorden's room there was some company present. As for the favourable impression that Johnson made on the company by his modesty and respectful behaviour, we are only told that "his figure and manner appeared strange to them; but he behaved modestly and sat silent." A favourable impression may have been made, but Mr. Main is our only authority for it. In page 4, in telling the story of Johnson's being touched for the king's evil by Queen Anne, he writes, "Poswell naïvely remarks that the touch was of no effect." Boswell, by the way, said, "this touch was without any effect"; but Mr. Main cannot keep from paraphrasing any more than if he were a parson. This, however, is of no consequence. Still he should not have This, however, is of no consequence. Still he should not have omitted to state that Boswell describes the belief in this cure as "a superstitions notion which, it is wonderful to think, preailed so long in this country." In p. 6 we read-the italics are Mr. Main's :-

Here is a little extract from one of those diaries which he seems to have kept from his cradle almost. It is dated October, 1719, when he was a lad only ten years old:—" Desidiae valedki; sirenig istins contibus surdam posthue aurem obsersurus." . . Such a manify little resolution from a mere child must have aprung from semething quite as healthful and strong as any religious impulse could well be imagined to be.

Mr. Main has made a very pretty reflection and a very careless blunder. All that Boewell talls us is that Johnson "very early began to attempt keeping notes, or memorandums, by way of a diary of his life." "From his cradle almost" may certainly sometimes be a correct synonym for "very early." Unfortunately in the present case this passage, which is quoted by Boswell as showing how early Johnson began his diary, was written not in 1719 but in 1729, when he had already been a full year at Oxford. If Mr. Main could say farewell to carelessness as Johnson did to aloth we would allow him to two his hand at manufacture and sloth, we would allow him to try his hand at paraphrasing such a work as Mr. Tupper's Hroverbial Philosophy for instance. In p. 7 we read that Johnson—Samuel we should say—when at Stourbridge School, "addressed a copy of verses to a Quaker young lady. The verses have been lost," but, says Mr. Main, "in default of the missing love lay, take the following written later, but presumably very much of a piece with the lost strains." The verses Mr. Main gives were written when Johnson west treats for your Mr. Main gives were written when Johnson was twenty-five years old, while he was at Stourbridge School in his sixteenth year. There are indeed those whose writings in their manhood show such ignorance and such conceit that "they are presumably very much of a piece" with the writings of their boyhood; but among such men as these most assuredly was not Johnson. In p. 19 Mr. Main tells us that when Johnson asked his mother for her consent to his marriage, she gave "her consent and her blessing." All that Boswell tells us is that "Mrs. Johnson knew too well the ardour of her son's temper, and was too tender a parent, to oppose his inclinations." In the same page we read, "For some mysterious reason, known only to themselves, the loving pair had determined to be married, not at Birmingham, where they then were, but at Derby." Will our readers believe that the only authority which Mr. Main has for the mysteriousness of their reason, and the fact that it was known only to themselves, is Boswell's statement that it was known only to themselves, is hoswell a statement that "I know not for what reason the marriage ceremony was not performed at Birmingham"? We have only space for one more of these paraphrasings. Mr. Main, in explaining Johnson's fondness for "that rather 'fast' young man of the period," Beauclerk, says it was partly owing "to a fancied resemblance on the young fellow's side to Charles the Second." Boswell says clearly enough that he was "of the St. Alban's family, and had in some particulars a resemblance to Charles the Second." Mr. Main has either never heard of Nell Gwynne, or else does not know that from her and Charles II. Topham Beauclerk was descended.

We will give one more quotation from Mr. Main where he is not paraphrasing, and will end with one of Johnson's sayings. Mr. Main, in writing of the well-known letter to Lord Chesterfield, says :-

There may be something of Latin in the language of it, but its spirit is genuine Saxon. It is of the genus thorough British, and of the species pure Johnsonian.

Johnson on one occasion talking to a Scotchman said, "This now is such stuff as I used to talk to my mother when I first began to think myself a dever fellow, and she ought to have whipt me for it."

DEAN CHURCH ON THE INFLUENCES OF CHESELE THE young men round St. Paul's are to be congressioned on having the opportunity of hearing such leatures as these of the Deen; they are to be congratulated still farther. If they are able to appreciate the high and delicate nature of the intellectual fare which is thus set before them. For Mr. Church is not, in the ordinary sense of the rounds a normal arrive constant. ordinary sense of the words, a popular writer or lecturer. Habknows much, but he makes little parade of knowledge; he generalizes freely, but his generalizations are guarded and qualified, so carefully that the untrained mind may easily fail to grasp them; the charm of his style lies in its sweetness, its subtlety, its singular the ways shades of one idea with the flexibility in expressing the many shades of one ides, rather than in the bold and forcible presentation of views that are easy to eatch and not difficult to hold. In his brief introductory notice, the Dean states that the Lectures are published as a me occasions which, it is hoped, have done something to bring him and other members of the Cathedral body into closer acquaintance. with some of the young men who are their neighbours in the City of London. The hope thus modestly expressed is well grounded. It is a matter of fact, and not of conjecture, that the lectures delivered at St. Paul's have exerted a real influence on the class-to whom they were addressed; and, without professing to measure accurately what from its nature defies precise estimate, we may safely assert that the Dean's share in this good work has been as

Mr. Church is careful to limit, without precisely defining, the influences of Christianity to which he would call attention. He considers them in their bearing, not on individuals, but on national character; and in so considering them he selects some influences to the neglect of others. Further than this, he represents national character by means of types and specimens; thus the Greeks stand-for the European races belonging to the Eastern Church, and the Italians and French for the Southern or so-called Latin races. For reasons which will presently appear, a system of representation is not equally necessary in the case of the Teutonio races; but if it were requisite in this case also to name a specific nation, we might say that Mr. Church treats of the influences of Christianity as they

have affected Greece, France, Italy, and Germany.

The Teutonic races must have presented the least difficulty both to the lecturer and his hearers. Their geography and their history can each be presented in a form which is easily intelligible and proximately correct. When ancient Germany is named, we think at once of the forests, and swamps, and sandy plains of which the Rhine is proximately the Western boundary, and which extend North and South from the Baltic to the Danube; we think also of the fair-haired barbarians pouring forth from their homes, and coming in hostile contact with the decaying civilization of the Roman Empire. We know also, to use the words of Mr. Unurch, that wherever the invaders came they found a strange, organized We know also, to use the words of Mr. Church, that polity, united in a vast brotherhood co-extensive with the Empire, but not of it, nor of its laws and institutions; earthly in its outward aspect, but the representative and minister of a perpetual and ever-present Kingdom of Heaven; unarmed, defenceless in the midst of never-ceasing war, and yet inspiring reverence and receiving homage, and ruling by the word of conviction, of knowledge, of persuasion; arresting and startling the new conquerors with the message of another world. Further, it is a matter of acknowledged fact that the invading Germans had a moral nature which peculiarly fitted them to receive and even welcome some aspects of the Gospel. They had a simplicity and sincerity which, as their intellects expanded, inclined them to the pursuit of truth; there was a steady and improvable element in their barbarism which led them in due time to receive and develop the idea of law; their manners had features of purity and even of austerity. Mr. Church holds with good reason that the virtues which, as rudiments and tendencies, were early marked in the German races, existed in company with much wilder and stronger elements, and were liable, amid the changes and chances of barbarian existence, to be paralysed or trampled out. No. mere barbarian virtues, he observes, could by themselves have stood the trial of having won by conquest the wealth, the lands, the power. of Rome. But their guardian was there. What Christianity did for those natural tendencies to good was to adopt them, to watch over them, to discipline them, to consolidate them. And accordingly Teutonic Christianity is coloured—we may add not unfavous-ably coloured—by Teutonic nature. High Christian presents. connecting social life and duties with the despect religious thought; the great rules of order and freedom, not the less impressive to an uncivilized people when taught obliquely yet forcibly by the tremendous threats of the older dispensation against opposition and the pride of greatness, found sympathetic response and garminated in the Teutonic mind.

In this part of his subject Mr. Church has ready to his hand a outline which he fills up with remarkable grace and delicacy. H is quite as earnest and ingenious, but perhaps not equally successful when dealing with the Greek and Latin races. It has be already stated that he selects the Greeks to represent the characteristics. of the European races belonging to the Eastern Chumingly, he leaves Russia out of direct consideration; the same time that Russia may be said to own its man an Chunch A

On some Reflements of Christianity upon Richard Char-Lectures delivered in St. Paul's Cathodrel, Bibliograph, as 1873. By R. W. Church, M.A., Dean of St. Pinl's London & Co. 1873.

recovered. He distance coherence, and the sease, to being penetrated with religiou. Mp. in view mainly the Greek mos, mp. of Bustom Christendom. But at ¥ P typical specime whole torrent of normalist M 08 advented the married of Greeks there reades on the educated mind a whole towards the horizon of history, we cannot see the Greeks, as we could see the Greeks, as we could see the Greeks, in a heavy, nebulous, barbarian condition; and we are as little capable of exclusively considering the present, and accepting as typical of the race the little Helleman kingdom now ruled, if ruled indeed this, by a Danish or German prince under the protection of Great Britain, France, and Russia. We are obliged to revert in thought to the Homeric time, with its small heroic monarchies. We cannot forget the difference in chasmall berote monarchies. smail herois monarches. We cannot lorget the difference in character of Athens and Sparts in their prime, or the contrast which existed in the days of Herodotus and Thuoydides between the Greeks of Europe and those of Asia; and it requires a really athlistic exercise of the mind to pass from Athens and Pericles to Byzantium and the Lower Empire. Mr. Church naturally calls attention to the Greeks as they are mentioned in the New Testament; and in this connexion he does not think of confining himself to Europe. From the idly curious and gossiping men of Athens, and the vain and shamelessly estentatious Corinthians, he Athens, and the vain and shamelessly estentatious Cornellians, no passes to the Ephesians, carried away by every blast of vain teaching, to the Cretsus, with their proverbially undesirable peculiarities, and to the "foolish" Galatians, the passionate, volatile, Greek-speaking Celts of Asia. The ideal Greek thus brought before us is as pliant and flexible as ever was actual Greek, and indeed more so. He lives under no definite institutions; his political and validious traditions change and change again; he tical and religious traditions change, and change again; he wanders free through vast regions of time and space, and his very

wanders free through vast regions of time and space, and his very race is mixed, if not uncertain.

Mr. Church, however, though he looks occasionally beyond Europe, gives it his principal attention. He is most concerned with the Greeks of the Lower Empire, and with those of modern Greece. For the Lower Empire he makes a temperate apology in reply to the unsparing attacks of Gibbon; with regard to modern Greece, he gives us a few touches which may remind us that he does not write about country and people without having more than ordinary acquaintance with them. The Byzantine Empire succumbed at last to the Turks. The nationality of Greece was crushed under them, and has only lately revived to a not very crushed under them, and has only lately revived to a not very powerful life. Mr. Church invites us to look at the Greeks when their ill-fortune had culminated in the Ottoman conquest, and to look at them again after three centuries and a half of Ottoman look at them again after three centuries and a hair of Ottomar rule. In the first place, they exist. They have not disappeared before a stronger race and a more peremptory and energetic national principle. They have not, as a whole, whatever may have happened*partially, molted into a new form of people along with their conquerors. Next, they have resisted not only dissolution or amalgamation, but, in a great degree, change. In characteristic endowments, in national and proverbial faults, they have the state of heather the degree of heather the state of the s though centuries of hardship and degradation have doubtless told on the former, they are singularly like what their fathers were. Nothing less promised endurance than their temperament and genius, so easily moved to change, so quick to the perception of self-interest, and so ready to discover its paths. Nevertheless, Greek nationality survives, and, though scarred by disaster and deeply wounded by servitude, it is now looking forward to a new and wounded by servitude, it is now looking forward to a new and happier career. The position of Mr. Church is, that Greek nationality has been saved by its Christianity. In Christianity lay the spring of that obstinate, tenacious national life which persisted in living on though all things conspired for its extinction; which refused to die under corruption or anarchy, under the Crusader's sword, under the Moslem scimitar. He further remarks that, to a sword, under the mostern seminar. Its intriner remarks that, to flexible race, far more disposed by nature to bend than to resist at the risk of breaking, Christianity has imparted a corporate toughness and permanence which is among the most prominent facts of history. We may say that, in hardening the Greek race to endure, it has developed in them, in regard to their religion, an almost Judaic hardenss and rigidity of thought, a local idea of religion which can be convenient convenience of Christianity beyond its sects and its forms in scarcely conceive of Christianity beyond its sects and its forms in scarcely conceive of Christianity beyond its sects and its forms in the East. Yet the fact remains; the easy-going, pliable, childishly changeable Greek race, at whom the Romans sneered, has proved, when tried by the despect misfortunes, one of this most inflatible nationalities that we know of; and the root of this permanence and power of resisting hostile influences has been in Christianity and the Christian Church. Their religion has impressed on the Greeks with a new face the idea of the eternal and lasting; it has strangthened in them the spirit of brotherhood, and made the Greek race, in the face of the greatest adversation; a race of home.

There is much in the view thus set forth to suggest thought and incline us to assent; yet it must be confessed that the case is not so clear with regard to the Greek as to the Teuton. That the Greeks, clear with regard to the Greek as to the Teuton. That the Greeks, under severe and prolonged opposition, have been greatly sustained by their religion is beyond a doubt. Religion is the natural recipies of the commendation; nor is their attractiveness of the kind which any critical analysis can do much to elucidate. Miss which any critical analysis can do much to elucidate. Miss which any critical analysis can do much to elucidate. Miss summary, or, if the natural senctuary is descripted to the senctuary or, if the natural senctuary is descripted to the senting of surviving its destruction. The priest is never more in the work. One cannot point out to an unsympathetic capitals of surviving its destruction. The priest is never more in the work. One cannot point out to an unsympathetic senting of surviving its destruction. The priest is never more in the work. One cannot point out to an unsympathetic listens which has must price allow, whether it be of the sort best suited to his particular taste destruction. The expression in a new and Bendon: Smith, Elder, & Co. 1874.

startling form of balled which perhaps were being power in their old familiar shaps. The doubt which arrive in the own of the Creeks is whether their religion has aminted in the preservation of their nationality mainly in virtue of its countrilly Christian elements. Christianity is the religion of freedom; it develops the natures that accept it, and is in turn developed by them; where it is national, it is also for the most part characteristic. If the Greek Church had a closer affinity to Greek nature, the Dam of St. Paul's would have a stronger case in fivour of the connexion between Greek Christianity and Greek natureality.

between Grack Christianity and Greek nationality.

When Mr. Church turns to the Latin races as represented by Italy and France, he observes that in those nations Christianity has accomplished a great work in the development of the affections. The old Roman was a willing stranger to that free outpouring of the emotions in which Frenchman and Italian recemble each other; to that delicate sembility in family and social life which is the source alike of so much scute pain and so much intense pleasure; to that grace in literature and manners which, under unfavourable circumstances, degenerates into weakness; to the continuous, active, and abundant exercise of the imagination. Few men have more to say on this subject than Mr. Church, or could say it better. Within the limits which his Lecture allowed him he has contrived to introduce much happy illustration of the manner in which Christianity touched in the Latin races the hidden vein of tenderness, the "fount of tears," the delicacies and courtesies of mutual kindness, the riches of art, and the artist's earnestness. His comparisons of Virgil and Dante, and again of the Meditations of Manual Applies with the Confession of St. the Meditations of Marcus Aurolius with the Confessions of St. Augustine, are admirable examples of suggestive yet cautious analysis. The soundness of his general position is here beyond analysis. The soundness of his general position is here beyond question. Christianity speedily exercises a mighty power over the affections of nations that grasp it with the heart; it operates in the same direction, more slowly yet perhaps as surely, when it is grasped by the intellect and will. Its great hopes and its terrible fears, the infinity which it gives to joy and sorrow, the demands which it makes at once on the sympathies and the aspirations of the believer, if felt at all, must be deeply felt and widely operative. Christianity has certainly helped to make both French and Italians what they are; though it may be doubted whether, before they received it, they conformed to the type of the ancient Roman. The genuine old Roman stock exceptional among Italians, and perhaps even among Latina. it conquered the world, race after race that had little resemblance to it caught its language, its tone, its manners, without really imbibing its spirit. In the first ages of Christianity Greece had already done much to corrupt Rome, and poets and moralists were ascribing, perhaps with little warrant of fact, to other races the sturdy virtues which were disappearing from the capital. It would have been vain in those days, and for many ages after, to look for even an approach to a dominant national character in the peninsula which at last, with some effort, we regard as a united Italy. The claim of France to moral kinship with the conquerors of the world is still slighter. The nation is Celtic at heart; its affinities are not with Cossr and his soldiers, but with Brennus and his invading hordes; its affections have always needed deepening and directing rather than arousing. These facts do not interfere with the general drift of Mr. Church's remarks. is still true that France and Italy represent "races sprung from the subjects of the stornest of Empires and moulded under its in-The so-called Latin races learned a great deal more than intense. In so-camed Latin races learned is great dear noise teat a language from the Romans; they learned law, order, municipal institutions, and a civilization which even in the incipient decay of moral purpose embodied a stronger will than that of the most energetic barbarism. In fact, it is surprising to observe the skill and truthfulness with which the Dean of St. Paul's has modulated what in other hands might have become dangerously sweeping generalizations. His readers may pause here and there, and feel their footing rather uncertain on this or that projecting point of speculation. But we may be sure that when he delivered the Lectures his hearers had no such fear, and had no occasion to feel it. They were under the guidance of a master, and, as he took here with perfect columns and with respect to the columns. them with perfect calmness, yet with great rapidity, over an ex-tensive and interesting subject, they were well content with the truths that were brought before them distinctly, and made no demands for the precise definition of objects, vast in scale and necessarily indistinct in outline, that were introduced in the background.

TOILERS AND SPINSTERS.

M ISS THACKERAY has collected in this pleasant little volume a series of papers whose authorship was already known or guessed at by those who saw them in the places where they originally appeared. To such readers they will need no further commendation; nor is their attractiveness of the kind further commendation; nor is their attractiveness of the kind which any critical analysis can do much to elucidate. Miss Thackeray does not aim at being classical, if by classical writing we understand that which compels the reader's judgment to certain approval not bound up with his feeling of individual pleasure in the work. One cannot point out to an unsympathetic element this and that point of excellence which he must perferoe that the cost heat suited to his perferoe that the cost heat suited to his perfectler tasks.

or not. There are those who think Middlemarca a tiresome novel; but if they admit any standard at all in matters of art, their reason can hardly resist the conviction that it is a great work. It is otherwise with the impressions we derive from these kindly really reall and discursive conversations in print, for such they really are. Their charm is the same as that which we find in conversation; we do not mean in listening to professed good talkers whose business is to be effective in a company, but in closer intercourse with friends whose speech is the free and yet unobtrusive expression of a genuine personality. As with men, so with books, we must meet this half-way, or it will never come to us. If we do so with a good will, we shall gain a new possession which leaves us no cause to repent of our confidence; but if we were to hold back and require strict proofs, the judicial equity of criticism might not find itself able to force the bargain equity of criticism might not find itself able to force the bargain on an unwilling purchaser. The highest literary ambition aims at writing books which everybody ought to read; but it is no unworthy object, though a different one, to write books which demand nothing but to be allowed to give a pure enjoyment to as many as choose to take it. Miss Thackeray's work is of the kind which does not seek to command our respect so much as to win our familiarity. One power she has in a high degree which for this purpose is quite indispensable, and which many writers and smeakers of orester pretensions would do well to cultivate more. speakers of greater pretensions would do well to cultivate morenamely, the power of telling disagreeable truths in an agreeable manner. She is almost needlessly diffident when she uses the privilege of the familiar essayist to explain that she criticizes nobody in particular. After commenting, in the essay which gives its name to the book, on the ways of the desolate and fussy who go about crying for somebody to give them a mission, she observes:

I do not mean that this is the habitual spirit of the self-denying and self-concentrated persons of whom I have just been speaking, for honest and persistent efforts must make themselves respected in any form. I suppose I am addressing that vague, but useful offending scapegoat that all advice-givers, advertisers, and article-writers attack. It misbehaves in every convenient manner in order to give the wrath-pots of eloquence an opportunity of received out. of pouring out.

But it seems to us impossible that any one should take offence at Miss Thackersy's advice or even reproof. It is not merely that all she says is kindly meant; for it is possible to overflow with love for one's neighbour in many ways which the neighbour highly disapproves of, and a tender regard for his spiritual welfare may, under favourable circumstances, be exalted into the special form of philanthropy for which our too little known humourist Peacock coined the name philotheoparoptesism—that is, reasting one's neighbours at a slow fire for the love of God. But Miss Thackeray's for her neighbours is not of the dogmatic and meddlesome sort which finds satisfaction only when it can give people what seems good for them, whether they will or not. She shows an interest in all beneficent efforts to diminish want and misery, and the chief object of the papers here collected is to help some of these attempts by making them better known. She rejoices with the workers in so far as they succeed, without stopping to count the failures. Here is a paragraph from the essay headed "Little Scholars," written after a visit to a Jowish school in the City. It was ten years before Section 25 of the Education Act was thought of, and it does not suggest any positive or immediate solution of the religious difficulty. But the difficulties might be lightened if Denominational and Secularist partisans could for once agree to take a leason from the spirit in which this is

And so I suppose people of all nations and religious love and tend their little ones, and watch and yearn over them. I have seen little Catholics cared for by kind nuns with wistful tenderness, as the young ones came clinging to their black veils and playing with their chaplets;—little high-church maidens growing up rosy and happy and crosses and mediavel taxta, and chants, and dinners of fish, and kind and melancholy ladies in close caps and loose-out dresses;—little low-church children smiling and dropping curtsoys as they see the Rev. Mr. Faith-in-grace coming up the lane with tracts in his big pockets about pious negroes, and broken vessels, and devouring worms, and I daresay pennies and sugar-plums as well.

Who has not seen and noted these things, and blessed with a thankful, humble heart that fatherly Providence which has sent this pure and tender religion of little children to all creeds and to all the world?

The account of this particular school tells us that little Jew babies are uncommonly like little Christians, and appreciate rice and potatoes quite as much as certain small Christians whom Miss Thackeray visited in Pimlico appreciate soup and pudding. The independence and cleverness of the older Jew children as here independence and clevarness of the older Jew children as here described has something almost alarming to Gentile readers, and goes some way to support the Asiatic mystery developed in the most brilliant of the Novels by Eminent Hands, that all the great people of the world are really Jews. The other children who were found eating soup and pudding in their school at Pimlico were in a less advanced stage. Miss Thackeray records a delicious piece of childish dialogue: of childish dialogue :-

One little curly-haired boy, with a very grave face, was eating pudding very slowly and solemnly—so I said to him:

"Do you like pudding best?"
Little Boy. "Issa."

"And can you read?"
Little Boy. "Issa."

"And write?"
Little Boy. "Issa."

"And write?"
Little Boy. "Issa."

"Aid have you got a sister?"

Little Boy. "Issa."

"Little Boy. "Issa."

"Little Boy. "Issa."

The ideal woman as one imagines her is no social failure. She is eximple the control of the cont

na. "No, see is with a diethe girl, see is an y down Little Boy, estra solutor old. er out."

"And how old are you?"

Little Boy, with great dignity. "I am it year old."

There was snother funny little thing, very small, sitting between two bigger boys, to whom I said—

"Are you a little boy or a little girl?"

"Little dirl," says this baby, quite confidently.
"No you ain't," cries the left-hand neighbour, very much excited.

"Yes, she is," says right-hand neighbour.

And then three or four more join in, each taking a different view of the question.

Another paper describes the first experiment made in England (this again in a Jewish institution) in the method of tasething deaf and dumb children to speak, not in finger-signs, but in articulate words, and to read off the ordinary articulate language of mankind from the lips of the speaker. We learn from a post-script to this account that the institution is now extended, and that the institution is now extended, and what Miss Thackeray says of the children with whom she talked on her last visit is most encouraging:-

M. Van Praagh is now the director of an institution in Fitzroy Square for teaching teachers, as well as the children themselves, the set of lipreading. This institution is not for Jews, but for any one who likes to come. The system is absolutely the same as that already described in the article. The children seemed very eager, good, and attentive; they could speak to one another, and evidently greatly preferred this plan to the fingersign system to which we are all accustomed. . . . It was indeed very difficult to realize that they did not hear; they gave one more the impression of little foreigners imperfectly acquainted with English than of victims of so and a fate; and I think the best testimony we can bear to the success of M. Van Praagh's system is that it did not occur to us to pity any one of them, except, perhaps, a boy and girl who did not come forward ner attempt to speak.

Next to this comes a picturesque essay on "Little Paupers," which gives us an insight of quite a different kind from what we can get from statistics, and perhaps no less valuable in its way, into the practical working of the boarding-out system. No definite scene is assigned to the description, but there are slight indications which dispose us to guess at Devonshire. Anyhow, we have a pleasing picture of good simple folk in a country cottage, and the orphan children who come to them wild and friendless, and with workhouse poison in their blood, but may now grow up clean and wholesome with good food and fresh air, and in a home where wholesome with good took and the said in a home with got at least something more like parental care than the mercies of the Union, where they have nothing to look to but the State—a sort of Jupiter-like parent, as Miss Thackeray puts it, whom they cannot honour or succour.

There is also a rather melancholy article on the Hospital for Incurables, and a more cheerful one on the good works (which seem to be various enough) of the Newport Market Refuge. Miss Thackeray takes occasion to comment on the costly and unreasonable manner in which our great charities are administered, so that the subscribers' money, instead of going to the objects of their charity, "is put to strange and vexing purposes—to printing little books that nobody reads, to sending circulars that go straight into the fire, to arranging an elaborate machinery of admission that in no way benefits the patients." She rises to unwonted indignation in her protest against the "cumber of selfish interest and patients," but the difficulty cannot be asserted. patronage," but the difficulty cannot be ascribed to mere vanity and selfishness. It lies rather in want of mutual confidence. have not yet learnt the true secret of all executive work-to find out whom we can trust, and then give him ample discretion; and till we do learn it we must bear all the defects of our Parliamentary and quasi-Parliamentary institutions as best we may, and go on scrambling through our public life with deformed Acts of Parlia-ment, and subscription lists and charity dinners, and the stock exchange of charitable votes.

exchange or charitable votes.

Light and familiar as is Miss Thackeray's style, we have seen that she can say a word in season when she thinks fit on matters of serious social interest, and those words may perhaps be the more effective by reaching people who are not accustomed to read anything serious. She has pretty trifles about five o'clock tes and croquet to attract readers who would prefer to hear of nothing else, though they may have no objection to a shade of sentiment. borrowed from some far-off world to make a background. But as they read on they will see that in this real world there are people quite out of the sphere of asthetic tea-parties, who have to be fed, and taught, and rescued from fates which asthetic circles do not choose to be shocked by hearing of; and if at should come into any one's mind that Miss Thackeray might as well have chosen any one's mind that have the should be t anything else to write about, seeing that all the facts about schools and paupers are to be found in blue-books and Parliamentary debates, the thought would be hasty and foolish. Miss Theology observes, however, a careful distinction between social and political topics. She touches on politics only once, in a note the latter part of which cuns thus:—

If the advocates of female suffrage would all put their case in this way, instead of attempting to set up women as a class against men by clamour about imaginary wrongs, they would still have grave objections to meet, but they would at least have ceased to be absurd, and would have samed the right to have those objections put forward seriously and respectfully.

Among several shorter miscellaneous essays which conse at the Among several shorter miscellaneous essays which come at the end of the volume, we must specially mention that on "A Book of Photographs," in which an amusing contrast is drawn between the inartistic vulgarity of the ordinary costs do visite and the very different qualities of Mrs. Cameron's portraits. Miss Thackeray's critique on her predecessor Jane Austen will also be read with interest. We cannot agree in her opinion that the "actual study of character" has gone out among English acvelists. George Eliot's characters seem to us to stand out with quite as much individuality as Miss Austen's, while they are conavelets. George Ellot's characters seem to us to stand out with quite as much individuality as Miss Austen's, while they are conceived by a deeper thought and an infinitely more varied imagination. A novel without character is simply a bad novel, or a spoilt essay at best, and cannot be tolerated under any pretence of a new school. One or two things remain in Miss Thackeray's book of which we cannot speak here. The few for whom they are meant, and who will understand them, will also understand why we pass an in silence. en in silence.

MISTRESS JUDITH.

A N Englishman travelling in the south of France soon after the fall of the Great Napoleon was asked by an old priest if it was true that Englishwomen wore rings in their noses. "They may do so," he replied, "in the north of England, where it borders upon China, but the custom does not obtain in and about London." Wherever England does border upon China the manners of this story may be a faithful picture of life in England. How far they reproduce nature or the national manners of our own day in the naichbourhood of one of our famous midland counties, and in the naichbourhood of one of our famous Universities, our readers shall judge. That it is a picture of our own day is shown at starting; a faded sampler, the work of a long-lost daughter, bears the date 1849. Mistress Judith is the only child daughter, bears the date 1849. Mistress Judith is the only child of a wealthy Cambridgeshire rector, her well-born mother having died at her birth. His parish of Haslington, however, profits little by its vicinity to a seat of learning, which is not to be wondered at when we see how purely local are its interests. Even the parson does not "count much on the post." The inhabitants keep no reckoning of time but by Plough Monday, Valentine's Day, gleaning-time, and Haslington feast, and they hate all strangers; seeing however few enough, for nobody, gentle or simple, comes there, except a pedlar, and a couple of bailiffs when the exigencies of the story require their intervention.

The Rector's daughter from her infancy is called Mistress Judith.

The Rector's daughter from her infancy is called Mistress Judith, and is never addressed or spoken of by any other title. The tale opens upon her at five years old, when she addresses Master Hurst, a superannuated labourer, "I don't think you'll live very long, Master Hurst, do you?" "I don't think so neither, my dear," he replies; but he lives all through the story, both from the necessity there exists in Haslington for all people doing and saying and thinking the same thing from year to year, and because he is Mistress Judith's main confidant. Time does nothing to divert or qualify her devotion to Master Hurst by introducing female rivals in his friendship. Mistress Judith lives and dies, as it seems, without even seeing a young lady. Rectors' beautiful daughters in other parts of the world, especially if they are heiresses as well, are not neglected by society; but society is ignored in the narrative, and nothing comes to interfere with Mistress Judith's sitting with Master Hurst and his wife, in winter by the hearth, and in The Rector's daughter from her infancy is called Mistress Judith, and nothing comes to interiere with Mistress Judith's sitting with Master Hurst and his wife, in winter by the hearth, and in summer by the bees, which they watch with unwearying assiduity from year to year. At one time the oblivious Rector—and when people have bad memories in a story, they are bad with a vengeance—awakes for the moment to the expediency of providing younger companions for her. He sets out to Trotter's End, a farm at the other end of the village, with this in view, and, by dint of inquiring half-a-dozen times on the road, discovers Mrs. Bullen at the end, and engages her to send her boy Jesse to the Rectory next end, and engages her to send her boy Jesse to the Rectory next day. But when the boy presents himself next morning the designs of yesterday have passed entirely out of the Rector's head; and seeing the lad in his study, he assumes that he is come to be taught, and puts a Delectus into his hands. The boy is apt, and the lessons become an institution. It is understood in the village that Parson become an institution. It is understood in the village that Parson is larnin' Jesse Butler, and going to make a scholard of him. Mistrees Judith, however, does not take to Master Jesse. She has seen his brother Ames at Master Hurst's, who is set down by his mother, by himself, and by the village generally, as a dunderhead, and she likes him the better for his want of book-learning. So also does the authoress of this idyl, who lavishes on him all the fond epithets of bigness which flow so readily from the female pen. Amos is a lout; but hig-limbed, hig-footed, hig-handed, hig-cyed, and great-liearted. On the eye of her tenth year Mistress Judith has the ill-luck to rouse her father to a consciousness of her ignorance. Up to that date she was left undisturbed to suck her thumb and hob and nob with Master Hurst; but a rash desire for still more liferty prompts her to nudge her father, and to say "To-morrow is my birthday. May I do jest as I please?" "Eh! ah!" saye

".Mistrees Judith: a Combridgeshire Story. By C. C. Francy. Author of "Jannine Leigh." Lendon: Sympson Low & Co. 1873.

the parson, "so it is. Who told you?" "Mistress Hurst and Mistress Gadd; and Mistress Gadd see'd me born, so she must know." "See'd you, dear! is that the way you ought to speak?" So apostrophized, she corrects herself with the amendment, "Saw'd me barn"; and the Rector sees that something must be done. It ends in the village schoolmaster giving her lessons, for which he cought to get more comits than he receives for be done. It ends in the village schoolmaster giving her lessons, for which he ought to get more credit than he receives, for the next we hear of her is that she devours all the books, had and good, in her father's study, reads Plato with him, and bursts into tears over Socrates' dying hour. By this time she is seventeen, and she and Ames are fast friends; but Ames is only known by the sobriquet Farmer Bullen, whereas his brother Jesse is Gentleman Bullen; both, however, being impartially addressed by each other, by Parson Ingrey, and the Haslington world as "Lad." Jesse—"the clever, clear-headed youth with his keen interest in the classics, mathematics, history, and general information"—"what," said the Rector, "might he not do? He would send him to a good school; after that a scholarship at King's would be a thing to ask and have. Then a public life, anything to show forth the great talents that God had given him." So, though Jesse had money of his own, the parson paid all school expenses. But in full flow of such a promising career, Jesse happens to hear Mistress Judith say—having seen a party of soldiers pass through the village—that she liked soldiers better than bookworms; musing upon which, Jesse writes to his patron that he means to be a upon which, Jesse writes to his patron that he means to be a soldier. This, we are assured subsequently, not because he was at all in love with Mistress Judith—he was much too cool a hand—but because any young man hearing a pretty girl say the same would do as he did. So, instead of going to Cambridge, Jesse goes to Paris to learn modern languages, leaving a clear field for Amos,

if he presumes to use it.

Unluckily no story can do without a villain to set things going wrong. The villain in this case is a certain Paxton Dick. He is an unwrong. The villain in this case is a certain raxion from an unpopular character just because he is Paxton Dick, and not Hashington Dick, for the folks cannot bear strangers; but also they do not like his looks, nor does the reader, for he is blear-eyed and leers on all occasions, and carries a basket of eggs which he calls new-laid. Dick is so fond of mischief that he will sacrifice a basket of eggs by upsetting them on the road as a ruse, simply to make time in order that he may listen on the sly to what a young man and woman are talking about under the porch. Neither Amos nor the parson has ever done him any harm; but Paxton Dick's malice is of the worst order—disinterested malice. It is not very easy to see what harm he does by listening, but we are to understand to see what harm he does by listening, but we are to understand that mischief comes of it. Amos distrusts Paxton Dick with the true instinct of an honest nature, but Jesse falls into his meshes, and very mysterious meshes they are. Yet Jesse, it is well to bear in mind, is cautious. It is one of his strong points, and besides caution he has tact, and these two qualities combined induce him to conclude a letter to the Rector by sending his respects to Mistress Judith. This is the only mention or allusion in the letter, but the person sees in the words a profound significance, and but the parson sees in the words a profound significance, and decides in his own mind that, if Jesse Bullen should love Judith and Judith should love Jesse, why they should marry. Judith was better born no doubt, but what is birth, except so far as it makes a gentleman? So the parson put his hand on the letter and said it was the letter of a gentleman, an opinion which is solemnly backed by the authoress in her own person.

In the meanwhile Amos becomes disastisfied with himself. Love wakes him, as it did Cymon before him, to the consciousness of his deficiencies. He pens a letter to Jesse, saying he will stay at home no longer; he must get somebody clae to manage the farm; he means to go into the world and improve himself. In the inditing of this letter his great hand moves steadily; his great elbows are squared, he signs a great Amos Bullen at the end, and dabe a stamp and thumps it down well, and writes the address. The authoress is much pleased with it, but writes the address. The authoress is much pleased with it, but we must say once for all that the sophisticated reader would rather see the Rector's daughter laid in the early tomb of genteel remance than wedded to a lout who, while he pens his letter, looks so much like Sam Weller writing his valentine, and who announces his plans to his mother with the reservation "Leastways if I can." He does not go, however, before Haslington feast. Mistress Judith is to go to see the booths with Master Hurst in his chair and Mistress Hurst, and escorted by Amos. Master Hurst reflects on the changes in dress in his time; "There's more dress nowadays than there were i' my time; only wared a smock, I did, all my time; arter I married, nice clean smock I were. And then ye my time; arter I married, nice clean smock I wore. And then ye see, Missus, if the clothes wasn't so good, ye see the smock he made them better—kivered 'em up like." The procession sets out, and Mistress Judith is so excited by the scene that she insists on going to the dancing-booths. Amos, however, does not take advantage of such adorable simplicity, but dissuades her, and they return home. But she finds the rectory dark and descript and and arminimpleme. Amos to take her to the descript. It is deserted, and again implores Amos to take her to the dancing. It is a tremendous temptation, but virtue prevails. In the moment of a tremendous temptation, but virtue prevails. In the moment of hesitation Paxton Dick again passes, and again leers. And so the summer passes, and a certain Sunday comes, only a specimen Sunday to show the parson in his official character. There is no Dissent that we hear of in Haslington, and the congregation assemble at the call of the bell, but no parson responds to the summons. Mistress Judith perceives that she must hunt up her father, and finds him at less calmly budding roses. "The bell's stopped," she cries. "That havn't begun." "Kh?" he asks, as she puts on his surplice and leads him back to choose his sermon

out of the three years' heap. It being midsummer, he fixes on a Christmas sermon, trusting to make alterations as he goes along. At length the psalmody begins, the selection being effected without previous arrangement, and frequently under the difficulty of an obstinate silence in the barrel-organ, which has to be taken out of church and shaken before it will act its part with propriety. In the midst of these familiar difficulties, an apparition sets the thoughts of parson and people alike wool-gathering. This is none other than Gentleman Bullen walking up the aisle to his mother's pew in a coat of good broadcloth and with a ring on his finger. No wender that the sermon was read off right on end, snow and holly-berries and all, and that nobody seems to have found it out. It is perhaps a real stroke of nature that we find Parson ingrey—who is Broad Church, "in the sense of having heart and eyes ready to receive good wherever it was to be found"—meditating on the improvement of the present over the past, and the abuses he could remember of which to-day has no example. remember of which to-day has no example.

Jesse's return is not altogether welcome to Amos, who, however, thinks to secure his own interests by disclosing to Jesse the state of his feelings. Jesse rather grudgingly accept the confidence, having his own ideas about Mistress Judith. Through an unfortunate contretemps Amos goes off without saying good-by to her, and when Mistress Judith shows pique, Jesse is shabby in not clearing his brother of any intentional neglect. Naturally being unrestrained by generous consideration, we soon find him making love on his own account, and with such good success that Mistress Judith would be overpoweringly happy in their engagement if he did not bind her to secrecy. It is not easy to see why, for the father is quite as anxious to have him for a son-in-law as Mistress Indith is to have him for a husband. Once the sees him receives Judith is to have him for a husband. Once she sees him receive a packet from Paxton Dick, and is seized with a momentary misgiving that there may be something amiss. But the father is told at last. Still, however, Jesse's turn for mystery remains as pronounced as ever, for which the reader finds it easier to account by the necessity for filling a second volume than on any grounds of probability. He holds aloof, does not even send a valentine; but as he is cramming very hard for his military examination, this is accepted as an excuse, and the wedding is being prepared for, the Rector giving his daughter fifty pounds for her trousseau.

Nothing more clearly separates Mistress Judith from the conventional young lady than the confidance she chooses on this occusion. The women in the gleaning-field are lamenting how she is "losing the blee off her," which the reader accounts for by the worry in which her lover systematically keeps her, when a young Judith is to have him for a husband. Once she sees him receive a

the worry in which her lover systematically keeps her, when a young woman of the party tells her experience:—"Doan't trouble no un she doan't, and we never see her not since the first day o' harvest, me doan, and we never see her not since the first day o harvest, comin' about the doors speaking so noice-like and genteel. 'Well Mistress Wib'dy,' says she, 'that be a noice gown,' says she, 'I moind for to have one as favours that when I go for to get my gowns,' says she."

In the meanwhile an intense and, considering the parson's vast

opinion of Jesse's abilities, scarcely accountable auxiety prevails at the Rectory as the day of examination draws near. In order to get the news more quickly, a messenger awaits at Cambridge the official report, with which he at length gallops up, bringing the satisfactory intelligence that Jesse stands fourth on the list. But even now something mysterious interposes between the cup and the lip; never was so laggard a lover; though the Rector offers to settle 8,000l. on his daughter, and, if there are debts, he even reflects that debts may be got over. At last "the blow falls," and here we must compliment the author on a daring conception. It turns out that the cool, cautious, clever Jesse had got a Cambridge of the country of the cool of the last transfer bridge attorney to personate him at the Chelsea Hospital examination. It was the attorney, not Jesse, who had passed with flying colours, and who now comes forward on finding no difficulty in making his statement good, seeing that he could prove that he himself, John Orisp, had undertaken to represent Jesse Bullen, and had done so. Mr. Orisp does not mind saying that his reasons for this proceeding were pecuniary, but it is not explained how he hoped to make this candid avowal conduce to his permanent advantage. For all this Mistress Judith is constant, and would forgive Jesse if he would only come back; but he disappears from the scene without reporting himself to anybody. Strange to say, the people of Haslington lay all this misery to the charge of Paxton Dick, and favour him with one of their customs—"tin-kettling"—and with this ceremony drive him out of the village, well thrashed indeed, but with his pockets well lined. So altogether he comes off the bridge attorney to personate him at the Chelsea Hospital examination. but with his pockets well lined. So altogether he comes off the best of all the dramatis persona. Mistress Judith fades and fades, having closed the eyes of Master Hurst, dies herself. Two that after, as the survivors are sitting together at Trotter's End, and the learn Amos goes out and brings in his brother Jesse. It

Thock is heard. Amos goes out and brings in his brother Jesse. It have his final disappearance was an act of generous atonement:—
It is she yours now, lad? I've given you time—surely I've given you time." "And that was why you bode away?" asked Amos. "Why else, lad, why else? It was the least I could do—to set her free—and leave her for you, lad." "But she died," said Amos.

It argues courage of no common order to have invested this story with the perpetuity and weight of print, good paper, and showy hinding; still courage amounting to audacity would scarcely have ventured so far but for the influence of the not uncommon opinion that anything passes under cover of a dialect and quaint phraseology.

Het accesses defles this distinction, and shows itself for what it is not an all disguise. Under the thin well here designed for its concealment it is patent indeed. it is petent indeed.

UR OF THE CHALDEES.

TIERE is another phenomenon, and a phenomenon which, we really think, beats all that have gone before it. Perhaps it might not do to say that Mrs. Wilkes has turned the world unside down, but she has very successfully turned it right round. Some people have conferred to a certain weakness in their astronomy as to the doings of the moon. The sun, there is no meaner of doubt, people have confessed to a certain weakness in their sarronomy as to the doings of the moon. The sun, there is no meaner of doubt, risos in the east and sets in the west. No one expects it to doy otherwise, except those Mahometans who accept the alleged tradition of the Prophet, that one of the signs of the end of the world will be that the sun will change its habits in this natter. But as to the lesser light the case is less plain. We have known people who felt by no means fully assured whether the moon rose in the cast or in the west. And indeed, setting science saids, the notion that the moon ought in this respect, as in others, to do something different from the sun might not seem wholly unreasonable. Now Mrs. Wilkes's book gives us a kind of feeling as if some change of this sort had really happened in the case of one, or perhaps both, of the two great lights. Mystically indeed the thing has happened; in all orthodox symbolisms the two great lights typify the Empire and the Papacy, and both of those powers had a way of moving eastward and westward in a strange fashion, to Constantinople or to Avignon, sometimes to points further east and west still. Mystically again, when a Mussulman Caliph reigned at Cordova and a Frank King at Jerusalem, we might say that the East had become the West and the West had become the East. But all this is a trifle to such a turning about of the common notions of the points of the compass as implied of the common notions of the points of the compass as is implied in the belief that, when Abram set out to go from Ur Canaanwards, he was going east, and that, when Ekiezer went to fetch Rebekah, he made his journey westward. And their journeys eastward and westward were so much longer and harder than we eastward and westward were so much longer and narder than we had ever thought of. For in truth Ur was Ireland, and Abram set out from Ireland to go to Haran and Caanan. Now in the case of the return journey made by the faithful steward, we feel a deep concern on one point. How about the camels? We cherish some faint hope that, in those early times, the British Islands may not yet have been broken off from the Continent; otherwise the ristoure of Elbert and his length garden by see is too much for may not yet have been broken off from the Continent; otherwise the picture of Eliezer and his beasts going by sea is too much for us. We have always had difficulties as to the legs of the horses in the ships in the Bayeux Tapestry. How then shall we dispose of the legs of our camels? Perhaps however the large number of knees assigned to the camel by Herodotus, and further multiplied by Professor Rawlinson, may have been given him to enable him to stow himself away comfortably in such an emergency. Be this as it may, according to Mrs. Wilkes, everybody, Herodotus and Professor Rawlinson included, has gone altogether wrong in thinking that Chaldaca lay to the east of Palestine or of anything olse. It lies to the west of all things European and Asiatic; it else. It lies to the west of all things European and Asiatic; it olse. It has to the west of all things European and Asiatic; it lies in the green island beyond which no one, ages after Abraham, over thought of getting further. Our first fit of amazement over, we at once saw that in the Irish origin of the patriarch we had lighted on the cause of that mysterious voyage to Ireland which, as Irish tradition tells us, was made by Scota the daughter of Pharach. Abraham and his descendants play so remarkable a part in Egyptian story that a voyage to the land of their birth would not be income of the control of the course of wonderful in an Egyptian princess who possessed any degree of antiquarian curiosity. There is no side of any question for which something may not be said; and on the whole it might get rid of some difficulties, if we could believe that the moon rises in the west or that Ur of the Chaldees was in Ireland.

We suppose that at this time of day nobody but Mrs. Wilkes—and perhaps her husband, to whom she has the sense not to dedicate her book, though she tells us how much help he has given her in multing it—will expect us seriously to answer or examine so wild

naking it—will expect us soriously to answer or examine so wild a theory as that which makes the call of Abraham happen in Ireland. But the book is really curious, as showing a state of mind the exact likeness of which we do not remember to have come across before. We are thoroughly well used to the state of mind the state of th mind of people who never heard of, or who wilfully shut their over to, the discoveries of modern scientific research. And we also know very well, though it is not so common as the other, the state know very well, though it is not so common as the other, the state of mind of those who know what modern discoveries are, but who think that they are all a mistake. And we also know the state of mind, though it is more wonderful than either of the other two, of those who not only think that they know what modern research has brought to light, but think that they believe in it, yet who then go and say something which shows that, to all practical purposes, they might just as well never have heard of it. Some parts of Mr. Gladstone's Homer, some parts of Professor Rawlinson's Herodotud, will be at once remembered as examples of the kind of parts of Mr. Gladstone's Homer, some parts of Professor Rawlinson's Herodotus, will be at once remembered as examples of the kind of thing we mean. The state of mind of Mrs. Wilkes is in some points skin to this, but it has peculiarities of its own. Both Mr. Gladstone and Professor Rawlinson always speak respectfully of the system which they have persuaded themselves that they understand and believe in. But Mrs. Wilkes seems to understand, and, if we rightly understand her, professes to believe, while at the same time she seems to despise; and when she comes to put forth her own notions, she talks as if she neither believed nor understood. She takes the trouble to copy out shaborate tables of the relations of the Aryan languages, and then through the rest of her book she throws her comparative philology aside, and talks as if no

^{*} Ireland: Ur of the Chaldess. By Anna Willess. London: published for the Author by Trübner & Co. 1372.

such thing as comparative philology had ever been found out. It may be that she thinks that comparative philology is very well as the as it goes, but that she herself is called to be the prophetess of a more excellent way. Such a more excellent way may very likely a more excellent way. Such a more excellent way may very likely some day be found out. A time may come when we shall be as certain that Aryan and Semitic—are parts of a greater whole as we now are that Greek and Teutonic, that Hebrew and Arabic, are severally parts of greater wholes. But this will be, not the denial, not the undervaluing, but simply the fuller working out of what we know now. But Mrs. Wilkes, having first set forth some of the main results of the comparative method as far as they go at present, goes on to sin against all of them in detail. The insane school of Celtic antiquaries used to be very fond of telling us of the close Celtic antiquaries used to be very fond of telling us of the close connexion between Celtic and Hebrew, a notion which we have always in our own minds fancied was suggested by the presence of guttural sounds in both. To be sure the same argument would have proved an equally close connexion with German or Spanish; but then people of this kind had no dealings with such profine tongues as German or Spanish, while they thought it their duty to pick up a little Hebrew for their souls' health. Now it is perfectly conceivable that, if the Aryan and Semitic languages can be applied to the content of the made out to be parts of a common whole, it may turn out that Celtic and Hebrew have preserved fragments of the original stock which have been lost elsewhere. We of course do not say that it is so; we only say that such a doctrine is conceivably possible, if only the evidence could be produced. But this is not what was meant by the old style of visionaries who had never heard of convertive philology, it is not what is meant by Merheard of comparative philology; it is not what is meant by Mrs. Wilkes, who has heard of comparative philology and in a way professes to believe in it. Fresh from her tables of the relations of the Aryan languages, she goes on to prove that Chaldren was in the British Islands and that Abram set forth on his pilgrimage from Ireland, by gathering together a heap of words and names in Great Britain and Ireland which have some superficial or accidental likeness to Semitic words and names. Of course there was nothing wonderful in this in an orthodox Druid writing before Bopp or Grimm was born; it is in no way wonderful in those, Druids or others, who are still as though Bopp and Grimm had naver been horn; the america this relation of the desired of the state of the superior of the state of th Grimm had never been born; the amazing thing about Mrs. Wilkes is, that after some pages of philology which, if not new, are at least true, she carries us off into a lower quagmire of conjectural etymology than any Druid, Bard, or Ovate whom we have the pleasure of knowing. Herein is the wonderful point about Mrs. Wilkes. The two sisters in the fable drop from their mouths, the Wilkes. The two sisters in the fable drop from their mouths, the one toads and the other rubies. Mrs. Wilkes drops both toads and rubies; she is a fountain which sends forth both sweet water and hitten a glight of many markets of Ala slight stream perhaps of the sweet and a strong rush of the bitter, still sweet and bitter, in whatever proportions, side by side.

Now is it not strange, is it not worth a few moments' reflection as Now is it not strange, is it not worth a few moments' reflection as an unexpected form of human nature, that any one who seems quiet to have grasped the true relation between Greek and Sanserit should, a few pages later, tell us "Probably from the Irish Ugh-der is derived the word Author, which means the same thing"? "The Lord increase you" is, we believe, an Irish blessing, and it would be well if Mrs. Wilkes would get it translated into Latin. The German who first translated "Semper Augustus" by "zu allen Zeiten Mehrer des Reichs" was a trifle to this. That Hibernia, the Hebrides, and Eboracum—according to Mrs. Wilkes Eboricum or Hebricum—all come from the patriarch Heber wo Eboricum or Hebericum-all come from the patriarch Heber wo have somewhere seen before; but we were not sorry to have our laugh over again at finding mysteries once more made out of the mero miswriting of "Hebrides" for "Hebrides." But it is something to get an answer to a question which we have often asked in

The religion of Great Britain and Ireland was Druidism. And what was Druidism?—The worship of one God by sacrifice on unhown stone altars, after the custom of Noah (Gen. viii. 20, 21, 32). The Druids preserved the religion of Noah.

In the "unhewn stone altars" we seem somehow to get a scent of a cromlech, and directly after we get the Ovates to match the Hebrides; still to tell us that a thing was "the religion of Noah" is clearer than to talk about "Helio-arkites." The following passage contains much which at least is new, if not true:-

passage contains much which at least is new, if not true:—

When Heber entered Ireland, he was welcomed by a company of Druids and ladies of the race and name of Lughaid, or Lud, the brother of Arphaxad. The Ludies are described in Nennius as "a great rolling wave;" and their descendants are known in the British Islands by the comparatively modern names of Lloyd, Loyd, Luard and Loudon, in Wales and Ireland; McLeod, or sons of Lud, in Scotland. This race of Lud extended over a considerable portion of western Europe:—the old name of Lyons was Lugdunum; Lugdunensis that of Normandy; Mane-Lud, near Loc-Maria-Ker in Armorica, is a place that is remarkable for its megalithic romains, sculptured with the same kind of characters found on stones in several parts of Ireland. Then we have Ludlow, Ludwig, Ludberough, Luddendenfoot, Ludgate, and the old name for the City of London, Cusr-Lud, which is that of one of the three seats of the Arch-Dudds of Britain.

Our search has perhaps been superficial, but we cannot find anything about "Ludites" in the Historical Society's edition of Mennius, though we certainly have heard of "Luddites" in times much nearer to our own. Then we are anxious to know something about "Ludwig." We are in the dark as to any place so called; ad, if it be the name of a man, how is it that the same name, in its other forms of "Louis" and "Lewis," is referred, along with a great many other names, to the presence of the tribe of Levi?

Anyhow, how ignorant both of Latin and of his own tongue was the Frankish poet who wrote

Nam Hludowicus enim hafi de nomine dictus, Ludere subjectos pacificando monet. Seu quis Franciscam mavult ruserare loquelam, Nominis ut poesit noscere notitiam; Nomps sonat Hluto preclaram, B'isged quoque Mars est, Unde suum nomen composuisse patet.

This is perhaps enough, but the following concerns Englishmen more nearly :-

The Saxon "Genesis," generally supposed to have been written by a Caedinon, should, we are inclined to think, be understood as simply the beginning. This will appear when it is remembered that Cashnon is the initial word of the book of Genesis in the Chaldee paraphrase or Targam of Onkelos, 192722 b'Cadmin, or b'Cadmon (the b is nearly prefixed), which is a literal translation of b'Raschith ("In principio"), the initial word of the original Hebrew text. It may be hardly necessary to observe that the Jews quote and call the first book of the Bible "b'Raschith"—the books are denominated according to their initial letters. The Chaldale Genesis, even to the present day, is quoted and called by the Jews b'Cadmin.

Then, again, the following has a still wider range: --

Then, again, the ioliowing has a still wider range:—

Ileside the numerous Round Towers of Ireland there are quantities of stone remains there that must have originated with the people of Ganesia. These stone remains have often particular reference to the Assyrian and Egyptian periods, and will be found to have great value in showing how Christianity has retained, often without our knowing, many of the comblems and forms of faith distinctly traceable to a pre-historic, but certain Aryan, and Semitic, and Hamitic source, just as the Irish language has the equivalents of hundreds of its words in Sanskrit, Hebrow, Arabic, and other languages, until lately believed to have had no affinity with one another, and of course no affinity with frish. In like manner, they would have been thought dreamers who, in a less enlightened age than the present, proposed to show that the origin of many of the Ninevite, Babylonian, and Egyptian monuments is referable to Western Europe.

Lastly, we turn over the page and find --

See The Sculptured Stones of Scotland, by Stuart, and Marcus Keane's Towers and Temples of Ancient Ireland,

See Stuart and Kenne! "Powers eternal, such names mingled!" "Oke, jam satis est; ohe, libelle."

BUSINESS.

This little book, if it is not unfair to suggest such a com-A parison, belongs to the same class as Barton's Anatomy of Melancholy. Everybody knows that Burton was the only author who ever charmed Dr. Johnson into rising two hours earlier than usual, and perhaps of all culogies ever pronounced upon any book, that is the most impressive. Few indeed are the books which have produced such an effect even upon readers bound by much lighter chains to their couches, and Johnson was the last of men to make such a sacrifice without the sincorest admiration. It must, however, be added, that most modern readers find it difficult to share his enthusiasm. We doubt whether any man's literary appetite in these degenerate days is sufficiently keen to enable him to devour that monstrous mass of crudition. The book before us is not likely to disturb anybody's slumbers; it may be read with the utmost impunity by the lightest sleeper at any hour of the day. Its resemblance to Burton consists simply in the method adopted Its resemblance to Burton consists simply in the method adopted by the author. His reading does not appear to be measurably extensive; he confines himself almost exclusively to very familiar authors, and indeed often steeps to those backneyed quotations which have become part of the ordinary currency of literature. Still the "Merchant" fills his pages with quotations, and, as we should have supposed, writes in order to quote much more than he quotes in order to illustrate his writing. Though he is estensibly discoursing about business, business serves him, as melanchely served Burton, chiefly as a thread by which to connect the stray beauties which he has picked up from other authors. He does not appear to take this view of the matter himauthors. He does not appear to take this view of the matter himself. He informs us in a long "digression on quotation" that his aim is to utter his thoughts as well as he possibly can. Therefore, he says, when he finds that his thought really belongs to somebody else, he prefers to give it in the language of the original proprietor. He adds that quotation is a very difficult matter, and that it takes much more time to discover and apply the remarks of others than to write fifty times as much original natter. It may be so; but we admit that we have some difficulty in reconciling the theory to the facts. The "Merchant" seems to represent himself to us as an innocent-minded person who, having something to say, and recollecting dimly some parallel passage in Shakspears. say, and recollecting dimly some parallel passage in Shakape Wordsworth, or Lord Chesterfield (three of his favourite authorism up the book and hunts out the passage. We should inferred from the internal evidence that he had adopted a different course of procedure. We should have supposed that he kept commonplace book in which he put down whatever struck him the course of his reading, and then joined together the fragments by a flimsy pretence of argument. Hhymes, according to Hudibers bras,

The rudders are of verses, By which, like ships, they steer their courses.

And in such poems, for example, as the Ingoldsby Legends one often feels that the rhyme is in part the ruler instead of the instrument of the author. The "Merchant's" quotations are often so very

^{*} Businem. By a Merchant. Edinburgh : Edmonston & Douglas. 1872.

little to the purpose that we should certainly have supposed that they occupied a similar position in his prose. However, he says that it is not so, and he ought to know best.

Meanwhile, if we turn to the argument, which is thus asserted

to have a certain independent value, we must confess that we are not a little puzzled to make out its general bearing. The "Merchant" is ambitious. He wishes to adopt a quaintly humorous and allusive style after the model of Burton or Sir Thomas Browne; and he frequently becomes so claborate as to be barely intelligible. We will take an example or rate as to be barely intelligible. We will take an example of two. He is arguing against an imaginary antagonist who has said that "business casts out love." After declaring that men of business display "every shade of the amorous passion," he proceeds:—"If, again, he (the antagonist) should limit his conclusion to Dulce Domum, it surely cannot require the pen to assume the place of the lance to maintain that citadel which had a new consecration by our impassioned Chatham." We imagine that in the complications of this sentence there is somewhere concealed a statement that business does not exclude donostic affections: but statement that business does not exclude domestic affections; but we do not profess to see our way clearly through its obscurities. Presently the "Merchant" is reproaching people who give way too easily to despair. His remarks upon them illustrate the mode in which he introduces quotations:-

Their prone condition does not by any means reduce me to lie down by their side in maudiin commiscration; cannot loosen in the least the hooks of steel with which conviction has grappled to my soul the veracity that—to give it in Goethe's language, put into the mouth of Mittler speaking to Edward—man should not forget that the highest honour is to command ourselves in misfortune; to bear pain, if it must be so, with equanimity and self-collectedness. Those dreary wails cannot drown the bugle-notes of hope that have long lingered in my ear, and which first sounded through the visionary storm around Peel Castle:—

Welcome fortitude and patient cheer, And frequent sights of what is to borne! Such sights or worse as are before me here, Not without hope we suffer and we mourn.

These specimens will probably be a sufficient indication of the writer's style. In fact, the character of the book is tolerably plain. The writer is obviously not a man of any literary capacity; we suspect that he is much more in his element when he is applying his principles to practice than when he is laboriously shaping them into hyper-literary language. "Ceaseless in its operations," he exclaims, "guardian and director of every atom in its appointed orbit, so "guardian and director of every atom in its appointed orbit, so that when it reaches the end of its revolution it reissues at once on its wondrous journey; harmonious in all its parts; irrefragable in all its conclusions, is the art called Bookkeeping." Possibly; and we have no doubt that the "Merchant" is better employed in practising the art than in pronouncing these cumbrous eulogies upon its merits. So fur as we can gather through the mist of his rhetoric, he is a passionate admirer of the charms of business. He applies to method as exemplified in business the passage from Pope's Essay on Man which ends in the lines (as quoted by him)

To it no high, no low, no great, no small, It fills, it bounds, connects, and equals all.

To see the force of this we must remember, though the "Merchant" does not make the remark himself, that, in the original "he" takes the place of "it," and that Pope is speaking of God as the soul of the Universe. The application is therefore tolerably bold, and may perhaps be taken as an indirect hint that the "Merchant's "deity is business. If he had adopted that theory a little more distinctly, and worked it out more vigorously, the book would probably have been more amusing, if not more decorous; for it is only proper to add that the "Morchant" is a gentleman of most edifying sentiments, and is always delighted by lofty moral aphorisms. And, after all, we have no doubt that the composition of his hand, after all, we have no doubt that the composition of his book has given him a great deal of pleasure, if its perusal is not calculated to afford very much pleasure to the rest of the world.

very much pleasure to the rest of the world.

If we endeavour to place ourselves for a moment at his point of view, we shall be more disposed to sympathize with him than to condemn him. The pen, it is true, comes rather awkwardly to his fingers when it is not used to make entries in a ledger; instead of expressing himself simply, he becomes unusually pompous, and faucies that the best style of writing is not that which expresses thought most clearly, but that which is stiffened by the greatest number of circumlegations and inis stiffened by the greatest number of circumlocutions and in-direct allusions. Moreover he exaggerates the importance of a stock of literature not very varied or extensive, though creditable enough to a man who only indulges in literature by way of recreation. But still his aim is creditable; for it is an attempt to confer some ideal glory upon everyday occupations. It is perhaps rather cruel to criticize a merchant because he is clumsy when he escapes for a moment from his counting-house to his library. Rather let us congratulate him that he has a library to which to escape, and that he has a real love for literature not composed of blue-books and ready-reckeners. It may be added that he uses his library in the right spirit. It is as well that there should be some connexion between our more material occupations and our intellectual recreations. It is at least one way, and not the worst way, of reading poetry and philosophy, to seek everywhere for expression of some thought which may bear fruit in the sphere of our active life. True, the process is rather difficult at times. The "Merchant bear greeneded in finding some remarks much backleoning in has succeeded in finding some remarks upon bookkeeping in Goethe, or, as we guess, in a translation from Goethe, and rejoices mightily at the discovery. But, for the most part, poets have said

very little which has a direct bearing upon questions of debit and credit. Their remarks have sometimes to be lugged in by main force and applied, as in the case of that quotation from Pope, rather against the grain. Even a man of business, however, is still a man before he is a calculating machine; and general remarks about the true aim of life, about the moral virtues which are appliedly in overwhere. about the true aim of life, about the moral virtues which are applicable in every sphere, and the consolations of which merchants are not less in need than their neighbours, may form a useful part of his mental nutriment. Perhaps if our shopkeepers were in the habit of studying Wordsworth's views of "plain thinking and high living," they would be less inclined to put water in their milk and sand in their sugar. Speculators might learn the advantages of equanimity if they would sometimes indulge with Spinoza in the contemplations of things as they are, and learn the importance of rising above the petty sphere of money-getting to the regions of eternal truth. To have a safe retreat from the worries of daily life is one of the first conditions of spiritual health; and to carry back into daily life something of the more placid atmosphere which back into daily life something of the more placid atmosphere which is breathed at moments of retired contemplation is an excellent method of restraining our tendencies to worldliness. The "Mermethod of restraining our tendencies to worldiness. The "Morchant" means very well, if his narrative is rather imperfect, and his mode of expression rather inarticulate. Whether he was wise in publishing his thoughts is a question upon which we shall not enter. If he pursues them, we would suggest that he had better increase his library. His mode of quotation sometimes suggests an odd limitation of his reading. If he had studied our friend Hoswell he would have remembered that the remark about selling what all men want—that is, power—was made to Boswell by Boulton, and not to George III. by Watt. And he should have been able to trace to its real source the admirable saying about words being the counters of wise men and the money of fools, instead of describing it as quoted by "Warburton."

ATKINSON'S ART TOUR.

IN Mr. Anthony Trollope's Travelling Sketches that able and IN Mr. Anthony Trollope's Travelling Sketches that able and close observer of contemporary English human nature has a chapter on the "Art Tourist." He tells us that the class of art tourists is very numerous, and that of all tourists the art tourist is the most indefatigable. "He excels the tourist in search of knowledge, both in length of hours and in assiduity while he is at work." And then Mr. Trollope gives a long description of the art tourist's ways and objects. We have just been thinking with what delight the novelist would have discovered such a specimen of the art tourist as Mr. Atkinson had he menored of the art tourist as Mr. Atkinson, if Mr. Atkinson had happened to fall in his way at the time when those Travelling Sketches were in contemplation. The combination of a British love of touring with an interest in art has led to a great deal of really hard work in the conscientious getting-up of the peculiarities of has the peculiarities of the schools of painting. "The upshot of all this," Mr. Trollope tells are thus hear the greation of a dustivet and naw subject of inus, "has been the creation of a distinct and new subject of investigation and study. Men and women get up painting as other men and women get up botany, or entomology, or conchology; and a very good subject painting is for the purpose. It is innocent, pretty, and cheap—for I take the fact of the tour to be given as a matter of course." The art tourist, to be perfectly happy in his pursuit, must like both travelling and art; he ought not to be easily sickened of steamboats and hotels, nor easily wearied by easily sickened of steamboats and notes, nor easily wearied by that most tiring of all human pursuits, the examination of thousands of pictures in great galleries. We have known men who had art culture, and were probably quite as fond of art as Mr. Atkinson is, yet who could not remain two hours in a picture gallery without getting a headsche bad enough to disqualify them for any other labour during the rest of the day; and we have known other sincere lovers of art who hated travelling, and did not think the risture collegies a comprehension for the approvement in the approvement in the approvement in the contraction of the contract the picture galleries a compensation for the annoyances inseparable from a nomadic life—the long tiresome railway journeys, the frequent change of hotels, and the horrible crossing of chopping seas in little steamers that pitch and roll till most of the passengers are sea-sick. Mr. Atkinson, however, is so happily constituted that his annual art tour, instead of being a weariness, is evidently the greatest of pleasures. Although he confines himself mainly to the subject of fine art in what he chooses to communicate to the public, it is evident from many scattered observations that he is keenly observant of everything that passes around him. M. Taine says that an Englishman has a remarkable avidity for facts, and that by the time he reaches middle life his head is furnished with five times as many facts as a Frenchman's head is. Mr. Atkinson is particularly English in this respect, and is always noting something worthy of his observation. But if he is English in this respect, he is less so in the absence of one of the commonest in this respect, he is less so in the absence of one of the commonest of English habits. He never grumbles, but goes everywhere with the same perfect good temper, and sees what is to be seen without quarrelling with places for not being like other places. Although the main purpose of the book is strictly kept in view, and we never forget for long that we are travelling with a student and connoisseur, he gives variety to his narrative by glimpses of scenery and brief allusions to history and manners which are always welcome when they occur, and are never wordy or overdone. We have seldom met with a book in which what is principal and what is accessory have been kept in better proportion to each other. Most writers would either have wearied us with incessant distant.

An Art Tour to the Northern Capitals of Europe. By J. Beavington Atkinson. London: Macmillan & Co.

plailiens short art, or the mader present of an "Art Tour," would say given a quantity of light reading about the people in the teamers and hotels. The book opens with the approach to lopsubagen, and the first page is a good example of Mr. Atkinson's aconic yet agreeable manner of describing what he sees as a

Being once established at Copenhagen, Mr. Atkinson of course went to visit the castle of Rosenborg, where there is a very interesting series of chambers arranged chronologically, each of them furnished according to the taste of a particular epoch, with furniture and art-objects exclusively belonging to the epoch represented. There are many remarkable treasures in this collection, but what is most remarkable is the realization of an idea which permits the visitor literally to walk down the centuries of the past. Mr. Atkinson gives a full description of the Museum of Northern Mr. Atkinson gives a full description of the aluseum of Northern Antiquities, which is already immensely rich, and is certain to in-croase in the future, as there is a law by which all tressure-trove must be brought to it, and a custom, not less efficacious than the law, by which the full value of every article is immediately paid for it by the authorities. Without such a practice it would have been impossible to secure "the astounding weight of gold-work" been impossible to secure "Theorems and the proposition of the property of the secure "Theorems are proposition of the property of the secure "Theorems are proposition of the property of the secure" of the property of the pr that distinguishes this museum. There have been many remarkable "finds," but the most remarkable seems to have been that by a husbandman working in a field in Fionic, who came upon a treasure of golden ornaments belonging to the fifth or sixth century which were valued at between ten and twelve thousand of our era, which were valued at between ten and twelve thousand pounds. We should like very much to know what became of the lucky peasant after this prodigious discovery. Did he act like a like a like a fool of reasonable, responsible person, or did the money make a fool of him? Our author does not think so much of the Copenhagen Gallery of pictures, which contains seven hundred works, of which nearly two hundred are by modern Danish artists.

nearly two hundred are by modern Danish artists.

Mr. Atkinson says that the castles and palaces of Danmark are extremely big for such a little country, on the same principle, we suppose, that landed proprietors who have very small estates (especially Scotchmen) have such a fancy for large houses, as if they were some sort of compensation. The palace of Christiansborg is spoken of as "unwieldy and overgrown." Our author does not fail to give us an account of the Thorwaldsen Museum and the Frauen Kirche in which stand his Christ and Twelve Apostles. The architecture of the latter. "though water museum and the Frauen Airche in which state his Offset and Twelve Apostles. The architecture of the latter, "though poor as poor can be, has one merit in common with that of the museum, that it does not militate against Thorwaldsen's statues." Mr. Atkinson seems to have been more impressed by the Thorwaldsen collection in church and museum than is usual with him,

waterest consecutive and museum than is usual with him, for he is not very easy to move by means of art, perhaps from having seen so very much of it.

At Christiania Mr. Atkinson greatly enjoys the scenery, and takes a hearty interest in the development of the small Norwegian school of painters. The two essential branches of this school are school of painters. The two essential branches of this school are the figure-painters, represented by Tidemand and his following, well known to us through International Exhibitions, and the land-acape-painters, who have wild mountain scenery for their subject, and either work at Disseldorf, or are at least inspired by the land-compe school which has fixed itself there. The characteristics of these two branches of art may be fixed in the memory very sasily. The figure-pictures are substantial in execution, but not either light spidswierous, and the subjects of them are always taken from heasent life, which they represent with the greatest possible symmetric life, which they represent with the greatest possible symmetric life. ngat or dexterous, and the subjects of them are always taken from passant life, which they represent with the greatest possible sympathy, and truth. The landscapes are full of magnificent natural materials, arranged in a brilliant scenic manner with very powerful and striking effects. Specimens of both kinds of art, are to be found in "Oscar's Hall," near Christlania: pathy sind truth. The landscapes are full of magnificent natural of granite, whilst the entrance-hall of the Hermitage is sustained in straining effects. Specimens of both kinds of art are to be from the Cimmerian Bosphorus has twenty monoliths. In the found in "Oscar's Hall," near Christiania:—

Chieff Mail, reached by one of the many small steamers which ply on

these waters; is finely structed on an unknown overlocking the florit. Passengers are landed at a dilapidated stage at the foot of a prottily withind hill, up which the path winds. At the summit one road leads to public pleasure gerdens, the other soon brings the traveller to the park-like grounds is which Cocar's Hall is planted. The view from the terrace and the tower commanding the flord, mountains, city, has not many equals even in this land of penorames; to compare it with the Rhine, which used to be the test of fine seenery, were to show it indignity. Entering within, the gree is cought by pictures in keeping with the landscape without. Let into the passelling are six compositions by Frick, a painter of Christiania, comprising mountains, forests, torrents, lakes treated in the showy, startling, some style which Norwegian painters borrow from Ditsectdorf. Yet symmetry, breadth, and brilliance make these pictures eminently decorative. In soberer mood are the ten scenes, known far and wide by engravings, taken by Tidemand from the life of the Norwegian peasant from the cradic to this greve. A bride adorned in bridal crown stands at the church-door; then a child falls sick, or a son leaves for the perils of a tahor's life. The best is the last, wherein the venerable couple are seated alone; the father reads to his aged wife from a large family Bible.

In these honest, downright works we scarcely feel the intrusion of art between nature and the spectator; the incidents are recorded with unadorned simplicity, the narrative is told as by unlettered men accustomed to unburden their minds with deep smotion.

Mr. A tkinson has much to say that is interesting concerning

Mr. Atkinson has much to say that is interesting concerning Norwegian landscape and Düsseldorf, in which he very accurately characterizes the Disseldorf influence:-

characterizes the Disseldorf influence:

The noble landscape [by Müller] which finds a place in the Gallery of Christiania, has every appearance of having been painted in Germany, and yet it is as a summary of what is grandest in Norway—dark mountains, a mountain tarn, pince, rocks, the distant sea, with a grand array of cloudland overhead composed into an imposing panorama. The foreground is elaborated after the usual Düsseldorf manner with loose stones and green herbage, and what is most unpictorial in Norwegian nature, such as the crudity of greens, has been mitigated by shade, and managed according to the German avstem. I have sometimes wondered what the Norwegians themselves think of these free pictorial treatments; adaptations may be needed for foreign, but scarcely for native eyes. It is true that the crude whiteness and cast-iron hardness of Swiss snow-mountains are always softened down by all native artists save the inferior herd who furnish the shop-fronts in Geneza. And so the only way to render the wild Norwegian landscape acceptable to the average eye of Europe is to pass it through some such medium as that of the Düsseldorf Academy. Yet I think it would be unfair and unwise to merge wholly the art of Norway in that of Germany. At any rate the painters of Christiania form a distinct branch in the school of Düsseldorf. There is also a very interesting chapter on Stockholm, a place which

painters of Christiania form a distinct branch in the school of Dussidorf. There is also a very interesting chapter on Stockholm, a place which Mr. Atkinson enjoyed greatly for its situation, but not so much for any art treasures that he found there. The architecture is either exotic, as in the Royal Palace, which seems to have come from Genoa, and the Museum, which seems to have come from Berlin, or else it is not of much value or importance, as, for instance, the old Swedish ecclesisstical Gothic. There is a medicere collection of a thousand pictures containing a large proportion of spurious examples, but a hundred of these pictures are Swedish, and therefore both genuine and interesting to the traveller who seeks art like a plant on its own native soil.

Our author tells us much about Russia which is either

Our author tells us much about Russia which is either absolutely new or else presented to the reader with a fulness and precision that give to old subjects a new interest. Indeed it may be said that Mr. Atkinson's method as a writer of travels is never to touch upon any subject at all unless he is either able to say what has not been said before, or to bring fresh evidence in support of an old truth. We all knew the general characteristics of St. Petersburg from the artistic point of view before Mr. Atkinson went there; we knew that it was a place remarkable for many shams and pastiches and a few substantial realities; that the Hermitage was a rich collection, that St. Isaac's Cathedral was a costly magnificent affair on which wealth had been profusely lavished, and that the Russian Emperors had a taste for malachite, and marbles, and mosaics. But Mr. Atkinson brings all these things before us with the vivid detail natural to a writer who has been long accustomed to the study of such subjects. He is always careful to distinguish between shams and realities, and is not to be imposed upon either by stucco or veneer in architecture or by copies in picture galleries. With such a guide as Mr. Atkinson we have the satisfaction of feeling that we really know the truth about subjects which caroless rumour had represented differently. Here is an instance of this. Most of us have heard that there are pillars of malachite and lapis-lazuli in the Cathedral of St. Isaac at St. Petersburg, but their structure was not explained. Mr. Atkinson is careful to tell us that they are really cast-iron tubes veneered with these precious materials. Even this is wonderful enough, for the eight malachite pillars are said to have cost 25,000%, and those of lapis-lazuli 12,000%, per pair. We rather dissent from the blame implied in Mr. Atkinson's observation—"Thus hollow are the most precious arts of Russia!" It seems to us that nothing can be expected except veneer when materials so precious are employed, and that there is really no false pretension here, any more than in the gilding on the dome of the same cathedral, which everybody knows to be superficial. Hesides, if Mr. Atkinson says that Russian arts are hollow because the malachite pillars are hollow tubes, he ought, on the other hand, to say that Russian arts are solid and substantial on account of the magnificent monoliths, which serve as pillars in that same cathedral of St. Isaac and alasyshare. The four portices of St. Isaac know the truth about subjects which careless rumour had repremagnificent monoliths, which serve as pillars in that same cathe-drai of St. Isaac and elsewhere. The four portices of St. Isaac are sustained by monoliths of polished granite from Finland, each seven feet in diameter, and sixty feet high; and in the Kazan Cithedral there are fifty-six monoliths thirty-five feet high, also the standard whilst the automore hell of the Harmitage is sustained

which stands the colossal bronze of Peter the Great is said to

which stands the coloreal arouse of Peter the Great is east to weigh 15,000 tons, and was brought to St. Petersburg by means of ropes and pulleys worked by men and horses.

Mr. Atkinson has a great deal of interesting matter about the churches at Moscow with their gilded and painted domes which make such a wonderful effect in the distance, and their almost overpowering coremonies or "functions" as they are called, which he thinks superior in their way to any religious ceremonials he has witnessed. Mr. Atkinson has also much to tell us about the scenery of Bussia and the difficulty of travelling and studying in it. witnessed. Mr. Atkinson has also much to tell us about the scenery of Russis, and the difficulty of travelling and studying in it for the purposes of the landscape-painter. It is certainly not attractive, and it is one of the best proofs of Mr. Atkinson's constant cheerfulness and good-humour that he could travel through it without showing any signs of low spirits. Indeed it is evident that Mr. Atkinson has just the right temper and constitution for a traveller. He is never seriously put out by an inconvenience, but bears it patiently whilst it lests, and then, when a better time comes, and pleasanter places are arrived at, he enjoys them all the more from the contrast. The wonder to our mind is that Mr. Atkinson can see so much without showing any signs of having Atkinson can see so much without showing any signs of having rather overdone it; but he seems always ready to look at a new church or pass a day in a new picture gallery. The habit of scientific classification as applied to art and artists has, however, scientific classification as applied to art and artists has, however, decidedly affected his appreciation of painting in one way, by making him apparently almost incapable of unreserved enthusiasm. He rarely describes a picture with any of the artist's passion, but simply indicates its place in the general art catalogue of the world, showing its affiliation to this or that school, of realism or classiciam, Düsseldorf or Paris as the case may be. Hence, although he knows everything about art schools, he often seems to have little real sympathy with the life and aims of a painter, and artists are to him very much what flowers are to the botanist and rocks to the mineralogist, specimens to be analysed and classed rather than teachers to be listened to or friends to be beloved.

HEATHERGATE.*

WE confess to always feeling a certain terror at first opening a novel which doals with a local dialect. This in most cases produces the effect of straining the reader's attention to understand a language which may be new to him; he is forced to lay siege to unknown difficulties of grammar and expression, to storm walls of unusual constructions, before he can arrive at the citadel of the fiction which is his object. In many cases when he arrives at this he is so weary with his toil that his heavy eyes are unable to take more than a casual survey of it, and want the power of observation necessary to appreciate its advantages. This practice of clothing a story in uncommon language, which may be adopted by a writer either as a tow de force or because the dialect, difficult of comprehension to the majority, is familiar and easy to him, has gone far to spoil Le cousin Pone of Balzac, and the works gone far to spoil Le cousin Fons of Balzac, and the works of the author who is perhaps more like Balzac than any other, both in his intense power and his habit of analysing the worst side of human nature—namely, Galt. The Last of the Luirds and Laurie Todd have but a small circle of readers now, and this is probably to be attributed to the fact of their being written in Scotch. There are those, indeed, who have found this a great objection even to the novels of Scott; and where so great a master-hand has failed to entirely overcome an obstacle, it shows either great courage or great ignorance, or perhaps both, in one who has not yet made or great ignorance, or perhaps both, in one who has not yet made a way in the paths of literature to grapple with it. There is a proverb about fools and angels which occurs to the mind when we come upon an instance of this; and the reaction from our first terror makes it the more pleasant to discover that the author of *Heathergate* does not fall into the former of these categories. There is no doubt too much Scotch in *Heather*categories. There is no doubt too much scored in Assumerante, but it contrives to contain a good deal that is amusing. The beok opens with a pleasant picture of the family of the Stormonts, the head of which having seceded from the Presbyterians, has procured the muistry of the Episcopalian chapel at Heatherpute. Of Heatherpute's locality we have Presbyterians, has procured the ministry of the repiscopalian chapel at Heatherpute. Of Heatherpute's locality we have no more certain information than that it is in the north-east of Sootland—a somewhat vague direction. Mr. and Mrs. Stormont have a family of two sons and three daughters; and in this fact, with which we are made acquainted at the beginning of the book, we get a hint of what is its crowning fault. The author, whose strength evidently lies in the direction of quiet touches of humour and character, has fallen into the not uncommon error of thinking that to secure interest a complicated plot is necessary. Complicated plots, such as the late M. Gaborian's or Mr. Wilkie Collins's, wherein the author, however tangled his skein may appear, never loses sight of the end upon which he must pull to unravel it clearly; wherein, however often we may be taken from place to place, from people to people, each scene has its due proportion to the whole book, so that there is no appearance of purposeless rambling—these certainly do secure interest. Where the skein seems carelessly muddled, instead of artfully confused; where the writer seems to diverge vaguely at haphazanl from one part of the world to another, and the sense of connaxion between different portions of the novel is lost, the interest falters, straggles aimlessly after the story which seems to have no definite goal, and finally expires before the and is attained. And it is thus with Heatherpete. Of the two sons of Mr. Stormout, can has making better to do then be killed in a duel, for no purpose whatever, as far as we can discover, so far as the interest of the story is concerned; and the other falfile his fate by writing home a set of letters from America to amounce his marriage, and the fact that in the circumstances of that marriage he has come upon the track of a curious secret—the secret of the book. About this there is nothing either new or striking; it is the old story of a connection, long thought to be illicit, turning out to be a marriage, and thus putting a supposed illegitimate son into the position of rightful heir. There appear, indeed, to be certain remarkable facts in the way in which this is discovered by a long chain of evidence, the missing links of which are continually turning up at nexpected times and places; but these sudden apparitions are so confused and so confusing that we have no clear idea of how they lead to the completion of the necessary proof. They are not unlike the plates which are kept in continual revolution by the hands of a skilful juggler; but in that case the area of performance is small, and the time of representation short. If to ascertain the simultaneous motion of the plates it were necessary for the spectator also to be in continual motion, travelling to and fro from one quarter of the globe to another, the juggler might not find a large sudience.

Of Mr. Stormont's three daughters two are even less important to the story than are the sons; one of these indeed, Effie, resembles to death of the plates in the Greek plays, excent that she has a serious to

Of Mr. Stormont's three daughters two are even less important to the story than are the sons; one of them indeed, Effie, resembles the dumb masks in the Greek plays, except that she has coarcely so much to do as they had. And this applies to a large number of the characters who appear in *Heathergate*. The book has one great merit to start with—that of being in two volumes, one less than the ordinary length; but when these two are crowded with so many personages that, if every one of them were worthy of attention, they would easily fill up a romance of the length of the *Wandering Jew*, this ceases to be a merit. It is partly in consequence of this that the narrative is halting and confused, and that the second volume, in which the development of the plot is that the second volume, in which the development of the plot is worked out, possesses an animated dulness which is peculiarly irritating. There is a thin thread of interest and intelligence irritating. There is a thin thread of interest and inventoring running through its weary meshes which has just sufficient force to compel the attention and to raise hopes of something better and clearer coming, which never comes, in spite of repeated disappointment. It is probable that the writer of *Heatheryate* will not rise to any eminence in the walks of fiction by the skill of his plots. On the other hand, there are indications of merit to be discovered whenever we are allowed to get one or two of the characters quietly together. There are clever touches, for instance, in the dialogue between Mr. Stormont and his wife, when he is about to drive into the town of St. Mary's to fetch out his daughter Violet, and proposes to kill two birds with one stone by selling some outs at the same time. She recommends him to make a better bargain then he did about a certain calf with one Jock Butchard, and asks him how he means to bring Violet out:—

him how he means to bring Violet out:—

Convict the minister of an error in his grammar, or a false quantity in his Latin, he would smile, and see, and amend it, for it was a very rare circumstance that he failed in either; but question his shrewdness in bargaining, or the worldly wisdom he so much lacked, and he roused at one.

"I mean to drive Wallace Wight in Peter Poste's gig; the bairn would not like to come out with cart. But, my dear, you should not let your memory retain such trifles as the sale of that calf; especially as you prevented it even when the man assured me he was bidding its full value."

"Kae! and you to believe him, notwithstanding what the Wise Man said anent buying and selling! Ah weel, Jock Butchard would have gude reason to boast if he had gotten the calf at the price he asked. If ye could but be persuaded that other men are not so as-fauld as yourseff!"

"Charity, charity, Marjorie hinny! I do think your speech savours of suspicion and ill-judging of your neighbour."

"Jock Butchard was ne'er neighbour of mine, and I know well he tried to take you in. And, maister," she said suddenly, "you would not be the well beloved of us all as ye are, if you bore not this trust in your fellowman in your own true heart. But I maun remind you that you are also not to be self-confident, and it is something like it to speak of driving that skeigh brute in the gig,"

The character of Tibby Gowk, too, scornful and bitter with the

The character of Tibby Gowk, too, scornful and bitter with the scorn that is often found in the Scotch mind, displays considerable powers of observation. Her remark at the end of a long recital of one of the laird's sons running off to see and being cursed by his father that that the mithes for into the desagged and said are recital of one of the laird's sons running off to sea and being cursed by his father, that "his mither fell into the dwams, and said aye he would droon (she was but a peakin' body)," is very characteristic. Miss Clavers, the talkative, sharp-tongued old lady, is also well drawn and life-like. Both Tibby Gowk and she have a considerable power of saying disagreeable things; but in the case of the former this proceeds from weariness and contempt, and in that of the latter from a vitality that is repressed by want of means and therefore dashed with envy which comes out in little casual reflections all the more pointed because they have nothing to do with the actual subject of conversation. Miss Clares cannot tell how she came by a certain piece of information without dealing a blow at one of her informante. "A next who will have," the says, "tellt Freeman, Colin Colville's man (set kinn up, wi' his body servant!)." The mixture of real kindness with this superfigial ill-nature, a not uncommon combination is weares of Miss body servant!)." The mixture of real kindness with this super-figure ill-nature, a not uncommon combination in women of Miss Clavers's age and circumstances, is well conceived and delicately executed. Again, the way in which the calcium between the laird and his old servent Saunders are indicated, solutions which have comething peculiar to Scotland in them, is not without a quiet humour. The laird has mislaid as key which is the Saunders and presented to him is allowed.

. Montherpate. s vols. London: Henry S. Wing & Co. 1872.

" Where found ye #?"

"Just in your ain not potient. Her suid it be? and you lookin' for it every game but the risks aim ! It's the trails you're growin' did to, and see topically you'll me give in to the multime conscalance of yours. In it the lary yo were wanted ?"

d, and I mind now I had on the great-coat when I looked up all armst have alleped it into the pocket instead of putting it that drawer, and must have alipped it into t into my doub."

To hear you is like the bairn's rhyme:---

"* On Tintook Tap there is a mist, And in the mist there is a hist, And in the kist there is a cap."

"Lockin' yes drawer wi's key, and then lockin' that in some ither place! Wha's special yes bits o' poppers?"

"This is unbeasable, baunders. Long as we have been together, we'll need to part unless you keep a better scrapht tongus in your head."

"Tuta! There needs two words to that, and I'm no gaun to speak and

There is a sense of fun in the condescending proposal made to a lady by the conceited and besotted laird of Dunure, which, after reciting all the vest advantages that must accrue to any woman who becomes his wife, closes with the words which seem thrown in morely as an unnecessary afterthought, "and I like you very much, Miss Smith; I do indeed." In fact, the power of sketching character with a correct eye and a light touch which is evident in several passages of the book leads us to hope that the author of Heather gate will make another adventure as a writer of fiction, and will on that occasion relinquish the thought of attracting attention by talent, and confine himself to the portrayal of quiet life, in which there is much chance of his succeeding. In the event of his doing this, he will do well also to avoid more than he has done the habit of making private reflections in the character of author, which has here led him into the strange mistake of attributing to the Spanish poet Ercilla a saying as old as the time of Solon.

GERMAN LITERATURE.

T is but natural that the recent accession of growtness to Prussia should have occasioned a corresponding accession of contribu-tions to Prussian historical literature, in exposition of one stage or another of the steady rise of the House of Brandenburg until its persevering ambition has been rewarded by the Imperial crown. The first volume of Droysen's Frederick the Great is the eighth volume of a series designed to embrace the whole of this prolonged develop-ment. It is also something more—the period comprised in it, from the accession of Frederick until the definitive acquisition of Silesia, being one in which the course of Prussian history was intimately associated with the general politics of Europe. Though no imitator of Ranke as to form, Droysen belongs essentially to the same school as that eminent historian; he is at home in courts, camps, and cabinets, and systematically disregards the social movecamps, and cabinets, and systematically disregards the social movements which constitute in general the determining forces of history. Adequate attention to this department would in fact be wholly incompatible with the minute and patient attention which he has bestowed upon his peculiar field; and it may be added that the importance of diplomatic history is relatively greater at the beginning of Frederick's reign than at most periods. Frederick was not, like Cromwell or Napoleon, a great man fushioned by the circumstances of his times; the fatalistic school of history notwithstanding, there was no absolute reason whatever of history notwithstanding, there was no absolute reason whatever why the incumbent of the Prussian throne might not have been as weak as his successor; and had this been the case, nothing on earth would have made Protestant Germany a first-class Power. The gist of the story does for once actually lie in campaigns and negotiations, and Droysen's almost exclusive attention to these subjects is fully justified. The range taken by him is very wide, extending over nearly all the Courts of Europe, the actuating principles of whose policy at this time of general unsettlement are ciples of whose policy at this time of general unsettlement are developed with masterly acutaness, supported by a most extended the command over diplomatic literature, published and unpublished. Frederick's Silesian campaigns are well described, and the author's perspicuous style, though devoid of ornament, is animated and attractive. The general tendency of the work is highly favourable to Frederick, whose conduct is certainly entitled. nignty is yourselve to Frederick, whose conduct is certainly entitled to every excuse, if there be any excuse, that public utility can offer for unprincipled rapacity. It is, indeed, the precise counterpart of Prince Biamarck's policy in 1866, and must be appreciated.

en similar principles.

Professor Richter's "Annals of Medisval German History Professor Richter's "Annals of Medimval German History" | sre arranged in a tabular form; the most material facts being given in large type at the head of the pages, the less important or doubterful ones, with the references to authorities, in smaller type below. The book is intended for the teachers and atudents of historical classes, by whom it will be found useful, and equally so as a compendium for self-instruction; it is not designed for general readers. The first part comprises the annals of the Frank kingdom under the Merovingian dynasty.

H. M. Richter's I work is intended to trace the currents of public opinion in Germany from 1860 to 1870 which contributed

to bring about so ducided a manifestation in the latter year, is favour of German unity under Prassian leadership. Litturery and social influences are not excluded. There is little in the book to criticize, and not much to commend.

Herr Adolf Beer*, the author of a history of the first partition of Poland, publishes some of the materials on which his work was based. These are the reports of the Austrian diplomatist Van Swieten to Prince Kaunitz of his almost daily conversations with Frederick the Great on this subject, and on the mutual relations of the three partitioning Powers in general. For the sake of greater accuracy, these are conveyed in French, the language employed by the King and the Ambassader in conversation, the substance of the despatches being in German. Herr Beer, judging by internal evidence, pronounces the observations of Frederick to be reported with strict fidelity. This may be, but the envoy has evidently framed his versions of his own rejoinders with an eye to effect. His own comments, conjectures, suspicions, and attempte to penetrate Frederick's designs are undoubtedly sincers, and cast a very curious light on the diplomatic manusures of the period.

Bavaria † is at this day one of the countries where Liberalism and Ultramontanism appear most evenly balanced, and the light

and Ultramontanian appear most evenly balanced, and the light cast by their long struggle upon the traditional policy of the Roman Court imparts interest to what would otherwise be but a dry record of tortuous chicanery. Before the period selected by Herr von Sicherer for the starting-point of his history, the sway of Ultramontanism in Bavaria had shown symptoms of insecurity. The Electors, in fact, had always asserted a degree of independence in their temporal relations with the Church which was wholly inconsistent with Roman maxims, and only condoned in consideration of their zealous discounsement of herew. Not only were Protestants prevented from settling in the country, and the few already established subjected to all kinds of disabilities, but even Protestant grammars and dictionaries were excluded from the schools. This state of things could not well continue throughout the circle out on the country and to the interest dispute of the Caust of Rome, Protestents had already been placed on a substantial equality with their fellow-citizens, when, in 1799, the determination of the Bavarian Government to restrict the authority of the Papal Nuncio over the national clergy led to an interruption of diplomatic intercourse. The Government insisted upon a definitive Concordat, and the recalcitrancy of the Curia forms the subject of Pn. von Sicherer's fatiguing and intricate, but valuable, history. The negotiations finally terminated in 1821, in an arrangement with which Rome professed to be satisfied, concealing, as Dr. von Sicherer shows, her disappointment at the substantial frustration of her

most important objects.

A biography of Fénelon ;, by E. R. Wunderlich, is neat, workmanlike, and written in a spirit besitting its subject. It advances no claim to originality, and is indeed avowedly sounded

on the life by Bishop Bauseet.

The interesting theme of the early Coltic Church is not altogether new to Dr. Ebrards, who ten years since published a series of carrys on the Culders in a theological periodical. Since that period our knowledge of the subject has received considerable additions from publications of new MSS. and the works of several Scotch ecclesiustical scholars; and Dr. Ebard now feels himself competent to write the history, not merely of the Church in its own domicile during three conturies, but of its musionary activity on the Continent of Europe. The relation of the early British to the Roman Church is notoriously a subject of controversy, and it is Pr. Ebrard's mistortune, not that he has triken a side, but that he is too obviously the holder of a brief. He contends for the independence of the Celtic Church as evinced by its peculiar observance of Easter, and labours to establish the evangelical character of its doctrines; even the awkward question of its comobitic arrangements is met by proofs that a monk's marriage was accounted legitimats, and that no especial sanctity was attached to celibacy. Miraculous legends are disposed of by the help of a theory of "charismats" and a good deal of mild rationalizing; it is further proved that they are at all events less miraculous than the miracles of the rival Church. latter part of the work contains the history of the long and eventually unsuccessful struggle of the Culdes missionaries in Germany with the representative of Rome, the Englishman Winfrid, whose part in German ecclesiastical history rescubles that of Augustine in his own country. Finally are recorded the degry and ultimate extinction of the Hiberno-Scottish Church.

Dr. Schurer's "Times of the New Testament" | is a very useful auxiliary to Biblical study. The first part contains an interesting and lucid summary of the political history of the Jewish nation from the time of Antiochus Epiphanes to the suppression of the revolt of Barchochelas under Indrian. The second and more important part is devoted to a review of the national life of

Palestine in the age of Christ; treating of its ethnology, its constitution, political and religious, the leading sects, the schools stitution, political and religious, the leading sects, the schools and synagogues, the Messianic expectations of the people, the condition of the Jews dispersed among the Gentiles, and the contact of the Jewish and Greek intellect represented by Philo. The

of the Jewish and Greek intellect represented by Philo. The work further contains valuable excursuses on chronological, genealogical, and numismatical questions.

Dr. Probst is a Catholic theologian, and the general drift of his treatise on the ecclesiastical discipline of the first three centuries is to establish its substantial identity with that of the Church of Rome at the present day. His method, however, is strictly objective; he is profuse in the citation of authorities, and does not disdain the results of modern criticism. His work is undoubtedly calculated to be of much service, if its special purpose is not left out of sight. It is divided into four parts, treating respectively of the general theory of the Church and the various orders of the clergy; of rites and coremonies, sacred buildings and their ornaments; of liturgical matters, including the disciplina arcans; and of the exercise of administrative authority.

Professor Max Müller's Lectures on the Science of Religion; have appeared in a German translation at Strasburg, with the essays on "False Analogies" and on the "Philosophy of Mythology," and a beautifully photographed portrait of the author from Mr. Joy's medallion.

logy," and a beautifu Mr. Joy's medallion.

A. Fasolius's researches into the ancient Egyptian Calendar 1 are designed to establish a rule for its conversion into the Julian and Babylonian methods of reckoning. The author fully admits the extreme difficulty of the subject.

The late Dr. Kutzner's geographical, historical, and scientific casays 5 are agreeably written, but have few pretensions to novelty

cassys 5 are agreeably written, but have lew pretensions to novelty or extraordinary interest.

Dr. Fechner's || "ideas" on creation and development principally relate to the Darwinian theory, and their chief purpose appears to be the reconciliation of it with the doctrine of design. Dr. Fechner writes with great earnestness and candour, and with adequate persplouity, but conveys the impression of being less at home in physical science than in metaphysics.

The interest attaching to the archeology of Sweden I during

The interest attaching to the archeology of Sweden ¶ during the heathen period is obvious; what we were scarcely prepared for was to find so much of it of a numismatic character. Being destitute of any currency of their own, the rude inhabitants were nevertheless not indisposed to avail themselves of that of their civilized neighbours; and the frequency of the occurrence of Roman coins at particular periods constitutes an accurate index to the activity or relaxation of commercial intercourse. During the peaceful period from Trajan to Commodus buried coins are numerous; during the subsequent time of barbarian invasion of the Empire they almost totally disappear; they recur under Constantine and his successors, at which epoch the bracteates, or imitations of Imperial coins, executed in the North of Europe, make their first appearance. These are rudely executed, but their design is unmistakable, and they indicate a very considerable advance in civilization. After another interruption, corresponding to the second era of barbarian incursion, coins both of the Eastern and Western Empire again become frequent; and as in process of time the Northmen acquire seafaring habits, the coins of almost all nations are found to occur. Angle-Saxon mints from the time of Edgar onwards are largely represented, but the most remarkable fact is the large amount of Arabic coins. It is interesting to note the abundance of money during periods of tranguillity, and its disappreparage in time of war. Even that periods of tranquillity, and its disappearance in time of war. Even that remote region evidently profited from an early period by the resort of merchants, while it may be inferred that few of the conquerors of the Roman world returned to their original homes. There is no other topic of equal interest in Dr. Hildebrand's book, although weapons, ornaments, and other archaeological treasure-trove receive due extention. due attention.

The Godefroy Museum at Hamburg has recently received a collection of 470 coloured drawings of fishes of the Pacific Ocean, executed by Mr. Andrew Garrett **, and representing a collection formed by him in the course of several years. We are indebted for the publication of these splendid sketches to the publication of these splendid sketches to the founding of the Museum control of the Museum c nunificence of Herr Cosar Godefroy, the founder of the Museum, who has greatly augmented the value of the publication by entrusting it to Dr. Albert Günther, the first of living ichthyologists. The editor's scientific knowledge, and his facilities for consulting the drawings of Captain Cook's specimens preserved in the British Museum, have edabled him to rectify several inaccuracies of the original artist; he is also solely responsible for the accompanying text. The collection is in many respects nearly complete, contain-

ing, for example, twenty out of the twenty-five known Parities species of the genus Chetodon. Mr. Garrett is still actively at work, and it is hoped that the deficiencies will be completely supplied in process of time. The publication will occupy ten parts, comprising twenty plates each. The first is devoted to the genera Serramus, Mesoprion, and other acanthopterygious fishes.

The life of Christian Daniel Rauch , the greatest, as we should conceive, of all modern portrait-aculptors, presents some analogy to that of the most renowned of English portrait-aculptors, Chantrey. Like Chantrey, he was born in humble circumstinces, and though, unlike him, apprenticed from the first to his ultimate profession, the difference was rather apparent than real, he being principally employed in decorative work. As with Chantrey again, the peculiar nature of his talent recommended him to the notice of the great and opulent; he mixed largely in the highest society, and if a less accomplished man of the world than his English contemporary, he was in a far higher sense a votary of art. The early exercise of his talents opened to him the path to Rome, where he arrived much about the same time as a yet more illustrious conexercise of his talents opened to him the path to Rome, where he arrived much about the same time as a yet more illustrious contemporary, Thorwaldeen. He there attracted the notice and enjoyed the patronage of the Prussian envoy, Wilhelm von Humboldt, by whose influence he obtained the commission for the work that created his fame, his monument of Queen Louise of Prussia. The execution of this task (1811) took him back to Germany; ere his return to Italy he was concerned with the Crown Prince of Bavaria in the purchase of the Æginetan marbles for the Glyptothek at Munich. He subsequently resided at Carrara, and lived alternately at that place, Rome, Berlin, and Breslau down to 1819, when he was installed as Professor of Sculpture in the Barlin Academy, and became, as his biographer says, the definitive founder of that school of Berlin sculpture which he directed for nearly forty years. Here the work concludes for the present founder of that school of Herlin sculpture which he directed for nearly forty years. Here the work concludes for the present. Here Eggers has performed his task most admirably. He has thoroughly mastered and digested an enormous mass of correspondence, the substance of which he reproduces in terse and pregnant language, rarely having recourse to the letter of the original. Although Rauch's life can hardly be termed eventful, the biography is never dull a success in great measure to be attributed to the is never dull; a success in great measure to be attributed to the dexterous introduction of eminent personages, such as Humboldt, and the manuer in which it is made to illustrate the career of Rauch's comrades and rivals in art, especially Schadow and Friedrich Tieck. The particulars respecting the progress of Rauch's works are always interesting; the narrative is enlivened by the sensonable introduction of references to important public events, and the whole work is an excellent example of the art of diver-sifying a narrative which, in inferior hands, might easily have

been insipid or altogether technical.

The naturalization of Shakspeare in Germany is a counterpart to the naturalization of Handel in England. England has adopted the mighty German master of Oratorio without the slightest resentment at his superiority to her own Purcells and Boyces; and the greatest dramatists of Germany, to their honour, have and the greatest dramatists of Germany, to their honour, have contributed the most to the domestication among their countrymen of the greater Englishman. The claims, however, which commanded the allegiance of Goethe, Schiller, and Lessing failed to impress the late Dr. Roderich Benedix †, an esteemed writer of agreeable comedies. The writers referred to have, he thinks, been depreciated by their ungrateful countrymen, and a good half of Shakspeare's fame is owing to his foreign extraction. This gratuitous defence of the injured and uncomplaining worthies is highly disinterested on the part of Dr. Benedix, whose own reput has much more to apprehend from the tooth of Time than from the renown of Shakspeare. He has much to say on the subject, but has much more to apprehend from the tooth of Time than from the renown of Shakspeare. He has much to say on the subject, but the substance of his complaints is reducible to this, that the incorrigible Shakspeare will persist in being opulent, transcendent, and unfathomable to a degree wholly illegitimate in a dramatist; who ought to stint plot and incident to the measure of his five acts, and bring down his ideas to the capacity of an intelligent dramatic critic to apprehend a novelty on a first representation. In a word, the ocean refuses to be contained in the pail, and the pail refuses to be comforted. Or can the work peradventure be but a concealed satire, designed to exhibit the impossibility of any dramatic representation of real grandeur in an age where the critic is put above tion of real grandeur in an age where the critic is put above

e poet ? The late W. Wackernagel's lectures on Poetry and Rhetoric‡, now The late W. Wackernagel's lectures on Poetry and Rhetoric I, now edited by L. Sieber, were originally delivered in 1836. They treat, first of poetry, secondly of prose, thirdly of style in general, going through the subject in the usual order and in very methodical fashion. They contain much useful information, but hardly seem to differ in any material respect from ordinary esthetical manuals.

No man has a better right than Klaus Groth to discourse on the subject of dialects as literary languages, and his essay, principally on his native Platt Deutsch, is as entertaining as it is instructive. He denies that Low German is giving ground to High German, although admitting that the area where it is spoken in its purity is diminishing, and that a new dialect is arising from its mixture with High German. with High German.

These is nothing very remarkable in Adalf Rusenberg's literary feedbases, except an operational disregard of the amenities, or the conventions, of criticism. Madlle. Assing is soundly and justly rated for the effrontery of her literary resurrectionism, especially in her recent publication of Prince Puckler-Muskau's correspondence. The same author has written a very fair account of the dramatists of the Second Empire †, in a spirit which may be inferred from the heading of one of the chapters—"The Dramatists of the Decadence."

tists of the Decadence."

Mr. Karl Trübner, who has planted the banner of German bibliopolism at Strasburg, and appears determined to achieve renown for publications on all matters connected with Alsace-Lorraine, sends forth two interesting little contributions to the history of early French literature—the Computus of Philip of Thaun 1, edited, with an essay on the author's language, by Dr. E. Mall, and a monograph on Louise Labé, by E. Laur. §

Miss von Bohlen's version of In Memoriam || is very accurate and elegant. The indefinable magic of the original is indeed absent from the rendering; which, however, if on one hand more homely, is on the other more perspicuous. The effect is something like that of revisiting by daylight a spot hitherto only familiar by the glimpses of the moon.

FIRE DUKE OF EDINBURGH'S MARRIAGE.

The happy days when a Poet Laureate was a working official, and carned his humble gratuity by the facile composition of appropriate verses, the public had the satisfaction of finding their loyalty expressed for them in the highest flights to which loyalty could go. Great CESIE, as the poet of the time was pleased to call Geomes II., looked for verses if there was a Boyal marriage, or birth, or death, and the verses came. The heathen deities were always at command to smile or weep, as the case might be. But now that our Laureate is merely an eminent poet on whom the that our Laureate is merely an eminent poet on whom the title is conferred as simply certifying that no better poet is he pleases, and on subjects of his own choice, the expression of loyalty is put as it were in commission, and every one who addresses the public is called on to offer his contribution in a humble prosaic way. There cannot be much to say if the Muse is silent and the smiling deities are not invoked. Health and happiness to the bride and bridegroom, and congratulations to the QUEEN on seeing another of her children satisfactorily settled in the world, form the sum and substance of all that can be said. All that can be added is to note the fact that Royalty is still so much of a living reality in England that a vast number of persons in every part of the Empire will read the accounts of the Duke of Edinburgh's marriage with almost as much interest as if it were a matter directly concerning their own home circles. The Queen is the friend of her people, and it is pleasant to think that every English family is privileged to look on the Duke's marriage as they would look on the marriage of the child of a friend. It is precisely because this is the natural and spontaneous feeling of the country that Royalty is powerful. And if any marriage in the Royal Family would excite some honest enthusiasm, it is of course doubly interesting when the marriage in question happens to be a very grand one. The Queen, like humbler parents, has been content to see very different lots fall to her children Some of them have the minimum, and some the maximum, if the greatness that can be associated with Royal life. Nobody has a word to say if the Queen is pleased to sanction a comparatively humble so much of a living reality in England that a vost numcan be associated with Royal life. Nobody has a word to say if the Queen is pleased to sanction a comparatively humble matriage in her family; but variety is always attractive, and it is soothing to the national pride to find the Queen's son marrying the daughter of the Emperor of Russia. The commonies of the wedding itself have all been on a style of unquestionable grapheer. The Russian Court has always been a magnificent Court, and when it puts on its best appearance it has now perhaps no equal among Courts. The Histiah reader cannot help a thrill of gratification when he follows the secounts of illuminations, and the benediction of the Neva, and all the military splendours, and a trousseau of fifty dresses, in which statidnesses are not included. This is sumething like a wedding, and all this gorgeous gaiety is in henour of an English Prince.

Ecclesiastically too, this wedding has its exciting side. for

menous of an singlish Prince;

Reclementationly too, this wedding has its exciting side, for the bride belongs to the Greek Church, and we are not essistenced to have much to do with the Greek Church, and it will be a new excitement to be brought into sometimen with it. A Royal bride who is not of the recognised form of Protestantism might awaken this apprehension in tissid minds, but fortunately we may so extremely little of Greek Christians that we do not y animosity towards them. In point of doctrine there insuces between our Churches which are no double deally of importance, but there is not the slightest of golitical objections to the Greek Church. There is not the distribute the Greek Church.

us in Ultramontanism; and for the purposes of pageantry and impressive ceremonial it is excellent. We of course, and those who represent us at St. Petersburg, cannot pretend to come up in any way to the gorgeousness of Greek ecclesiastics. Still we can but do our best, and it sounds well when we hear that the Dean of WESTMINSTER went clad in a red silk gown and with a gold chain round his neck to call on three Patriarchs in succession. If in spite of Seron any man could ever be safely called happy before his death, the Doan of Westminster minds always love to think that by being happy themselves they make others happy also, and the felicity of the Duke of EDINBURGH and the new Duchess must receive some purceptible increase from the thought of the intense pleasure which Dean STANLEY will have derived from their wedding. He will appreciate to the utmost its historical importance, he will fathom its ecclesiastical and political significance, ne will lathom its ecclesiastical and political significance, and at the same time every detail of every ceremony will have a special meaning to him. Whether the Russians are as much pleased with the match as Englishmen are it is impossible to guess, as every utterance on such a subject is in Russian purely official. The Case wills it, and that is enough. But we may notice that the tone of the Russian pures has alwesdy become more attention. of the Russian press has already become more concilia-tory towards England. We at least are praised for our growing moderation. Since the settlement of the our growing moderation. Since the settlement of the Khiva affair, a leading Russian paper points out, Englishmen do not seem to be so disagreeable as they were when speaking of Russia. This is true. We cannot be always holding forth on the Central Asia question, and on the difference between Bussian promises and performances. The time of silence arrives, and then the Russians have the double entifection of having out all they want and of double satisfaction of having got all they want, and of having let us complain till we are so tired of complaining that we are content to accept in silence what we cannot

It happens that two incidents of some consequence in the history of Russia have taken place while the preparations for the wedding have been going on. Field-Marshal Count von Berg has died, and his funeral has been attended by the Czan and his Court as a mark of respect, not only to his personal merits, but to the high station he occupied as Viceroy of Poland. He is not to have any successor. There is no more to be any Viceroy of Poland, which is to be governed, like any other pro-vince, by an ordinary Governor. The end of Poland has thus come at last, and even the last remnada of its historic greatness has passed away. It is a mere part of Russia now, and there is nothing to which a special Vice-Royalty can be attached. Russia no longer awakens Hoyalty can be attached. Russia no longer awakens the sympathy of Western Europe for the Poles by the suppression of their independence; nor are the relations of Russia and Poland any longer a part of European politics. Poland has become once for all a province of Russia, and the Poles are but the provincials who live in that district. In the second place, the Czar has just issued an edict subjecting all Russians of every rank to military apprice. There are to be no more exemptions to be claimed. service. There are to be no more exemptions to be claimed on the score of rank or purchased by money. The nighty millions of the Russian nation are to be an armed people now; and it is calculated that in fifteen years Russia will have a total force of two millions of soldiers, and will be able to send half a million of men over her frontier if she resolves to be the attacking party in a great war. The Emperor ALEXANDER ing party in a great war. The Emperor ALEXABDRE says emphasically, and with evident sincerity, that the constitution of this gigantic force is not to be taken as a sign

of coming war, and that he has no thirst for military renown. Probably it will be a long time before any his successors provokes a great war as deliberately as his father did. Still, with all danger on the side of Poland removeds and with an army prodigious, even according to the standard of modern Continental armies, Russia is a very formidable Power. We can see this plainly, and may as well own it frankly. At the same time the connexion now formed between the Royal Families of the two countries, and the increased intercourse between the two nations to which this connexion will probably give rise, will, we may trust, do something to prevent Russian statesmen from using their new strength in such a way as to give England grounds for serious apprehension. The bride of the Duke of Edinburgh will be welcomed here, not only for her own sake and that of the family she is entering, but also in the hope that she may discover and report that she has come to live among a people which has not the slightest ill-will towards her countrymen if only it is left in peace.

SPAIN.

THE new Spanish Government seems to be readily acknowledged by the whole country, with the exception of the districts which are still occupied by the Carlists. Even ROQUE BARCIA, one of the principal insurgent leaders at Carthagena, is kind enough to advise his friends in a letter to a newspaper to suspend their Federalist opinions for the present, and to give a patriotic support to the Government. As he justly observes, it is desirable to concentrate the national efforts for the suppression of It is only surprising that the Carlist insurrection. the same obvious reflection had not occurred to himself and his associates when, during five months, their own rebellion secured to the Carlists the most effectual diversion. At that time the government was administered by a Republican of undoubted sincerity; whereas Marshal SERRANO and his colleagues have always preferred the monarchical institutions which are hateful to patriots of the order of Roque Barcia. It is indeed not a little surprising that an insurgent lender should, within a week from the surrender of Carthagena, be in a condition to write letters to the newspapers. After taking part in the negotiations with the obliging and considerate general of the besieging army, Roque Barcia was caught with many other fugitives on the Darro, which unsuccessfully attempted to escape in the wake of the more lucky Numancia. His appeal to his own political faction on behalf of the Government is perhaps the consideration for his immunity from prosecution. end of the tragical farce of Carthagena was perfectly consistent with the whole of the previous story. Although the bombardment was prosecuted with energy, no breach had been effected; and the garrison was still supplied with provisions, when the officer in command of the castle of Atalaya thought it expedient to sell his post to the enemy. The fort was occupied by a detachment of the besieging army, before the insurgent chiefs were aware of the treachery which had been perpetrated; and, after some hositation, the governing body and the populace agreed on the necessity of surronder. With characteristic impudence the report and proposed that their patriotic conduct should be formally acknowledged, that all persons should be exempt from punishment, and that the rebel officers should receive corresponding rank in the regular army. The best excuse for their audacity was the subsequent concession by General Dominguez of many of their demands. The conditions of capitulation commence with a recital of the heroic defence of Carthagena as a reason for the favourable terms conceded to the rebels. A general amnesty is accorded, not only to insurgent civilians, but to the officers who had been guilty of mutiny and treason in their most aggravated form. The convicts, indeed, were nominally remitted to prison under their former sentences, and in the circumstances the engagement that they should suffer no additional punishment was just and reasonable. The thieves and murderers who have served in the garrison of Carthagena incurred no additional guilt when they pro-fited by the opportunity of liberation. It was not to be expected that they would sacrifice themselves for the benefit of the Government and the community which have kept them in durance. There is no reason to believe that they have committed additional crimes of the ordinary type while they have borne arms for the insurgents, and they se searcely be accused of treason. More than two thousand of these men are now in the custody of the French authoriti who will probably be only too glad to restore them to the Spanish Government. It would seem that those of the rebel leaders who escaped took unnecessary trouble, they would apparently have enjoyed, if they had remained the consequences of their transaction. It is impossible to regret that the termination of an accountable and anomalous struggle was not attended with bloodshed. Some of the eye-witnesses naturally contrasted the amenities which passed between the besiegers and the robels with the savage retaliation which was practiced by the victorious army of Versailles on the Paris Communists. Triumphant factions in Spain have often committed frightful atrocities, but at Carthagena there seems to have been an exhibition of general tolerance and good humour. To the military commanders it may perhaps have seemed that there was little difference among various sections of Re-It remains to be seen whether the campaign publicans. against the Carlists will be conducted with equal modera-Unlimited toleration of treason indicates a low political and moral organization. National unity is worth little if it can be openly assailed without provoking general indignation.

The Spanish Admiraland his squadron displayed to the last the same singular incapacity which has been shown throughout the struggle. There would have been no difficulty in attacking the Numancia in the harbour before there was time for her to get under way. When the vessel sailed towards the blockading squadron, it might have been thought that some vigorous effort would be made to redeem many previous failures; but the Numancia passed through the squadron almost without molestation; and it was only found possible to intercept the Darro, which was too weak to offer resistance. If Admiral Chicarro was powerless against a rebel ironclad vessel, he displayed superfluous vigour in dealing with a harmless English merchant steamer. The Ellen Constance was passing near the Spanish squadron at night when she was stopped by a shot from the flag-ship; and she immediately obeyed the signal. It is not clear whether the vessel was suspected of attempting to run the blockade; nor indeed is it known that a blockade had been formally and legally established. The subsequent conduct of the Spanish Admiral and his officers was equally strange and indefensible. Even a blockade runner only income link life to the subsequence only income link life. blockade-runner only incurs liability to capture, unless she attempts to defy a summons to surrender. Instead of sending, according to ordinary custom, a boat on board the vessel which had been detained, the Admiral at once sank her by ramming; and when the captain and a part of the crew had contrived to climb on board the flag-ship, they were forcibly prevented from saving some of their comrades, who were accordingly drowned in sight of the Spanish officers. The outrage, as it is reported, requires full compensation; and it may be remembered that no satisfaction has yet been given for the unprovoked massacre of a number of English subjects at Santiago in Cuba. As there is now a regular and probably stable Government established in Spain, it may be hoped that there will be no hesitation in complying with just demands for redress; of the friendly disposition of England to any Spanish Government which can restore order Marshal SERBANO'S Administration can entertain no doubt.

The Carlist leaders, who appeared a few weeks ago to be superior in force to their adversaries, seem in consequence of recent events to be withdrawing from some of their positions, though they have lately advanced to the neighbourhood of Barcelona. Since the beginning of their present rising in the early part of last year their prospects have never been so gloomy as since the last Madrid revolution. Atthough Castelan had made great efforts to reorganise the sway, he could scarcely rely on the zeal of generals to whom he had during his previous career been politically exposed. He was also hampered with the tedious rebellion of Casthagena, which would perhaps have been ultimately successful but for the enterprise of General Pavia. The rebells had calculated accurately on the criminal levity of the majority in the Cortes, and on the probable appointment of P1 x Marsall as Minister in the place of Castelan. As long as snareby prevailed and throve in the South of Spain, the Carlists might feel a just confidence that the war against them would not be prosecuted with vigour. An army has now been formed in Valencia, under the command of General Liorez Dossasura, who has incorporated with his own troops some of the matinous lateralisms of Cartiggena. The whole resources of the Government as available for

wire in the Farth; and the Carlists, who had never ments in prostrating beyond their own provinces, will insect originally be outsumhered and everpowered. It will take it they anticipate the inevitable result by some time they have a better moral right for the carried terms than the rebels of Carthagens; perhaps Marchal Serrano may resent the failure of his manney in the antumn of 1872. For the present the probably maintain its own thority under the name of a Republic. It is not known whether any considerable party is anxious for a BOURBON restoration; and, during the minority of Don ALFONSO, the experiment would be tried at a disadvantage.

FRANCE, ITALY, AND GERMANY.

THE French Government has at last made a full and satisfactory statement of its foreign policy. It has even done more than make a statement. It has vontured to quarrel openly with its clerical supporters, and has silenced for a time the organ of M. VEULLOT. This and the speech of the Duke DECAZES taken together have made it quite clear that France is not to be dragged into difficulties, much less into war, by the Ultramontanes. The French Government lately published a set of deatches containing the circulars issued respectively by the Duke of Broghe and Duke Dreazes on assuming office as Foreign Minister. Both Ministers said the same thing. Both proclaimed that peace must be the great aim of France, and that care must be taken not to let the country be ombarrassed by the passions of extreme parties. But they said this in different ways. Duke DECAZES seemed to mean what he said more thoroughly than his chief, to have formed a more comprehensive and permanent policy, and to be more determined that he would not be frightened or persuaded by dangerous friends into letting the character of his policy be misunderstood. Since he took the place of the Duke of BROGER the action of the French Foreign Office has been gradually becoming more decisive and significant. He has realized that France could not any longer maintain an attitude of open amity, but scarcely covered enmity, towards Italy, and that the time had come when France must recognize the destruction of the Temporal Power, and treat it as any other conquest sanctioned by time and the course of events, or must refuse to recognize it and treat it as a cause of war, to be declared as soon as the circumstances of France would permit. A fierce Ultramontane deputy gave the Duke an occasion for declaring once for all what was the decision at which he had arrived. General Du TEMPLE proposed to question the Ministry as to its intentions in appointing a new Minister to the Court of VICTOR EMMANUEL. The view of General Du TEMPLE and his ecclesiastical friends is that Victor Emmanuel is a sacrilegious robber, a spoiler of holy things, a sovereign ancregations robber, a spailer of holy things, a sovereign under the severest Papal censure, and that therefore France as a nation of good Catholics ought to have nothing whatever to do with him. The Duke anticipated the question, and made a statement which answered all the purposes of General Du Temple if he merely wanted to get information. The Government had to say that they were sending a new Minister to Rome because they wished to live in singers and hearty friendship. because they wished to live in sincere and hearty friendship with Italy, "such as circumstances have made her."

Words of kind regard to the Pors were added, but the Duke carefully limited himself to a concern for the spiritual interests of the Holy Sec. Nothing could be added to the spiritual interests of the Holy Sec. miner. The destruction of the Temporal Power is mot to be regarded by France from the euclesiastical point of view. The Pors was a sovereign, and has been dispossessed just like the Elector of HESSE or the King of tower; and Italy, such as circumstances have made her, is to be regarded as any other friendly Power which has in its day got hold of territory in a somewhat improper way. The feeling of the French Assembly on hearing this explicit arowal of a policy totally opposed to the wishes and views of the Ultramontanes appears to have been one of extreme melief. It allowed the question of General Dy Trupts to be burked by a piece of Parliamentary sharp practice, and the position of the Ministry both in and out of the Amenably is decidedly stronger in consequence of the regulare that has taken place between the Government and

ferical party,

Section with which the French nation has leaven.

turous schemes of finatics appears to have been stress enough to remove much of the mortification that might naturally be felt when it became known that is action of the Government was not parely spentaneous but his deep determined parely by the interferent of Germany. What really passed between the two Governments is not accurately known but it is recalculated that where ments is not accurately known, but it is probable that what has taken place is this:—The German Government began by complaining of the language med by the French bishops generally, and by the bishops in the singlibour-hood of the annexed provinces more particularly. In consequence of this M. DE FORTOU issued his circular, but the German Government considered this circular too mild, as it rather warned the bishops for the future than consured them for the past. The French Government pointed out that it was extremely difficult for it to control the language of bishops who could only be reached by a cambrous and ineffectual process. The German Government replied that a part of the French press was even worse in its instigations of hatred to Germany than the bishops, and that at any rate the French Government had sufficient control over the press. While the controversy was at this stage, it happened that the Univers published a criticism by the Bishop of Périqueux on M. De Forrou's singular, and the French Government determined to not at smoo, and suspended the Univers. It was not on the demand of the German Government that the Univers received this blow. for the blow was dealt before the German Government could have received a copy of the Univers in which the Bishop's manifeste appeared. Meanwhile the Chevalier of Nicka had been vehimently urging Duke DECAZES to put an end to the state of suspense in which Ituly was kept, and to let Italy know whether it was really to be treated as the friend of France or not. Duke DECAMES accordingly resolved to content the Italian Government by the frank avowal of a friendly policy in the Chamber, just as he bad contented the German Government by the suspension of the Univers. In doing this he was only carrying out the policy to which he had all along been personally inclined, and he was aware that this policy was that which the great majority of his countrymen heartily wished to see carried out. In one sense, therefore, the action of the French Government has been the result of foreign interference, and in another sense it has not. The French Foreign Ministre has not been compelled by a powerful neighbour, and by a neighbour not very powerful but still strong enough to insist on an open policy of friendship or enmity being pursued in regard to it, to do what he disliked doing, or what the French nation wished that he should not do. He has merely done what he desired to do and what his countrymen approved his doing. But he was forced—or, perhaps, it is more strictly true to say that his colleagues were forced—to put an end to hesitation, and avow the real intentions of the Government. It is humiliating to Frenchmen to act in any way under foreign dictation, and if France had not been so thoroughly beaten in the late war, the dictation of Prince BISMARCK might have been keenly resented. But at the same time Prince BISMARCK has done the French Government and the French nation a great service. It is the hatred of the priests, who are supposed to be the allies, if not the guides, of the Ministry, that has made the Ministry so weak and unpopular in the country; and it is the hatred of the priests that keeps France unsettled, and prevents its recovery from the effects of the war. The suspension of the Universe and the speech of Duke Decazes will do more to help the Ministry than the nomination of any number of Mayors; and if the French people can but be made to believe that the intrigues of priests will not be allowed again to waste the blood and treasure of France, they will be encouraged, as they would be encouraged in no other way, to settle down under a Conservative Republic, and let politics alone while they strive by patient industry to repair their shattered fortunes.

Whether Prince BISMARCK has been harsh and cruel in the exercise of the dictation he has employed is a question which will be answered differently according to the general prejudices and prepossessions of critics. Prince Bismanck is engaged in a very serious struggle, and he finds that his opponents notoriously rely on the support of France. Their party is, they say, in power in France, and France will soon he strong enough to help them. The Franch hishops and a part of the French press countenance this notion in the party.

We way, and suggest in one shape after another that, although war is impossible just now, yet the state not to be offered up as a morifice to the adven. German Government may be embarrassed and enfeebled

by persistence in a violent opposition to all it does, and that the newly-erected Empire of Germany may thus be so undermined that its disruption must be only a question of time. In the same way the clerical party in France do not ask for an immediate declaration of war against Italy, but they urge that by the judicions use of a vexatious, vacillating, and dubious policy towards Italy, the spirit of the Italians may be broken, their material resources wasted in prolonged preparations for war, and their domestic differences fomented and aggravated until at last France will have only to take a very little trouble, and the Pope will have his own again. Under these circumstances, as the French Ultramontanes derive almost their whole strength from the countenance of the French Government, and from the supposed necessity of the Government to purchase their support at any price, the German and Italian Governments have called on the French Government to speak out one way or the other, and to let it be known whether the disruption of Germany and the restoration of the Temporal Power are or are not part of their foreign policy. As it happens, this demand has been made at a time when on other grounds a coolness has sprung up between the Government and the Extreme Right, when the alliance of the Ultramontanes is evidently doing the Government much more harm than good, and when the Foreign Office is in the hands of a moderate and liberal man. Forced to speak out, the French Government has spoken as it wished to speak, although, if Government has spoken as it wished to speak, although, if the choice had been given it, it would probably not have spoken so soon or so clearly. With its utterance the French nation is perfectly satisfied, and sees that it has thus escaped a danger even greater than that which threatened Germany or Italy. Frenchmen generally regard Germans with profound aversion, and Italians with a mixture of dislike, suspicion, and contempt, and many Frenchmen would therefore have probably preferred that Frenchmen would therefore have probably preferred that when pleasing themselves, they should not be at the same time pleasing Germans and Italians. But their misfortune cannot be helped. France, Germany, and Italy each want the same thing—the pursuit by the State of its own aims, without the interference of the Church. each of them this is the necessary preliminary of a durable peace, and peace is precious to all three, although France perhaps needs it the most.

MR. GLADSTONE ON THE COUNTY FRANCHISE.

MR. GLADSTONE'S reply to the Deputation on the County Franchise confirms the expectation that the Government will not introduce a Bill on the subject during the ensuing Session. As Mr. GLADSTONE said, his own opinions on the subject are well known; and he might have added that, until he was compelled to extemporize an excuse for his conversion to the Ballot, his approval of a further extension of the suffrage was known neither to the world at large nor probably to himself. The discussion on Mr. Gladstone's Reform Bill of 1866, and on Mr. DISEARLI'S Reform Bill of 1867, was conducted on the understanding that the changes then proposed to Parliament should be final, at least for some considerable period. Mr. GLADSTONE at that time, and seven or eight years before, when he was a supporter of Lord Densy, knew as well as he knows now that a man might have a vote or not have a vote because he happened to live on one or the other side of a borough boundary. . If the distinction between boroughs and counties is anomalous, it has been embodied in the English Constitution from its first origin, and it has been deliberately maintained by all Parliaments and by all statesmen who have undertaken from time to time to modify the representative system. There is something absurd in the sudden discovery that inequalities of this kind are intolerably mischievous. Even in Mr. Glad-STONE'S ingenious and paradoxical explanation of his reasons for conforming to the popular doctrine of secret voting, he dwelt not on the propriety of establishing a uniform franchise, but on the alleged impossibility of maintaining the restrictions which were left after so many had been removed. His speech was in favour, not of household suffrage for counties, but of universal suffrage in all constituencies; and, when he and the Deputation were exchanging civilities on Wednesday last, both parties assumed a conventional and transparent disguise of their real objects. The spokes men of the Deputation, naturally less discrect than the Minister, incurred his delicate censure by blurting out

the demands of those whom they professed to represent. The Secretary of the Deputation thoughtlessly confissed that his constituents for the time had passed resolutions in favour of adult suffrage, which is equivalent to universal suffrage, except that it excludes children and probably women. Mr. Gladstone, after gravely inspections whether he meent horsehold or adult suffrage disquiring whether he meant household or adult suffrage, discovered that in a document submitted for his inspection there was nothing about the larger claim. He had indeed himself vindicated universal suffrage, and he knew i that the Deputation had not the smallest intention of being satisfied with the proposed change in the county franchise; but for the immediate occasion both parties affected perfect innocence of all ulterior designs. Mr. GLADSTONS also hinted to his less experienced interlocutors that they were hasty in mixing up with their demand for household suffrage supposed grievances which are not likely to attract universal sympathy. One speaker complained that when labourers were tried, they found gentlemen on the bench of justices, and unsympathetic farmers or tradesmen in the inner labor. It is true that the same hardship is the first that the same hardship is the same jury box. It is true that the same hardship is felt in boroughs as in counties; but possibly the extension of democratic power might tend to abolish all qualification for the functions either of magistrate or juror. Mr. Glabstone knew better than the members of the Deputation that such a result might not command universal approval; and he therefore took refuge in official incapacity or unwillingness to discuss incidentally the grave question of the administration of justice. The country is not yet prepared, in deference to any Deputation, for the transfer of a dozen representatives of the Palace Yard mob into the jury-box of the Queen's Bench. In that neighbourhood the wisdom and the justice of universal suffrage are clearly illustrated, in anticipation of any future Reform Bill. Mr. TREVELYAN will do well to imitate the prudent reticence of his leader when he next feels tempted to specify his Permissive Bill as one of the blessings which are to follow the entranchisement of the agricultural labourer.

Mr. GLADSTONE'S reply to the Deputation would have deviated widely from his usual style of thought and speech if it had not contained something odd and characteristic of the speaker. His audience must have been surprised by his simple-minded inquiry whether their demand was preferred for party purposes, and by the suggestion that farmlabourers might, after all, perhaps vote for Conservative With equal hope of receiving trustworthy inmembers. formation Mr. Lowe might ask a deputation of publicans whether they wished to encourage habits of drinking, or a Permissive Bill Alliance whether they desired to interfero with the freedom of the subject. Mr. GLADSTONE was of course perfectly satisfied with the assurance that the Trade Unions were wholly unconnected with any party or organization. In one sense the statement is literally true, for the Deputation cares as little for moderate Liberals as for Conservatives, and hopes, when its objects are attained, to control legislation in the exclusive interest of the working class. Universal suffrage and equal electoral districts would rapidly obliterate all former distinctions of party. To do the members of the Deputation justice, they were sufficiently candid, except in their adoption of the intimations which were contained in Mr. GLADSTONE'S suggestive questions. It is not their fault if any gullible politician believes that they expect their clients to give Conservative votes. Mr. Arch, who conveyed to Mr. GLADSTONE the assurance that the county franchise was not desired for party purposes, has repeatedly used menacing language in speaking of the owners of land. It is not easy to understand the relevance of Mr. GLADSTONE'S truism that the late rise in the wages of labour was not an unmixed disadvantage. When the relations long are deligated as advantage. When the rhetorician long ago delivered a panegyric of Hercules, it was asked who had said anything against the demigod? It is possible that employers may grudge the rise of wages, though they complain more commonly of the diminished efficiency of workmen; but no public speaker would be foolish enough to express in public his regret for the prosperity of the most numerous class of the community. The rise in wages has been attained without the aid of a household county franchise; and whatever may be the ultimate result of democratic changes, they will assuredly not increase the demand for labour nor diminish the supply; yet if Mr. GLADSTONE'S reference to wages had any connexion with the subject under discussion, it must have implied a relation of cause and effect between political power and high wages.

Inving retired from the presence of the kimister, the

missibers of the Deputation arrived at the conclusion that they could be its disappointed with the result of the interview. Mr. Gianguage had not promised to bring forward a Reform Bill in the next Session, and he had even remarked that the country was not fully prepared for the change, it was accordingly resolved that the agitation should be solved presented, and there can be no doubt that the members of the Deputation and their political allies that the members of the Deputation and their political allies will redeem their pledge by innumerable meetings and precious. Many of them are perhaps honestly convinced that when they have pointed out an inequality they have de-monstrated an injustice, nor can it be expected that they should appreciate the arguments against uniformity of suffrage. Those who hold that the numerical majority ought to be supreme are fully justified in drawing the inference that all men should enjoy an equal share of electoral power. The irregularities and apparent anomalies which still prevail provide the one possible security for the partial representation of minorities, of classes, and of opinions. Ingenious projectors who with the best motives successively busy themselves in devising checks and safeguards against the tyranny of the multitude shut their eyes to the more effective, though partial, attainment of their objects under the Constitution which democratic agitators desire to

The fatal objection to farfetched devices for the protection of minorities is that they would be summarily swept away s soon as it was found that they effected their purpose. Mr. BRIGHT's fierce intolerance of opposition has never been more strongly expressed than in his unqualified denunciation of the plans for representing minorities which commanded the approval of Mr. Mill. In this instance that zealous party politician represents more accurately than the theorist the inevitable tendencies of democracy. The contheorist the inevitable tendencies of democracy. flicting interests and even the dissimilar prejudices of counties, of boroughs of moderate size, and of large towns, prevent or diminish the opprossion of any class or political party. If Mr. GLADSTONE and Mr. ARCH have their way, London alone will return a seventh of the representatives of England; and perhaps out of sixty members, not one may be supported by the tradesmen, the capitalists, or the upper and middle classes of the metropolis. There are those who believe that such a result would be more anomalous and more injurious than the exclusion of a collier from the franchise because he moves from the borough of Morpeth into the county of Durham. Mr. GLADSTONE'S inquiry whether household suffrage is a party question seems uninteresting in comparison with its bearing on the representation of various classes and interests.

THE DUKE OF BROGLIE AND THE ASSEMBLY.

FOR the present, foreign affairs—under which head may be included the suspension of the Univers—have more interest for Frenchmen than the enumeration of the varying majorities by which the Mayors' Nomination Bill has been carried through the Assembly. In the later stages of the discussion the Liberals had nothing more promising to labour for than the restoration of the Bill to the form in which it had originally been introduced by the Government. M. BERRGER proposed that the permission to choose Mayors who are not already members of the Municipal Council should be confined to cases in which a Mayor has resigned or been dismissed, and that, in the first instance, the appointment should be made from the Council. The Duke of BROGLE is not the man to refuse power when The Duke of SECCLE is not the man to recuse power when it is offered; and though in the Billias first framed by him he had asked for nothing more than M. Bérenger was willing to concede to him, it was not to be expected that he should content himself with so small a grant after the Committee had shown thomselves more liberal. The choice of the

enemies than friends. Each appointment can be given to only one man, while there is no limit to the number of men to whom it can be denied. In every village there will in future be some disappointed petitioner who thinks that he has been ill-need, and lays the blame on the Government. The number of appointments is so great that no one can feel himself too insignificant to have a chance of getting one; and the area of future dissatisfaction may be calculated from the area of present aypertation. Again, among so from the area of present expectation. Again, among so large a number of officers there will certainly be some who will do their work ill, and the discredit of any failures will in future fall on the Government. A Municipal Council which found its affairs mismanaged by its own elected chief had no one to thank but itself; but a Municipal Council which finds its affaire mismanaged by a chief sent down by the Government will lay all the blame on the Minister of the Interior. It will be as though, in addition to any unpopularity which Mr. Lows may earn by his administration of the Home Office, he were held responsible for the blunders committed by all the overseers in the country. The burden would have been lighter if the Mayors had been necessarily members of the Municipal Council, since the electors might have been blamed for giving the Government such worthless material to work with. But the Duke of Broglin has rejected this loophole, and has insisted on taking the credit or discredit wholly on himself. No restriction is placed on his choice, and consequently no excuse will be made for him if he chooses ill. That in a large number of cases he will choose ill is inevitable. No insight into character can keep a Minister straight in nominating to 37,000 places.

At Versailles less interest perhaps has been felt in the regress of the Bill than in the question whether the Duke DECAZES did or did not vote in a particular division. M. FRRAY had proposed that in communes having less than five thousand inhabitants the Mayors should necessarily be chosen from among the Municipal Councillors, and on this motion the Ministerial majority dwindled down to four. It was believed at first that the MINISTER for FOURIGH AFFAIRS had absented himself, and upon this were based many ingenious speculations as to the relations existing between him and the Prime Minister. Those were at length set at rest by an announcement that the Duke Decazes had voted with his colleagues. They are protty certain, however, to reappear whenever there is again an excuse for them. Duke Decazes is not more liberal than the Duke of BEGGLIE, he has had the good or ill fortune to impress his countrymen with the belief that he is so. The Duke of Broglie's theory of a Conservative policy rests on an alliance between all sections of the Right. The Duke DECAZES'S theory of Conservative policy is supposed to rest on an alliance between the Centres. If there is any founda-tion for this distinction, the Duke Decazes can afford to wait until time has demonstrated the vanity of the Duke of BROGLIE's hopes. An alliance between all sections of the Right, taking the Right to include the Right Centre, is, except for the moment, an impossibility. The allies differ among themselves upon every point upon which agreement is important. It is not only that they are not in accord upon the question what shall be the ultimate form of apon the question what shall be the ultimate form of government in France. A difference upon this point might possibly be healed in the future, and could cortainly be postponed for the present. But they are at issue upon the character and duration of the Government at present in power. The Legitimist organ, the Union, has lately defined what it understands the law of the 20th of November to do, and it turns out that this definition makes that law leave matters in the exact position in which it found them. The law, says the *Union*, confides the executive power to Marshal MACMAHON for seven years, subject to any modification that may be introduced by the constitutional laws. The Marshal, therefore, is President of the mittee had shown themselves more liberal. The choice of the Musican of the Internol is not to be fettered by any local considerations. He may pick out 37,000 Government laws may be doubted whether the Government have quite taken in the amount of unpopularity which they will bring on themselves by this law. As a matter of fact, the Mayors will probably be appointed from well-affected persons in the district. A vast number of applications have already, it is said, been sent in, and the Prefect will be directed to choose the candidate whose practice seems most likely to square with his professions. In desling with so large a body of patronage, of November does no more than this, there was no need to pass it. Ever since the 24th of May, the Marshal

has been President of the Republic until the Amendy shall otherwise decree. As the Right read the law, he is nothing more than this now, and, if so, what was the meaning of fixing seven years as the densition of his powers? The more reasonable theory is that the mention of the constitutional laws refers only to the conditions under which his powers are to be exercised. At present he is President with one Chamber elected by universal suffrage and with a Ministry responsible to that Chamber. Under the new constitutional laws he may be President with two Chambers, or with one Chamber elected by a restricted suffrage, or with a Ministry responsible to himself. But under whatever conditions the powers may be exercised, they will continue to be exercised by the Marshal until the seven years are over. It is inconceivable that two parties holding such opposite opinions as to the duration of the authority under which they live, and as to the lawfulness of labouring to overthrow it, should long continue to pull together.

If once they part company, it seems impossible that the Duke of Broule should romain in power unless he is pre-pared to dispense with the form of Parliamentary support. The desertion of the Right can only be rendered harmless by the adhesion of the Left Centre, and the adhesion of the Left Centre-must be purchased by concessions which the Duke of Broune thinks fatal to the cause of moral order. The Left Centre are moderate enough in their idea of liberty, but the Duke of Broule's reading of the term is too restricted even for the most Conservative members of the party. In this respect, it is thought, the Duke DECAZES would be more manageable, and if he were at the head of affairs, there might be no longer anything to prevent the bulk of the Left Centre from giving a hearty support to the Government, The real weakness of such a coalition would not lie on the side of the Left Centre. Provided that they obtain the guarantees they require, they would probably be as well satisfied with Marshal MacManon's Government as with any Government which France is likely for the present to have. The doubt is, whether the Duke DECAZES would be able to carry with him the Right Centre. It is not at all an easy thing to determine what the politics of this section really are. If they are willing the politics of this section really are. If they are willing to accept a Conservative Republic, there is no great difference between them and the Left Centre. But if they still cherish a sneaking kindness for Constitutional Monarchy, it is sure to show itself, and nothing could be so fatal to the Left Centre as an alliance with a party reported to have Orleanist learings. It is quite possible, therefore, that among the sacrifices which the Left Centre would have to demand from the Duke DECAZES would have to be included the sacrifice of his party. It remains to be seen whether the Duke will show himself so good a general as to be worth bidding for even without his armv.

DIFFIGULTIES OF THE LIBERAL PARTY.

articles in the Quarterly Review is not enhanced by any obserfulness in their tone. The writer may perhaps have yielded to a temptation which often prevails with essayists, as with movelists, of compelling others to share the unsamess which diagniets himself. More sanguine minds may dilate on the alleged signs of Conservative reaction. The Quarterly Reviewer prefers to dwell on difficulties besetting the present Ministers which would be not less formidable to their successors. The groster part of his latest publication is devoted to the painful subject of Irish disaffection. It is true that the Home Rule agitators have the Femians at their back, and that the priests will probably join the movement if it proves to be universally popular. It is natural that an infriendly critic should taunt Mr. Grantsons with the failure or imperfect success of his Irish legislation. It was unfortunate that large demonstrate should have insinciately followed an abortive rebellion, and the Minister sometimes displayed a want of judgment in suggesting a relation of cause and effect between the Fenian conspiracy and his own measures; but it is not desirable to adopt the statements of ungenerous dennagences that the Church Bill and the Land Bill were extorted from England by fear. One of the two measures was eminently just; and the Liberal party conscientiously believed that the spoolal circumstances of Ireland compalled and justified an exceptional interference with the propository with the propository

Home Bule is a co Home Male is a consequence of the legislature of the many he tested by the imaginary strongeller. However, the Many help moddled with the tenure of legislature. There is not meddled with the tenure of land. There is not the seems research to appose that him Birer mould in that see have refrained from an agricular which might have been apported by more plauside arguments than at present. Trick sodition has always been uniform in character, although his language has frequently varied. The principal changes in its condition is that it has lost the advantage of a gricy were which was admitted by the best of its appearants to be genuine. The schiam between the bulk of the Liberal party and the Irish hierarchy can scarcely be regretted by Conservatives, though it involves some public disadvantage. As long as the Protestant Establishment was maintained. the Catholic priesthood could always count on a Liberal alliance. But for the bigotry of the English Nonscolormists and for the timidity of the Government, a portion of the church property might have been employed in such a manner as to neutralise or largely diminish coclesiastical disloyalty; but perhaps it was only by revolutionary methods that an intrinsically just measure could be accomplished. The Irish Roman Catholic prelates probably hoped that they would ultimately escape from the conditions of their temporary and uncongenial alliance with the English Nonconformists; but, after pretending to desire no benefit from the revenues of the Establishment, they have found that they were taken at their word. Their Dissenting confederates are as obstinate as themselves, and Churchmen, unless they are also statesmen, can scarcely be expected to return to the Roman Catholic hierarchy endowment for spoliation. Mr. GLADSTONE understood better than the majority either of his party or his opponents the expediency of applying to Universities, if not to Churches, the system of concurrent endowment which was denounced by popular clamour. His Bill of last year, among many other defects, had the fatal fault of conflicting with opposite prejudices. If a Catholic University had been endowed from the funds which are at present awaiting disposal, there would have been little danger from intrigues between Mr. Burt and Cardinal Cullen.

The Irish difficulty, though it may supply materials for recrimination, would affect both political parties equally if the extreme Laberals had not already begun to temper with Home Rule. Mr. Cowen is not likely to stand alone in the profession of Federalism, which seems in England as in Spain to be casually associated with expressive opinions. When the Church has been discatablished, the Mouse of Lords abolished, and the land wholly for partially confiscated, the time may perhaps have arrived for the dismemberment of the Empire; and Mr. Cowen, who professes himself a thoroughgoing adherent of Mr. Grantone amountees his purpose of not shrinking from the STONE, amounces his purpose of not shrinking from the extremest consequences of faith in numerical majorities. The preliminary question of the demarcation of the district which is to govern itself by counting heads may be left for full ther consideration. The whole of Ireland would probably vote for separation by a large majority, while the according of Ulster would be nearly equally divided; and the Protestants and the Catholies of the higher clauses would be almost unanimous in their desire to maintain the entry of the Empire. If a popular vote were taken in the Catted Kingdom the Federalists would, be atterly defeated. Mr. Cowan's declaration may perhaps be expla ned by the fact that the Irish votors are numerous in Newcounte. The impetient adversaries of union are kind enough to take an active part in English political deminists, and Mr. May and other desing or a kind enough to take Been and other designous have advised this to make the acceptance of the doctrine of Home Make, as beginnition, a condition of their support. The Mindstern though they will not inquire too curiously into the pledger which have obtained a seat for a Liberal, and produce at the general election find that they had been supported by the revenue outry large are after section of their pasty. It is true that Whige or made at section of their pasty. The entire of Paris and the chindren of Paris and the chindren which has bleft persons, lends to manufacture. stand to

distribution of the Ministers with the produced of the second of the test of the first of the produce of the first of the first the continue statement will produce a similar result in the great indicating of the first produce a similar result in the great indicating of bosonghe. In addition to the notives while we likely to operate collectively on constituent bedies, many charts of voters are becoming more and more distributed with fits actual or probable policy of the Generalization. When Mr. Stansible wantonly attacks the House of Lords and unnounces that the Liberal party needs change for its own sale; when Mr. General suddenly threatens all holders of corporate landed property with compulatry liquidation; and when Mr. General extemporises an approval of universal saffrage, those who have anything to lose naturally doubt whether the Government may not at any moment adopt the principles of Mr. Chamberlans, which indeed are scarcely distinguishable from the opinious of Mr. Broger.

The reaction against democratic Liberalism is not in a party sense Conservative. In the days of Lord MELBOURNE every Laboral who felt inclined to change his political colour was as strongly attracted to the leader of the Opposition as he might perhaps be repelled from the chiefs of his own arty. According to universal and well-founded belief, Sir Bonner Punt, whatever might be his political shortcomings, was the ablest man of business in the country. No similar confidence is reposed in the brilliant tactician who will be raised, if at all, to power, not by his own merits, but by the blunders of the present Ministers. As Mr. Grave Duff said the other day, the Opposition is singularly deficient in competent candidates for high office in the House of Commons. Sir STAFFORD NORTHCOTE would be a respectable Chancellor of the Exchequer, and Mr. HARDY has administered the Home Office with eredit; Lord DERBY, and, if he would accept office, Lord Salisburt, would add strength to the Government; but by general consent Mr. Distance is regarded as the representative of the Opposition; and his accession to power would not reassure timid politicians. Mr. GLADSTONS may perhaps be thought more dangerous than his rival; but in administrative knowledge and in financial skill he is greatly superior to Mr. Dishabil. It is not too much to say that a prudent, able, and trust-worthy statesman in the House of Commons, as brilliant as either of the two rival leaders, and as judicious as Pres, might secure to either party at the present moment the support of a vast majority of the constituencies as they emisted before the last Reform Bill. There remains the uncertainty as to the power and disposition of the new voters, who had no time or opportunity to organize their forces at the last general election.

The mones in which they will take the strongest interest are scarcely those which are selected by the Quarterly Reviewer. The exclusion of religious instruction from schools principally interests the Dimenture, who are stronger among the small tradesmen than in the working classes. maturative agitators will more probably concentrate forth out the extension of household suffrage and the business of matter and it has the first out the business of matter and it has the first out to be th in of mate; and, if Mr. Geapstons decline e in the present Parliament, sured of his fitters support. It is, after all ms or conval oversight that the result of any probably depend. At a time when the thinky believed in the doctrine of perpetual siethes may probably depend. At a time when the sit distinct finally believed in the doctrine of perpetual, tion which is now proposited by Mr. Stansfula, employ good to his. THE SHEPPIEN DONORDS

to been justly remarked that Regular Valous bis

explusively devoted to the promotion of their cyte, approblem. The respinsions of the late matering of deligit from Trade Unions at Sheffield they be comparison expressed in the proposition that the real or expressed are expressed in the proposition that the real or expressed terests of male adults living by material lebour original theorem at the two exclusive object of legislation. These water materials are differences of evision as to the fact trade of attention. some differences of opinion as to the test made of effecting the common object; but the subordination of the rights and interests of other classes to the advantage of workings was unanimously approved. After a wordy and irrelevant preamble about the necessity of dealing with stinggles be-tween capital and labour on statesmanlike principles, and about a law of taxation "that shall scoure to all classes the perfect law of liberty in their industrial operations." the delegates resolved without a dissenting voice that the Imperial revenues ought to be raised by direct levy on the annual value of realized property. As the managers of Trade Unions never conceal their opinion that their constituents ought to possess predominant political power, their demand for entire and perpetual immunity from all contribution to public burdens involves a reversal of the oldfashioned doctrine that taxation and representation ought to go together. Skilled workmen, in defiance of law, already enjoy exemption from the direct taxes which are imposed on incomes not larger than their own; but the inequality might at the cost of the wealthier classes he removed by an alteration of the limit at which hability to the Income-tax now commences. If the unanimous resolution of the Trades Congress were adopted by Parliament, every small annutant would pay an additional tax for the relief of workmen who are at present compelled to pay artificial prices for their beer, their gin, and their tebacco. A pruny saved would on the newfungled system no longer be equal to a penny got. For the moment the meeting forget the theory to which all its leaders, and probably all its members, are pledged, that the land of the country ought to be divided into little freeholds. Mr. Auch's clients would, as the future holders of realized property, be required to pay towards Imperial taxation a part of the contribution which is now exacted from the artisans. The jealousy and hatred which demagogues cultivate against capitalists was also for the moment suspended. If the fiscal dectrines of the Congress provail, the tyrannical employer will share with his virtuous workmen entire exemption from toxistion on the profits of his business. It is true that oversights of this kind would be readily corrected in a Trade Union Parliament; but the undisguised selfishness of the proposal is typical and instructive.

While the transfer of burdens from themselves to their neighbours was approved by the delegates without discussion, a resolution against overtime, which suits some classes of workmen while it is obnoxious to others, was only adopted after debate. The several supporters of schemes for reducing the hours of labour are perfectly consistent in objecting to overtime; but in many cases the agitation for reduced hours has really been undertaken rather for the purpose of raising wages than through a desire of additional leisure. Some workmen prefer long hours to short; but if the day's work is conventionally limited to nine hours, they claim a higher rate of payment for any excess, and experience shows that employers are often willing to sabmit to these demands. One of the speakers asserted that, although during the nine-hours' movement there had been a demand for a diminution of overtime, the practice had not since decreased in the smallest degree. The mover of the resolution stated that at Manchester "some "the employers worked their men night and day, while a large number of other men were walking the streets out "of work." If the question had been whether the employers or the workmen ought to have been preferred, the Congress would not have hesitated to decide in favour of labour against capital; but the men who work overtime work of their own accord; and they may be disposed to resent and to resist a demand that they shall sacrifice a ortion of their earnings for the benefit of the surplus portion of their earnings for the beneut of the surplus labourers who may be walking the streets without work. It appears by the admission of the opponents of overtime that their efforts have hitherto always ended in disaster; and it way be conjectured that the decision of the majority at street will be equally ineffective. The opponents of the street will be equally ineffective. The opponents of the confined to cases of real necessity, and that such payment it should be a recompense for is should be demanded as would be a recompense for the hours. In other words, overtime is to be allowed the it comes be prevented; and those who work beyond

the regular hours will continue to obtain the best price for their additional labour. A resolution against piecework was defeated, amongst other reasons, because it appears that at Sheffield piecework is universal. If it could be for a moment assumed that the interests either of employers or of the general community of customers were entitled to consideration, it would be obvious that piecework ought as far as possible to be encouraged. Mr. Brasser has shown that the proportional as well as the actual amount of work done has declined in consequence of the reduction of the hours of labour, and in his judgment the only security against the further progress of inefficiency must be found in payment depending on results. It fortunately happens that the view taken of their own interest by some classes of workmen is not uniformly antagonistic to the general welfare.

The incidental controversy with Mr. FAWCETT on the limitation of the hours of labour of women was not creditable to the generosity of the delegates, and they will scarcely have been satisfied by Mr. FAWCETT's plain and manly explanation. He was accused of opposing provisions for the protection of children which he had approved without qualification, and it is unlucky that Mr. MUNDELLA, on whose Bill the discussion arose, should not have taken occasion to correct the misapprehension of the Congress. It is not surprising that artisans should object to the competition of women, as American workmen resent the intrusion of Chinese cheap labour. Some of them probably persuade Chinese cheap labour. Some of them propably persuage themselves that, by imposing a restriction on the hours of female labour, they are serving the best interests of women; but Mr. Fawcett not unreasonably contends that those who are most immediately concerned in the question should be allowed to decide for themselves. A limitation of the hours of labour compulsorily applied to women would exclude them altogether from some profitable kinds of employment; and, whatever may be the motives of the workmen who demand this restriction, it is obvious that they might be largely benefited by the suppression of cheap competition. As in other questions of the same kind, it would be useless to raise the question whether consumers have not the right to obtain commodities on the cheapest terms. The Trade Unions and the philanthropists have practically established the principle that hats are made for the benefit not of wearers but of hatters, and that houses are built for the purpose of providing wages to masons and carpenters. The employment of women in certain handicrafts facilitates and cheapens production, but it tends to diminish the demand for the labour of men; yet perhaps Mr. FAWCETT is justified in suggesting that women also have some claim to be so far considered in legislation as to be let alone. The Congress of course resolved that workmen should have a voice in the limitation of the number of apprentices. It would be intolerable that the interests of the male adult artisan should in any case be sacrificed for the benefit either of the employer or of the father of a family who may wish to provide for his children. If this and similar restrictions make any kind of product dearer, so much the worse for the con-sumer, who may perhaps, in accordance with the perfect haw of liberty, be exclusively taxed in relief of the supreme working class for the value of realized property.

Another eminent person was more fortunate than Mr. Fawcerr in obtaining the unqualified approval of the assembled delegates. Mr. Goldwin Smith had little to say on the special objects of the Congress; but the delegates gladly relieved their attention to the details of business by listening to eloquent denunciations of the Established Church, the aristocracy, and the social system of England. Mr. Goldwin Smith may boast that none of his numerous antipathies have been in the smallest degree mitigated by an absence of several years from the country which contains the objects of his abhorrence. At Sheffield he expressed in equally bitter language his detestation of the social system of England and of the Established Church; but it may be collected from a later speech at Manchester that for the moment the Church is his favourite object of aversion. It is scarcely worthy of Mr. Goldwin Smith's intellectual power to indulge in the monstrous exaggeration that the Church "is now changing the national religion from Protestant to Roman Catholic." In his speech at Sheffield Mr. Goldwin Smith had nothing to tell the artisans about emigration to Canada, except that in his equinon they would for the most part gain little by the change. Even on the economical expediency of emigration by the agricultural labourer he declined to express a

decided opinion; but he reiterated again and again the statement that either in Canada or in the United States the labourer would not be annoyed by the offensive presence of squire or parson, or social superior. It was perhaps not Mr. Goldwin Smith's object to excite animosity between different classes in England; but his speech could have no other effect. The extreme bitterness of his own feelings is certainly not to be explained by personal causes; for an accomplished and refined scholzs of great and acknowledged ability must always have handthe opportunity of choosing his own society, and of forming unbiassed opinions on social and political questions. The result has been an impatient diagust with English institutions, against which it would be useless to argue or to protest. It is difficult to understand what good purpose can be served by appealing to prejudices which artisans are sufficiently willing to cultivate. Mr. Goldwin Smith has not found that social equality invariably promotes just and benevolent feelings. He prefers Canada to the States as a place of residence, because he has found that the Americans hate England as bitterly as Trade Unionists ought to hate squires, farmers, and every branch of the aristocracy; and he is one of those who "still love the old country, and cannot "bear to be among people who are always breathing hatred of it." Englishmen even of the unprivileged and odious upper classes are not in the habit of cherishing, even on provocation, national hatreds. There is no doubt that Mr. Goldwin Smith's statement is more accurate than the ordinary cant about American brethren; and perhaps it may be suggested that faultless institu-tions produce but an anomalous result in causeless spite and malignity.

COMPULSION AND SCHOOL BOARDS.

THE Manchester Conservatives may claim the credit of having discovered a new application of "Rule" Britannia." The slavery to which Britons so often declare that they will never submit must in future be taken to include attendance at school. The charter of the land, as originally rendered by the guardian angels on duty, secures every free-born Englishman against being taught to read and write against his will. It is a curious speculation how far the more influential members of the party will see cause to adopt the reading of the melody which encouraged the rank and file to shout down Mr. Dixon on Wednesday. We are unwilling to believe that the genuine zeal for elementary education which once existed among Conservatives can have been so overlaid by Denominational partisanship as to lead them to resist the application of compulsion for its own sake. It must be admitted, however, that Mr. Dixon is partly to blame for the dislike which the Bill he is to introduce next Session encounters in many quarters. Universal compulsion and universal School Boards have been associated on former occasions with the repeal of the 25th Clause and with the establishment of free schools. Whatever else may be doubtful in the educational future of the country, it is abundantly clear that a proposal to make an indigent parent send his child to a school he dislikes instead of to one he likes, because the latter is invested with a specific religious character, has not the remotest chance of being adopted by the present Parliament or by any Parliament which is likely to succeed the present. It is hardly less certain that, in the present disposition of the ratepayers, free schools are regarded by the majority of the constituencies as a mere costly crotchet. Politicians who have chosen to mix up these fancies with suggestions of practical moment must not wonder if a careless public is slow to disconnect the two.

Mr. Dixon's speech on Wednesday was moderate and reasonable, partly perhaps because he was obliged, from the difficulty of getting a hearing, to omit the greater part of what he meant to say. Whether his Bill will display the same qualities is not certain. If the Daily News is in the counsels of its authors, it will embody a provision which will entirely destroy any chance of success which it might otherwise have. The Daily News confesses with praiseworthy candour that it puts the Denominational question very far above the educational question. To get every child in the country to school is not in its opinion an object worth attaining, if the schools into which the children are in the get continue Denominational. In fact, it classes observation standing by itself among the schemes which have been called fauthors.

School Boards. , and giving in school, is to do nothing on this qu If we are to wait for universal compulsion ameedarian school is set up in every parish the expense of the ratepayers, without regard to question whether there are any children to go to it, we prait a long time. In point of financial unpopularity on a proposal would be worse than the repeal of the a5th Cisuse. The latter change would only involve the provision of unnecessary schools in places where there were indigent children to be sent to them. The former would indigent children to be sent to them. The former would involve the provision of unnecessary schools, even in parishes where every parent was willing to send his children to the existing school and able to pay the fees on their behalf. It is easy to forecast the prospects of universal compulsion under such a law as this supposing that by some miracle such a law could be passed. Take the case of a parish in which there is accommodation in a voluntary school for every child, within the ages to which the Education Act applies. The ratenavers would which the Education Act applies. The ratepayers would robably resent being compelled to elect a School Board; but if, in addition to this, the School Board when elected was peremptorily ordered to build a school for which there was no demand whatever, or to submit to have it built by the Education Department at the expense of the parish, the command would be met by a flat refusal which would be justified and reproduced over half the country. It would be much more straightforward if those who advocate this measure would acknowledge that they are compelled by higher considerations to abandon the cause of elementary education. A man who says, I am a Dissenter, or a Secularist, before everything, and unless I can have elementary education cast in the precise mould I wish, I had rather there should be no elementary education at all is prefeatly consistent. His line is in effect education at all, is perfectly consistent. His line is in effect identical with that of the extreme Denominationalist. one refuses elementary education altogether if it is associated with religious instruction; the other refuses elementary education altogether unless it is associated with religious instruction. But the man who says, I want elementary education above everything, and then refuses to accept it except upon impossible conditions, is not consistent. It is open to him to say that it is better to have children left in total ignorance than educated in schools where the schoolmaster is not forbidden to teach religion; but in that case, if there is any meaning in words, he ought to cease to proclaim his zeal for education or to call the organization by which he tries to carry out his theory an Education League.

For anything that appears to the contrary in his own speech, Mr. Dixon stops a long way short of this impracticable extreme. But even in the combination of universal School Boards with universal compulsion there are serious dangers to be apprehended. It is important to remember that, as the law at present stands, every district that wishes for a School Board can have one. In any borough the Town Conneil may apply for a School Board; in any parish not comprised within a borough a majority of the ratepayers can apply for one, and in this case the voting is by ballot. When the Daily News in the article already quoted speaks of the Education Act as only allowing a School Board to be brought in to supply deficiencies where the supporters of the old schools have failed to do so, it either misunderstands or misrepresents the statute with which it finds fault. It is not true that the Education Act only allows a School Board to be brought in to supply deficiencies. It compels a School Board to be brought in to supply deficiencies, but it allows a School Board to be brought in wherever the ratepayers wish for one. If therefore School Boards were to be made universal as the instrument by which to apply compulsion, we should be entrusting a most delicate operation to bodies to the creation of which the ratepayers have already shown themselves hostile. We may be sure that if the Education League had thought it possible to induce the ratepayers throughout the country to apply for School Boards where they were not obliged to de so, they would not have allowed this clause in the Act to remain, so inoperative as it has remained in rural districts. By whomsoever a law enforcing attendance at school is applied, it must excite considerable to magnified in the first instance; but if it is applied by a standance at school is applied; it must excite considerable to magnified in rural districts. By whomsoever a law enforcing attendance at school is applied; it must excite considerable to magnified in rural districts.

and representing, therefore, not only their prejudious, but their irritation, this opposition will have every possition opportunity of making itself effective. The surgeon's kalls will be put into the hands of an unwilling patient, and he will be told to operate upon himself. No doubt some machinery will be provided by which the knife will be taken from him if he obstinately refuses to make use of it. But a process of this kind must involve considerable delay, and may end by making compulsion so unpopular that it will be allowed to become a dead letter. This is what is to be feared from Mr. Dixon's Bill. The cause of universal compulsion has no more dangerous foes than some of these who are loudest in professing themselves its friends.

REPORTERS AND WEDDINGS.

THERE is a form of misery with which most of us have te make acquaintance at least once in our lives. Mankind has agreed to surround the marriage ceremony with observances of a distressing, not to say ridioulous, nature. It is generally assumed, we need not ask with what accuracy, that a marriage is in itself a cause for congratulation to the persons most immediately interested; and therefore it is inferred that they should suffer cheerfully the small deduction from their satisfaction which is involved in making themselves a show to their acquaintances and to the public generally. As the world becomes more civilized there is a tendency to diminish the quantity of ceremonial observed; the couple are allowed to seek refuge in flight, instead of being exposed to the coarse conviviality customary in former times; aspeech-making is rapidly dropping out of fashion; and it may be hoped that in time two human beings, performing the most solemn act of their lives, will be allowed to get through the business quietly and seriously, without being exposed to the impertinent intrusions of the outside world. The world, however, is not disposed to give up its rights without a struggle. It is curious to remark how, even in London, the general public insists upon associating itself with what surely ought to be a private coromony. The sight of a conchinan with a white favour is sufficient to send a visible thrill of sensation through the population of a whole street. The doors of the church are thronged with a crowd as excited as though, instead of being absolute strangers, they were the attached tenantry of a feudal noble. Little knots of enthusiasts gather outside the house of the bride, and watch for hours on the chance of a distant vision of a wreath of orange flowers or of the white waistcoat of a sheepish young gentleman. The philosopher would be interested by a clear analysis of the state of mind of these unbidden guests. Are the poor ragged figures which give in place of champagne? Or do they feel that for the moment all

The emotion, whatever its nature, rises in proportion to the elevation of its object. Thanks to the inestimable blessings of a cheap press, we can all put ourselves in the position of the humble crowd at the church door. For the small sum of a penny we can become favoured guests in imagination. When Mr. Gladstone says a few words in the privacy of his family upon such an occasion, they are immediately proclaimed to a listening world. A royal marriage necessarily invites the presence of a still larger public. A number of educated and intelligent gentlemen are engaged in satisfying the curiosity of their countrymen as to the minutest details of the proceedings at St. Petersburg. They have our most sincere sympathy, or rather, they would have it if we did not know how thoroughly the art has been reduced to a system. They are, in fact, simply filling up common forms, or playing a simple variation upon a perfectly familiar tune. They know when to introduce a proper little gush of sentiment, and how to contrast it by a little timely facetiousness; they can fill up blank spaces by dexterous allusions to the Crimean war or to Peter the Great, by excursions into Russian history, profound enough to give their readers a general feeling of being well-read persons, without exacting too much from their powers of attention. Then there are graphic descriptions of St. Petersburg, and general remarks upon the progress of international sympathy, and allusions to the abolition of serfdom, and brief summaries of the rites and dogmas of the fastern Church, Whatever interstices may intervene between the glowing details of geogreous ceremonials may be easily filled up by such materials, which in a practised hand require the least possible expenditure of labour to fit them for public consumption. Some happy reporters will penetrate into public consumption.

accuracy; but in one way or other each man will do his duty, as Hosea Biglow observes:

Like Blitz in our Lyconen, A haulin' ribbins from his chops, so quick you'd scarcely see 'ess,

Whether this branch of literary manufactive he altogether a whelesome one for the operatives is not an important question. To
describe a royal marriage is at least as good an investment of
human energy as to interview the last new lion or to report the
endless intricacies of a moneter trial. It is an honest way of
making a living, though we may feel a passing regest when we
see talents devoted to the purpose which might be capable of
better things.

In another sense, however, it suggests a curious field for speculation. The extreme interest with which we must presume all these reports to be devoured—for otherwise we could not suppose that intelligent editors would devote to them so large a part of their columns—is a fact worth notice. Popular orators generally refer to the increased influence of the press as so much power thrown into the scale of democracy. They assume that when everybody is capable of getting his opinions expressed in type, that vague power known as public opinion will become omnipotent, and that it will exert itself towards levelling all social and political differences. Now, whatever may be the ultimate tendencies are exceedingly different. That form of its immediate tendencies are exceedingly different. That form of its immediate tendencies are exceedingly different. That form of Republicanism, for example, of which Sir Charles Dilke is the most prominent advocate, does not seem likely to profit by the change. The theory that we ought to cut down the expenses of our Government to the lowest point consistent with efficiency does not correspond to the sentiment of the newspaper-needing public. It gives them the liveliest satisfaction to see the thing done handsomely. They might gramble at taxes which should bring them no return either in solid services or in satisfaction to their imaginations; but it is plain that they consider that the mere visible splandous is worth a good deal in hard cash. They will pose over illustrated newspapers containing portraits of the happy pair, and pictures of State ceremonicals and segmes in St. Petershurg, and trifling incidents connected in the ranctest way with the central event. They will send out the ranctest way with the central event. They will send out the ranctest way with the central event. They will send out the ranctest way with the central event. They will send out the ranctest way with the central event. They will send out the ranctest way with the central event. They will send out the rancte

The stern Republican may of course reply that loyalty of this kind is little better than flunkeyism. The stimulus applied is merely an adaptation of the great art of advertising. The difference between a courtier and a valet was never so plainly marked as could have been wished; and when a whole people is enabled to take a place at the servants' table and to fall down in adoration before idols of gold lace and millinery, the tendency is to make a pepulation of valets. There is undoubtedly so much force in this criticism that it is impossible to regard the present system with anything like unmixed satisfaction. The interest which the ordinary mind takes in the pettiest details of costume and manners mixes itself very unpleasantly with the really noble sentiment of loyalty. It would be invidious and impossible to distinguish accurately how much of the writing about a royal ceremonial is aimply vulgar, and how much is intended to satisfy a pardenable and even destrable curiosity. Undoubtedly the ovil spirit of snobbishness is not yet exoroised from the population. Even Radical newspapers occasionally supply columns of fine writing about the marriages of people who have no merit but rank or wealth, and Town Councils are still capable of grovelling to the very earth before rich landlords who are of no particular value to manhind at large. Possibly at no distant day, when we are all more or less reasonable creatures, we may recognize the majesty of simplicity even in high places, and be more auxious to hear of the moral worth of our rulers than of the quality of their clothes and the quantity of wine consumed on factive occasions. But for the present we must be content to take the good and the evil together—as, indeed, good and evil have a perplexing tendency to get themselves mined up in most buman affairs. If monarchy were an effets institution, whatever tends to strengthen its hold upon the people must be so far objectionable. But if, as most people suppose, it has still a good deal of vitality in the most civilis

course exercise but a most transient findings. In a month we two the last school of the reporter's influence will have that swap, and the most glowing language will be left to mouther with the fineriptions of the Bleshorse trial. But when the avoiding the smallest details of a few balls and support is so university marked, it is obvious to meaning power over the imagination of mankind. A very little tipodescension on their part goes an enormously long way, and they have only to show a good quality now and then to appeal by muse legitimate methods than a mere display of finery to the hearts of imageness methods than a mere display of finery to the hearts of imageness in democratic ages, they are still almost mean, while genteful to anybody who will give them the efficient preparation to believing in an ideal rules. Loyalty, whether of the Brummagem or of the genuine kind, is by no means dead, and, whatever changes may tell in a different direction, some instruments for stimulating its activity are more potent than swen. It would be impertinent to inquire how far they have been turned to account in any given case; but it would certainly account though a word from a genuine ruler, who appreciated his advantages, were still of more efficacy than many volumes of rhetoric of the Bilke order.

THE TRADE IN FOUL LITERATURE.

Piron time to time the polise reports bear witness to the meritorious activity of the Society for the Suppression of Vice in unearthing and bringing to punishment the secret vandors of obscesse books and pictures. A whole family engaged in this absuinable trade has lately been rooted out one by one, and for a while at least a stop has been put to their pestilential cuterprise. It would be a great mistake, however, to suppose that the market for foul literature has been classed, or that it is by any means centimed to the obscure wretches whom the Society we have named is chiefly engaged in prosecuting. There is a well-known story of Poe's in which a wily diplomatist, wishing to hide a letter, sticks it in a conspicuous position on his mantelpiece, where the polite of course never think of looking for it. The purveyors of printed mastiness have pushaps taken a hint from this fable; at any rate they appear to have hitherto found safety in the impadent publicity with which they carry on their strocious industry. The miserable vermin who hide in the back slums are hunted down, while more audacious traffickers in filth and immorality appearently command impunity by the very openness and boldness of their transactions. We have now before us a startling document bearing on this subject. It is a "Catalogue of Rare and Curious Books, many in fine condition, with a collection relating to the Counties of ——," Soc., which are at present on sale at a bookseller's in one of the priscipal thoroughfares of London. We forbear to give the name and address; for, though we should have no hositation in pillerying the man, we have no wish to advertise him. This Catalogue is frealy circulated by post, and the copy which has reached us came from a country parsonage. It is one of the blessings of a free country that there is no security against the introduction into an Englishman's home of the vilest and most mischievous communications. The Post Office is the ready servant of infamous quack doctors, money-lenders, and of even worse knav

On the front page of this Catalogue we find the names of several collections of early woodcuts of historical and artistic interest, and the eye running casually over the other pages lights on Ascham's "Schoolmaster," Bickersteth on the Prophecies, Start's Book of Common Prayer, and similar works. A more careful examination, however, discloses the real character of the trade thusadvertised. We find a highly suggestive "Collection of Ourious Poems, relating to the Female Sex, Love, Marriage, &c.," by Sedley, Rochester, Etherege, and others of the same school; "Adventures of Signer Roselli, his amorous intrigues, &c.," 'Monorous Adventures; a curious collection of some remarkable incidents which happened to persons of the first quality in France"; "Life of Mrs. —, a gay lady"; "Stage-coach Intrigues with the Fair Sex."; "Fortunate Country Maid; being the entertaining memoir of the Maschioness of L. —— 'wherein are displayed the various ville artifices employed by Men of Intrigues for saducing of young women," with many more publications of a similar kind. For anything we know to the contrary, meet of these books may disappoint their purchasers; but all we are concerned with its the prurient take, to which an appeal is made. If there were any doubt on this point it would be removed by the cynical frankness of other passages in the Catalogue. Ducaccio's Ducaccos is offered, "with all the suppressed passages"; Buckingham's works, with "all the castronous." Money Purlement is temptingly described as a work "which offers transpasses the houries of december and for writing which the author was distincted by his father; another book is se full of "slandsus against ladies" that the vertex's "townswoman drove lim isto exile, selling him out of the town with stones"; and the "Ristoire de Prince Apprils (Triana)" is renominated in the "Ristoire de Prince Apprils (Triana)" is renominated in the manner and the "Ristoire de Prince Apprils (Triana)" is renominated in the manner and the "Ristoire de Prince Apprils (Triana)" is re

To the to feno Dougles, lier Pro and so on. can' 2. Ogilicie for Innest and Marder," and so on. There is a male client of careflaction in "Beauty Electroned, chiefly by an ambade and characteries of Beauty in Women," with "numerous place, of main figures." The gene of the Catalogue, however, mailed means to be "Facethe Bacetharum," containing "Be Gendin Jacumia Dissertatio, De Virginibus Therese Insugarates, fit.," of the attention of which the vender of filth gives quite a majorates measure. "This is," he assures us, "a perfect copy of a most emessing back in modern Latin. The various pieces, which are all gravity indecest, examplify a failer mastery over the colloquial Latin ifsient than any similar production, with the sole exception of the flagitious "Mourait Eleganties," of N. Chorier," of which flagitions work, however, this expert in literary orders could doubtless procure a copy if applied to.

This Catalogue is, no doubt, a particularly shameless and diagrating illustration of this abominable traffic in the filth and garbage of latters; but we are sorry to say that we have lately come Hust

many attention or this soumants traine in the first and shape of letters; but we are sorry to say that we have lately come room catalogues circulated by other bookselters—some cocupying sparently a respectable position—which are only a shade less one and impudent. It is impossible to mistake the salacious aggretiveness of "Curious," "Facetie," "Hrotica," even if noting were known of the contents of the works thus classified. The extent of the trade and its profitable character may be inferred from the number of booksellers who appear to be engaged in it, and the confident audneity with which they push their detestable wares. It is melancholy to reflect on the amount of corruption wares. It is melancholy to reflect on the amount of corruption which is thus disclosed; but the amazing thing is the openness and impunity with which the traffic is carried on. It is the peculiar mischief of shad book that, when once printed, it is scarcely refuse of generations which is shocking to think of the accumulated refuse of generations which is stored up for sale in the shops of a number of London beoksellers; but what shall be said of those who endeavour to give new life and currency to this pollution? Not long ago an enterprising purveyor of this class reprinted all the dreary nastiness of Apkra Behn, more dist, without the faintest flavour of wit or fun. Another publisher offers "Babelais, Faithfully translated," with the explanatory comment, "When it is stated that this is a 'faithful translation,' scholars will know what is meant." We should translation, scholars will know what is meant." We should imagine that even those who are not scholars can have no diffioulty in understanding that what is meant is that all the original orders of the book is conscientiously preserved. This publisher died lately, but his successors apparently do not shrink from carrying on his peculiar trade. Here is an advertisement which we out from last week's Athenaum :-

BEAUTIFULLY PHINTED OLD REPRINTS.—Measure Delicio; or, the Muses' Recreation, 1636; Wit Restored, 1638; and Wit's Recreation, 1640. A new edition, 2 vols. large fep. 8vo. beautifully printed on antique laid paper, and bound in antique boards, 21s. A few large paper copies have paper, and bound in an been prepared, price 35s.

The publishers intimate that the old edition of these volumes having become exceedingly scarce, they "venture to put forth the present new edition in which, while nothing has been omitted, nothing has been spared to render it more complete and algorithms. as been spared to render it more complete and elegant than any that has yet appeared." The publishers certainly show a remarkable degree of courage in "venturing" to reprint this work and to offer it publishly for sale. We were not previously acquainted with the book, but a glance at a few pages of it taken here there at random show that it contains the most abominablemay almost literally say, bestial—indocencies. Mow any printer or publisher should venture openly in the face of the world to identify himself with such horsible nestiness we are certainly at identify himself with such hornible nestiness we are certainly at a loss to conceive; yet it is made a matter of pride and boasting that this work, which previously had "become so rare that it was only to be found in the cabinets of the curious," has been brought within the reach of pepules circulation, and that "nothing has been omitted." All decent-minded people must lament that the "cabinets of the curious" were not allowed to retain a monopoly of this jewel. The same publishers are also anxious that the present generation should be suchied to revel in the feemlence of Tom d'Urfay, and think that "no analogy is needed for placing such a work more within the reach of general seeders and students."

It is not very easy to understand the solution which the police arrangements of this soundry are intended to bear to the maintenance of public descency. A notatious quack was permitted for many years to advertise his influence under by means of a revolting arbition in one of the means of an evolution which the maintenance of public descency.

by means of a sevoltmany years to have consider an exception of the metro-ing arhibition in one of the most consplored parts of the metro-pelis. It is only a few exceptingtons this metacon was suppressed, and the proceedings which at length produced this most some left to be carried on by a voluntary floriety. This floriety has also had to bear the burden of dealing with the about sole imiliatin chasses and the proceedings which at length products the many many to be carried on by a voluntary floristy. This floristy has also had to bear the hundre of dealing with the about solid multiplications. By Lond Compbell's Act, on information prints and publications. By Lond Compbell's Act, on information prior oath before a magistrate, a sectal want tools, prints, as a haptiful for the assument destruction of informations income prints, as a haptiful property of sale or publication; list as there is no Public Prints in, and as the prints are sold list and sale for the distribution of information, the Act, would be adopted better first for the distribution of the many publication and allowed the first transfer and the destruction of the sale would be distributed. graduce, the Representation of Na p. Ohe day would be do

credible if it were not seated on official authority, one occasion the Government, instead of assisting actually pocketed the times resulting from the Bottoms. The lower diese of hawkers of discount asverely dealt with; but the question now is, whether to be allowed to be openly sold by purveyous with perfect freedom and impunity. We are quit familiar argument on this subject, that old books is and are vanishis illustrations of the manners of the they were published; and also that if a second they were published; and also that if a general extent were published; and also that if a general extent we to be made on obscene literature, it would be bard to say we great names might not be struck at. We are certainly not on side of prudery in this matter, but there is surely a line to drawn between the preservation of old books and pictures ea.) torical curiorities and the republication of obscentities in a country. tirely chesp and popular form in order to gratify prusis.

As to the person of whose Catalogue we have spoken all ought to be no difficulty in dealing with such a case, here no question as to whether a particular work is or bere no question as to whether a particular work is or in not decent. When the vendor himself vouches that his warss "tranged the bounds of decency," and are "most amusing and ground decent," and recommends them on that very ground, he may taken at his word. It is intolerable that domestic private he invested by inve should be invaded by invitations to the purchase of such per villanina.

THE YOUNG ENGLISHMAN OF THE TIMES.

THE Germans, it seems, are going to best us on a field which we had always thought was, if any field could be, unalterally our own—the field of commercial enterprise. This is a sad thing to find out, but it seems, at least according to the Times, to be only part of a much greater law. We wonder whether that most rare volume, the Lord Mayor's Journey to Oxford, is studied in Printin House Square. In that volume the dutiful Chaplain who seem House Square. In that volume the dutiful Unaplan was remarkable his Lordship's progress sets down as one of the most remarkable things which they saw or learned on the way, the discovery that "good sense and good manners were not commed to the citizens of London." Up to that moment the Lord Mayor, or at least the Lord Mayor's Chaplain, had lived in the belief that all beyond the Oity bounds was a howling wilderness of folly and barbarters. It had not come into his head that there could be the least glimmering of good sense or good manners so far east as the Tower or so far west as the Strand. The view from Arinting-Mouse Square certainly seems to be one degree wider than the view from the Mansien House. What the City of London was to Dr. Dillon the lale of Britain, or perhaps only part of it, has hitherto been to the Times. Civilization, or at least the highest form of it, had hitherto been shut up within the limits of the four seas. No other nation could lay claim to any progress in civiliza-tion, or at any rate not to any progress in civilization which could be at all compared to our own. At last the Times, like Pr. Dillon, has awakened to the fact that the thing which had hitherto been thought to be found only within such a narrow circle had really spread itself a good way further. As Dr. Dillon found out that both the scholars and the citizens of Oxford might lay some claim to the possession of good sense and good manners, so the Times has found out that other nations besides curselves can do something in the way of the progress of civilisation. And the Times, like Dr. Dillon, having made the discovery, honestly and manfully announces it to the world:—

We cannot disgrise from ourselves that in what is called the progress of civilization and the great work of the almotenth century the Continent has gained as much ground as we have—certainly much more ground than was thought possible a few years ago.

A few days before the famous journey, Dr. Billon had not thought it possible that there could be so much good sense and good manners anywhere out of the City of Lendon as he actually found when he got to Oxford. And so, a few years ago, perhaps a few days ago, the Zimes had not thought it possible that the Continent could have made so much programs as it has become Continent could have made so much progress as it has learned from Lord Herby and some of his late correspondents that it really has made. To be sure the Times seems still to look upon the Continent as all one thing, seemingly usting as a single body, and most likely Dr. Dillon, when he had discovered that good sense and good manners were to be found in the country, still looked on the country as all one thing, and drew no very minute distinction between Oxford and Newcastle-upon-Tyne. Still this transitional state is one which most likely has to be gone through before people get clearer notions. The Times induced seems to look on the Continent as a place inhabited only by Germans; but this of the Continent as a piace manned only by termines; but this or itself is an advance on the belief which not long ago was common among good Englishmen, that it was a place inhabited only by Frenchmen. Here then is the fact that the Continentals, or at any rate the Gormans, are getting ahead of us, and it is our duty to see what we can do still to keep ahead of them.

to see what we can do still to keep ahead of them.

The Times very properly begins at the beginning. Train up the young Englishmen in the way in which he should go, and when he is old, or before he is old, he will be a match for the German or even for the Seotchman. For just at the end of the article it seems out that the zeal of the Times is not for the United Kingsdem, in general, but only for that part of it called England; and it seems in as a sort of after thought that, if the German is ahead of ma, the Seotchman is sheed of us also :--

see one Bail the Charman just so overywhere the Englishman has

found the Scotchman, better prepared for the work, and equally devoted to it; more steady, more thrifty, and more disposed to help one of his own

Well, in order that the young Englishman may be able to meet on equal terms with his rivals beyond the German Ocean, and seemingly also with his rivals beyond the Tweed, he must learn geography. Geography indeed he must learn thoroughly; and it would seem that, if he adds a little history to it, it will not do him would seem that, if he adds a little history to it, it will not do him any harm. As we cannot understand how geography can be taught without history, or history without geography, we should have thought that the one precept took the other for granted. Still we at least have no objection either to say or hear the same thing twice over, and we are glad to have the Times so far on our side as a held that if we are to be a match for the Gorzapa or the Section to hold that if we are to be a match for the Germans or the Scots, or to do anything at all in any way, it is right that the young Englishman should learn geography. It is of course painful to think that we need to learn anything in order to put ourselves on a level with Germans or anybody else; still there the fact is, and we must look it in the face. After all, we are their betters, and would not change with them; still, if we can add their merits to our own, we shall be more perfect still than we are:-

We presume that few young Englishmen would like to change places with Germans of equal rank. But there are some points on which Germans have the advantage of us, and in which, accordingly, we have to bestow more pains, if we would make up the deficiency.

So then, not to be behind the rest of the world, we must begin our studies in geography. We say that we must begin them, for therein is a point of difference between us and the *Times*. The studies in geography. We say that we must begin them, for therein is a point of difference between us and the *Times*. The *Times* holds that we have begun them already, and that we have made some progress in them. Let us look at the young Englishment to the *Times*, he stands at present:—

The young Englishman is generally pretty well up to the geography of his ewn island; Switzerland, perhaps; parts of modern France, ancient Italy and Greece. But he knows next to nothing of any other country, because he cares for no other country. Yet without a wide and solid geographical basis for future development it will be impossible for a merchant ever to carry in his head the commerce of the world, or to be prepared for any new information to be acted upon promptly. As for history, if a young Englishman knows that of his own country, with a few striking incidents from the annals of our nearest neighbour, that is about all he thinks an Englishman nead know.

We are sorry to say that our own experience at least tells us that this is somewhat a description in rose colour. Contrary to the general rule, it is in this case more easy to prove the negative. The Times is quite right as to what the young Englishman does not know, but there seems a little play of fancy in the description which the Times gives of what he does know. It is certain that that class of young Englishmen who may be supposed to know, in the words of the Times, "something about parts of ancient Greece and Italy" have very vague ideas about the geography of the world in general. we do full justice to the distinction which the Times draws between different parts of ancient Greece and Italy, as no one in any age can be expected to know very much of the inner districts of Ætolia or Samnium. It would be hard, now we have got out of the pre-scientific age, to dwell on the fact that England once had a Prime Minister and Oxford a Chancellor who believed that Chrift law within a mile of the coast of Theresis. But that Corfu lay within a mile of the coast of Thessaly. But perhaps these places also are among those parts of ancient Greece perhaps these places also are among those parts of ancient Greece whose geography people are not expected to know. In the same way the Times prudently confines the knowledge of the young Englishman to "parts of modern France." Now Orange, theatre and all, has for some time past been—some might think unluckily—part of modern France. But we can bear our witness that, among those young Englishmen who have the best chance of knowing something about ancient Greece and Italy, there is an almost universal belief that Orange is somewhere in the Low Countries, or, as it is sometimes more minutely defined, "it lies between Holland and Germany." Young Englishmen of the same class have been known to doubt whether Navarre lies in Sicily or in Austria. But the Times says that they know the geography of "Switzerland perhaps." The "perhaps" is most wisely put in; but the sentence betrays a lurking notion that because young Englishmen, especially of the class most likely to know something about ancient Greece and Italy, often have a fancy for climbing Swiss Alps, therefore they have a knowledge of o know something about ancient creece and Italy, often have a fancy for climbing Swiss Alps, therefore they have a knowledge of Swiss geography. No doubt there are here and there scientific men who climb Alps with the express purpose of learning one branch of geography. But we suspect that with the ordinary climber of Alps, with the man who simply gets prouder the more danger he thrusts his neck into, the process of climbing becomes a positive hindrance to learning any geography. The canning danger he thrusts his neck into, the process of chimbing becomes a positive hindrance to learning any geography. The genuine Alpine climber, when he has climbed his peak, thinks it as much intellectually as it is physically beneath him to know anything about the city or district at his feet, its history, its constitution, or its antiquities. He would be ashamed if any one suspected him of having anyly so low as to know the paper of the Center, in of having sunk so low as to know the name of the Canton in which he is standing, whether it has a primary or a representative Assembly, whether it is one of the old Thirteen, or one whose Assembly, whether it is one of the old Thirteen, or one whose enfranchisement living mon can remember. Who, in fact, would atoop to learn geography or anything else, when he is taking his pleasure in "the playground of Europe"? Then the notion that Switzerland exists only as a place for people to climb Alps in tends to the notion that, wherever there are Alps, there is Switzerland. Above all, it must be Switzerland where the King of all Alps is, and he would be a very exceptional young Englishman who would listen to any one who would be persuade him that Chamouni and Martigny were not parts

of the same State. As the the parts of modern Persons a young Englishmen know, we should like to have a mass finition. One thing is certain, that, though many of the have passed by Mantes, there is an all but maivered duty to identify Mantes with Le Mans. We have ever known the full build, that "Clarence is a to identify mantes with Le. Mans. We have even known to Englishman express his full bulief that "Cayenne is the most of Normandy." Nay, as for our own island, we are by no most certain as the Times that an Englishman really know geography. Now we will not put them on in anything hard; we will not ask them to distinguish Clackmannan Kinross on a skeleton map. Nor will we take extreme cases like of the man—he is no fable—who did not know on what it. of the man—he is no fable—who did not know on whatriver is stood. But it is certain that it is the hardest thing in the stood. But it is certain that it is the hardest thing in the warm to make young Englishmen believe that there are so many as two Avons—a pious economy will at such moments keep back the fact that there are six or seven—and that the atream which flows by Stratford is not the same as the stream which flows by Bath. As for the belief that Bristol is on the Severn, it is one so rooted in the minds of young Englishmen that it would be worth while for our schools and Universities to join to get up a series of excursions to convince their students of their error on the most. Then, by the same logic by which all Alps are held to be in Switzerland, a large part of Lancashire is commonly held to be Cumberland, and a large part of Somerset to be Devonshire, though we must allow that this last wrong is sometimes balanced by a belief that the city of Exeter is in Somerset. As for the knowledge of history, we mark that, while the Times assumes by a belief that the city of Exeter is in Somerset. As for the knowledge of history, we mark that, while the Times assumes that the young Englishman knows the "geography of his own island," his knowledge of its history is a matter, as crookbacked Richard might have called it, of "buts and ifn." At all events, he knows only the history "of his own country, with a few striking incidents from the annals of our nearest neighboar." The question may savour of Scribes and Pharisees, but we cannot help asking, Who is our neighbour? At first we thought it was France, but when we saw the change from "his own island" to "our own country," and the references further on to Scotchmen as a distinct set of people, we perceived that it must be Scotland. as a distinct set of people, we perceived that it must be Scotland. The young Englishman then thinks that, if he knows the history of England and a few striking incidents from the annals of Scotland, that is about all an Englishman need know. Now, if he does know the history of England, which the Times seems to look on as a thing so easy to be known, he certainly does know a good deal, a thing so easy to be known, he certainly does know a good deal, perhaps enough to put him on a level with Scot or German. As for the striking incidents, we suppose they are Macbeth and the witches, Wallace and the trout, Bruce and the spider, and so forth. Well, if a man does know the history of England, we do not quarrel with his amusing himself in this way; Barbour and Blind Harry are at any rate more wholesome than Miss Braddon and Miss Broughton. But if the Times takes them for history, that is not then matter. history, that is another matter.

Altogether we would say to the young Englishman, Follow the good advice of the Times when it tells you to learn geography. Believe the Times when it tells you the wholesome truth that of the geography of most part of the world you know nothing at all. But do not flatter yourself that you know anything of the geography of your own island, or of Switzerland, or of any part of France, unless you have some better reason than the word of the Times to make you think that you do know it.

BISHOPS AND CURATES.

BISHOPS AND CURATES.

THE significance of the question which has been raised by the application to the Court of Queen's Bench for a mondamus to compel the Bishop of Durham to license Mr. Peake as curate of St. Oswald's, Durham, will not be fully realized by those who regard it as a mere personal question between a bishop and a curate. The rule which was asked for has not been granted; but the Court has given leave to the counsel for the plaintiff to look up authorities, and to repeat his motion. Whether or not the application is renewed in this particular case, it may be presumed that a question fraught with such serious consequences to the constitution and discipline of the Church is likely to be heard of again. The circumstances of the case are briefly these. Dr. Dyke wished to appoint Mr. Peake as his curate, and Mr. Peake accordingly applied for the usual licence from the Bishop of the diocese. Bishop Baring replied in a curious letter, which, though it was addressed to Mr. Peake, had certainly the appearance of being aimed at some other person. The Bishop remarked that "the extent to which some of the clergy of the present day, in their public ministrations disreremarked that "the extent to which some of the clergy of the present day, in their public ministrations disregard the law which they have pledged themselves to obey has become very serious," and intimated that, in order to check this "open defiance of lawfully constituted authority by the ministers of the Church," he had resolved to supplement the subscription required by law with certain articles of his own device. His plan was to "require of an incumbent on his nomination of a curate, that he give me his written pledge that he will not require of such curate—(1) That he wear coloured stoles; (2) that he take part in, or be present at, the burning of income; (3) that he turn his back upon the congregation during the celebration of the Holy Communion, except when contents the bread." And further to demand from the constant "a written promise that he will offend in some of these phases." It will be observed that Bishop Baring attaches two modificates to the graint. instant in the country of the first the members who wants the country is the disconting allocations of the history of the disconting at the country shall pledge kinned; to discharge and defy his emperior in the country shall pledge kinned; to discharge and defy his emperior in the country of the latter requiring him to do expanding which can be construed into a violation of the obligations privately imposed by the bishop without any legal authority. Occasionately, even if the durate were willing to contract himself out of the ordinary protection of the law, and to place himself cort of the ordinary protection of the law, and to place himself corts in the necessary certificate unless the incumbent was also willing to submit to the private and personal orders of his episcipal superior. The proposition is thus laid down that a hishop is entitled to refuse a licence to a curate unless he will sign a document emanating privately from the bishop, and of no legal authority whatever; and further that the curate, even if willing to submit to this unlawful oppression, cannot claim the certificate unless another person over whom he has no control, but who, on the contrary, is his employer and superior, and who is also on this point entirely beyond the authority of the bishop, will agree to sign any paper which the bishop may choose to present for his acceptance. There are thus two questions at issue; first, whether the bishop has any right to exercise this self-constituted authority over either the incumbent or the curate; and next, whether he has a right to refuse a licence to A., the curate, because quite another person, R., the incumbent, will not also place himself at his feet, and accept his private decrees as the law of the Church?

In the present instance the curate and the incumbent appear to at one in resisting these arbitrary and unconstitutional demands, but it is important to observe the extent of the power which is claimed by Bishop Baring. In order to examine this question fairly, it is necessary to put out of view the particular nature of the stipulations which Bishop Baring sought to impose. These stipulations may or may not embody certain legal decisions as to the services of the Church, but they are certainly not stipulations to which a curate is by law required to give formal assent, and the question therefore is whether a bishop is entitled, by virtue of his office, to throw his own private views on such matters into a series of articles which all below him must subscribe. The Record, which rather nervously rejoices over the decision of the Court of Queen's Bench as a personal triumph for the Bishop, is careful to remark that "the Judges were too doubtful as to what is careful to remark that "the Judges were too doubtful as to what was the law to commit themselves on the sudden to a distinct opinion on the question, whether the Bishop's mode of action had been strictly legal or not," and that "the absolute power of the bishop is a two-edged sword" which might equally be used against Evangelicals and Ritualists. It is possible that, if a very High Church bishop should happen to be infected by the example of the Bishop of Durham, and should attempt to bully an Evangelical curate in the same way as Dr. Baring did Mr. Peake, the Record might discover reason to doubt whether, spart from "the technical legality of his mode of action," he furnished "a noble example of a prelate maintaining his principles with consistent manliness." The whole question is of course, not whether bishops ought to favour one side or the other, but whether they are entitled to append to the statutory subscription any articles of their own invention which may happen to have taken their fancy. The law on the subject is may happen to have taken their fancy. The law on the subject is perfectly plain and distinct. It is contained in the 9th Section of the Subscription Act of 1865, which is to the following effect:— That no person shall, on, or as a consequence of, ordination, or on, or as a consequence of, being licensed to any stipendiary curacy, or on, or as a consequence of, being presented, instituted, collated, elected, or licensed to any benefice with cure of souls." &c., be required to make any subscription or declaration, or take any oath, other than such subscription or declaration, or take any oath other than such subscriptions, declarations, and oath as an required by this Act." It might have been supposed, therefore, that all that would be necessary in this instance would be simply to look into the Act of Parliament, and ascertain whether Bishop Baring's three articles were recognized in any part of the Act. part of the Act. It would appear, however, that the Judges of the Queen's Bench had made up their minds to keep clear of all ecclesiastical controversies, and to leave the Church, as Prince the Queen's Elench had made up their minds to keep clear of all ecclesiassical controversies, and to leave the Church, as Prince Biamarck asid of Paris, to stew in its own gravy. They would look at nothing but the principle that the Bishop is authorized to grant or refuse licences at his own discretion. "It is quite possible," said Mr. Justice Blackburn, "that in one diocese the bishop may say, 'I will license no curate who is suspected to be Low Church,' while in another diocese the bishop may say, 'I will license no curate who is suspected to be High Church.' It may be very inconvenient that that state of things should exist, but that is for the Legislature to remedy, if necessary." Dr. Stephens admitted that, if a bishop simply declined to grant a licence without assigning a reason, there would probably be no alternative except to submit to his decision; but he argued that the state of the case was changed when the bishop took upon himself to make his licence conditional on compliance with various standards and pledges of his own invention. One of the Judges hinted that the things which Bishop Baring wished the curate and insumbent to pledge theseselves not to do were illegal; but that does not in any way touch the question. If they are illegal, the bishop should proceed against the unisader in the regular way. If they have only doubtful, the bishop's opinion about them is only his regular or the grant of the case only doubtful, the bishop's opinion about them is saily his 18

teo hastily assumed by the Judges that this was are efficientical question. It is simply a question of the construction of an Act of Parliament regulating the performance of castain public duties. Suppose that, instead of the Church, it had been the Foreign Offlice, and that candidates for clarkships were required to make a particular declaration before they were appointed, could it be seriously argued that, in addition to this declaration, the Secretary of State had a right to enset on his own authority a supplementary subscription that the candidate was a sound Liberal or Conservative, as the case might be, and always voted straight at elections, in spite of the Ballot? To complete the analogy, the candidate should further be required to produce a declaration signed by the chief clerk of the particular section of the office in which he hoped to be employed, promising to take care that all his subordinates should be made to vote on the right side.

The range of the decision, if it really was a decision, which was given the other day by the Court of Queen's Bench in this case, goes very far indeed. If it is confirmed, it will obviously leave the "curacy" of England at the uncontrolled mercy of the bisheps; and not merely the curates, but the incumbents also, for an incumbent might just as well be turned out of the Church at once as be deprived of the means of discharging his duties by the aid of curates of his own choice. A bishop who wished to suppress a clergyman whose ways were not exactly his own ways would only have to impose upon him and his curates a privately concocted declaration, which he knew beforehand would not be subscribed, and to follow it up by refusing to license any curates for service under that particular clergyman. Mr. Justice Blackburn remarked that, although the wearing of beards by clergymen was not a violation of the law, still if the bishop did not like beards in the pulpit, he had a right to require the clergy of his diocese to return to the use of razors; but, on being reminded that beards were not subscriptions, and would not come within the Act, he withdrew the observation. It is obvious, however, that bishops who held themselves entitled to follow Dr. Baring's example might vary their private formulas at their pleasure, and might undertake to interpret in rather a startling way some of the doctrines of the Church. The assertion of this peculiar authority on the part of the bishops is certainly a very curious corollary from the recent decision of Parliament to dispense with the assistance of the bishops in the judicial determination of ecclesiastical questions. If bishops are to be allowed, entirely at their own private pleasure and discription, to supplement or supersede the statutory subscriptions required from clergymen, they will practically be invested with absolute power over the doctrines and discipline of the Church. A Government which was in office for a number of years, and, like Lord Palmerston, had a run of luck i

BIARRITZ.

POYAL patronage, and fashion following in its wake, have neldom raised a watering-place more suddenly into greatness than they have raised Biarritz. Twenty years ago it was an obscure village, inhabited by a few Basque fishermen, and now its permanent population exceeds four or five thousand, while the autumn visitors must number thrice or four times as many. No bathing place in France, except perhaps Trouville, rivals it in popularity and in the luxurious provision which it makes for its guests. And, on the whole, royal patronage and fashion have for once been wise. Biarritz has three conspicuous advantages over the summer resorts either of the North and West of France, or of the East and South-East of England, in its climate, its scenery, and its position as a centre for exploring a beautiful country. The climate seems to realize that of the Elysian plain whither Menelaus and Halen were, according to Homer, to be sent by the special favour of the Gods; it is never too cold, and seldom too hot; the sir is soft, yet fresh, bright, and bracing, for Orean is always sending up "skrill-blowing blasts of Zephyrus to refresh mankind." As the country, in spite of recent fir plantations, is still rather bere just along the coast, the sun of July and August must be too strong for English taster, but in the later months of autumn the Bay of Biscay sufficiently tempers the heat; and all through the winter snow very seldom falls and never lies. The sea is warm enough for bathing in January; yet, as it is part of the open ocean, cool enough to be delightfully refreshing in August—cooler in fact, than on the coasts of Normandy. The peculiar combination of softness and keenness which we note in the breeze is only to be found in Southern latitudes and exposed coasts; and it may be doubted whether there is anything quite of the same kind in our own islands. South Devon and Cornwall have a deliciously mild climate; but it is too humid and relaxing in the hotter months of the year; and the West of Ireland, with keener and stronge

Compared with the Germans or ourselves, the French and Spaniards show so much indifference to natural beauty in their choice of places of summer resort that one can hardly think that

the picture of the mountain groups which form a background to the views round Biarritz have had snything to do with its good facture. The cliffs on which the town stands, and along the top of which one can walk for several miles each way, seems to excite some admiration in the visitors; but any one who has seen, we will not say the West Highlands of Scotland, or the coast of Mayo or Donegal, but even Devon, or Connwall, or South-West Wales, will find it hard to get up an interest in these petty heights of cretaceous limestone, which seldom basek down directly into the sea, and have neither the rich dark colours nor the rugged lines of the crystalline rocks that guard our Western seabord. Standing on irregular hills, and piezzed by creeks and inlets, with isolated bits of rock scattered all about in the sea, the town ought to be very picturesque, but the nonstrous hotels and ornste villas have done their best to destroy the charm which nature meant to give. And the beauty of the place has suffered still further by the way in which walks have been cut along the cliffs, tunnels excavated, and attempts made to form a port by building little walls and breakwaters from one insulated rock to another. Milleons of frames were spent by the Emperor in these enterprises, but the winter storms have been too much for his engineers, and the work exacely advances. The immediate neighbourhood inland is far from interesting. For some miles round, the country is either flat or nothing more than undulating; the soil sandy; the weeds are low, and mostly of sombre pine; there are few streams, and some of those romantic villages which one sees in the Pyrenees and on the coasts of Asturias or Biscaya. There is nothing to compare with the country roads of Normandy round Reyoux or Lisieux, not to speak of the lanes of Devonshire, or the breasy moons between Scarborough and Whitby. On the other hand, it must be admitted that the views of the chain is comparatively low; it is only in the clearest weather that any summits exceeding four or

These, however, are by no means the enjoyments which the swarm of visitors that fills hotels and lodging-houses from June to November seems to appreciate. Spaniards and French alike, for the Spaniards seem to outnumber the French, they nover stroll out of the streets on to the cliffs, or turn their heads to look at the finest sunset or play of cloud-lights upon the mountains. During the day the men sit in front of the cafes, or lounge along the promendes with eigers, and at night betake themselves to the Casino, where there are plays or operettas thrice a week, balls on the other days, and gambling always. The women disport themselves among the waves in elegant costumes surmounted by coquettiesh straw hats, and for the rost of their time sit gossiping together, and watching others bathe. The wealthier sort drive a little, but mostly on the dull poplar-bordered road which leads to Bayonne; very few ride, still fewer walk, and nobody goes on the water. They are happy, however, and muchable time are the healthier for the sea all which enters even the cases; and if their fashiom of getting health and happiness seems a tame one, at least it attains its object, which is more than can always be said for our own efforts in the same direction. And this dislike to locomotion is so far lucky for an Englishmun that he finds himself as much alone on the cliffs outside the town as he would at the Land's End, and may ramble about unobserved to his heart's content; may, in fact, do everything but bathe, an act forbidden (except in one of the thebliseaments des bains) under the utmost rigours of the law. This is really the one great drawback to the pleasantness of the place. Unless you go out almost before daylight in the morning or after dark at might to some secluded apot on the shore, or rive a boat to carry you out to sea, you are forced to get into a close and fil-scented box, put on an uncomfortable dress, which makes swimming almost impossible and hangs clammily about you as you go in and come out of the wator, and take

from the disagrambles which the dishipment involves. But up need not expectible such as idea will over accumulate the finite who rule at the limits, the over and shows the Francis Charge of prepriety, there are to be considered the interests of the expect. The dishipments, powerful people in such a place.

We have left to the last what is one of the chief charmen of

We have less to the last what is one of the chief common it is all directions. Close by is Beyonne, one of the handoungst of Tames provincial towns, with its stately houses mirrored in two broad rivers, its half-Spanish arcades, its citadel, and its general coefficient. A few miles beyond Hayonne to the North, there is the purity large of Yrieu embosomed in deep black woods of smeint fire and authorities, and such trees, a perfect type of the Landes assency at its beat. Along the court of the South one has a succession of interesting Begins towns—Guestarry, fit. Jean de Lus, Hendays, and, must cusious all, lying just beyond the Spanish frontier, at the mouth of the famous Bidasson, Foutambia, a tiny city of mouldaring pulsace, with a huge squase castle which looks as if it might have sheltand. Charlemagne the night when Roland's horn was heard, a thinteenth-century church more than hig enough to hold the whole present fronts and projecting comices that almost meet across the street, and finally, the meet beautiful women in all the Hasque country, and one is told, is all Spain. Still further a noble coast of hold promonteries and richly-wooded bays runs away cut to the West towards Sautander. Inland there is the Franch Basque country, a land which, if less striking than the central Pyranes, is certainly not less cherming. The mountains seldom axceed five thousand feet in height, but they are very varied and pictarseque in form, and they are covered with woods of oak and Spanish chestnut, very much reminding one with their grand old mossy tranks and their frequent glades, fringed with holly and an undergrowth of fern, of the best parts of our own New Forest. In the valleys streams of an exquisite elearnose ripple along through bright green pastures and orchards; for it is a great fruit as well as vine region, and has an air of prosperity as well as of cleanliness, and general comfort which is not common in Southarn Europe. The houses in the long straggling villages are painted white or purple, large, and scruptul

are simple, and sometimes even rough, but they are clean, the people are genial and friendly, and the charges ridiculously low, often net more than four or five francs a day.

All these charms, however, are lost upon the French and Spanish visitors to Biarritz, who have no taste for rambling, and never penetrate the Bacque country except to drink or baths in the waters at such a place as Cambo. After watching the life and demeaneour of the Spaniards at Biarritz, many of whom are political refugees, and not a few belonging to the best families in Spain, one ceases to wonder at the misfortunes of their country. These exiles accept their condition with a phlegmatic indifference which is a far worse symptom than a restless passion for conspiracy would be. They declaim indeed, and with some eloquence, for heurs together to each other, or to any chance French or English listener they can find, on the crimes of Castelar and Franceras, but the matter evidently givesthem no real centers. While they have their cigar and their chocolate, and enough pocket money to dress with and sujoy a little gambling, the future of Spain, or even their own personal future, will not spoil their sleep or their direction. One comes to believe what one is told all along the Spanish border, that Spanish civil wars are carried on by a small minority of the population, the rest doing their work (which is small enough, heaven knows) and daucing in the evening as usual, just as if nothing remarkable were in progress; and one is more willing to listen to, if not to accept, the theory that climate has a share in the mattergand that emjoyments are independent of wealth, man's energy in labour mocessarily declines, and with it his interest in political or accept something to answer for in the dignitied languer of these stately gentlemen who stroll about in front of its Casino. With such a lay and such a sea life seems very tolerable, even though year country may be sinking deeper and deeper into lankruptoy and

ADULTERATION OF TEA.

IT has been suggested that if we neally wish to check adulturation of tea we should strike at the importer. It is theoretically possible to examine ten in hond, to detect spurious articles, to destroy them, and to punish those who deal in them. The Commissioness of Castons urge that this would genetically be difficult, and that we should thereby check the tends which we undertook to regulate. But if we think it better to drink no tall at all there to drink bad ten, we shall not be greatly affected

stels a third might he applicable s. Persons versed in the Obina t to an to the engrees which would reward in-not seems that all spurious tens would be more detected, and the Parsons vars rable grade as to We need not a a were detected, and the importers penish sed. If some were detected, and the importers penished, the insperious teas would be checked. As regards the difficulty of ing what degree of adulturation shall be punished, it applies by to say flourt before which a prosecution may some; magistants at Birmingham was lately occupied with a case is kind for about a week, but ultimately a conviction was need. If we really are in earnest to check importation of tess tes, it may be checked, but, like most other accial imments that can be suggested, this will require the appointment asymment of proper officers to early it out. "There are no resofteness who have the requisite knowledge" for inspectors a fluctuar of the suppointment as the doubtless much afficient could be sensointed, and in this tees, but doubtless such officers could be appointed, and in this tenes, at any man, compatitive examination might be anfely at in selection. If Mr. Bright's programme of a "free breakfast ble" were fally carried out, the Commissioners of Customs would be no proper duty in connexion with the except to ascertain that by paying articles were not imported under its name. But of course, were becaute and fixed and driving if we choose and re inspectors of imported food and drinks if we choose, and whether they he placed under the Commissioners of Customs or any other authority is a matter of detail. The dealers now complain that they suffer for the sine of importers, while the public is led to the comfortable conclusion that "there is perhaps no article of food more subject to adulteration than tea." It is represented that the Obinese manufacturer prepares tes in accordance with the in-structions he receives from England. Possibly he might be willing estructions he receives from England. Possibly he might be willing to do a little cheating on his own account, but the opportunity is not afforded him, for the interests of the English merchant are guarded by his own emparts, who are on the spot, and know all about foreign leaves, lie tea, stones, and, iron, and colouring. We are quoting now from a monthly publication by Dr. Hassall, called Food, Water, Air, which is dismal, but perhaps necessary, reading. It is alleged that both wholesale and retail dealers in tea can, if they please, detect gross cases of Chinese and adulteration. The grocess know that Canton green and Caper teas are adulterated, and further, if they require special evidence are adulterated, and further, if they require special evidence of adulteration in any given sample, they can easily obtain it. The look is enough to show whether the tea is artificially coloured or not; a sixpenny magnet will reveal iron, while a careful accutiny and a little hot water will detect the lie tea; "so that if any retail dealer is ignorant of the fact that his teas are adulterated, it is wilful and culpable ignorance." The retail dealer, or his counsel, would probably answer that the question is one of degree. He can only buy such teas as are in the market, at prices corresponding to those which his customers will pay. The question has been lately asked "What is wine?" And some difficulty was found in answering it. We are told that foreign leaves are added to some high-priced teas in order to impart a perfume which the ten-leaf does not possess. Many high-priced wines undergo processes analogous to this which could not be called criminal adulteration. Coming to low-priced wines, we find that they do not deserve to be called wines at all, and the case seems to be nearly the same with low-priced tees. By force of habit people not only consume both these articles withe erticles withnorms of many proper not only consume both these efficies without repugnance, but cannot do without them. If one grower does
not supply cheap tes another will; and after all the question is,
whether gamuine tes can be supplied at the price we are able or
willing to pay for it. If it cannot, we should do well to abstan
from tes altogether; but still we have the right to please ourselves.
The "importance begreages" which I and A bouless used to content The "innecessus beverages" which Lord Aberdare used to contrast with "intexinating drinks" begin to appear rather the more pernicious of the two. If one inspector cuts off our tea and another our beer, we may be healthy, but we shall not be comfortable or contented. It may be quite true that one of these liquids is as minimized. At may be quite true that one of these liquids is as sworthy of the name it goes by as the other, but still we are need to them, and cannot easily find substitutes. Notwithstanding I explanations of the constituents of sherry, there are thousands I people who believe that it has a sustaining power which is necessary to their health. ell explanations of the constitue

messessary to their health.

The practice of colouring or "facing" ten is so notorious that it ought to decaive nobody. Habit and imagination enable us to purceive that a peculiar and grateful flavour is imparted to ordinary black ten by an infusion of green ten at a higher price. Speaking generally, the true green ten comes from thanghai, and the false from Canton. Dr. Hassell gave lately an analysis of an article which, with commendable honesty, was ammuned as "handsome gampowder, to imitate true Shanghai Ping Suey gampowder," This sample was "very strongly magnetic," containing 48:46 per cent. of his ten, "eastly matter partly in the falled leaver." It was faced with turnserio, Prussian blue, and a white inimenal powder. The ask of the ten was 23 69 per cent., whereas the ask of good ten is less than 6 per cent; so that extransoms menter must have been langely introduced into it. Br. Massell mentions in the same number of his journal deat or sittings, and in make known to the public of lange, and is much used for min-

The public, if they were essable, would infinit Mary San It is use in interesting quantion whether Chins and at a can grow enough the to supply the world. It paster to receive their tan and lanve their me. If they mat h adopt Cabbett's principle and stick to beer. At put talk us that our ten is "faced;" another finds "lift in the water with which we fill our kettles; and in the water with which we fill our kettles; and a third suggests that our milk may have been adulterated with water drawn from a well polluted by infiltration of sewage. Our best is probably home-flesh, and our mustard is flour coloured with termeric and seasoned with capsicum. A few years ago, says Dr. Has gennine mustard was scarcely to be met with in the market. all. gennine mustard was scarcely to be mat with in the masket. The manufacturers made three qualities of mustard, distinguished as "fine," "superfine," and "double superfine." They all consisted of the above-named ingredients, and the first-named contained the least mustard, while even the "double superfine" contained a good deal of flour. The value which all trades attach to names is remarkable, considering that noither declors are customers expect realities to correspond to thom. The commonest kind of sherry must be marked "V.S.O.," and mustaed largely composed of coloured flour ranks as "double superfine." Furthaps the reason why genuine articles are hardly ever sold in England is reason why genuine articles are hardly ever sold in England is that the language has no epithets sufficiently magnificant to apply to them. It was alleged by a Correspondent of the Times that wheat flour improves mustard, on which Dr. Hassall observes that wheat flour improves mustard, on which Dr. Hamall observes that in the "fine" article of commerce, which contains least mustard, there is most flour, which seems to him extraordinary if the flour is only used to improve the numberd. A practice analogous to that of "facing" tas is whitening bread by means of alum. If a West End baker made bread from the best wheat flow, and used no whitening matter, the bread would be yellowish, like the home-made bread of a country house and his customers would reject it. An example semewhat similar is that of putting sulphate of iron into beer to give it "head." It is to be feared that our grandinto beer to give it "head." It is to be feared that our grand-mothers were addicted to what they called "greening" pickles by putting them into a copper vessel. We need not dwell on the familiar structices of coloured confectionery, nor upon the use of red load in cheese. But a new horror has been added to the list by the author of a little book on Adulterations of Food (Isbister and Co.), who has discovered that mushroom katching is adulterated by "the juice expressed from the livers of putrifying horses." After this it is almost a relief to revert to the older theory that ketching was made out of crushed blackbeetles. Among the probable ingredients of butter is "rag-palp," and straw-pelp is largely used in making jasu. We do not find that this author sanctions the popular idea that call's-foot jelly (recommended for its strengthening qualities to invalids) is made out of old combs. He tells us that "plain spirit" is produced from grains at the distillery, and it becomes gin, brandy, or run, at the pleasure of the rectifier. nd it becomes gin, brandy, or runi, at the ple ssure of the rectifier. Many so-called wines, he says, contain the genuine article in only a homosopathic proportion. This statement is indisputably true, and it leads us to inquire whether the wine-merchants are to be treated on the same principle as the toa-dealers. If they are, the unlucky grocor who sells both articles is likely to be doubly punished.

THE QUARTERLY REVIEW ON SACERDOTALISM.

WHEN the title of "Sacerdotslism Ancient and Modern" first caught our eye on the cover of the new number of the Quarterly Revew, we must confess that the feal subject of the article did not for a moment occur to us. We turned to it with some interest, in the hope of finding one of those learned dissertations which still occasionally adorn the pages of the Quarterly on the ancient theosophies of Egypt or Greece, intersporsed perhaps with a running comment of comparisons and conrasts between the priests of Isia and the priests of Home, or even the hierophants of that most sacerdotal of all modern sects founded by the late M. Comte. Greatly to our surprise, and somewhat to our disappointment, the article turned out to be simply another attack on the so-called littualists, and especially on the 480 clergymen-or, in the polished phraseology of Exeter Hall, "the 400 priests of Beal "-who last year petitioned the Upper House of Convocation about confession and aundry other points of religious or coremonal It is to the subject of suricular confession, however, that the Roviewer almost exclusively confines himself; and when the true purport of his luminations became clear to us, we could not help feeling some currently as to how he intended to treat what has been for the last six months or more the favourite theme of the mob-orators and penny-a-liners of the religious world. The or the mon-practice and penny-s-inters of the religious world. The grave and dignified Quarterly Review, we said to curnelves, will certainly not indulge in those exquisite flights of fancy and rhetoric which distinguished the harangues of Lord Shaftsabury and his friends at Exeter Hall last summer. There will be nothing in its learned and decrease pages about the "soothing sysup" of Archbishous letters, the "mesty-mouthed" uttersmoss of Convection, and the distinguishes are all invariant indical descriptions of the text. the "faithleaness" and imminent judicial downfall of the Establishment; still less shall we meet with any of those swkward little confusions of identity between an infidel historian and a Populi or Ritualist confessor which contributed so neach to the comic element of the meeting of last Jane. Nor were we altogether wrong, though the Reviewer's language is not always quite as sober as might be desired, and his accuracy, as will presently appear, is very far from

being unimpeachable. The Reviewer, it is true, finally arrives at the safe conclusion that the best way of dealing with the Ritualists is to leave them alone. He disclaims any sympathy with "excited meetings to put down the Confessional," and any desire for episcopal or legislative interference, remarking truly enough that, if people suppose their spiritual condition to be benefited by absolution, neither Bishops nor Acts of Parliament can prevent them from acting on their belief. In short, he tenders, though in a different spirit, pretty much the same advice as Gamaliel tendered to the Sanhedrim. It may possibly be asked why, if we are disposed to acquiesce in his practical conclusion, need we quarrel with the process by which he reaches it? But then we are not writing to defend or to attack any theological party or opinion, and, if we were, our task would be rather an embarrassing one; for Proteus was hardly more difficult to grasp than the Reviewer in his theological capacity. He seems to be neither Catholic, Anglican, nor Protestant, and yet to be all three at once. "The Catholic Church of the Ritualists," we are summarily assured, "is a phantom;" but then he immediately adds, "not that the true Catholic Church is a phantom"; only he nowhere explains what is the true Catholic Church. He appeals to "Protestantism," but scouts Protestant theologies as "entirely without a history." He appeals against the Ritualists to "Anglicanism" and the Book of Common Prayer. How he treats the latter, we shall see by and by. As to Anglicanism, we should have thought that, if there was ever a typical Anglican, it was the late Rishop of Exeter, and if there was a distinctively Anglican doctrine, it was the doctrine of baptismal regeneration stands on just the same ground with the doctrine of sacramental absolution. However we are not concerned with his theological beliefs, whatever they may be, still less with the least will admit that the end does not justify the means, and so neither does the soundness of the conclusion exc

the premisses. The Reviewer's indictment against "Sacerdotalism," by which he means confession, in the Church of England, is mainly twofold. He challenges its historical origin, and its consistency with the standards of the Church. There is, indeed, a good deal of sub sidiary matter which we can only suppose to be thrown in ad similarity. Thus, for instance, it is natural for Protestants to insist that the practice of confession is mischievous and delusive; but to talk of "the closest similarity" between the temper which leads people to a confessor and the taste for spirit-rapping is more suited to the Rock than to the Quarterly Review. A belief in the efficacy of absolution, again, may be wholly false; but few suited to the Rock than to the Quarterly Review. A belief in the efficacy of absolution, again, may be wholly false; but few educated Protestants, out of Exeter Hall, would care to designate the faith sincerely held, not only by Ambrose and Augustine, but by Bossuet, Fónelon, Pascal, Sir Thomas More, and a host of other men of various ages, of intellect at least equal to the Reviewer's, "inherently absurd." He might have known that it is just this sort of rodomontade which supplies fuel to the flame which he is professedly labouring to extinguish. But to come from assertion to argument, or what is intended for such. to come from assertion to argument, or what is intended for such. The Reviewer ingeniously traces the origin of the revived Confessional to one of the earliest of the Tracts for the Times. It appears that about forty years ago Dr. Pusey published a tract on Baptism, which we have never seen ourselves, as neither, we suspect, have a tithe of the confessors or penitents over whom it is supposed to have exerted so tremendous an influence. We must be content, have exerted so tremendous an influence. We must be content, therefore, to take the Reviewer's account of its substance, and we therefore, to take the Reviewer's account of its substance, and we do so the more readily as it tells directly against his argument.

The tells us that, after dwelling on the effects of baptism, the author proceeded to insist on a view of the gravity of postbaptismal sin which he calls "extravagant," and informs us, in his usual peremptory style, there is "not a sentence in the Prayer Book" to authorize, but which he fully admits, and proves by sundry extracts, to have been taught by the Fathers. Into the dissertation which follows we need not enter. We are favoured with a rambling and superficial sketch of the Novatian controversy, which reads very much as if the Reviewer had confounded Tertullian's notions after he became a Montanist with the contemporary teaching notions after he became a Montanist with the contemporary teaching of the Church. And he finally sums up with the sweeping assertion that "the necessity of auricular confession and private absolution follows logically from the doctrine of the heinous nature of post-baptismal guilt," which was taught by the early Fathers. Surely, if so, either the Ritualists are right or the Fathers were wrong. Most Protestants would at once accept the latter alternative; but the Reviewer, though he had a few pages before called the patristic view of sin extravagant and "anthropomorphic," carefully retrains from saying so, nor could he well do otherwise after the contempt he has poured on "theologies without a history." Possibly also he was haunted by some dim recollection of the Fathers being appealed to as authorities in the Anglican formularies. Now we are far from committing ourselves to the correctness of his estimate of patristic teaching, or to his explanation—which Now we are first committing offiselves to the correctness of his estimate of patrictic teaching, or to his explanation—which strikes us as very far-fetched—of the origin of the Confessional movement in the Church of England. But, taking the facts as he puts them, he has gone out of his way to supply his opponents with a powerful apology on the ground of "historical" Christianity,

for the very practice which he so passionately deprecates.

Let us see if he is happier in his argumentum of knowless, he on the Common Prayer Book and the dictates of common at It might have been presumed that a writer who has disputed article of thirty pages to demolishing the Richalists would at have taken the trouble to acquaint himself with the lead features of their teaching. They will probably smile to find the selves impaled on the horns of the following dilemma:—"Un absolution is a Sacrament it is worthless, and has no mean whatever. The Ritualists cannot escape the dilemma. They is avoid using the word Sacrament itself, and thus keep themselout of the grip of courts of law, which would convict any out of the grip of courts of law, which would convict any who avowedly taught that there are more than two Sacram Now a mere cursory glance at the advertising columns of a religious newspapers would have shown him that the Ritualis are so far from "avoiding the use of the word Sagrament" the are so far from "avoiding the use of the word Sacrament" that they seem rather to glory in it, and they are probably—but here we speak under correction—not more squeamish in the pulpit than in the press. But why is this language to bring them within "the grip of the law courts"? Because, we are reminded, the Church Catechism says "that there are only two Sacraments," and moreover "the Twenty-fifth Article expressly declares that there are only two Sacraments, and that the Sacrament of Penance is a pure fiction." The Reviewer is scarcely more fortunate in his quotations from the Preven Real than in his quotations from the Preven Real than in his quotations. only two Sacraments, and that the Sacrament of Penance is a pure fiction." The Reviewer is scarcely more fortunate in his quotations from the Prayer Book than in his appeals to the Fathers. The Church Catechism does not say that there are only two Sacraments; but, in language carefully guarded, or, if he prefers so to regard it, purposely ambiguous, and known to have been framed by Bishop Overall, who was a high sacramentalist, it states that there are "two Sacraments only generally (i.e. universally) necessary to salvation." But the most red-hot Romanist would hardly care to assert that all the seven Sacraments of his Church are generally necessary to salvation as it would follow among other generally necessary to salvation, as it would follow, among other generally necessary to salvation, as it would follow, among other awkward consequences, that no Roman Catholic priest could be saved for lack of the Sacrament of Marriage, and no Roman Catholic layman for lack of the Sacrament of Order. Neither, again, does the Twenty-fifth Article "expressly declare that there are only two Sacraments." It merely affirms, in language as guarded or as ambiguous as that of the Catechism, that "there are two Sacraments ordained of Christ in the Gospel," leaving any one who may be so minded to maintain that seven, or even—as Bishon Bathurst's intelligent candidate. leaving any one who may be so minded to maintain that seven, or even—as Bishop Bathurst's intelligent candidate for orders is said to have conjectured—eleven more, were established or administered by the Apostles. The passage about the "five commonly called Sacraments" which follows is so loosely worded as to leave us in doubt whether Confirmation and Absolution, for both of which forms are provided in the Prayer Book, are states of life or a corrupt following of the Apostles. And the Hamilies which are said in another Articles. Apostles. And the Homilies, which are said in another Article to contain a godly and wholesome doctrine, call several of these ordinances "Sacraments." The fact is, as any one with the slightest knowledge of theology would have been aware, that the Reformers differed a good deal among themselves about the precise definition and number of the Sacraments. The Wurtemberg Confession says the term has a very wide signification, and makes it includes all the savery. (To propose for some years minimal as a state of the savery o include all the seven. Cranmer for some years maintained, as did Luther, the odd notion of three Sacraments—Penance being the third—which the Reviewer somewhere attributes to the Ritualists. But what specially outrages him is that these same Ritualists have the assurance also to appeal to the Prayer Book. Archdeacon Denison, it appears, has published a sermon where he quotes the Ordination and Visitation Services in support of his view of absolution. The comment of his critic, as coming from a professed champion of "Anglicanism," is a little perplexing. "Surely the Archdeacon has not forgotten the notorious Gorham case, and how Bishop Phillpotts was beaten in his attempt to enforce, in respect of the haptismal office, available that makel his makel case, and now hisnop radipous was beaten in his attempt to enforce in respect of the baptismal office, precisely that verbal literalness of interpretation upon which the Sacerdotalists rely when they claim for themselves the authority to forgive sins." Yet we are told tempages afterwards that "the Office (of Baptism), if taken in its obvious meaning, asserts the reality of regeneration." Surely the Archdescon has the best of the argument here. We have no intention at all of entering on a discussion of Scriptural exercisis, and shall therefore pass over the Reviewer's original comment on St. John's language about absolution, with the remark that, if it is good for anything, it would support the Quaker theory of Sacraments, not his own. But the most wonderful part of his argument is still to come. Archdeacon Denison, it seems, has not only quoted the Prayer Book in defence of his view of confussion, but has further asserted that it is the great object of the Church to make her members habitual communicants. One would have supposed that no one who had read only the Exhortations in the Communion Service could doubt for a moment that he is right here, as regards the Church of England at all events. But the Reviewer exclaims, "Where does Archdeacon Denison find this in the Prayer Book? In spirit this view of his is based on the doctrine of Transubstantiation itself." If the Ritualists hold that doctrine, as he implies, they will be much obliged to him for suggesting so as he implies, they will be finded obliged to him sor aggressing so novel and elinching an argument in support of it. There are many different opinions about what doctrine of the Eucharist the Prayer Book teaches, but no one capable of reading can doubt that it teaches the duty of habitual communion. "In spirit," therefore, if not in letter, it teaches Transubstantiation. But, adds the Parsignary warming into a fine functor of this checking adds the Reviewer, warming into a fine frenzy at this shocking notion of Archdoscon Denison's, "Oan it be conceived that, if St. Paul were to revisit this earth, he would tolerate for a moment the theological teaching of the Archdoscon" about habitual Wall, we can only judge by what St. Paul beautiful or make which he actually was on earth; and we have said discharged all likes of madding with Scripture causesis. It was include the said made and the said which have appeared to most readers, not only to make, but to enjoin, what appears to the Reviewer so unjoined, and inconceivable. In fact, we feel almost tempted to y of him what he says of his opponents:—"With writers of this head there is no arguing at all."

school there is no arguing at all."

There are other passages in this strange farrage of slipshod faither, and blundering logic which we had marked for quotation, but we have said enough. Let us repeat that we are not pleading the cause of the Ritualists. To any amount of "public and private reasoning" that may be urged against them nobody can harly object, so long as it really is reasoning. What strikes us as so very extraordinary in the particular method of "public reasoning" pursued here is that it tells exactly the wrong way. If the Reviewer has proved anything at all—and we are very far indeed from saying that he has—he has only shown that the advocates of confession can appeal for the "logical necessity" of their views to the teaching of the early Fathers, and have a still more impregnable ground in the "verbal" and "literal" statements of the Prayer Book. It happens only too often that people have reason to pray Book. It happens only too often that people have reason to pray that they may be saved from the cruel kindness of their friends.

The Quarterly Reviewer has contrived to supply his enemies with that rarer and happier topic of gratitude for which of old the Patriarch vainly sighed. They must be very dull or very graceless if they do not, after reading his article, congratulate themselves that their adversary bath written a book.

CO-OPERATION IN PERIL

CO-OPERATION IN PERIL.

THE grocers will probably be glad to hear that Co-operation is in danger. It appears that a dispute has arisen between the Committee of Management of the Civil Service Supply Association and a section of the members, and that this useful Society is just now passing through a very critical stage of its existence. Not that there has been any falling off in its prosperity; on the contrary, it does a larger amount of business every year, and is continually extending the range of its operations, and its financial success is perfectly assured. It is its prosperity, in fact, that has brought it into peril. The origin of the Association is well known. A few members of the Civil Service, pinched by low salaries and high prices, tried the experiment of combining in order to make wholesale purchases of a few articles in common domestic use. They found that in this way they not only saved a good deal in money, but stood a better chance of getting articles of a high quality than when they went to the retail shops. As the experiment answered so well, it was natural that it should be continued and extended. Other members of the Civil Service were very glad extended. Other members of the Civil Service were very glad to take advantage of the plan, the list of commodities which were to take advantage of the plan, the list of commodities which were purchased in common was gradually enlarged, and at last a cooperative store was opened on an extensive scale. This has gone on growing until it is now one of the largest distributing agencies in the country. The Association has two branches, one in the City and the other in Long Acre. Each establishment is a vast warehouse, embracing almost every description of retail trade. For several years past the Association has been selling goods to the value of about half a million annually, and this amount, large as it is, has lately been exceeded. For the year ending in February last the sales were over 700,000. The Association consists of two classes of members—members who are shareholders, and members classes of members—members who are shareholders, and members who merely hold tickets entitling them to make purchases at the Stores; and for some time past there have been symptoms of a tendency towards a division of interests between the shareholders and the ticket-holders. The fundamental principle of the Association has hitherto been that it should be strictly co-operative, and limited to the distribution of goods as nearly as possible at the prices at which they are bought from the manufacturers or wholeprices at which they are brught from the manufacturers or wholesale dealers. The value of a share in case of death or withdrawal
is fixed at ten shillings; and shareholders enjoy only the general
benefit of obtaining high-class articles at moderate prices, without deriving any profit from the transactions carried on in their
name. The goods are sold at the original wholesale prices,
with the addition of a small percentage for working expenses.
It would be imprudent of course to reduce this margin to such a
point that there would be any risk of loss, and the consequence is
that every year there is a larger or smaller balance on the other
sids. In the year ending February 1871 the sales of the Association amounted to 492,418L, yielding a gross profit of 54,741L, and
a net profit of 27,052L, or 5L 12s. 3d. per cent. In consequence,
however, of the continued reduction of prices, sales to the amount
of 712,309L in the year ending February last yielded a gross profit
of only 60,544L, and a net profit of 17,350L, or 2L 8s. 8d. per cent.
the percentage of working expenses remaining pretty nearly
stationary. These balances the Committee have been in the
habit of applying to the reduction of prices, but the question new
is whether the money should not go into the pockets of the shareholders.

reduction of prices, but this proposal was negatived at the grain meeting of shareholders by a lerge majority. Last February & question was revived in the form of a Resolution, directing the steps should be taken, either by an alteration of the rules or other wise, with a view to prevent the further issue of shares, which we carried at the meeting, but negatived on a ballet. Since the was, with a view to prevent the further issue of states, which was carried at the meeting, but negatived on a ballet. Since they another Special Committee has been appointed, and has reported in favour of closing the list of shareholders, and dividing the surplus profits among those who hold the axisting shares. The Committee of Management, however, adhers to their opinion that there should be no departure from the original principle of the Association, and submitted this conclusion to the shareholders in a Report which was discussed at a point and tunneltables. the Association, and submitted this conclusion to the shareholders in a Report, which was discussed at a noisy and tunnituous meeting on Thursday last. Sir Roundell Palmer and three other eminent counsel have, it seems, given an opinion that funds already accumulated cannot be divided, and the only question, therefore, is as to the future. By the existing practice of distributing the profits among the whole body of members in the shape of reduced charges, the question of accumulated profits is very simply disposed of, inasmuch as there is nothing left to accumulate; and the Committee of Management appear to think that it is as well to keep this temptation out of they way of greedy shareholders. The latter are warned that, if they should decide to reverse the present policy of the Association, "there is but too much reason to fear that it will rapidly descend from the honourable position which it has for some years occupied, from the honourable position which it has for some years occupied, and become sooner or later a mere trading company." The Chairman told the meeting very plainly that a selfish appropriation of the funds of the Association would be a sacrifice of principle, duty, and honour, and that, if it were resolved upon, a large number of Civil Servants would feel bound to withdraw from it, as they could not at the same time be Civil Servants and persons trading for profit. Another member of the Committee, in announcing that he and his colleagues would retire if the Resolution were carried, pointed out that it involved a complete revolution in the constitution of the Society, and that it would be in the power of any shareholder to apply to the Court of Chancery for an injunction against the scheme being carried out. After a long and very disorderly debate the Resolution was carried by a majority of the meeting, and a poll will be held on it next month.

It does not require much reflection to see that, whatever may be from the honourable position which it has for some years occupied,

It does not require much reflection to see that, whatever may be said in favour of a division of profits, it would entirely alter the character of the Association. It would practically coase to be cooperative, and would become an ordinary trading company. Hitherto there has been no antagonism of interests in the working of the establishment. All members have alike shared the advantages of cooperative trading, and the prosperity of the Association has been discounted in the cheapening of goods. All that the managers have had to consider has been how to carry on the business without actual loss. It is obvious that directly shareholders became entitled to profits all this would be changed. It is certain became entitled to profits all this would be changed. It is certain enough that, human nature being what it is, the next step would be to take care that the profits should be as large as possible. Increase of appetite grows by what it feeds on, and the great end and aim of the Association would be simply to enrich the shareholders to the fullest extent. There would no longer be any guarantee either for moderation of prices or for the quality of the goods. The managers would be expected to make as much money as they could, and the shareholders would be more concerned about their own dividends than about the satisfaction of those who were their own dividends than about the satisfaction of those who were only customers at their shop. The question at issue is really only customers at their shop. The question at issue is really whether the old Association shall be destroyed, and a new Association whether the old Association shall be destroyed, and a new Association of an entirely different character, with altogether different objects, established in place of it. The original object of the Association was to benefit all the members equally by cheapening the cost of living; what is now proposed is that one set of members should be enriched at the expense of the rest. It is clear that if there were a division of profits the value of shares would be proportionately increased; they would be bought and sold, and as their mercantile value went up the stronger would be the pressure put upon the managers to squeeze the largest possible dividends out of the business for the satisfaction of shareholders.

It is nerhans not unnatural that some of the proprietors of a vast

It is perhaps not unnatural that some of the proprietors of a vast and flourishing business of this kind should cast a covetous eye on the profits which might be diverted into their own pockets. may be asked to reflect, however, that it was not with the view of making profits that the Association was started, and that the success which has attended it has been mainly due to this circumstance. Moreover, there is no reason to suppose that this Association enjoys a monopoly of the sort of capacity which is required for the management of a large co-operative business: is required for the management of a large co-operative business; in amounted to 492,4184., yielding a gross profit of 54,7414., and fet profit of 27,6524., or 54. 124. 3d. per cent. In consequence, owever, of the continued reduction of prices, sales to the amount of 712,3594 in the year ending February last yielded a gross profit of 27,6524., and a net profit of 17,3504, or 24. 8s. 8d. per cent. There are for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in required for the management of a large co-operative business; in the share the draw, if it changes its character, and another Association similar to the old one would no doubt be immediately started. There are already a number of trading stores with which the old Association would have to compete, and many retail ahopkeepers have also been wise enough to adopt the principle of distinguishing between cash and credit payments. There is no magic in a co-operative store and credit payments. There is no magic in a co-operative store and credit payments. There is no magic in a co-operative store and credit payments. There is no magic in the cash of the sharp and credit payments. There is no magic in the cash of the sharp and credit

whing in **A** g in the system which ought it mostle while He far there is t quirelesses beine. He far there is institute in the system which any shoptesper might not adopt if he thought it weath while. A co-operative store, however, when it is really no specifies, after the further advantage of handing over to the questimes, after the further advantage of handing over to the questimest the personal profits of the chockesper. This has hitherto been the essential principle of the Civil Service Supply Association; and if it were to be reversed, the Association would become merely a trading business conducted for the benefit of the proprietors, and would consequently less its hold on the great mass of its customers. The state of the case, when reduced to its elements, is simply this. The Association was originally intended to serve the interests of all members of the Civil Service or their friends who chose to foin it; it is now proposed that it should be converted into a an mamoers of the Civil Service of anear friends who choice to join it; it is now proposed that it should be converted into a private speculation in the interest of the existing body of share-holders. If this were done a rival Association on the old plan would probably be started; and the selfish promoters of a division of profits would discover that they had dispossessed others without doing much good to themselves.

POST OFFICE TELEGRAPHY.

We wished to find fault with that useful body of public servents who manage the post and telegraph, we might complain that they sing somewhat loudly their own praises. We are not likely to forget that the telegraphs have been purchased by Government, and that the nation has had to pay for them; and when an admirer of the Telegraph Department talks of its "extended views," we are reminded that those views ambraced the pockets of ourselves as taxpayers. Without saving that money was spent lavishly in these purchases, we views ambraced the pockets of ourselves as taxpayers. Without saying that money was spent lavishly in these purchases, we may at least affirm that the Post Office authorities were pleasant people to have dealings with. In one instance a large sum was obtained for a Company by an agent, who claimed upwards of 5,000% commission from his employers. The reward was not disproportioned to the success; but when the claim was investigated in Chancery, it appeared that the agent had done nothing beyond the wery heat thing he could do—namely, place the matter in the hands of a solicitor, who asked for the money and got it. The intervention of this gentleman had the desired effect at the Post Office, and the "views" of the authorities became sufficiently "extended" to include payment to the Company of the price which it demanded. which it demanded.

An enthusiastic writer upon postal telegraphs in the Standard seems to have persuaded himself that the intended transfer of headquarters from Tolograph Street to the General Post Office was headquarters from Tolograph Street to the General Post Office was a secret confided to a chosen few, of whom he had the happiness to be one. "It leaked out," he says, that the new galleries at St. Martin's-le-Grand were to be devoted to telegraphic purposes, and perhaps he believes that even the fact of the construction of these galleries was known only within a privileged circle, and would not be imparted to the public until they were called upon to pay for them. In the days when Mr. Diaraeli was chiefly celebrated for sarcasm, he began a speech on a financial question with the words, "Let us leave out of view the admirable management of the Secretary of the Treasury, and forcet for a moment his panegyric upon tary of the Treasury, and forget for a moment his panegyric upon himself." In like manner we should desire to consider the condition and prospects of postal telegraphy under the bon-dition and prospects of postal telegraphy under the present administration without being disturbed by the clamorous lauda-tion bestowed upon it by its friends. The removal from Tele-graph Street to St. Martin's-le-Grand was effected in the afternoon of last Saturday. "It is difficult to convey to the ordinary reader an idea of the amount of labour thus involved, but the way had been made smooth by the forethought of the engineers of the Telegraphic Department." Before this transfer was made wires coming from the West passed through St. Martin's on their way to "T.S.," as the late central station was called in telegraphic language, while wires from the East went to "T.S." direct. On Saturday last the western wires were cut at St. Martin's, and the instru-ments belonging to them were removed thither from "T.S.," "joined up" with the wires, and set to work. The half-mile lengths cut from western wires were then united to eastern wires, lengths cut from western wires were then united to eastern wires, and the remaining instruments were brought from "T.S.," joined up" with these united wires, and set to work. It was important to perform this operation accurately and with the least possible impediment to business, and the work appears to have been well done in several hours less than the allotted time. Let us give to Mr. Culley and his assistant engineers due credit for this exploit; but perhaps public attention is likely to be directed not so much to what Mr. Scudamore and Mr. Culley do as to what they leave to the content of the co

that perhaps public attention is likely to be directed not so much to what Mr. Soudamore and Mr. Culley do as to what they leave unitons.

Towards the end of last Session a question was ealed and a correspondence was moved for in the Mouse of Commons in maken and a correspondence was moved for in the Mouse of Commons in maken and received improvement in telegraphy by Mr. Risherd Herring, which had been submitted to the Post Office authorities and received by them as the suggestion of an outsider small he likely to be received by a department well content with this instrument than with the Mouse, so well as reading with this instrument than with the Mouse, so well as reading with this instrument than with the Mouse, so well as reading with this instrument is specially adjusted for reading with this instrument is specially adjusted for reading which makes a marked distinction between dottaind which makes a marked distinction between dottaind teleface.

terrupted so as to form long marks, which a alphabet are represented by combinations of these distinction.

Each letter is distinguished from that which follows apace, and each word is distinguished from that which the by a longer space. In the system proposed by Mr. Is filering, and described in the pampilet before us, the and dots are made by separate styles or principles, and are transverse to the slip of paper which are provided as the system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system has an obvious adversely unless it he is not a system. stead of longitudinal. This system has an obvious advantage which, unless it be in some way counterbalanced, would, apparatulating far to entitle it to preference over the Morse system. The seculed dashes and dofs made by the Morse sustained the same line of uncertain length are liable to be sustained each for the other. Practically, a short dask and a long datage almost undistinguishable. Mr. Henring asserts that his instrument makes "clear and definite" marks, and that his point being some compact than that of the Morse instrument, is more legible. If Mr. Herring has effected a real improvement, is commercial within a unquestionable. He seems to us to have made out a clear for a full and fair trial, and indeed the Post Office authorities have some and fair trial, and indeed the Post Office authorities have full and fair trial, and indeed the Foat Units authorities have coded this in words, although up to this moment no estimates conclusion either way appears to have been arrived at. We so not propose to offer any opinion whatever on the menits of the controversy as to the value of Mr. Herring's instrument; and we only refer to the subject for the purpose of surveying the machinery and the men employed in Post Office telegraphy from a point of view which—from the nature of the nase—is not that of an admirer. an admirer.

If we may judge from the extracts given in this pamphlet, we should say that the correspondence which was moved for last Session ought to be printed, in order to enable the public to see Session ought to be printed, in order to enable the public to see how the l'ost Office deals with the suggestions of outsiders. Mr. Herring brought his system under the notice of the authorities towards the end of 1870, and a discussion enamed between him and Mr. Scudamore which has lasted to the present time. The scientific advisers of the department regarded Mr. Herring's instrument as "a modification of an arrangement already proposed" by other inventors, and they stated that "practical and experienced men." had then make the prescription and experienced men." enced men" had been unable to perceive any advantage that would result from adopting this arrangement. Mr. Scudamore informed Mr. Herring that the officers of the department thought it "impossible to produce readable signs" by his instrument, and had concluded that it was "practically worthless." It appears that after two years' discussion the officers of the department have that after two years unaction the one of the representation first assumed. Mr. Herzing's instrument has been made the subject of elaborate trial and report by Sir William Thomson and Professor Jenkin, appointed by the Post Office; Mr. Herzing has impeached some of the conductors of Office; Mr. Eleving has impeached some of the conductors of that report, and Mr. Soudamore has admitted that Mr. Eleving is entitled to a further trial. The complacency of the "practical and experienced men" who manage the telegraphic basiness of the nation may perhaps be disturbed by the suggestion that an outsider could improve upon the system existing at "T.S." But we know that public departments tend to get into a groove, to exclude interference, and to perpetuate traditions. Their distlast pressure is unnecessary. The great and growing business of pressure is unnecessary. The great and growing business of telegraphs ought to be conducted on the most improved principle; and it is unsatisfactory to find the Post Office authorities putting aside a new form of instrument on the assertion that it cannot aside a new form of instrument on the assertion that it cannot produce readable signs, and afterwards receiving from the scientific referees selected by them an opinion that, whatever may be said of the instrument in other respects, it "is not inferior to the Morse, either in speed or in cortainty of signs." There can be no doubt at least of Mr. Herring's ingenuity and persoverance. We read lately of a Canadian who has obtained within the last year from Government compensation for services rendered. themselves into this, that the telegraphic wires and apparatus are not so well constructed and maintained as they might be and ought to be. He conceives that the country is entitled to demand the most complete and accurate system of telegraphy that is reasonably practicable, and he offers his invention as a

Minister and a second s

HOSPITALS OF REPUGE.

A N article in the Times of last Tuesday gives an interesting to a social question which presses urgently for consideration. The institution in question is the London Fever Hospital. It has grown rapidly from small beginnings, and now, in consequence of recant changes, its Governing Body is desirous of at once increasing its usefulness and extending the sphere of its operations to classes which it has scarcely benefited hitherto. In the beginning of the present century a "Society for Bettering the Condition of the Poor" hired a small house in Gray's Inn Lane, giving it the name of House of Recovery. As the name implied, its object was to remove from their overcrowded dwellings persons suffering from fevers. The patients were offered suitable care and medical attendance, while their neighbours and families were relieved from the risk of infection. The Society succeeded, in spite of the strenuous opposition which the most rational and benevolent innovations usually have to encounter. In 1815 it had outgrown its confined quarters in Gray's Inn Lane, and the state of its finances enabled it to move to more spacious premises at King's Cross. Thance it had to make a second move when the ground was cleared to make way for the railway terminus, and this time it settled in fresher air on the heights of suburban Islington. There it remains, having gradually increased its buildings to meet the growing demands on its space. Strange to say, when we recollect that philanthropy must resolve itself, after all, into a matter of money, we learn that the Governors have seen able to go upon the principle "of never turning sway fever from their doors." Yet they have informed that during the last great outbreak of faver, new wards, as they became necessary, were run up in wood-work and gal-vanized iron in the course of a fortnight.

The affairs of the Hospital must have been conducted with The affairs of the Hospital must have been conducted with equal liberality and judgment, and undoubtedly it must have done a very great deal of good. During the eight years from 1862 to 1870 the annual average of admissions was 3,189. But circumstances have brought about a change, amounting the revolution, and the passing of the Metropolitan Asylums Act has neatly emptied the hospital wards. In 1872 the number of admissions had fallen to 182, and it came about in this way:—Previously to the passing of the Act, the principle of the Hospital authorities had been to reserve feely my poor person who chose to apply, with the examption of the servents of non-subscribers and parochial paugers. The servents were admitted on a small fixed navment; the naurons. The servents with the marishes. The o paupers, by arrangement with the parishes. The set paupers became the chief putsons of the establishment got the apputation of being a pauper hospital, it send that the poment of other of sets attood upon their sold about. When the Metropolitan Asylumn Act was the parished for matropolitan anything Act was the parished for matropolitan anything. nent; ti ult was, the ment: and as it may be suppresed that the pounds of othe dignity and hold alout. When the Metro persed, which provided for metropoli nearly emptied the weeds. The nachdan and the members while a inesse start man Act was on prupers also me of the Maspit mently paralyzed while a ning hody placed itself i de mariale s not of the Local Go ant Ra it le . The President may be technically right in his interpreted his legal powers, although it seems to us that a man in him y could accordly be represented with efficient interference was direct attention efficielly to the facilities affected by this Hospital for the relief of sufferers who are much to be picted whether he be right or wrong, there is the gre people who are unfettered by official etiquette should not show similar reticence. As to the benefits offered by the Hospital there is no room for argument, and nothing but projudice can prevent the classes to which they are offered from thing advantage of them.

Those who have unlimited command of money, who can propure the best advice, ample attendance, and a superfluity of luxury, may not unnaturally prefer being tended in their l although, in cases of grave actidates, even they are High to-more efficiently treated in a hospital. But in assacia of au diseases as fever, we believe the Hospital to be preferable for who are not actually affilient, while as regards per straitened circumstances there can be no doubt w Nothing can be more pitiable than the condition of those people lying sick in London at this moment. It may be the fifth of a large family occupying a small house, always company in struggle to make the two ends meet, and living parallely for hand to mouth. In case of illness he does not earn to claim services of the parish douter, who is at least paid to reads to although he may be paid poorly. He could for some medical a who sees all around him the visible signs of his patient's pose m faoilean amon r Unless the doctor be a very phenix of conscientions physical he is apt to measure his attention will some reference to measure remaneration which possibly he may never real in any case, it is but human mature that he should under such under such circumstances, multiply his visits unmeasurely, or prolong them more than he cannot help. He prescribes medicines according to the rules of the pharmacopois; and if there should be no ready money to buy them with, it becomes a question of negotiating is credit at the chemists, and the auxieum wife has to worry herself about ways and means when she has the invalid and her half-doren children on her hands. It is a simple outrage on helpless poverty to order oranges, or ice, or any of the luxuries that are brought as a matter of course into well-provided sick-rooms; that are brought as a matter of course into well-previoled sick-rooms; and so the fever is suffered to gain head when the expenditure of few shillings might have checked it. Then there are the children. It is of little use attempting to keep them quiet, as they go tumbiling up and down the creaking staisrass and blundering against the thin partitions. As the invalid is dropping away into a sleep under the influence of some cheap marents, he is brought back to his pain by the screens of the baby is the next room. The early morning opens with a chorus of shouting and bellowing from the baby's brothers and sisters, just when overstrained mature in beby's brothers and sisters, just when overstmixed matuse is making a desporate offort after repose; and if the invalid has no children of his own, the infliction will be the more merchess from the children of his neighbours. If he pulls through, in spite of all that is against hun, thanks to Providence or a tough constitution, his convalescence is sensely likely to be rapid. The atmosphere of worry that he breathes is sinced more trying than, the actual closeness of his confined and crowded quartum. For in some respects his wretched lot is almost envisible when confinated. with that of some others. At any rate he has company, if he has too much of it, and there are kind people around him who take an affactionate interest in his fate. But how many solitary persons there are in London who are linked to no living some within reach, except perhaps by some formed the of business. Bickens, for whom the romance of lonely chambers in the Imas of Court had. always a charm, tells the story of an immate who put an end to his existence and was never missed until months afterwards. his existence and was never missed until months afterwards. There are thousands and thousands of lodgers in crowded houses who would be almost as little looked after should disease suddenly strike them down. It is no one's business to sent for the doctor, no one's duty to pay the nurse. The very sense of after shandonment, the absolute absence of anything like sympathy or tenderness, acting on a frame suffering under the depression of reaction from delirium, would be sufficient in itself to make recovery impossible.

It is scarcely necessary to say how different everything would have been if these unfortunate people had been removed at ones to the Hospitel. In the Hospitel they have airy rooms and comfortable beds, the best advice, constant and skilful attendance, suitable medicines, and all the luxuries that make the difference between comfort and wretchedness, to say nothing of life and death. Allower all, there is the removal from immediate causes for anxiety, and there is the feeling that the very best is being done for you, which is one of the most infallible specifics in the world. When the option lies between alternatives like these, it is inconceivable that the choice should be doubtful. If the beds in the Fever Hospital are left to stand empty, it can only be attributed to ignorance or prejudice, and it is high time surely that everything should be done to emightes the one and secons the other. For this reason we regret that the President of the Local Government Beard did not think fit to make use of his official sutherity to measured the Hospital and its advantages to the classes who might profit by sit. It is to these classes and to persons who may be in communicate.

cation with them that we have especially addressed cursulves, confining ourselves to what we may call the personal argument. But we need scarcely add that there are other considerations which are even more weighty, insemuch as they gravely affect the public health, and consequently the general welfare of the community. The time will come no doubt when we shall see stringent rules laid down for the removal, under certain easily definable circumstances, of all patients who are infected with contagious disease. Meanwhile, and pending further sanitary legislation, every one should do his best by the employment of reason and argument to diminish the number of centres for the spread of contagion.

REVIEWS.

STEWART'S CONSERVATION OF ENERGY.

SOIENOES, like individuals, are most severely tried by succ As long as their devotees are working on in silence, carefully removing by multiplied observations and experiments the preliminary difficulties that lie in the way of the attainment of clear ideas nary difficulties that he in the way of the attainment of clear ideas respecting the nature of the phenomena and the forces at work, so long the world leaves them undisturbed, and their discoveries are known only to their brother specialists, who are the persons most competent to judge of their exact extent and significance. But when these labours have led to the discovery of a great generalization which connects widely dissimilar groups of familiar and striking phenomena, the public rushes to welcome the successful science. The imperfectly formulated results are seized upon and interpreted by each one for himself, as though scientific propositions could be understood without a knowledge of the technical meaning could be understood without a knowledge of the technical meaning of the terms involved. Theorists see in the new discoveries the solution of all imaginable difficulties in nature; practical men see in them inexhaustible sources of power; and inasmuch as the knowledge of the discoveries is no longer confined to men capable of understanding their exact nature, there ensues a period in which the most false notions are abroad concerning them. Who has not met secret believers in the possibility of negretual metion or practical men where improved had sibility of perpetual motion, or practical men whose ignorance had emboldened them to predict that electricity would take the place of steam, who saw in the propositions that motion is indestructible of steam, who saw in the propositions that motion is indestructione and that electricity is as much a mode of motion as is heat, a confirmation of their predictions, though to the instructed the meaning they conveyed was fatally opposed to the possibility of these prophecies being ever realized? It is at such times as these expositors like Professor Tyndall are specially valuable, who possess the heavy art of communicating a maximum of truth mixed the happy art of communicating a maximum of truth mixed with a minimum, though still appreciable, quantity of error. In the present age of rapid scientific development it is easy to think of discoveries that are passing through such a time of trial; but three of the best-known illustrate successive stages of it. The Undulatory theory has nearly passed through it, for people are learning that the hypothesis of an ether is rather an ambediagent of the that the hypothesis of an ether is rather an embodiment of the difficulties of light than a solution of them; and though mathematicians feel that some of the difficulties and contradictions involved in the hypothesis make it doubtful whether it should be stated in its crude form in works intended for advanced students, it cannot be hoped that more accurately scientific ideas should every intended to the control of the c it cannot be hoped that more accurately scientific ideas should ever be instilled into non-scientific minds. Darwinism, or, as it should rather be called, the Evolution theory, is just entering upon this stage. The nature of its subject-matter has dragged it prematurely into notoriety; for, unlike the other cases to which we have referred, specialists here find themselves with ideas on the exact nature of the theory and the limits of its operations but little more definite than those of the less instructed. That this is the case is shown by than those of the less instructed. That this is the case is shown by the fact that one division of specialists and the general public alike are listening eagerly to the brilliant and suggestive uttorances of Mr. Herbert Spancer, who would demonstrate that it accounts for all the phenomena of the universe (though from the absence of Mr. experiments and explanation and experiments are as a shaddly better absence of the universe. quantitative analysis his writings are a splendid picture of the un-ascertained possibilities of the theory rather than an exposition of it), while the rest of those who concern themselves about the matter are engaged in an acrimonious dispute, not about the limitations, but the existence, of the process of evolution—a question which in a dosen years will be held to be not arguable. The great physical generalization called the Conservation of Energy is in an intermediate state. It is so new that all kinds of false ideas are prevalent about it; it is so exact that these cannot be tolerated; and thus its circumstances are such as to make so thorough and thus its circumstances are such as to make so thorough and simple a treatise as this by Professor Balfour Stewart a boon to science and the world at large.

The scheme of the book is simple, as is naturally the case when the subject-matter comprehends but one single law of nature and the subject-matter comprehends but one single law of nature and its manifestations. The first two chapters are devoted to the consideration of mechanical energy and its change into heat, Professor Stewart rightly devoting special attention to these two forms of energy, compared with which all others are insignificant in practical, if not in theoretical, importance. The remaining forms of energy are then explained, and the law of its conservation is stated, and its operation traced through all varieties of transmutations. An

* The Conservation of Energy; being an Elementory Treaties on Element in Lane. By Balfour Stewart, M.A., Ll.D., F.R.B., Professor atural Philosophy at the Owens College, Manchester. London: Heing & Co., 1878. m: Henry

al shotch of the progress of the acter historical shatch of the progress of the actions, and an estimate the of Professor Thomson's correlative theory of the Dissipation of Eddews; and the work concludes with a chapter in a Position of Life, which is closely connected with a well-knew cases written some years ago by Professor Stewart and M Lockyer. The style is all that it should be; it is difficult to understand how so much information can be contained in so few world Professor Stewart could not have been nearly so successful in this respect had he been in any degree a pedant. No such writer would permit himself to use the quaint language and still quainter similar and illustrations that make the book so readable, and yet there is scarcely one that is out of place, or illegitimately used, or likely mislead. In such points Professor Stewart is superior to any living physical expositor, excepting Professor Maxwell, the chief difference being that the latter does for the most difficult physical dees what the former does only for the simplex once. They both gives ideas what the former does only for the simpler ones. They both a strong dash of humour to their illustrations, a humour which b a strong dash of histories the awkward mental gambols of the scientific lecturer who seeks to cultivate a "lively" style of lecturing, but which reminds us of Hood's writings, in that the thoughts that are clothed in a humorous dress are those which are most worth attentive consideration. Admirably clear as is Professor Tyndall, he is far inferior to them in this respect. The fact is Tyndall, he is far interior to them in this respect. The fact is that they are both enthusiastic physicists devoted to original investigations, who allow their physical conceptions to permeate all their thoughts instead of keeping them locked up in a kind of mental cupboard, as is so often the course pursued towards knowledge of the exact sciences. Thus they always use analogies drawn from common life, and no stock of recondite conceptions is needed to appreciate the force of their illustrations. This is a great gain at a time like the present, when the general reader has but little leisure for scientific training, and it is on this account that we specially recommend the book to his attention. Independently of the direct importance of the principle of the conservation of energy, it is one of the few cases in which all can get an adequate notion of a scientific generalization. No other discovery has so much unified science, and at the same time been so simple in its statement that even the uneducated can obtain an accurate knowledge of it, provided they are taught by as sympathetic and suggestive a teacher as Professor Stewart.

The least satisfactory parts of the work—if it he not uncreacious

The least satisfactory parts of the work—if it be not ungracious to find fault with parts when as a whole it is so admirable—are those which treat of the history of the science of energy, and of those which treat of the history of the science of energy, and of the position of life in connexion with it. The former is very meagre, as any such historical account must be which is contained in some half-dozen crown octavo pages not too closely printed. Such a mere outline is merely sufficient to communicate the bare facts of the successive steps of the discovery, and is totally inade-quate to convey any just notions concerning the relations between the several discoveries or the merits of their makers. This is unfortunate, for the history of the science of energy is specially instructive on many points which are important in an age like the present, which is so ready to shower honours on the fortunate ones who can establish a claim to be the first to arrive at some great scientific truth. Amongst other points it illustrates how little claim to our gratitude does one possess who enunciates such truths without demonstrating them. He is not to be honoured as the first discoverer of a law who utters sentences which, when viewed in the light of lates knowledge are sent to inches it. in the light of later knowledge, are seen to involve it. in the light of later knowledge, are seen to involve it. What more perfect enunciation of the great principle of the science of energy, that "heat is a mode of motion," could be found, than the one given by Bacon, when he says that motion "stands in the place of a genus to heat"? Yet Bacon's claims to be considered the founder of the science of energy are immeasurably inferior to those of Newton, in whose works no such admirably general statement can be found, but who demonstrated that part of it known as the Conservation of Mechanical Energy. His discovery left the loss of energy by friction standing apart, an isolated of it known as the Conservation of Mechanical Energy. His discovery left the loss of energy by friction standing apart, an isolated or rather a residual phenomenon, challenging separate investigation; and by giving such a striking instance of the conservation of energy throughout countless transformations, he did more to lead men to carry up the idea to its most general form than many such unsupported statements as that of Bacon's would have done.

With regard to the part of the present work which deals with the position of life in relation to a science of energy, our objection is more fundamental, though we doubt whether the author could have avoided touching on the subject, or whether, if he did so, he was not at liberty to treat it in the way he has chosen. The point is a not at liberty to treat it in the way he has chosen. The point is a very difficult one, as all must be that relate to the connexion between the mind and the body. The fact is that great scientific generalizations, such as the one that forms the subject of Professor Stewart's book, give us a partial view of the fundamental laws which have been shaping the universe during the whole of its and which will continue to do so during the whole of its past, and which will continue to do so during the whole of its future existence. No sooner is such a generalization arrived at than it is instantly examined by each school of theological than it is instantly examined by each school of the logical and metaphysical thought to see how it bears upon their special tenets. To this there can be no objection if the laquity is conducted in a proper spirit. It is not the attempt to derive arguments in favour of religious ideas from the deepest truths of nature of which we are cognizant, that has so often covered theologians with ridicals when wider knowledge has shown the mistaken character of their reasonings, but the attempt to use for a like purpose deplaced events, the exceptional and unimportant consequences of special concatenations of circumstances. The which the slightest accordance would have taught them were

indication of the minima with that make down a floating straw indication of the minima of the great time where curface it barries, and what their inquiries want to made in an imperial spirit, and what their made, the answers are seldom wholly individuable to the views of any one set of inquirem. The enimone of energy, corrying as it does the rule of an exact quantitative law as well to the vastest and most minute phenomena of force, seems specially calculated to throw light on the great mysteries of the origin of the aniverse and the position of life in it. Of all scientific are alligations none seem so likely to answer the questions whether the universe can have existed from all eternity, and whether the mind can originate impulses—or, in other words. whether the universe can have existed from all eternity, and whether the mind can originate impulses—or, in other words, whether it can decide on the motion that shall take place in the particles of the hody over which it seems to rule, or whether they are the blind consequences of external impulses. To the first it gives a strangely definite answer, which places the difficulties of the theory of the eternity of matter in a new and striking form. Heat, it says, can never be destroyed, but it is always tending to equilibrium; that is to say, a hotter body gives off more heat to a colder body than it receives from it, and thus all bodies tend to become equal in temperature. No automatic mechanical process will reverse this, and thus there is and tarms all nodies tend to become equal in temperature. No sutomatic mechanical process will reverso this, and thus there is a general tendency of heat (and with it all other forms of energy) to move towards uniformity. From this principle of the dissipation of energy its discoverer, Professor Thompson (to whose words Professor Stewart refers in the interesting chapter devoted to this subject), concludes that the universe had a beginning, and must have an any for a process of degradation cannot be account. to this subject), concludes that the universe had a beginning, and must have an end, for a process of degradation cannot be eternal. Like the waves on a windless ocean, the differences of temperature are gradually lessening, and all is tending to one dead level. Does not the existence of these waves point to a disturbance from without in the past, and in the absence of such interference may we not look forward to universal stagnation in the future? Without claiming for it a conclusiveness which no argument leading from the uniform course of nature to the necessity of a past or future interference therewith can from its very nature possess, we must admit the force of such reasoning, and we think that Professor Stewart's statement of the case is aminently fair. But we like less his treatment of the equally difficult question how far life, or rather spontaneity, is possible in a universe where all non-mental phenomena are reducible to the motion of matter, and where all phenomena are reducible to the motion of matter, and where all motion is deducible from the laws of force by means of Newton's well-known laws. We cannot but feel dissatisfied with Professor Stewart's comparison of life to the commander of an army who contents himself with giving orders which set the troops under him in motion, and more especially with his attempt to represent spontaneity as an aggravated case of such "incalculability" as is seen in the case of an explosion where a minute excitant force produces great effects incapable of accurate prediction. Valuable as these are for showing how little independent of the laws of energy an organism need be accurate prediction. Valuable as these are for showing how little independent of the laws of energy an organism need be to be gifted with spontaneity, they must not be used to hide the chasm which separates the theory of spontaneity and that of energy as it at present stands. The plain facts of the case are that physical science regards all resulting phenomena of the universe as fully determined by its antecedent condition, and no variation can take place save in virtue of a temporary or permanent alteration either of the forces or of the motion of some particles of matter. Those who seek to evade this, instead of frankly admitting it and challenging their antagonists to prove their theories so accurately as to negative the nists to prove their theories so accurately as to negative the possible power of vital action thus directive to interpose, are fatally damaging their cause. It is of no use for them to shrink from claiming the power of mind over matter in this crude form; their position requires it, and they might have learned this fact from the care with which their opponents lay down the impossibility of such interposition as the basis of their argument. Experimentally this has never been demonstrated, and to assume it perimentally this has never been demonstrated, and to assume it involves a pstitiv principii; and the advocates of spontaneity have a right to have this recognized. But, on the other hand, they ought to admit that physical science does know and can know of no such thing as spontaneity, save by becoming experimentally acquainted with cases of the suspension of her laws; perimentary acquainted with cases of the suspension of ner laws; and it is wiser for the upholders of the doctrine of the freedom of the will to admit the inexplicability of their doctrine by the laws of physics, and to retort on their adversaries by pointing to such other mysteries as the law of heredity, and by asking them whether these do not seem equally to claim for life an exceptional position.

GORDON'S LIFE ON THE GOLD COAST.

R. GORDON prefaces this little book by the remark that the DR. GORDON prefaces this little book by the remark that the Gold Coast is now in fashion, and he therefore hopes to be justified in serving up recollections of rather an old date. In fact, it was in the years 1447-8 that he made personal acquaintance with a region which then, as now, had a very unpleasant reputation. He took part in a little expedition to Appolonia, where we had hold of an objectionable king, and set up a retired carpenter in his place. He attended Ceptain Maclean, the bushend of poor "L. E. L.," in his last illness, and he was a part of whatever was going on in that part of the world at the time. The shief incidents which occurred

Life on the Gold Chest. By C. A. Good M.D., Deputy-

were of course the illness and deaths of a large part of the potion. Dr. Gordin tells us that in the years 1324 and 1830 a demned corps of white addiers was stationed upon the coast, that the average annual death-rate was 1,500 per 1,000 of name atrength. Insurance Offices used to advertise, and perhaps advertise, that they will accept lives of persons in every process and in every part of the world, with the single exception of West Coast of Africa. To most of the names incidentally menti by Dr. Gurdon there is appended the note "since dead." party of six who made with him the expedition to Appolonis is the sole survivor. Though some of the deaths mentioned art to such accidents as being upset in a boat and exten by a sharl is the sole survivor. Though some of the deaths mentioned are due to such accidents as being upset in a boat and esten by a shark, the great majority appear to be due to the effects of the climate. When Dr. Gordon is describing the animal life at Cape Coast. When Dr. Gordon in describing the animal life at Cape Coast or never complete. At one period he was the only one to take his place; and his isolation continued so long that, like some prisoners, he was able to form an intimate acquaintance with the mice who frequented the room. In fact, there is a kind of funereal atmosphere about the place. All his recollections are more or less directly associated with disease or with the death of acquaintances; and it might about the piace. At his reconsections are more or less directly assects ated with discase or with the death of acquaintances; and it might naturally be supposed that he would look back upon the scene of so much suffering with a settled melancholy. Oddly enough, however, this appears to be as far as possible from his state of mind. He admits the existence of "discomforts and disadvantages," which He admits the existence of "discomforts and disadvantages," which seems to be rather a mild form of expression for so disagreeable at state of things; but he adds that he has no reason to look back to the time spent there "otherwise than with agreeable recollections." We should guess indeed that Dr. Gordon was a younger man in 1848 than he is in 1874. Certainly the tone of his remarks reminds us of nothing so much as of some of Lever's military novels. Dr. Gordon would to all appearance have been admirably fitted to take his part in some of those jovial proceedings in which Harry Lorrequer and his like always indulged on the eve of a battle. The book is short and unpretending enough: but in this sense The book is short and unpretending enough; but in this sense it is really interesting as an illustration of the mode in which young Englishman may keep up his spirits under untavourable circumatances.

The catalogue of pleasures by which Dr. Gordon endeavours to support his theory of the agreeableness of life on the Gold Coast is indeed not very attractive. The first amusement noticed is a picnic in the forest on the arrival of a ship of war. Dinner parties were also frequent and generally followed by a dance. To the dancing, indeed, there was the trifling objection that there were no young ladies; but the young officers enjoyed dancing with each other to the strains of a drummer and a lifer. Another pleasure was listening to the band of the Gold Coast Militia. This band was composed of four very dilapidated veterans; they could not stand, be they all suffered from the guinea-worm which had got into their legs and feet. However, they were wrapped up in cloth and placed upon stools. One of them performed upon the big drum, which was unluckily so much torn at one end that the stick occasionally disappeared in the inside; a second had a key-bugle, some of the keys of which had fallen off, whilst the springs of others were broken; the two remaining musicians had a clarionet and a tambourine. Then, again, there was a billiard-table, torn and uneven, it is true, but still a table. Outdoor amusements were more difficult to obtain. Cape Coast being surrounded on every more difficult to obtain. Cape Coast being surrounded on every side by dense bush, there was only one practicable path. One of the other roads was too "hot and muggy"; another key by a grave-yard, against which the inhabitants of Cape Coast had a pardonable prejudice; and the sea-beach was too much frequented by natives for various purposes. The popular promenade, to which there were no serious objections except that it was bordered by a hedge of prickly-pear, of which the thorns were apt to get into the feet of passers-by, and which gave protection to "large numbers of venomous snakes," led to a certain salt lake. This salt lake was of great importance for purposes of recreation. Boating by sea was impossible, on account of the strength of the surfand the violence of the frequent squalls. But regattes could be got un upon the of the frequent squalls. But regattas could be got up upon the lake, by the help of rigging native canoes. The canoes generally upset on the first attempt to put them about; but the lake was not your down and there were always metalling canons at hand. very deep, and there were always paddling canoes at hand; so that the only result was a sound wetting, to which the yachtamen soon became accustomed. We are told that a wetting in that part of the world is apt to be dangerous; but sufficient precautions may obviate any serious risk. The grand amusement of the travelling Englishman still remains. There was a certain quantity of shooting to be had; but as there is no large game in that part of Africa, the sport generally resolved itself into the comparatively unexciting form of procuring interesting specimens for purposes of natural history. There were, indeed, difficulties in the way. The bush was so dense that birds could only be shot as they flew across the narrow pathways; and moreover there are

they flew across the narrow pathways; and moreover there are larger quantities of venomous anakes, some of which have the decency to get out of the way, though others have an unpleasant habit of turning upon any intruder. We are, therefore, not surprised to find that Dr. Gordon was the only man with sufficient withusiasm to indulge in this variety of amusement.

After running over this catalogue of the pleasures of Cape Coast, Dr. Gordon remarks that, "though life presented some of the pleasures mentioned, it was not all play." There was so much to be done that people could not give themselves up entirely to the satisfing round of dissipations which we have described. In fact, withing to some prejudice about the Jiacomforts of the region, officers were only sent in sufficient numbers to do the necessary

rock. But, as a large proportion were always ill, are under untity of work was thrown upon the remainder. Thus B levion has known an officer perform divine service, serve out to on were always ill, an under non the remember. Thus Dr. one, requir a gun-carriage, superintend the erection of a se, make a barnels inspection, and wind up by the sh employment of commanding a funeral party over a beather officer. Obviously, though the attractions of life may have been as great at Cape Coast Castle as at Knightsbridge, an officer of a West at Cape Coast Castle as at kinightsbridge, an officer of a West India regiment could not partake of them with a mind as free as that of an officer of the Guards. However, he endeavours to set before us the "general tenor of life" by some doggrel verses written by one of his friends to a brother officer absent from ill-health. This letter describes a dinner at the Wesleyan Mission-house. Both the writer and the recipient of the letter, we may add, died within a few years. The party consisted of twelve, and the bill of fare included soup, beef, potatoes, turkey and ham, roast and boiled mutton, frienesses, roast and boiled mutton, fries en,

Pastice and pice, plumpudding and rice, And many things also which looked very nice.

There were moreover stout, pale ale, and champagne, with madeirn and sherry, enough to make the party, perhaps with a view to the rhyme, "exceedingly merry." It must be admitted that the entermanment was tolerably substantial for a missionary, especially in a climate where the thermometer seldom or never falls below eighty cogress Fahrenheit. The posts proceeds to describe some whist parties and the annoyance of the Governor at losing. A more striking account, however, of the means by which the British officer keeps dull care at bay in the tropics is given in another instructive aneodote. Dr. Gordon tells us how narrowly he escaped an adventure at Accra in 1847. Some English officers were stationed advanture at Accra in 1847. Some Enghan omcers were standed at the fort, and it was of course their duty to suppress the slave trade as far as their power extended. One day a rakish-looking schooner appeared, and from it landed a very agreeable Yankee skipper. He was saked to dinner, became very jovial, and invited all the officers to accompany him on board his ship for a few days "pogni" fishing. The invitation was accepted, but next morning "poggi" fishing. The invitation was accepted, but next morning the officers remembered in time that it might be rather awkward for them to be found by an English cruiser on board of a ship which was well understood to be a slaver. Their withdrawal we lucky, for the next morning appeared H.M.S. Devastation, which immediately gave chose to the schooner. After a time, the schooner ed, and brought into the roads off Acera. were actually on board, and the Yankee captain had taken good care to have his papers in order. Accordingly another dimer took place, including the officers of the Devastation, as well as the previous party. Disner was very lively, and was followed by a game of leapfrog; after which the guests tried how many characters they could clear at a standing jamp. A good many falls naturally occurred at these postprantial athletics; and, as the fun became more boisterous, the Yankee shipper avoided liquors, and managed to withdraw quietly as became a decent slave-trader. The naval officers returned to their ship a little before dawn; and when they got up next day, the Yankoe schooner had taken leave without notice. A few days afterwards it came out that she had shipped her cargo of slaves and departed in safety.

We have been seduced too far into an account of life on the Gold Coast a quarter of a century ago. Since then, many changes have taken place in most parts of the world; and though we presume that progress has scarcely been so rapid on the Gold Coast sain some other places, we may presume that even there the old order has more or less yielded place to the new. Certainly we should see little to regret in a complete transformation, in spite of the apparent fordness with which Dr. Gordon dwells upon his old iss. But we ought to say in conclusion that, hesides the rather curious social phenomena which we have described, there are several things in his little book which are worth a glance. It does not profess to be very exhaustive, nor is all the information brought down to medern dates; but the incidented descriptions are lively enough, and Dr. Gordon speaks with kindness of the natives. They have their faults, as he admits, and indeed goes far to prove; he has not the strong objection to slavery in all its faults, and the strong objection to slavery in all its province. s which most English writers think it right to express or to affect; but he describes with gratitude acts of kindness which he has received from the savages, and says that after all they are m beings, with less differences from ourselves than we are inclined to assume. If anybody is thinking of taking up a permanent residence on the Coast, he will scarcely be encouraged by Dr. Gordon's remarks; but the many people who are now interested in its pecaliarisies may be recommended to turn over his pages, where, amongst other things, they will find some very sensible contents are appropriate that a property with the orders. sanitary augmentions, conforming very closely with the orders lately published by Siz Garnet Wolceley.

ENGLISH SURNAMES!

W/RY should people who write books be so fend of threating their private affairs and private feelings on a world to which those affairs and feelings are altogether indifferent? We accept it in a poet; it is, we suppose, part of a poet's business to tell us: these things. We do not wonder at it in Mr. Furnivall. tell us these things. We do not wonder at it in Mr. Furnivall. When he tells us why he did not have his beby christened, and how pleasant it is to waits with the fair-haired Alice, we know

Maglish Surnames, their Sources and Significations. By Charles Pardeley, M.A. London: Charles & Windus.

that it is Mr. Firmfuell's way. But in Furnivall to know that he has a way. Furnival to know that he has a way. We the leave and the fair-distinct Alles the life lie. I me; but we did know that, if they had not compthism to me; now we did important, if they had not he something no less grotteque would have been the With Mr. Burdeley we are not on the same term came across Rir. Randeley before, we knd no a what was his way. But we suppose that, a nivall's way to chatter about his father. Of the two we are greatly mades the habour the clint and the control of the two we are greatly mades the habour the clint and the control of the two wests. greatly prefer the baby. The filial devotion of teachers is really getting too much for us. We put shrick a week or two back when Mr. Fitzedward Halfintroduced us to his nother. But the presence of I mother was a thing of joy compared with the presence berdsley's father. There was at any rate much low said: We were simply remainded of the fact, which, if we have our thoughts to the subject, we might have guessed for ourself that Mr. Mall, like Mr. Haudis, must have or have had a mot. But the gush of Mr. Bardsley's filial seal gues modil fare. In his dedication he apostrophisms his falses with never admiration and with a patriorchal or Qualus-like use of true second person singular:—" I have leved thee ail my Rife, "Thou hast lent to it a father's cantion, a mother's per brother's hope, a sister's interest." "Thou wilt say it is per Yes, thou wilt be fains to thine intelligence to be true to metrum, or at least axive grammaticum, "Kind old fasher!" feel quite sure, from the desication itself, that Mr. Bardsley a whatever may be the work from which he is laid aside, deceme something much better than to be in this way made ridiculous

his son.

The book, however, itself is not so had as might have been holised for from this siliest ofidedications. It is not particularly good, but it is not particularly look. A rather hackneyed subject, but one which still awaits really scientific treatment, is deals with here way which at every step suggests the wish that it might have been better, while on the other hand it is not disfigured by many very gross blunders. There is a certain amount of twaddly the thing was the way. n he nor is rather heavy, and Mr. Bardsley is most heavy wh and then tries to be lively; he has not worked some of the most important sources so well as he ought to have done; and he is still in the Court of the Gentiles as to any clear views of g English history. On the other hand, he has clearly worked well at some sources of knowledge; he has got together a great store of facts; and, if he has not marshalled them in what we should think a thoroughly scientific order, he has at least not shovelled them together in the utterly chaotic way in which some compilers do. And if his jokes are not particularly good, we see bound to say that there are not very many of them. Het Mr. Bardsley's book is dreary work to read directly after Mr. Oliphant's. It is impossible not to compare the two; for the bistory of personal and hereditary nomenclature is certainly, wherever either of them exists, a part of the history of language. Mr. Bardsley himself, with perfect truth, goes further when he take us in the himself, with perfect truth, goes manner was the sources of a very first sentence of his text that " to review the sources of a very first sentence of his text that " to review that naonle's history." Now people's nomenclature is to review that people's history." Now while we have from Mr. Oliphant eleme and aharply-ent motions of the history of the people with whom both he and Mr. Bandstey are now concerned, Mr. Bardsley seems to be in the blackness of d To be sure he is no worse than the great mass of readers, perhaps even than the great mass of writers; but the difference between his book and Mr. Oliphant's marks the difference between one who keeps up with the foremost lights of his ewn time and one who tarries behind them. After Mr. Oliphant's clear account of the continuous being of the one English tengue, it is provoked to find ourselves once more in the thick of all the convention stuff about "Saxons" and "Normane," Wamba and the beef as mutton, and all the rest of it. As far as we can see, Mr. Ben thinks that, immediately on King William's coming into England all the English became serfs and villains, or something of the kind; and this, though he stops in one place to explain at some length that King William's coming did not make a clean sweep or English institutions. A man with such an idea as this in his head cannot treat the history of English momenclature as it ought to be treated. In Domesday the names prove a great deal; a generations or two later they prove nothing. Indeed in the Domesday generation there was more chance of a Norman bearing an English sames than of at English was bearing an English sames. than of an Englishman bearing a Norman name. The Norman settlers under the Confessor give their children the names of English settlers under the Collessor give their children the names of English godfathers, whence we get Harold the son of Ralph, and Swegen the son of Robert, se well as the Edwards, Alfreds, and Eddiths, called after the King, the unlucky Ætheling and the Late. This fashion hardly got beyond that generation; in the feast, when all the court names were Norman, we find Englishment giving their sons Norman names. Robert the sear of Godfaine, the Hertfordships cruander and martys, is a type of a crossed of course, many of which will be found in the Glemeour Cartainty and in ceter Ca many of which will be found in the Gleucoster Cartes the documents preserved in Leofric's book at Ensur. sure that neither he nor any man like him, not in fruthe all out of Eksery and Ivanios, was over speles of churd or a Sanon hog. This, it may be said, is part of the history of Church of surespices. But one thing which this body fact in the

home to our minds is that the history of Christian and of sur

Children and the Mattery of Christian Marianes, but the Mistery of secretary and the Mattery of Christian whiteness than Mr. We wish that Miss Youga, who has done to well, would go an with the other. Mr. Bardeley, which is added to well, would go an with the other. Mr. Bardeley, was refer to "His Mulach's Miss Youga's, whom he also will be selded to selded the Miss Wonga's, whom he also which we conceive that he means Miss Youga's, whom he also which we conceive that he manes Miss Youga's, whom he also will be the matter of Christian names, in the chapter headed "Patronymic Consesses," these is nothing particular to remark one way or mostler; it made a listle heavily after Miss Youga's own book, but these is no very special fault to find with it. Here and there Mr. Bardeley manneers on without seeming to eatch the real hearing of the facts which he has got hold of. Thus he mentions the revival of the English names Edward and Edmund in the two sons of Menry the Third; he goes on to say:—

Theriously to this, however, an attempt had been made to restore the Printish "Arthur" in that nepheur of Cour de Lion who so miserallly gurlined by his mede's means, and thereby gave Lackland a securer hold upon the English therms, if not upon the affections of the country. The sad and gloomy mystery which surrounded the disappearance of this boy-prince seems to have implied mothers with a superstitious awe of the name, for we do not find, as in the case of "Effected" or "Edmund," its reyal restoration having the effect of making it general. On the contrary, as an effort in its favour, it seems to have signally failed.

More again is the confusion which we so often have to fight against, as if Arthur of Britanny had been in some way the heir of England, or as if anybody in England cased about him. Even in Britanny the name was a more revival, suggested no doubt by the zerival of Celtic legends in the twelfth century; but in England there was no need of any superstitious awe to hinder mothers from giving the name to their children when it probably never came into the head of any mother in England, whether of French or of English speech, to give her child a name which must have sounded so outlandish. We cannot think with Mr. Bardsley that Aldred, Alderson, and the like, as surnames, have anything to do with hifted, when there is the very name Faldred stering us in the face. We have not the least notion what Mr. Bardsley means when he tells us that, before the Normana came, the name Ivo" had held a precarious existence in England centuries previously through Danish raids." He adds, "St. Ives of Huntingdonshire seems evidently to be a blood relation." Ivo, the Huntingdonshire saint. Is always said to have been a Persian—a strange legend enough, but one which at least shows that his name was not familiar to Englishmen. We know nothing of any English or Danish Ivos, though it may possibly, as Miss Yongo suggests, have something to do with Ivar; but anyhow it is funny to go off to an "Yvo de Taillbois (1211), mentioned in Bishop Pudsey's Survey of the Durham See," when there is the elder Ivo Tailigeboac fameus in Domesday, and more famous in the false Inguil, so much nearer at hand. Nor do we know what Mr. Hardsley means when he says that the name Alfred was "rejected with herror by the fanatical spirit of the Puritan times," and, still more strangely, that Hugh "as a Paran agnomen was loathed by the Puritan mouth." How is Hugh Pugnan? How is it an "agnomen"? There can be no doubt that in the sixteenth and seventeenth centuries Scripture names got a great start at the expense of the older names both English and Norman; but, to go no

As we go through the other chapters on "Local Surnames," "Surnames of Office," "Surnames of Occupation," and "Nicknames," the whole thing is much of the same character; there is nothing very striking; on the other hand, there as nothing very grossly wrong. Here and there we doubt whether Mr. Hardsley has given the right origin to a name; but there is liette or nothing to cry out at. And, like every collection of the kind, it has its use as a mere collection. Mr. Bardsley has plainly worked with real care within his own range, but he has been weighed down throughout by a lack of clear ideas of general English history. It is wonderful, for instance, how seldem he refers to Domesday; yet Domesday must be the beginning of a history of English surnames. It is the record of the introduction of surnames into England. In this respect, as in most others, the Norman Conquest most likely only strengthened and hastened a tendency which was already at work. As aurnames were in Germany and Dommark, so they would most likely have arisen secone or later in England also, even if no Norman Conquest had ever happened. The numberless names, nicknames, cognomina, agnomina, whatever we please to call them, by which one Godwine or Thurkill is distinguished from another Godwine or Thurkill, could hardly fail to have grown before long into hardling surnames. Still, as a matter of last, they had not actually grown agro, make the Normane same and the time the histing surnames. When the Normane same and the time the histing surnames already made. All hereaft with them the histing surnames already made. All hereaft with them the histing surnames are so different to follow it. And thus a system of surnames areas, different for following the English M the

Numera and never inner, different from any which would have release among the Numera blomeston. If they had stepped in their own land. Mr. Bendsley's book is nashed in its own way, but a stelly essentific history of English surunness must be the most of one who has a far firmer hold of general history. We are glad to find in Mr. Bardeley's list an old friend, thoughter the are glad to find in Mr. Bardeley's list an old friend, thoughter the flucture flucture where we remember long ago in one of the flucture flucture, he might have given us mother name, an which we have always looked with yet desper admiration, the Requires flucture flucture. Dominas of the Masse Homesday.

THE LAND OF THE WHITE ELEPHANT.

A GLANCE at the cover and title-page of this book would not have told us that the author was an American. But, set to say that we are distinctly apprised of the fact in the account of Mr. Vincent's audience of the King of Busmah, it might be made and a sunday a su gethered, without any such announcement, from sundry small penulisrities of style and illustration. The equivalents for Indian rupees are invertably "dollars and conts." We are told, though we trust it is not the case, that it is in contemplation "to build a we trust it is not the case, that it is in contemplation "to build a railway" between Mangoon and the continue of Yunan in Obins. Captain Semmes is honoured with the spithet of "piratisel." The weapons of the exploring party in Cambodia are "two sevolvers and two or three large bowie knives." Southern Siam is remarkable for "prairie grass," as well as for rice-fields. The King of Cambodia has in his stables healthen has a been able to the contemplation of Cambodia. "prartie grees," as well as for ribe-cauda. The same of Calindrala has in his stables, besides a hazouche and a buggy, a samiago called a "rockaway," of the precise fashion and make at which we must profess our ignorance. Government House at Saigon "would appear to advantage in London or Washington." And the sellings and walls of the Cambodian secretaring parlour at his capital of Panompia are "freezood in as time a stric as many in Grosvenor Square or Fifth Amenus." On the will work is a not unwalcome addition to our knowledge of the lade Chinese peninsulas. It is written in a clear and sanflected style. It is descriptive of forests, lakes, rivers, capitals, and rains, many of which are still very imperfectly known, while some have hardly been described at all by fourtishmen. It shows the author to be possessed of some of the qualities indispensable to sun exploration—energy, undurance of best, fatique, and putty amoy-ances, good humour, quickness of observation, and intelligence. Its ances, good humour, quickness of observation, and intelligence. Its value is enhanced by two or times maps throwing lights on a made disputed points of geography, as well as by many excellent engravings which place before us the paradas with their wonderful tracery and the reigning monarche in their soles of State. We do not make out that Mr. Viscent is much of a naturalist, or that he has anything of that innate love of sport which prompts an Englishman to tell us how he longed for his graybounds when he started a graph in the ruins of Personolis, or how many sounds of subsets. gaselle in the ruins of Persepolis, or how many couple of suips its might have brought to bug if he had only taken his breach-loader to the banks of the Scannader. But there is no doubt that Mr. Vincent has seen much, and that he has not described all he saw. In a tour of three years he visited Persia, Mongolia, Jave, Japan, and China. Indeed, he devoted seven months to seeing the rincipal places of the Celestial Empire, including, bosides Can principal places of the Celestial Empire, including, heates Camon, Maczo, and Shanghai, the cities of Pekin, Tientsin, and Hankow on the great Yang-tec-kiang river. But, with a self-denial which in these days of fluid biographics and flabby novels caused he praised too highly, he has contented himself with an account of high and Cambodia; a glance at British Burnah and the independent kingdom of Ava; a husty notice of the colonial dependences of france, Malacca, and Singapore; and a few remarks on the attempt of the French to do at Saigon and in Coolin-China what sheet had failed in doing, just a century ago, at Pondicherry and had failed in doing, just a century ago, at l'ondicharry and Obandernagore. We may condense his travels into a brief compass by saying that he landed at Hangoun, went up to Mandaley, the present capital of the Burman Empire, and back again; came down the coast to the extremity of the Malayan peninsula, taking on his way Maulmain and Amherst, Penung and Province Wellesley, and Malacca; that then he sailed up the Gulf of Simu to Bangkok; and thence went across to Panempin, the capital of Cambodia, and so down to Saigon, where the journey and the nerestive end. The latter part of his travels, which will have the keenest interest for antiquaries and ethnologists, we may fairly give in his own language, by no means too boastful for what he had undergone and accomplished. "I had traversed the great

nad undergone and accomplished. "I had traversed the great Indo-Chinese peninsula, riding over its plains, voyaging across its lakes, paddling down its rivers, a distance of 655 miles, in aix weeks, including many long and delightful delays by the way."

It is no disparagement to Mr. Vincent to say that he has travelled, like his countrymen, at a rapid pace, and that he has nothing very original or striking to tell us about British Busmah. Eventy years have elapsed since Lord Palhousis concluded a campaign in which he had been his own War Minister, at the expense of a million and a helf—the first Burmese war having cost ten millions—completed the link wanting to our anaboard between the province of Arracan and that of Tenassenius, and added to the British possessions another splendid Palta, where land is gredienties, cheep, and abundant; where the people are fairly logal, some

The Land of the White Elephant: a Personal Narration of Trued and Adventure in Farther India, interesting the countries of Burens, Blam, Dembodia, and Ordhin-Chies (1871-2). By Frank Viscoust, Juntee. London: Hampson Law & Co. 1871

tented, and remarkably free from prejudices; and where, with a revenue of more than a million, famine and scarcify are almost unknown. There is little or nothing to be glassed from Mr. unknown. There is little or nothing to be gleened from Mr. Vincent's pages which has not been rendered available at the Indi d from Mr. Vincent's pages which has not been rendered available at the linus Office and in published Blue Books and Reports. Nevertheless it is always advantageous to see ourselves with the spectacles of friends or rivals, and to learn how an enterprising American gentleman has been received at the Court of an Oriental potentate, who has not yet quite recovered from the loss of the best half of his dominions. It will cause no surprise to Indian administrators to hear that the King of Ava could not be reasonabled to look on to hear that the King of Ava could not be persuaded to look on a white-faced traveller seeking enjoyment in novel situations, in any other light than that of a political adventurer; and that His Majesty held out the bait of employment and emolument, and as many Burmese wives as were agreeable, if "the stranger" would only aid him in the negotiation of a commercial treaty with the Tunted States. But this idea families to a many Eastern protection. only aid him in the negotiation of a commercial treaty with the United States. But this idea, familiar to so many Eastern potentates in other shapes, of pitting one great European or foreign Power against another, and of profiting by their collision or their rivalry, comes too late. There is no place anywhere in the Bay of Bengal for the ascendency of any other Teutonic or Latin race; and the Chief Commissioner at Rangoon, on the receipt of a telegram from the Viceroy, could probably reduce the independent Burmese to helplesaness and submission by a more simple means than even the despatch of a few marines and blue-jackets to storm a capital four hundred miles off. He more simple means than even the despatch of a few marines and blue-jackets to storm a capital four hundred miles off. He would, as Lord Dalhousie predicted, only have to forbid the transport of a certain pungent and highly-prized condiment called agrees, from the seaboard to Mandalay. Without this article of universal consumption the ordinary Burman is much worse than a navvy deprived of beer or a Highlander of whisky. Ngapee, by the way, is a sort of paste of salt-fish, at least half-way to putrefaction, odorous, and used by the natives to give a zest to their plain meal of rice. Though, to the eyes of an American accustomed to see burnt cities rebuilt in a few weeks, and civilization transplanted bodily to the midst of swamps and forests, there would transplanted bodily to the midst of swamps and forests, there would be nothing astounding in the design and construction of the English town of Rangoon, yet our government of this foreign dependency seems to have impressed him favourably. He has perhaps wisely refrained from any description of the machinery of administration, though a Chief Commissioner placed directly under the Supreme Government of India must have somewhat reminded him of a permit a present terminded him. reminded him of a newly annexed territory in the Far West not yet invested with the privileges and dignity of a State. But he is at no loss for words to describe his con-State. But he is at no loss for words to describe his contempt for Gallic endeavours to colonize the East. The "great nation" lacks the perseverance and energy of the English race, and, aiming at empire, produces nothing but a "burlesque on colonization." The effect on the mind of the author was that the whole thing was a farce. Those who have seen anything of the management of such dependencies will admit the truth of this observation, which even Frenchmen do not deny; and the obstacles to success are by no means lessened by the fact that superannuated admirals, who have looked down on human nature from a quarteradmirals, who have looked down on human nature from a quarter-deck, are often selected to solve the problem of governing Cochin China, for the simple reason that the colonies are under M. Le Ministre de la Marine.

It is to be regretted that the season of the year prevented Mr. Vincent from carrying out an intention of reaching Bangkok overland, from the backwoods of the Tenasserim provinces across the Shan mountains and the Meklong river, or down the Meinam. But this trip, feasible by means of ponies or elephants between November and April, is out of the question during a rainy season which lasts for at least air months and which though the next at which lasts for at least aix months, and which floods the earth at the rate of ten or twelve inches a day. So, as we have stated, the author coasted down the long narrow Malay peninsula, and has given us brief and not uninteresting accounts of Penang, with its hill sanatorium of 2,500 feet high; of Malacca, with the distant peak to which geographers more speculative than accurate have given the name of Ophir; and of Singapore, a coaling station and entrepit of spices for all nations, where coir-rope is manufactured from cocce-nuts, and where the gardens and the museum of the Hon. Mr. Whampon a member, not of the Town, but of the Legislative Council with shrubs twisted into the shapes of dragons and reptiles, with fish-ponds, summer-houses, and styes full of prize pigs, form one of the main attractions and boasts of the settlement. Mr. Vincent notes that the Straits Settlements were formerly under the Supreme Government of India, and are now governed, or left to govern themselves, by the Colonial Office. But it may not be generally known that when these dependencies formed part of the Indian Empire they were for years in subordination, not to the Government of India, but to the local Government of Bengal. Anomalous as this may appear, the Executive Power which had to look after Bengal, Behar, and Orissa, had also to regulate the squabbles of Malays and Chinamen, and to settle questions about the tenths of silver

mines and the exports of spices at Malacca and Penang.

The main interest of the work, however, must lie in the account of the ruins of Angkor, on the frontiers of Cambodia and account of the ruins of Angkor, on the frontiers of Cambodia and Siam, not very far from a lake which Mr. Vincent calls Thalaysap, but which other travellers have designated as Tale Toanless, or else Toulisap. If we except the account of these stupendous ruins by a traveller in the fifteenth century, we had really no good guide to them until recent years. In Adolph Bastian, the Fresident of the Royal Geographical Society of Berlin, visited them about 1854, and the late M. Henri Mouhot thoroughly explored the country in 1860. The latter gentleman, it may be remembered,

fell a victim to a malarious fever contracted in the area jungles of Lacs, leaving behind him ample notes of his act which were published by his brother in two volumes, a years ago. Mr. Vincent has partly taken the unfortunate man as his guide. From these narratives, as well as also the him which the man both illustrated and analysis of man as his guide. From these narratives, as well as the sketches by which they are both illustrated and curiched, sketches by which they are both illustrated and enriched, we may present to our readers some short account of these mighty relies. For grandeur of design, skill of construction, harmony of proportion, and profusion of detail, these ruined temples may fairly challenge a comparison with most in the world. The largest edifice occupies, with its outer walls, a space of the amile square. It comprises long galleries, imposing colomades of square stone, causeways of solid masonry, elegant pavilions, lofty towers, and bas-reliefs crowded with figures of animals and men. Both travellers' speak with almost bewilderment and awe of their extent, variety, and magnificence; and M. Mouhot, besides the account of the largest or Nagkon Wat, has given detailed notices of another pagoda, and of the King's palace and treasury, which prove these ruins to have been once the seat of a rich and powerful empire. Some idea may be formed of the scale of construction when we state that the causeway which leads to the main entrance is 725 feet in length; that the highest pagoda is 250 feet; that the sculptures extend for half a mile; that three terraces, with twelve staircases, and porticoes and galleries, form the body of the building; and that the great temple is supported by no less than 1,532 square pillars. The sculptures and bas-reliefs, as described by both these travellers, are clearly Hindoo. There are representations of the fight between sent to our readers some short account of these mighty re are clearly Hindoo. There are representations of the fight b Hanuman, the monkey-king, and Ravana, the tyrant of Ceylon; of Swarga and Naraka, or Heaven and Hell, and of Vishnu and Buddha. The question as to the builders of these gigantic edifices is one more easily asked than answered. We may of course dismiss any notion that they were erected by the "Lost Tribes of Israel" or by a "Prince of Rome." The scattered remnants of the Babylonian captivity have a good deal to answer for already, and Rúm or Rome is a late introduction of the Mohammedans, spread by them all over the East, pointing in a vague and general way to the great Power which had once ruled more than half the world from the Tiber or the Bosphorus. M. Mouhot alice at the Lorich abscicer only which a street do be one and on relies on the Jewish physiognomy which attracted his eye, and on a record of the judgment of Solomon, which a French bishop dis-covered, verbatim, in one of the Cambodian sacred books. But features are not always a safe guide for ethnology, and the fame of Solomon and of Alexander the Great has so caught hold of the Oriental imagination that local and village customs in the Punjab are to this day cherished as legacies of the Emathian conqueror, while any Kazi or Hakim who has displayed more than average shrewdness and impartiality may be made in story-books of all dialects to play the part of the Jewish monarch in a tale about two harlots and a child. Mr. Vincent is clearly in error when he two harlots and a child. Mr. Vincent is clearly in error when he imagines bearded warriors in the sculptures to represent "the Moors," though he may have been misled by Dr. Bastian on this point. Native tradition, as may be expected, gives us very little assistance. The Nagkon Wat was the work of "angels and giants," or it was built by the "leprous King"; or it even "made itself." Now, it is certain that a statue in good preservation is still to be seen on one of the esplanades of the temple, believed by those on the spot to be that of the Royal leper. The attitude is dignified; the features regular and manly; and the type is something resembling the Hellenic or the Aryan caste. Leprosy, with Orientals, is no disqualification for empire. Whether these noble monuments of an ancient creed are due to the single monarch whose monuments of an ancient creed are due to the single monarch whose statue has survived the ravages of time and desecration, or to two or three rulers in succession, one explanation of their origin might be as follows. After a mighty struggle in India, of the details of which we know little, the Buddhists or Reformers were details of which we know little, the Duddhists of Reformers were vanquished and expelled by the Brahmans or champions of the old religion. Driven from Central and Upper India, and from Rehar, the vanquished party took refuge in Ceylon. Thence they crossed to Burmah, and spread gradually over the Malsy peninsula. With their energies unimpaired, and with a vivid recollection of the idolatry which they had failed to refine, they built these vast temples to commemorate the myths and errors of the old superstition, and their own adoption of a better and purer faith. Such conceptions were not impossible to a pious community, guided by a vigorous ruler, which had just occupied a large tract of country rich in wood, in water, and in natural products, and hardly inferior to the plains of the Gangetic Delts. But, in any view, ruins which amaze and awe the few travellers who defy heat and exposure in the pursuit of science and history must owe their origin either to the ennobling and lofty impulses of a whole people, or to the exercise of some imperious fascination by a mighty sovereign who commanded the resources of mechanical science, and the obcdience of crowds of hewers of wood and stone.

SPECIFIC PRIMERS.

W HEN Lancaster found out a "Method of teaching to spell and road, whereby one book will serve instead of six hundred," he thought that he had made a discovery worth having, and he was justly proud of it. But three-quarters of

hose which from the topmost layer of the pile style themselves make of Specific Instruction. The name does not seem to us a sy one. The popular notion of a specific is something unpleasant the second company contained in a small phial and supposed but wholesome, commonly contained in a small phial and supposed to exercise toothache, or earache, or some of those other aches to which poor human flesh is subject. The connexion of ideas may which poor human flesh is subject. The connexion of ideas may tend to prejudice the minds of the little scholars, for whose benefit these same specific primers have been called into being, against using them. Their editor, Mr. J. S. Laurie, seems to have had a great deal to do with school-keeping and school-inspecting in all the continents except America. He is or has been "Inspector of Schools in England; Special Commissioner, West Africa; Assistant Commissioner, West Africa; Assistant Commissioner, Property General; Of England; Property General; Assistant Commissioner, Property General; Assistant Commissioner Education Commissioner, Ireland; Director-General of Public Instruction, Ceylon." We wish Mr. Laurie would let us know what specific enables him to get through the duties of these several functions in lands so far asunder that they would, we should think, have proved almost too much for the skill of the great Michael Scott himself. Mr. Laurie's Manuals, if we may judge from the advertisement on the cover, aim at being a complete ladder of the advertisement on the cover, aim at being a complete ladder of learning. The several steps lead up through all the grades of primary education, ending with the "facts and features of English history." We would fain ourselves have profited by a little "specific instruction" in these "facts and features," but our desire in this respect is doomed to rest unsatisfied, as the Manuals of Geography, English Composition, and Analysis are the only ones which have yet come before us.

We are glad to see that in the geographical primers our own idea of making children understand the nature of a map before you expect them to learn anything from it has been to some degree acted upon, though not fully worked out. We still maintain that

acted upon, though not fully worked out. We still maintain that the only way of making a child understand the exact relation of a map to the country it represents is by teaching him little by little to draw maps of some tract of country which comes within his own notice. Unless this be done, the geography lesson, which is skill bender may be made the most attractive of all lessons. in skilful hands may be made the most attractive of all lessons, becomes a mere dreary task confined to learning by rote a long string of hard names. We once knew a small boy who had brought home the geography prize from school, and yet could give no better account of Africa, his special subject, than that it was "a large yellow country," and we suspect that most schoolboys have not much clearer ideas connected with their maps. Some where that the object of all teaching ought to be to train the mind and the eye to the quick perception of likene and difference. There is no lesson to which the comparative method can be applied more successfully than to geography. No one can be said thoroughly to know the geography of any country till he has travelled through it, and our only way of forming any clear idea of what any country that we have not seen is like is by comparing and contrasting it with some other country which we have seen and therefore really know something about. In one point these little primers are better than most of their kind. They are divided into lessons of a reasonable length. Instead of all the counties of Integranes are better than most of their kind. They are divided into lessons of a reasonable length. Instead of all the counties of England being given in one lesson, they are here very wisely divided into eight, while each county is afterwards studied in detail. This is a decided improvement on the old way, and is in harmony with our favourite maxim that in learning anything as little should be presented to the mind at once as possible.

The two remaining primers have undertaken a very hard task, that of teaching the most unterschale of all are the est of convenience.

that of teaching the most unteschable of all arts, the art of composition. Mr. Laurie's idea of composition must, however, differ widely from our own. He defines it as "the art of putting words together so as to convey information." Now we have words together so as to convey information." Now we have frequently heard from popular preachers very finely worded sentences, nay, even whole semons, which conveyed information whatever; while we have, on the other hand, read very learned books which made no pretensions to excellence of style. Our little Manual goes on to say, what is very true, that (a) "Proper choice of words; (b) simplicity of expression; (c) right order of words and phrases; and (d) grammatical accuracy, are essential conditions of composition." If we might venture to correct a School Inspector, we should feel tempted to hint that to have something to say, to know exactly what you mean to say, and to have the nower Inspector, we should feel tempted to hint that to have something to say, to know exactly what you mean to say, and to have the power of saying exactly what you mean, are three points which are even more essential to writing what will be worth the trouble of reading when written. This degree of excellence would certainly never be arrived at by Mr. Laurie's method. It professes to lead the little scholar on to perfection in writing good English by first putting santeness together and then pulling them to pieces, writing themes on subjects about which no same achood by ever did or ever will care, and imitating stiff and proper letters which must, we absult lightly, have been written by no makers lifelihe school by these one of the dummies that show off school boys suits in the

we of Moses and Son. for us. Desertion tells attempt his been made in The outlines of malitain

made in the following pages des of easy and illustrative es atical analysis fred from use .

A glance through the "following pages" makes us feel with regard to the "perplexities" and "compilections" thus darkly kinted at the same awful, yet half-sceptical, curiosity which children well exercised in the Shorter Catechiam of the divines of Westminster feel towards its longer brother. If a maze of "copulative co-ordinate" sentences, and "disjunctive accessory sentences," and "adverbial accessory sentences of supposition, condition, manner, or qualification," are simplicity, what can the "perplexities" be? We does the Manual with a painful conscioueness of our own unworthiness to judge of such nicoties. We do not at this moment know to which of these classes of accessories the sentences which we have which of these classes of accessories the sentences which we written belong, and we have an uncomfortable feeling that if this knowledge is required from the upper classes of a village school, we should, if compelled to present ourselves for examination, be thrust down by the Inspector to the lowest place among the infants of the lowest standard. We never take up a batch of small school-books without feeling profoundly impressed by the consciousness that the sense of duty must be much stronger in children than in grown people. No other feeling could inspire them to drag through the dry drudgery of learning which is in too many cases set before them in so dull a guise. Of all the discouraging tasks which any them in so dull a guise. Of all the discouraging tasks which any one could propose to himself, we should think that writing manuals of English Grammars is the most thoroughly hopeless. All such manuals profess to teach the "art of speaking and writing correctly;" but as scarcely any one does either speak or write correctly, it is clear that they have one and all, from the days of Lindley Murray downwards, failed in the object of their creation. Yet they increase and multiply at an alarming rate, and each new author flatters himself that his book will accomplish a reformation in the everyday talk of his countrymen.

in the everyday talk of his countrymen.

The last on our list, Practical Rules of English Syntar, has been put together wholly and solely with this benevolent aim. In the preface its author bemeans the lax views, or rather practice, with regard to grammar which offend his ear on all hands. He goes on to inform us-

That our language, although so widely diffused throughout the civilized world, is relatively worse spoken and written than any other living tongue. To effect, therefore, some amelioration in this respect, be it repeated, is the leading object of the annexed treatise.

As the "annexed treatise" sets to work in the old-fashioned way by expounding twenty rules of Syntax and giving exercises thereon, we feel sure that it will never achieve its leading object Of all parts of elementary education, grammar is the one which it is most useless to teach by rule. Correct speaking can only be learnt by imitation, and quickness of perception can alone produce accuracy of expression.

The fact that the necessity of national education has at last been brought home to us, and that it seems desirable to find out the best and cheapest way of carrying it on, gives to all little school-books that come forth authorized by School Inspectors an importance and an interest which their own merits often in no wise deserve. It is only by examining the manuals in use that the public can form any idea of the work that is going on in those schools which take up so much of its time and of its money. The more we see of these little books, the more we feel convinced that the real principles of education are as yet but imperfectly understood. The greater part of them are primers for young children. Now for young scholars oral teaching is really and truly the only kind of teaching that is suitable, or that will ever reach their minds. To put books into their hands is the sure way to prevent their learning anything. This doctrine, however, is not as yet generally received. That it should not be accepted and acted on is strange in these days, when it seems to be thought impossible for grown people to take in knowledge of the most simple kind unless it be set before them in the form of a popular lecture. So much in fayour is this sort of literary gossip and dissipation importance and an interest which their own merits often in no w So much in favour is this sort of literary gossip and dissipation that it would seem as if the present generation despised the art of printing, and were bent on proving how well they can do without it. People are ready to run miles to hear a little frothy talk on some subject about which they could have learnt rothy talk on some subject about which they could have learnt more in a quarter of the time if they had taken the trouble to consult some text-book upon it, without stirring from their own fireside. But grown people ought to be beyond the stage of having what they wish to learn talked into them. Primary education, if it is worth anything, ought to teach them how to seek out information for themselves. The fact is that in all education a great deal more depends on the teacher than in all education a great deal more depends on the teacher than on the books he uses. How to seek out and secure the best teachers ought them to be the care of those to whom the State entrusts that most important charge, the education of the nation. Whether good teaching can be ensured by employing none but trained and certificated teachers seems to us a very open question. The prodigies of training colleges are in general people with dult brains that will bear much cramming. It is only dull brains that possess the stolid patience needed to support the deadening pressure of the constant and unvarging routine which such training implies. The very notion that teachers can be trained to teach well is a taken one. Every teacher who is worth anything must have his own method. He must have imagined and worked it out for histophi; yet it must be so electic that it can vary somewhat in its swm method. He must have unaginal with any somewhat in its

treatment of every different mind. But, on the other hand, the cleverest people do not make good teachin. They have found the paths of learning so easy, straight, and pleasant that they cannot sea, and therefore cannot remove, the squadding-blocks with which duller intellects find these same paths feest. Common sense, a ready wit, and a kindly sympathetic nature are far more useful gifts in teaching than mere ability.

The tendency of the present day, there can be no doubt, is to set for too high a value upon mere teaching, and to lose sight of the power of self-education which every one possesses if he will only take the trouble to grasp the means which come within his reach. Yet the unfailing effect of over-much teaching is to stupify the brain. To compel a forced attention, at stated hor es, to tasks in which the ikes no interest, is the sure way to crush out any spark of mind takes no interest, is the sure way to crush out any spark of original gessius, while loading the messory with the thoughts and theories of other rainds deadens the power of original thoughts. To give life to the daily lessons and to draw out the natural powers of the mind, while storing it with a certain amount of useful knowledge, is the teacher's difficult task. Now, as Locke said long ago, "Learners must tirst be believers." The teacher must convince the scholar that what he teaches him is of some real use, and that knowing it gives him some power over others who are ignorant of it. who are ignorant of it:-

To this he should add sweetness in all his instruction, and by a certain tenderness in his whole carriage make the child sensible that he loves him and designs nothing but his good.

How far the schoolmasters of the present day are secretly influenced by such high principles in the exercise of their vocation each one must answer for himself. Our own opinion of "trained and cortificated teachers" is not flattering. If we may judge them from the correspondence which appears in their own little journal, they the correspondence which appears in their own little journal, they are too conscious of their own excellence, too eager to keep up the dignity of their position, and too determined to resist being trampled on by either the squire or the parson, to have much time for thinking how they may best work for the good of the children who come under their influence. They are too apt to think that the object of all education is to pass through the several standards at the proper age, and to end with getting a Government certificate. We wonder if they have ever realized that the aim of education really is to increase the usefulness and the happiness of any any individual child—his usefulness by making him more fit to every individual child-his usefulness by making him more fit to help himself, his happiness by enabling him to see clearly and also to will to do whatever is best for the welfare of himself and

THE TWO WIDOWS.

ONE of the stock fairy tales of all nations is that of the wicked waiting-maid who personates the princess her mistress, and sees herself off on the royal bridgeroom as the fair delight whom he has been expecting. Sometimes by magic arts she takes on herself the person of the lovely lady, though her nature always remains cruel and her conversation low; but sometimes she retains her own features—which are invariably awarthy—to the wonderment of the innocent reader how it is that she is not diswonderment of the innocent reader now it is that and is not dis-covered on the spot. The true princess meantime is degraded to the waiting-maid, and regains her rightful position only by means of a strategem. Thus far the fairy tale, which probably has some recondite meaning in its unlikely incidents to redeem it from pure silliness, and which at the worst is intended to amuse only simple folk and little children.

Mrs. Funder Cudlip has constructed her latest novel on somewhat the same plan as the special bit of folklore we have mentioned. She has translated into modern English life the personation of the princes by the westing-maid; and has produced as crude and abourd a bit of work as we have ever had even from her pen. Her forte does not lie in mysteries and secrets. Sile has pen. Her forte does not lie in mysteries and secrets. She has neither the patience nor the accuracy necessary to a plot which deals with circumstantial evidence, the tracking of a secret, the fitting in of the various parts of an intrigue. Those special qualities which have placed Mr. Wilkie Collins at the head of all English weavers of intricate plots are just the qualities in which Mrs. Pender Cudlip eminently fails; her sprawling, hasty method of writing being the most inapt of all for that sort of story which ought to deal with subtle alkasion rather than direct indication, with careful and gradual revelation rather than coarse indication, with careful and gradual revelation rather than coars and sudden discovery. A scene-painter is not the man one would chaose for ministure work, nor are the hands of a rough-and-ready joiner those from which one would expect a dainty calinet or a long of puzzles. In the whole range of modern fiction we know of nothing th worse in its way than the Two Widows. The story is in itself an absurdity, and the writing is below even Mrs. Oudlip's standard. A wealthy man, the owner of a spacious mansion, and estate to correspond, has married a beautiful young woman of his own rank. She is what is called in society, and there is seither mystery nor secrecy in his manninge. He goes abread, makes a will, and dies; and his widow comes to take possession of the estate. Mr. Georpe Waldron, the gentleman in question, has been passionately fond of his wife. He writes of her in his will as "the good angel of his life," and leaves all to her on the supposition of her being "the good angel of the family; feeling care that in all things she would carry out his wishes"; thus making no provision for the only son of his only brother, who is finturely the heir to the enters. Elizarhers he has written of his to his fixed Frank an absurdity, and the writing is below even Mrs. Oudlip's standard.

Stappiton as "one of those fair-fixed angel woman men would gladly lay down their lives." The M men would gladly lay down their lives." The Min. Greener men would gladly lay down their lives." The Min. Greener was withen acquester who looks older than the twenty years with which she is accretized—a woman whose "flashing black eyes, crisp, curly black locks, and transparent olive cheshs might have enabled her to pass for a gipsy." The is mersower a tall deshing women, with a restless manner, and avidently, "no lady." Her daughter is a "tall, well-grown, shapely young woman, with a fine Napoleonic face"; a girl who, "although she missed the more delicate touches of breeding and blood, had about her a wealth of repose." "Lovers of refited beauty would have found this handsome girl wanting in meet of the points of blood found this handsome girl wanting in meet of the points of blood her a wealth of repose." "Lovers of refined beauty would have found this handsome girl wanting in most of the points of blood and breeding. But those who regarded stature and size, and firmness of flesh as the most desirable qualifications, would have had nothing to wish for when gazing on Miss Enumeline Vicary's statwart, healthy young figure, and clear-complexioned, deutities young face." We can acaresty then wonder at the sentiment, though we might have preferred a more delicate suche of expression, when Mr. Frank Stapyton says, after his first interview, "It nearly knocked me down this morning when I saw the woman Genrue married."

Feeling sure that acres interview.

Feeling sure that some infamy is connected with the will and the possession of Larpington, Horatis Waldson, the wildow of George's brother Arthur, and the mother of Garald, whom she considers the rightful beir, comes to the village, where she established herself as the rival widow. She is utterly unlike her so-called gracious type, who attends to the dinner with which she hopes to propitiste her brother Gilbert Denham, arranges her reoms with taste—"all rosy, light, and floral fragrance and contact and series sister-in-law, being a beautiful young woman of a retined and properties her brother Gilbert Dennam, arranges har reoms with taste—'all rosy, light, and fioral fragrance, and order, and beauty of the light, airy, graceful sort"—is very loving, very true, and very ladylike. Being the last, Mrs. Cudlip sees no incongruity in ascribing to her such a phrase as "Now, my cubs, surge upstains," when she wishes to get rid of her wishes a phrase which may suit wayners of the present day who are now families with when she wishes to get rid of her children; a phrase which may suit women of the present day who are more familiar with slang than syntax, but which does not seem to come quite harmoniously from the lips of a refined young widow who passes for a gentlewoman of the best kind. To help this lady to discover what is the mystery connected with the Waldrons at "the House," her brother, Mr. Gilbert Denham, comes down from London, unaccompanied by his wife. Actuated by a wonderful prevision of the part he is to play in the future drama, he desires that the fact part he is to play in the future drama, he desires that the fact of this wife, Pessie, may be suppressed; also the fact of his being Horatia's brother; and, thus marshalled, they accept an invitation to "the House," and open their campaign.

Gilbart's first desire is to visit the picture-gallery, and a great deal of diplomacy is put into this apparently simple proceeding; though what evidence be expects to gather from the portraits of the Waldron ancestors is not very clear. However he goes there, accompanied by the firm-deshed Miss Emmeline Vicary, with whom he has begun a desperate flirtation, to which she is responding by a coarse passion. Also there are two Miss Iblets whom Gilbert means to use as "pawns," but who are of no kind of value to the story beyond pointing to a door at the end of the picture-gallery, and saying, "We oughtn't to make so much noise down at this end; we may disturb the invalid." It might be imagined that a simple remark of this kind would not lead to much; but it is the "open seame" of the plot. Actuated still by that wonderful prevision which suables a person to see through all the millstones shead, Gilbert takes up the phrase, feels assured that it contains alread, Gilbert takes up the parase, nots assured that it contains the heart of the mystery, and never lets the subject drop nor gives the beautiful Miss Vicary with the Napoleonic face any rest until she has consented to introduce him to this invelid, who, also says, is her maniac sister Clarice. It is to be supposed that when people do wrong and live a life of deception they are reasonably careful to guard against discovery. To be sure they may overreach themselves, and, by their very fear of being found out, may set the keen-witted on the scent. But we venture to subject that no one in his or her ordinary means would have taken the may set the keen-witted on the scent. But we venture to solieve that no one in his or her ordinary senses would have taken this stranger, connected with the rival widow, right into the very heart of the mystery, and given the end of the due into his hands by which he might guide himself to the truth and bring upon them destruction. When Gilbert sees the beautiful maniac—a lovely young woman with "soft-looking, bright yellow hair" and dark, soft violet eyes "—he feels certain that she is neither Mrs. Waldron's daughter nor Miss Vicary's sister; mercover, he fall in love with her, for all that his Bessie at home is the less little wife in the world—for all, too, that he has gone as far as a mass wife in the world—for all, too, that he has gone as far as a man could well go in the time with the handsome Emmeline; though he goes considerably further in a few days—the whole way indee of an engagement. But the person who discovers the terms of the mystery is Frank Stapylton. Falling fast in love with Eigentia, he talls her of his former love affair with a beautiful young lady at Brighton. And he talls it in a manner so entirely Mrs. Pender Cadings come, that we will give it for the hemsit of our

* Ess. Men. Waldron, Arthur was right. I was awfully fend of a girl when I was a young fallow; and it was the old story. Don't you know? She didn't care for me."

didn't care for me."

The words, "What a blind fool she must have been !" were on Horatie's lips, but she checked them, hard as the task of doing so was. A greating wears is showed intelerent to say indifference shown towards a man she loves by another wears. However, discusts constanted heatest exceeding and manify and her reply to his confession.

"Buthatis and commit for somebody class?"

"That was just it, don't you sen! It was a quick thing, altogather. I met her at a bull in Brighton, and she fetched she tramendously in the comme of five round dances I had with her. Then I met her at a picnic; and then

[&]quot; The Zico Fidous. A Novel. By Annie Thomas (Hrs. Bunder Cudlip), Author of "Berie Donne," Sec. a vols. London: Chepsens & Hall.

I replace to the party of the party of the party. The rail of the party of the part

The theory that the Biguitie taked. Electrical Phays registered my first limited in this being the first question every woman sales about the one who has been prefered to her, or has presented her, or he any way rivalled let.

His answer was distressingly districtive.

"She was beautiful—a glorious gui with guiden but; and eyes—well, eyes that wans not a left like any that I have ever men in any other woman's

Expland, that Frank did not hear the name of the woman George Waldigs married. The brothes, Arthur Waldron, was his descent friend, and these things come out as matters of course. He sees the portrait of hearsh which the mad Chrice has painted and given to Hearth, and when he sees it, he cries out, "This is the girl I told you of; the girl I proposed to at Brighton." Some amount of detail gase to the description of Frank's burglarious entennes into that part of "the House" where Charice, sies Cecil, is sentined. He darm not break the window up to which he has ellimbed by means of a "mighty magnolis tree which was tasked up against the well," but he cuts out the pane with his diamond ring, and slips back the eath of the seah; then he goes into a closet, where he makes a comfortable hed for himself of sundry shawls and cleaks and dresses he finds there, and so falls salesp. The nurse discovers him in the morning, so does fill salesp. The nurse discovers him in the morning, so does full salesp. The nurse discovers him in the morning, so does full salesp. The nurse discovers him in the morning, so does full salesp. The nurse discovers of the broken link of memory by mentioning the name of Waldron, and thus prepared the way for her release and the discovery of the crime by which she has been defained. It all comes out through Emmeline Vicary's voluntary confession. She is madly in lone with Gibert Desham, to whom she is engaged; she has been madly in love with George Waldron, to whose "angel-faced" wife she was maid; so she tells the truth of the deception, at the same time painting her quondam mistress in no very flattering terms as a shallow fool, and ends her rather remarkable exposition thus, speaking to Horatia:—

Mrs. Arthur Waldron, your brother and you between you have husted me into a hole like a rat, and what have you gained by it? I know that

Mrs. Arthur Waldron, your brother and you between you have hunted me into a hole like a rat, and what have you gained by it? I know that you have disliked us very much, but I'm woman enough to know that you'll ache more when you see George Waldron's angel-fixed widhw reigning here as Mr. Stapyiton's wife. The real contest between the Two Widows dates from to-day.

Having done with mystery, Mrs. Pender Cudlip now goes into character, and the theme of the second helf of her book is the extraordinary vanity, heartlessness, and duplicity of the fair-faced Cocil, Mrs. George Waldron, whom her sister-in-law has helped to rescue from madness and imprisonment. Frank Stapylton, who up to this moment has been drifting rapidly into love for his friend Arthur Waldron's widow, she also being in love with him, turns back to his old passion for the yellow hair and violot eyes of Cecil, and in a vory short time engages himself to her in a half secret way for which also there is no adequate reason. But Cecil justifies Miss Vicary's vigorous contempt, and gives occasion to a piece of writing as exaggerated and disagreeable as anything that even Mrs. Pender Cudlip has ever put forth. The whole story of her flirtations now with Charlie Danvers and now with Gilbert Denham, while holding Frank to his fealty by her golden hair and violet eyes, is partly silly and partly offensive. It is certainly neither art nor nature; it is verbiage, and as verbiage serves the purpose of filling space, but it serves no other. The exposition made of Horatia's shifting fiselings for Frank and of his for her also fellows the same track. The pretty young woman who in the beginning is so resolute in performing "suttee," and caring for no one in the world but her "cubs," but who lets harself he so soon overpowered by passion for her husband's friend, is not a pleasent study; nor does her final resolve: to marry Frank because she thinks she would be happier with him than without him seem exactly the nicest kind of thing she could have done.

Altogether the book is menotonous and heavy in its abourdity,

Altogether the book is menotonous and heavy in its absurdity, while it is vulgar in thought and diction. Mrs. Pender Cudlip speaks of Gilbert Denkam as one "who would very strongly have advocated the whacking of Cassar's wife"; Miss Vicary's hat has "a soft curly plume, a nice compact fluffy thing, flopping over the brim"; Gilbert says, "both mother and daughter are as suspicious already as eats over poisoned mest"; Miss Vicary vibrates between "being over-demonstrative and unpleasantly morose and glum," but a new phase of pathos "was more fatching naturally to a man;" and Mrs. Cudlip finds it small wonder that her ladylike Horatia "should have sung out " that ahs was ashemed of Gilbert's love-making to Rammeline. Coming to smaller matter, we would ask Mrs. Cudlip where ahe has found in England briar-roses, wild-thyme, and " the punely golden estandine," all blooming together in the samener woods; and we think we may take it on ourselves to assure her that any botanist of maute would be glad to note and verify the phenomenon.

there can be no measure why the experiment of a scholarly preserved and should not be important entition, and even heat to be clear hand, it is there to make the two are enjoying a lysic post of the first order when the solution of the solution of the should not be successful from a proces wearing it but those who think that the pith and gift or wall as a first should be advocated on either side are many, and measure we wearing will find their case counterably strengthened by the apparament of an exhibition after their own heart by two scholars, the foremost of whom represents an order of scholarship and tasts not often attained, and, like his father before him, handles the Alcake and the Sapphic in composition as only genuine lovers of Florace one for Such of our readers as know the "Foffs Silverhe" and other kindsof Anthonough will not have forgetten the twentations of the late Bishop of Lichfield. What part is Mr. Lonsdale's, and what his coadjutor's, Mr. Loo, in the volume of the Globe Series that lies leafers as, it is unnecessary to inquire, for the whole is of creditably even merit, and to our thinking fulfils its purpose as a transcript of the Venusies bard for English readers more successfully then the Viryil which came forth two or three years since from the same hands, whilst it contrasts in one way favourably with Mr. Wilkins's prose translation of the Ecloques and Georgies, of which we took notice some time back. Certainly this Horseo is an independent work. Aiming to present poetic prese to their readers, the translators will not be found borrowing turns of speech and neater renderings from Conington, still less finding fault with him afterwards. The impression which

This is seen in the pleasant introduction to the Satires, the Odes, and the Epistles, which evinces at once a fund familiarity with the author and a sound idea of the chronelugical sequence of his poetry. While, perhaps, the niceties of translation are bestowed with most care upon the Odes, and a preference is admitted for the noblar character and more perfect finish of the Epistles—Horace's maturest work—the editors are careful to observe in the conversion of the Satires into English the original charm of finish without dulness which, as they note, was absent from Missillon's constantly retouched sermons, and the writings of Beilean, which were made same and flat by frequent polishing. The "Journey to Brundusium," the actire about the litoman bare, the culinary precepts put into the mouth of Catius in the Fourth Satire of the Section Book, the spisode about the visit of the country means to his friend in the city, are all inspired with a freshness not very easy to reproduce in prose, while the famous letter of introduction to a patron (Ep. I. 9), the gentle lecture to Bullatius, intent on shaking off ennui, or forgetting care, in foreign travel (i. 11), the poet's turned out that nothing is lost in sense, and less than one should have fancied in form. But the Odes undenstably have been the most critical task, and here it must be owned that the writers have striven to produce in fresh and graceful faithfulness an equivalent for the airy and fanciful shape of the lyric effusions of Florace. Have they succeeded? We have partly satisfapated our answer, and must endeavour to justify our conviction by a proof or two of their conscientiousness, which never subjects them to the imputation of undue prosing.

It has been said that Horace by his aut and telling spithets for local features redeems his own poetry from the charge against the ancient writers that they have none of the elaborate and idealized descriptions of scenery common in modern writers. "The walls of Corinth with its double see," "the home of echoing Albunea," "Somete white with depth of snow," "Low Ustica's vales and polished rocks," "High Acheroutia's nest and Bantia's glades and low Forentum's wealthy field," are but a few examples out of many of this feature in Horace's muss. And they are all cited from the translation before us, which may be compared with its poetical rivals without fear of lost laurels, unless it be in the last instance, where Comington gives a happy turn to the Latin, which a prose version could scarcely, from the nature of the case, repeat. The poet records an office done for him by the ring-doves of romance, like that which the robins piously performed for the logendary "children in the wood," and speaks of it as

Miram qued foret omnibus, Quiennque celus nidum Acherontias Saltusque Bantinos, et arvam Pingue tenest humilis Foresti.

A prose translator might envy, but could hardly imitate, the postical and pleasant artifics with which the Professor turned a ciscumbountory description of a locality into a much briefly and quite as forcible a figure, as follows:—

A logend, nay a miracla,

By Acherontic's neetlings told,

By all in Santine glade that dwell,

Or till the rich Forentan mould.

But it must be remembered that spithets play a great part in Ekman, even when they do not help to depict a locality. Momedinas, in we have already hinted, rhymed translation is less present of these than a prose version, such as that of Mesers. Lonsdale and

Thus, in Odes I. iv. 9 an epithet of some significance which heightens the force of the picture is left out by Conjugton:-

Nunc decet aut viridi nitidum caput impedire myrto,

Tis now the time to wreathe the brow with branch of myrtle green;

no mention being made of the head bathed in unquents. Lonadale and Lee restore "nitidum" to its rights in their version, "Now 'tis time to twine the glossy head with myrtle green, or the blossom which the unprisoned lands produce," where "unprisoned renders not amiss the force of "solutes," h.s. "veris calore laxates." A more instructive comparison of the two kinds of translation may be made in the case of a couple of lines at the close of the First Ode of the Fourth Book:—

Cur invidendis poetibus, et no Sublime ritu moliar atrium?

These our prose translators, if driven to express the participial epithet by a periphrasis, nevertheless render so as to lose nothing of the original. "Why," runs their version, "should I pile up a stately hall, with gates which envy haunts, and built in a novel style?" Turning to Conington we miss "invidendia" altogether

Why with rich gate and pillar'd range Upbuild new mansions twice as high?

And if we look to Theodore Martin to do the epithet the justice it claims, we find that he does it more than justice by making stock out of it for the last two lines of the following, which contains another example of surplusage:-

Why should I che To rear on high, as modern spendthrifts use, A lofty hall, might be the home for kings, With portals wast for Malice to abuse, Or Envy make her theme to point a tale?

Certainly prose restricts a translator from flights of fancy not warranted by the text he is elucidating, and acts wholesomely upon him in the event of temptations to excess as well as deficiency. It is not, to our thinking, admissible in translating into verse to introduce tags from modern poetry into a version of ancient lines, which such tags might fitly illustrate in a footnote. Much as we admire Professor Conington's general execution of his translation of Horace—though here his Satires and Epistles are on the whole more successful than his Odes—we object to such renderings as this of

Nec partem solido demere de die,

Who breaks the " too, too solid" day unblamed-

for which Hamlet's "too, too solid flesh" is clearly responsible. More poetical, and certainly truer to the Latin sense, is our prose version's English—"Nor to take a portion from the heart of the day" (Ode I. i. 20). Similarly the Professor imports a tag of poetry, that comes across him on the instant, into the last line of the following stansa from the Fifteenth Ode of the Second Book:—

Privatus illis census erat brevis, Commune magnum. Nulla decempedis Metata privatis opacam Porticus excipiebat Arcton.—13–16.

Each Roman's wealth was little worth, His country's much. No colonnade For private pleasaunce wooed the North With cool "prolixity of shade."

Our prose version suggests that a return to the literal is not inconsistent with an effective representation of Horace's thought:— "With them the income of a subject was small, the public revenue large. No colonnade, marked out with long measuring rods for a subject, caught the gale of the shaded North."

But indeed, where there are no omissions, no faults however small

in the verse renderings, the prose which lies before us makes fair pretensions to equality of merit. Here, for instance, is a pretty picture rendered both ways, and who shall say how much or little the unrhymed falls short of the rhyme?—[Ode II. iii. 9-12. "Quo pinus ingens—trepidare rivo."] "Where the mighty pine and white popular love to unite their branches' hospitable shade; and the fleeting brook strives to hurry onward down its winding channel." So the prose. The version of Conington follows:—

Where poplar pale and pine tree high Their hospitable shadows spread, Entwined; and panting waters try To hurry down their signag bed.

To hurry down their sigrag bed.

Nothing can be prettier; but when in the sequel of the same Ode the prose translators render "extructis in altum Divitiis potietur hæres," "your heir will enjoy the wealth you have piled on high," they administer a silent reproof to our two best verse translators of Horace, who assume, what the text does not warrant, that the heir must needs be a spendthrift. We have not space for Conington's very neat version of the close of Horace's "Ode to Msecenas," in which he prefers the task of singing Licymnia's praises to writing annals or fables; but it may be held that, with one little excision, the prose version brings vividly before the English reader the picture which Horace wrought with such inimitable teuches:—["Num tu que—rapere occupet?"] "Would you choose, for all that rich Achemenes possessed, or fruitful Phrygis's wealth that Mygdon owned, or the Arabian's opulent homes, to harter a lock of Licymnia's hair? While she bends her neck to meet your fiery kisses, or with a gentle cruelty withholds them; which she fock of Indymins's nair? While she belies her neck to meet your fiery kisses, or with a gentle cruelty withholds them; which she would rather should be snatched than asked for, and would sometimes be the first to snatch [them]." The final "them" is manifestly too much. In a kindred vain is the stanss at the end of the

Ninth Ode of the First Book, of which this passage results us. Conington's pretty quatrain shall recall the Letin, and then the reader will judge how little the prose version leaves to be

Sweet too the laugh, whose feign'd alarm.
The hiding-place of beauty talls
The token ravished from the arm,
Or finger that but ill rebels.

"Now, too, the pretty laugh from the depth of the nook, that betrays the hiding girl; and the forfeit snatched from the arm, or the finger that feigns to be unyielding." Both versions succeed in representing the force of "male pertinaci."

When we have said that for the most part Horace's nicer tauches and happy expressions find apt equivalents in the work before using. "lasciva licentia" comes out as "frolic freedom," and "vultus nimium lubricus aspici" as a "face too-dazzling-dangerous to behold," "fabulæ manes" as "fantastic shailes," and "Uda Lysso tempors." (with a strict attention to etymology) as "temples dewy with the easeful god"—it may suffice to add that the notes, critical and explanatory, are succinct, as they should be in a work of the kind, and so instinct with scholarship and happy parallelism as to be readable and attractive. On "sinistra labitur ripa" (Ode I. ii.) we find a pertinent note from Orelli that the Romans still suppose the floods of the Tiber to be caused by the sea driving back the water from the mouth of the river. In I. xxiii. 5-8 the relative claims of the readings "vepris inhorruit Ad ventum foliis" and of "Veris inhorruit Adventus foliis" are sufficiently weighed, and the latter, which is the usual foliis" are sufficiently weighed, and the latter, which is the usual reading, is rightly pronounced most poetical, as well as not too elaborate for the manner of Horace. In the beginning of Ode XXXIII. of the same book the translators make "Albi, endorate for the manner of Horace. In the beginning of Ode XXXIII. of the same book the translators make "Albi, ne doleas" depend on 'the sentence (vv. 5-8, &c.), "both because 'ne' is but rarely used with the present subjunctive to express a prohibition, and because the analogy of II. iv. 1, and III. ix. 1, strongly favours this rendering." In iii. v. 15 the editors read "trahentis" for "trahenti" (which is found in but one MS.), and couple it with "dissentientis," A.c. "and proved that, by the precedent, destruction would be drawn down on the coming age, if the captive men did not perish unpitied." Again, if such a line as that in the Epistles (I. xix. 13), "exigueque togse simulet textore Catonem," demands a parallel from modern adage lore, they are ready with the apposite "L'abito non fa il monaco," whilst on the concession made by Amphion to Zethus, the gentle to the rough brother, the musician to the hunter (as referred to in Ep. I. xviii. 41), they cite the brothers Halbert and Edward in the novel of the Monastory. That the work has occasional slips is natural enough. In Sat. I. ix. 50 we meet with "It never annoys me" for "nil mi officit unquam," whereas it ought to be "It never hurts me." But we take it as a whole, and find it eminently satisfactory. take it as a whole, and find it eminently satisfactory.

HUNTING SONGS.*

TO a lover of nature, field sports, and hunting not the least among them, offer a favourable opportunity for the display of such poetical power as he may possess. The exhilaration produced by rapid motion in the open air is of itself sufficient to excite the sportsman's imagination, while the varied scenery through which he passes furnishes material for the expression of his ideas; and his companions in the chase, the horse and the hound, are animals well worthy to be celebrated by the must be decided by the many more hunt novadays in a very process fachion. Then animals well worthy to be celebrated by the muse. No doubt a good many men hunt nowadays in a very pressic fashion. They hurry out of London in the morning, and after the express has taken them forty or fifty miles, they reach the hunting-field about one in the afternoon, gallop for three hours as hard as they can, and then hurry back to catch the evening train. Such men join in the chase very often less from any real love for it than for the sake of obtaining that vigorous exercise which is so necessary to those whose work lies in close and crowded cities. So long as they get that exercise they are well satisfied: but a had according those whose work lies in close and crowded cities. So long as they get that exercise they are well satisfied; but a bad scenting day, a slow hunting day, and a day in the woodlands are lost days to them; and the working of hounds and their clever handling under difficulties by an accomplished huntsman have no attractions for them. As a demand always creates a supply, and as the demands of this class of sportsmen are very considerable, fox-hunting has been so modified to meet their necessities as to particle in some counties at least very considerably of the achievement. take, in some counties at least, very considerably of the character of steeplechasing. But in more remote districts the sport is maintained in something like its ancient simplicity, regard being had to the change of hours required by modern habits, and to an increased love for pace, perhaps unavoidable in a railway age. Men, however, born and bred in the country, and enjoying constant opportunities of joining in the chase, are not altogether slaves to the absurd passion for galloping, and for nothing but galloping, over hedges and ditches at racing speed. A quick burst is agreeable enough, no doubt, when it comes; but a man to whom time is no object, and who can hunt one day as well as another, finds a quiet, even a slow day, agreeable also, and very often a welcome change, as affording comparative rest both to himself and his steed. Indeed, to a real lover of hunting, the absence of crowd, bustle, and excitement is one of its greatest charms; and it is on such occasions that he feels the utmost pity and compassion, not only for those luckless men who cannot hunt, but for take, in some counties at least, very considerably of the character

[·] Manting Songs. By R. E. Egerton Warburton. Lending: Picketing.

nts enable them to match only an

Tro letter meens quinquis percueses succi Famili, deman lites, avidenus tamellus, Evilorque fugle strupitus, billique fregores, feo prudes avidus sectaris gue gite ponti.

We have to thank Mr. Egerton Warburton, a sportsman of the best stamp, for the agreeable collection of hunting songs before us. They have not, it is true, the literary skill and finish of Major Whyte Melville's hunting ditties, but they are fresh, lively, not deficient in point, and frequently characterized by a healthy and genial hunder. As might be expected from his descent, and from his long association with a county renowned for sportsman of a good old type, Mr. Egerton Warburton is far from being enamoured of the modern customs of hunting, as displayed in Leicestershire and Northamptonehire:—

Young inheritors of hunting, ye who would the sport should last, Think not the chase a hustling race, fit only for the fast; If sport in modern phrase must be synonymous with speed, The good old English animal will sink into a weed.

And again, in "A Word ere we Start," some seasonable advice is given which would rather grate on the cars of certain hard riders who care much more about their own amusement than about the hounds, or the fox, or the enjoyment of other people:-

Boys, to the hunting-field! though 'tis November,
The wind 's in the south; but a word ere we startThough keenly axcited, I bid you remember
That hunting's a science, and riding an art.

The order of march and the due regulation
That guide us in warfare, we need in the chase;
Huntsman and Whip, each his own proper station,
Horse, hound, and fox, each his own proper place.

The fox takes precedence of all from the cover;
The horse is an animal purposely bred

After the pack to be ridden, not over—
Good hounds are not rear'd to be knock'd on the head.

Mr. Egerton Warburton was brought up in quite a different school, and would, we are sure, have sooner lost the best day's hunting than have seen a Master of Hounds' temper unjustifiably ruffled by a disorderly field, or his own sport spoiled by the selfish carelessues of some chance stranger:—

For coffee-house gossip some hunters come out, Of all matters prating, save that they're about; From scandal to cards they to politics roam, They ride forty miles, head the Fox, and go home! Such sportsmen as these we good fellows condemn, And I vow we'll ne'er drink a quasitum to them.

And I vow we'll ne'er drink a quasitus to them.

Quasitum meritis, we may mention, was the motto engraved on the glass of each member of the Tarporley Hunt, and the history of this famous Cheshire Club for nearly a hundred years is graphically sketched in the introduction, which is by no means the least agreeable part of this volume. How slow it was to depart from old ways, whether of hunting or of living, may be gathered from the fact that it was not till 1806, or forty-four years after the establiahment of the Club, that silver forks were used by its members at dinner, although they were almost exclusively selected from the oldest families in the county. The original rules agreed upon at the first meeting of the Club in November 1762, would considerably astonish the modern race of foxhunters. The first intention of the founders was to hunt hare, but the harriers were soon replaced by foxhounds. The hounds met at eight in the morning, and every absent member was fined one guinea; but then, as a consolation, those who did attend seem to have been left pretty much to their own devices during the day. Dinner was of course a business of the first importance and magnitude, and the course a business of the first importance and magnitude, and the hungry hunters were absolved from waiting for any dilatory brother who spent too much time on his toilet. A healthy thirst was encouraged, for three collar bumpers had to be drunk after dinner, and three more after supper, after which there were no further restrictions, but every member was allowed to do as he pleased in regard to drinking. Claret seems to have been the avourite beverage, and in 1773 we find a resolution passed, that every member who introduced a stranger should pay for the second night of his stay one gallon of claret, and for the fourth night two gallons. Breaches of the Club rules were punished by fines, paid in the same generous wine. In 1782 occurs the following entry in the Club Minutes:—"Officy Crewe and Sir P. Warburton were found guilty of a most heinous offence in having crossed a hare's scut with a foxe's brush, and fined one gallon of claret each, a very light fine for such an offence. Mr. R. Wilbraham prosecuted. Mr. Baugh was evidence, together with Mr. Peter Heron." In 1783 resolution was moved that no cards or dice be allowed after the first toast after supper, each member offending against this rule to d, for three collar bumpers had to be drunk after was encotinge a resolution was moved that no cards or dice be allowed after the first toast after supper, each member offending against this rule to pay two dozen of claret. "The above rule was carried by a majority of four, the President being counted as two." Betting was strictly prohibited, and a member having the andacity to lay, in the dining-room itself, the liberal odds of a guines to half-a-crown, immediately forfeited the wager, which, we will be bound, was converted into good Bordeaux before the evening was over. Compliments, as well as fines, was paid in the same way, and in 1772 we find that "Lord most absolute confusion of mind respecting the lessons of history, and the second election, but by his health being drunk in the same way, and in 1772 we find that "Lord most absolute confusion of mind respecting the lessons of history, which is second election, but by his health being drunk in the same way, and in 1772 we find that "Liberty and Low under Federative Generation Generation A. Hill."

**Liberty and Low under Federative Generation Control of the Club about the continue of its members in the Patterly and Low under Federative Generation.

**Liberty and Low under Federative Generation Control of 1974.

field became axceedingly strict, and the imposition of fines was incoment. No mantion is made of the purposes to which he money so received was applied; but we may ackly guess that the collerer and the wine-merchant knew a good deal about its destination. In 1764 it was resolved that if any member did not appear in the strict uniform—the colours of which were altered six years later—he should be fined one guines for each offence. Accordingly we discover that Mr. Crewe was fined for having his bridle lapt with red and blue; Mr. John Barry, for not having his bridle lapt with red and blue; Mr. John Barry, for not having his addlector house of his waistoast; Mr. Whitworth, for having his addlector house with purple; Mr. A. Barry, for having a waistoat with improper pockets; and Loyd Groavenor, who must have been always gatting into trouble, was fined four guineas for appearing out of uniform, one guines for being absent from dinner without leave, and five guiness for leaving the Hunt without leave. This jovial Club met twice a year, and each meeting lasted seven days. It celebrated its hundredth suniversary in 1862; and Mr. Egerton Warburton informs us that there have been very few changes made in its rules, so that it must be a society almost unique in the present day. The Hunt colours were a somewhat ataring mixture of red and green; and when Sir Peter Warburton set to Sir William Beechy for a full length picture, we are not surprised to hear that the painter strongly protested against the uniform, and declared that he might as well have been asked to paint a parrot. Many of Mr. Egerton Warburton's songs were composed expressly for the Tarporley Hunt, and we may quote some stanzas from one which appears to us to be a favourable example of his style:—

A Club of good fellows, we meet once a year,
When the leaves of the forest are yellow and sear;

When the leaves of the forest are yellow and sear;
When the leaves of the forest are yellow and sear;
By the motto that shines on each glass it is shown
We pledge in our cups the deserving alone;
Our glass a quantum, ourselves Cheshire men,
May we fill it and drink it again and again. We hold in abhorence all vulpicide knaves,
With their gins, and their traps, and their velveteen slaves;
They may feed their fat pheasants, their fixes destroy,
And mar the prime sport they themselves can't enjoy;
But such sportsmen as these we good fellows condemn,
And I vow we'll ne'er drink a quantium to them.

Some riders there are who, too jealous of place, Will fling back a gate in their next neighbour's face; Some never pull up when a friend gets a fall, Some ride over friends, hounds, and horses, and all; Such riders as these we good fellows condemn, And I vow we'll ne'er drink a quassium to them.

O! give me that man to whom nought comes amiss, One horse or another, that country or this; Through falls and bad starts who undauntedly still Rides up to this motto; "Be with 'em I will." Quasitum! Quasitum! fill up to the brim, We'll drink, if we die for't, a bumper to him.

O! give me that man who can ride through a run,
Nor engross to himself all the glory whon done:
Who calls not each horse that o'ertakes him a "screw,"
Who loves a run bost when a friend sees it too!
Quasitum! Quasitum! fill up to the brim,
We'll drink, if we die for't, a bumper to him.

O! give me that man who himself goes the pace, And whose table is free to all friends of the chase Should a spirit so choice in this wide world be seen He rides, you may swear, in a collar of green; Quassitum! Quassitum! Gill up to the brim, We'll drink, if we die for't, a bumper to him.

In taking leave of Mr. Egerton Warburton we hope that our sincere sympathy with foxhunting as a manly and invigorating exercise will spare us from such shafts of satire as he has discharged at an unfortunate writer who reviewed in the Times the "Life of Asheton Smith." With due deference, the name should be spelt Assheton:-

sheton:—

Let him who laughs our noble sport to scorn, Meet me next year at Melton or at Quorn;
Let the fast train by which his bolts are sped Bring down the Thunderer himself instead, My cover back (not Stamford owns a finer)
Can canter glibly like a penny-a-liner;
Free of my stable let him take the pick,
Not one when mounted but can do the trick;
Fast as his pen can run, if he can ride,
The foremost few will find him at their side;
His leader left unfinish'd on the shelf,
To prove a leading article himself.
With closing daylight, when our pastime ends,
Together dining, we will part good friends;
And home returning to his gas-lit court,
His mind oullghtened by a good day's sport,
Of hounds and hunting some slight knowledge then
Bhall guide the goosequill, when he writes again.

ry, and an extravagant b butions, leading not only to hedicrous eneggeration of the vel-erely formal or technical pseudiericies, but to the wildows of an regarding the probable adoption of the American forms reasons by nations which are quite as well contented with the wadness by hands which are quite as we constant with the wadness of the American early. Thus the Monato Theorems is described as a Federal Republic, indicating the highest degree of lagislative wisdom on the part of its founder, but finally corrupted and destroyed by the fixed operation of the aristocratic principle in the form of the limitation of the priesthood to the family of Asron, and of the ministrations of the alter to the tribe of Levi. Again, we see teld, to the immense amusement of every reader which as a germ of modern scholarship, that the Trojan war first gave to the Elellence a consciousness of actional life and union. And we find ef modern scholarship, that the Trojan war first gave to the Hellenee a consciousness of astioual life and union. And we find declemations about the feudalism, the tyramy of a landed aristoracy, and the ascendency of the moneyed class in Great Britain, worthy of the most ignorant imitator of Arch or Odger, coupled with a prediction that the country is on the verge of a Republican revolution, which suggests that the author must derive his information from a class of periodicals rarely seen by educated Englishmen. Of the fundamental principles of political economy the author has not a glimpse, as is shown by his wild statements about the despotic power exercised by the banking interest in consequence of the maintenance of a gold or silver standard, and his advocacy of the issue in every State of paper money, to be proportioned to the wealth of the people and to increase with its increase. He is not even careful to provide any security against over-issue and depreciation, nor does he seem to understand that, so long as gold is the money of international commerce, the price of gold must always measure the value of a municipal currency. So, again, he complains of the provision for the payment of United States bonds in gold; as if any one would ever have lent money to a Government which might pay principal and interest in a paper liable to unlimited depreciation. But, like many American writers no wiser in these respects than himself, he has a keen perception of the practical mischiefs at present affecting the politics of his country; the gigantic jobs perpetrated in the creation of railway monopolies in favour of companies which did not even find money to construct the roads, the funds being obtained on the security of land grants made before a mile of the line was in existence; the tremendous power acquired by some of these great corporations, and sustained and enlarged through direct legislative corruption; the evasion of laws acquired by some of these great corporations, and sustained and enlarged through direct legislative corruption; the evasion of laws intended to keep down rates through the limitation of dividends, by the simple device of "stock-watering"—in a word, the whole system of fraud and iniquity of which Erie was only the most audacious development. Like some others who have dealt with additions development. The some others who have dealt with the subject, he sees no method of suppressing the fraudulent system except by confiscating the property on which it is based, and sweeping away the capitalist corporations through whose power it has been maintained. He would take the whole railway and telegraph system of America into the hands of the Government; and would consistently put a stop to all private enterprise in the creation of similar monopolies. Yet he is not ignorant of the rottenness and dishonesty of those into whose hands he would transfer such girantic powers; he is simply so fall of one evil for the moment that, in trying to find a cure for it, he forgets evils at least equally great which he has already acknowledged, and which his equally great which he has already acknowledged, and which his remedy must enormously aggravate. The prizes of political life are already too rich for the morality of American politicians; add to them the vast mass of patronage, the control over every interest and every community in the States, which the proposed increase of the functions of Government would give, and what must be the consequence? The most judicious Americans allow that their present system is only not ruinous because the Government has a little to do and the avernment of the moral is to so ment has so little to do, and the prosperity of the people is to so great an extent beyond the reach of icolish or wicked legislation; but Mr. Britton Hill proposes to extend the functions of a distrusted Executive and a despised Congress beyond the limits trusted Executive and a despised Congress beyond the limits assigned to the strongest of European despotisms, and forgets to inquire how a machine already out of gear would work under the additional load. It is worth while adding that this writer, with all his pelitical rashness and economic ignorance, is a staunch Free-trader. He grasps so clearly the arguments of experience against a protestive tariff, and those of common sense against the principle of Protestion, that if we had confined our reading to that part of his volume, we should have taken him for an unusually ucid exponent of economic truth.

The Report of the Philadelphis Beard of Health for 1873 contains all the information that we should expect to find in such a document.

all the information that we should expect to find in such a document, all the information that we should expect to find in such a document. There would, however, be little to recommend it as a work of interest to other than sanitary reformers—who will note with some curiosity the close correspondence of English and American experience of municipal government, and the reproduction on the other side of the Atlantic, not indeed of English vestries, but of vestry jobbery, neglectful contractors, and insolant dustmen—were it not indeed of the action of the contractors. for some statistical tables and diagrams of more than ordinary importance which illustrate the influence of meteorological and least conditions on the rate of mortality. Thus we find that particular seasons have a cort of monopoly of particular diseases; the cold season being on the whole the healthiest, and the month of Fuly showing the general mortality at its very

highest point. explicable, rela Collegred lines show tions between the air as regards pressure, hundrity, and beginned. Philadelphia fally suproduces the worst finding of it mortality of Old World cities, in the sucrement dispredeaths in the first period of life, many one-half of number of deaths occurring among children under ter

A reprint of the first three Annual Reports of the Chic Geological Survey of the Territories would Election deserve notice but for the stress which it lays on the six fuel, growing or subterranean, over a very extensive tract of his, growing or subterranean, over a very extensive tract of his rendered peculiarly fertile by the depth of rich vegetable will of the surface, and the valuable man that forms the minest. By Hayden insists, and proves by the result of recorded experiments that the prairie lands are capable of growing timher; not many of producing rapidly growing trees for firewood, but of nonrishing the more valuable forest trees familiar in the East; and he urge on farmers and settlers the paramount necessity of planting round. the more valuable firest trees familiar is the East; said be urges, on farmers and settlers the paramount necessity of planting round their "lots" with timber and fuel trees, both for economic and for climatic reasons. In America, as elsewhere, the demandsion of the land by the destruction of its ratural growth of wood has had a most disastrous influence on climate; it will be a curious fact if the necessity of clothing the soil by artificial cultivation of timber is first recognised in those regions which nature herself had stripped bars. To the same series of publications—composing a mass of scientific information of great variety and of the highest interest, such as could hardly have been accumulated save highest interest, such as could hardly have been accumulated save by an official survey supported by the Government with all that liberality of expenditure and active encouragement of research which characterize the dealings of the Transatlantic Republic with matters and men of science—belong the valuable tables of Meteoro-logical Observations † compiled from the records of several stations in Utah, Idaho, and Montana, for the year 1872, by Mr. Henry Gannett, the assistant to whom that special department of investigation was entrusted. These tables only requir e a summary of the results, and of the general inferences to be drawn from them, to make results, and of the general inferences to be drawn from them, to make the compilation in every way worthy of its place in the Reports of the Survey, and of the labour and the cuttay bestowed upon them. Not less valuable, though very brief, is a paper on the Paleontology of the Colorado Tertiaries; containing a list and description of all the fossil vertebrates therein discovered for the first time during 1873, by Professor Cope. We hope that when the survey is complete, a readable abridgment of its general results may be undertaken by some competent member of the expedition. Such a work would be a most important addition to the records of work would be a most important addition to the records of geographical and geological research, and would moreover give to the general public, as well as to scientific readers, a fair idea of the labours and achievements of the Survey.

Miss Greatorex's "Etchings in Colorado" is represent, not very effectively, some of the most remarkable features of a region which forms part of the extensive territory surveyed by Dr. Mayden and his colleagues. We must say that the rude drawings contained in a recent volume of the Reports give a better idea of the natural marvels of the country than Miss Greatoren's more artistic sketches, which are neither so well chosen so distinct in thair sketches, which are neither so well chosen nor so distinct in thair representation of the scenes selected. But the accompanying test is very much superior to the illustrations; lively in style, often graphic in description, and comprising not a few anadetes strikingly characteristic of the hardships and perils incurred by the first settlers, and of the rough accommodation which swan yet the visitors to this now famous State must in many pasts put up with. Colorado, from the geniality and dryness of its climate, is a favourite resort of consumptive patients from other parts of the Union, who risk the fatigues and inconveniences of a sojourna rude and not easily accessible regions in quest of a last chance of life and health. How far it really suits such visitors can hardly be known: the short time during which they have resorted to be known; the short time during which they have resorted to it, and the limitation of their numbers, scarcely allowing of uny definite conclusion.

The second edition of Mr. Richardson's treatise on the Public Debt of the United States || is calculated to be very useful to brokers and intending investors, as it gives a clear and misute

Principal Suffernation concerning the Public Sold of the Sold of the Michael Sunding Lane. Second Edition. Sp. Richardson, Scientary of the Treasury. Washington: Members Tribner & Cit. 1873.

consistion of each of some dozen charges into which the public and the Union is sivided. It also contains much information asserting the order, and history of such char of securities, the transitions afforded by the legislation of Gongacia, and the doctions of State and Medical Courts for the payment of the interpet this current, and of the principal at asstartly, in coin, and without deduction in the charge of State or Federal textion.

They more lively and entertaining volumes of reminiscences have been active our hands than that of Mr. M. B. Field. Protego field, politics, diplomatic and Federal appointments, have brought he writer at different times into contact with some of the most destinguished percounges of recent American and European history:

the writer at different times into connect with some of the most distinguished personages of recent American and European history; and of most of them he has preserved some record, impression, or characteristic aneodote. He was employed in that extraordinary transaction respecting the sale of Qube in which three heading American diplomatists seem to have pretended at once to leading to their own Admiristration and to recore the (lowernleading American diplomatists seem to have pretended at once to dictate to their own Administration and to coerce the Government of Spain; and the circumstances brought him into the presence of the sovereigns of France and Spain, and made him acquainted with a variety of piquant incidents connected with that semarkable business. The lively indignation of the Empress of the Franch, as a Spaniard by bigth; the calm dignity with which the Court of Madrid avoided recognizing the intrigue, while treating the intriguers with distinguished courtesy; the switzerleases of Court efficuency; and the amusing difficulties into which Mr. Tield was brought by his quasi-diplomatic daties, and which Mr. Field was brought by his quast-diplomatic duties, and enhancemently by his temporary engagement as Secretary of La-gation, and by the obstinate exactions of his countrymen and , and by the obstinate exactions of his countrymen and ywomen, who would neither recognize the necessary excountrywomen, the Minister who presented them was responsible all are told with true humour and with pointed brevity. As an office-seeker under President Pierce, Mr. Field had ample opportunity of understanding the weakness, almost approaching to imbecility, with which that gentleman made and broke the most fervent with which that gentleman made and broke the most tervent promises. As an active politician and holder of important office under Mr. Lincoln and his successors, he has had cuportunities of close acquaintance with the leading statemen of the recent Republican administrations, and has much to say of their character and conduct. In his opinion, Mr. Chase was discovered to the conduct of the character and conduct. their character and conduct. In his opinion, Mr. Chase was distinctly the ablest and most honest among them. Mr. Lincoln appears to have been much less of the resolute leader and selfendent statesman, and much more of the shrewd politician, apt dependent surteman, and intent more of the strewd pointman, apt at discerning the movement of public opinion and yielding to it just in time to seem to guide it, than has commonly been supposed. That gross jobbery and dishonesty prevailed even in his own household, of which he could hardly have been otherwise than wilfully ignorant, has long ceased to be a secret. In fact, Mr. Field's revelations affect rather the popular estimate of individual character than the history of an exciting period, though it is significant to learn what very prompt and crushing preparations a Republican Government could make for destroying a mob like that of June 1863; mitrailleuses and grapeshot being kept in readiness to overwhelm the New York rioters had they ventured to approach the Treasury-office of that city. How many constitutional monarchies would be able to display equal decision in a similar emergency? and how many Ministers would be willing to take the responsibility of sweeping away a "popular gathering" with artillery, even if the "popular gathering" showed signs of a disposition to plunder the Bank? The Americans would hardly have allowed a rabble to take possession by force of the principal metropolitan Park; still less would they have rewarded the chief offender with a judicial appointment.

of Miss Ames's Outlines of Men, Women, and Things † we can-be speak in similar terms. The writer has seen comparatively not speak in similar terms. The writer has seen comparatively little of people worth knowing; she is by no means term or lively in telling what she does know; and Mr. Field would have compressed all she has to say into a single chapter. Her first paper, on "Arlington," displays a temper of which we should hope that, even in America, only a woman would be capable. The description of the former residence of General Lee—now a military is made an occasion for an insult to the widow of the cometerynoblest soldier and gentleman America ever produced, hardly paralleled even by Butler's brutal taunt to the sick wife of General Beauragard; and General Lee himself is reviled in terms which, if they represent any widespread feeling in the North, must make reconciliation and reunion impossible so long as Southerners retain either the pride of manhood or the common feelings of humanity. We could wish to see the fitting chastisement of this cutrage on truth and deency administered by some respectable organ of

American opinion.

The Handbook of English Synonyme; is a specimen of carelessness and mental confusion such as we do not often encounter.

Half the words lumped together as meaning the same thing bear

senses quite distinct, through parhops not widely different.
"Ahare, divide, parkinipate," are all given as synonymesother. This is by no means one of the worst specimens we
find; and the other parts of the beak are almost as body a
so the first.

Among a variety of scientific publications, that entitled ention, on account of vise and thuroughness, however we object, is a moneyraph on the Account of the man of the provider that are the second pure of the control of the American Philosophia Second 1, and the management of the American Philosophia Second 1, and mention, on eco of the to forms a quarto volume of no mean dimensions. Mean some Transactions of the American Philological Society t, southing among other valuable papers, one of especial interest on the which American language, has burnoused from the tenguage shorigines, and not a few of which have found their way. America into English, and some into other European languages Spain and France, especially the former, have cometimes bown from the Indians. Mr. Ferce I publishes these papers read before Literary Club of Cincinnati, on Primitive Man, Darwinian, and Mound Builders. A general idea seems to pervade them all—mean that the earliest traces of man are traces of a creature quilt thoroughly human as the savage roce of to-day, and eften means thoroughly human as the savage races of to-day, and often posturing arts which these have not, or which they have learnt from nivilized schers; so that there is no evidence whatever of th But these traces of man have been found only in the later Turtisties or in the subsequent drift; and the Darwinian theory expects to find traces of the primerval semi-home in deeper strate, and probably in regions yet unexplored by the geologist—perhaps that great submarged continent of which the Eastern Polyne is supposed to represent the mountain-tops and plateaux. X Krauth's Prolegomena 5 to the new American edition of Barkeley "Principles of Human Knowledge" are designed partly to elucida Berkeley's real meaning in his apparent dental of any existing sale stance causing the phenomena recognized by our sonses—in respect to which we must say that we find the original less purplexing than the explanation—and partly to exhibit the relations between Berkeley's and other more modern theories and systems of philosophy. Mr. Seigey | finds his Unity of Natural Phenomens in the all-pervading other; all matter having been created by aggregation of its atoms, while in the ether itself the atoms are separate, free, and in motion. We are not sure that we always understand his meaning; and we must leave its exposition or refutation to other hands. His theory is certainly novel and daring in its contradiction of received descrimes. And the information on the mineral Tournaline | by Mr. Hamiln, will hardly fail to attract the attention both of mineralogists and opticians. Finally, we have two popular handbooks on Insect stance causing the phenomena recognized by our somes-in m opticians. Finally, we have two popular handbooks on Insect Life by Mr. A. S. Packard **, of which the first describes—but too technically for such a work-the "Common Insects" Northern States, and the other (a mere pamphlet) those that specially infest the garden. A treatise on Crime and Insanity, by Dr. R. Hammond ††, takes the side of the question least popular with his profession, and argues from known cases that the escape of murderers on the ples of institute tends to encourage the commission of murder both by those who are not and those who are technically insane—many of the latter being quite capable of selfcontrol under the pressure of adequate motive.

THE DISSOLUTION. any gratification to & Prime Minister to strike a ks, to bewilder friends and foes, and surrivile mation, Mr. GLADSTONE enjoyed that gratifica-he semest last Saturday. The news that Parliaen dissolved without a word of warning, withthing having taken place that could even suggest a thing was possible, was received with an incre-hat was scarcely to be overcome by the statement its that was scarcely to be overcome by the statement in fact in the morning papers and the perusal of Mr. Militars aftered. The blow had been dealt with such religious aftered and rapidity that even, minor members be foverament had not the removes suspinion that a stitution was intended. Probably even in the Cabinet of there was not much loss surprise than in public-at-large. Mr. Glansrows studiently invented the stitution, but it was such a strange thing to invented the statement is was such a strange thing to invented the statement of the supposition of the statement of the supposition of the statement with the uncertainty of whether he had not forfeited his seat hanging over o whether he had not forfeited his seat hanging over But Mr. GLADSTONE has told his own story, and it is very difficult to trace the outlines of what really happened. Recent defeats at isolated elections had made him sharious, but nothing more When, however, the time When, however, the time came to give the final touch to the drafts of Ministerial niscence, to frame the Quern's Speech, to ponder over shot thould be proposed and what could be carried, his heart then to fail him. If he proposed small things, he would go seems the country is an attitude of humilistion. If he tried to describing great and striking, a dying Parliament and an elated Opposition would expose him to the risk of defeat All at once it occurred to him that the revenue returns were showing that the surplus would be very large. Bold schemes of finance crowded on him. He thought of the magnificent things he would like to do, and believed that he could easily invent some way of doing them. He was in possess. sion of a great treasure; he had the power of making a appoind use of a golden apportunity solich he honestly believed no one else enjoyed. If he used his power for the benefit of the nation, if he remodelled the system of aglish finance, gave, beens to this class; and boons to at class, and yet showed how the nation might reckon paying its way, whit was to be his reward? If he is things take their natural course, he would have emes to Parliament; and if he could have an to be sound, he would have carried his financial send to be sound, he would have carried ms manden a said carried the gratitude of his countrymen. But mend parties entroy live on gratitude. He wanted, agin he might get for himself and his party, someone substantial. The brilliant thought suddenly that he might make a capital thing out of the He would well his secret at the price, of a line above Raylimsent. If the nation lived to give the majority, then it should know his secret, and dineven a timer of dent

Chadcellor of the Exchequer and a Ministry in which Mr. WARD HUNT is Chancellor of the Exchequer. It made Mr. GLADSTONE once more everything to his party, and might make him once more the master of a Parliament. Fired with hopes so various and so awart, fickled with the curious novelty of his invention, and hurried on by a passionate, belief in himself and his devices, he sorted on the impulse of the moment, got the Queen's assent, rached to Downing Street, and announced that the famous Parliament of 1868 had suddenly died.

When things take their ordinary course, and an inspired

When things take their ordinary course, and an inspired Minister does not surplus by leaps and bounds the reasonable expectations of men, a Parliament is dissolved either because it approaches the end of its term or because these has been a Ministerial crisis. In the latter case a dissolution may come-comparatively suddenly, but the author which has been fated to the Ministry has been argued and decided in the face of the courtry. Fullie optition, under the guidance of Parliament, has had time to form itself, and the main principles to which the contending parties appeal are well known to the electors. If it is length of time that at last kills a Parliament, the constituencies have time to select candidates, to review the general policy of When things take their ordinary course, and an inspired time to select candidates, to review the general policy of parties, and to decide which of the issues raised by leading speakers are of real and immediate importance. when a Ministry suddenly flames out in the face of the country with a dissolution, it is equally hard for constituencies and candidates to form satisfactory relations, and for the country at large to see the boarings of a large unknown subject all at once submitted to its consideration. There is no excuse for a dissolution so sudden sideration. There is no excuse for a dissolution so sudden and so unexpected to be found in Mr. GLADSTONS's manifesto. If the recent defeats of the Government at Strond and clsowhere, and the difficulty of a Ministry with impaired authority carrying measures werth proposing and fighting for, are good reasons no more of a dissolution, they were equally good reasons a more age. If the electors were, as Mr. Forster suggested, to be consulted whether they would like to have the Income-tax repealed, enough was known of the probable surplus a month ago to enable Mr Gladstone to submit a proposal for the repeal of this Mr GLADSTONE to submit a proposal for the repeal of this Mr Gladstone to submide proposal for the repeal of this tax to the electors. These was no reason why the dissolution should be delayed until a few tilys before Parliament was to kneet for the commencement of the Session. But this is not all it. Not only was there no need to submit the question of the financial policy of the Government to the electoral body in this summary and unlocked for fashion, but the question was not one which ought to have been submitted to the electors at all in the shape in which Mr. Gladstone put it, and in which alshe it could answer his purposes to put it. Mr. Gladstone does not really sek the electors whether they would like to have the Income-tax reelectors whether they would like to have the Income-tax recaled and handsome contributions made from the Imperial Exchequer to local purposes; and some undefined quantity of taxes remitted on articles of general consumption. Of course every one would like to get these advantages if it were possible. What Mr. Chapstons asks the electors is whether they will give him a new lease of power if he promises to do these things and confer these advantages. without giving any clue as to the means by which he proefect manner, been discussing this and that question of rienal policy, and comparing candidate with candidate, if party with party, when Mr. Graperous breaks in spon on like a thunderbolt, and tells them that he will he a thunderbolt, and tells them that he will om a week to decide whether they will er will not neit pockets filled in some inexplicable way. It is

be more injurious to political morality, or more fatal to that gradual education of the people by Parliamentary discussion and cautions statesmanship which is the best autificate that remains to the spreading triumphs of vulgar and selfish mediocrity.

A Laberal leader, however full he may be of one grand idea and one absorbing topic, has many other thing touch on when he issues such an address as that of Mr. GLADSTONE to the Greenwich electors. He must go over the ground that belongs in one way or other, or which he wishes to belong, to his party. He must keep burning questions at least smouldering in their embers. Mr. Glau-STONE in his address did not neglect this part of his duty, but he treated every subject on which he touched as a man would do who believed that his financial device was all-sufficient, and wished this all-sufficiency to be the keynote of his party in the coming elections. There are three things which a Liberal leader would, under such circumstances, more especially desire. He would wish to keep plenty of ground open for future operations if his financial stroke proved successful. He would wish to treat the various questions which he showed he could be a complete of course which he showed the rains raise as capable of easy solution, if only he took the pains to explain how this solution was to be attained; and, lastly, he would wish to make his party forget their differences under the golden joy of an unlimited remission of taxation. Mr. GLADSTONE framed his address so as to attain as far as possible these desirable objects. He danced from one point to another. He landed, as the old navigators did, on a series of political islands, hoisted the Liberal fleg on them, and sailed away. The Libert's were of course to go for the extension of the county franchise, and as to the deficulty of the distribution of sents, perhaps peasant boroughs, if any one could understand what they meant, would meet the cuse. Perhaps, also, they would not, but then people who are going to puy very few taxes need not trouble themselves to go into speculative questions like that. The Liberal party is divided on the Education question. But why this idle quarrel? Differences as to School Boards and Denominationalism will look very small to men who stedfastly fix their gaze on the extinction of Schedule D. As to the Conservatives, they would please to observe that the Liberal flag had been hoisted on the islands of the Game-laws, liquor licences, entails, conveyancing, metropolitan municipalities, the University revenues, and several others, and must take care not to trespass on ground already occupied by a sovereign Power. If they tried to intrude on these sacred territories, and if the constituencies were idiotic enough to sanction so irregular and reprehansible a proceeding, the constituencies must take the consequences, and would never know how the magical feat which Mr. GLADSTONE offered to perform was really to be done. Nor would Mr. GLADSTONE for a moment allow it to be supposed that the blus of his financial millennium was disturbed by the just apprehension of any danger. The Ashantee war need trouble no one. In the first place, a war that does not in the least diminish a surplus is not much of n war; and then it is calculated to instil into us several wholesome moral lessons; and, lastly, how can any philanthropist object to a war the end of which is to be that, after we have killed as many Ashantees as we think expedient, we are going to love all the rest? In conclusion, Mr. GLADSTONE naturally appeals to the services rendered to the country in the last forty years by the Liberal party. He is quite entitled to do this, and no manifesto from his pen could be complete without such an appeal. The Liberal party has done great things in the last forty years, and some of the greatest have been done since Mr. Granstone has been Prime Minister. But although we may honour statesmen for what they have done in the past, we are obliged to judge their present policy by at sown special character, and it is difficult to see unything in this sudden dissolution, and in Mr. GLADSTONE's bargaining for the price of a financial secret, which raises the reputation of the Liberal party or adds to the benefits it has conferred on the country.

THE BRIBE.

THE most indefensible part of Mr. GLADSTONE'S Greenwich proclamation is the offer to buy amajority by the remission of the Income-tax; and it is the more necessary that independent critics should remonstrate against a misphisteria innovation, because from the special circumstances

of the case Mr. GLADSTONN was able to calculate on immunity from party consure. It might be plausibly argued that, in strict analogy to the law of elections, all his supportant ought to be unseated as having possibly owed their return to a flagrant act of bribery. The arcuse that in this case the consideration will be paid to the vater, even if the hostile candidate succeeds, is that by the evidently corted statements of Mr. Gladstonn's colleagues. Mr. Okupurell. Mr. Goschen and Mr. Stansparen assent that CARDWELL, Mr. GOSCHEN, and Mr. STANSFELD assert that the proposed financial change is so complex that it icas safely accomplished by Mr. GLADSTONE slove. It therefore appear that the Minister proposes to bribe the electors by a draft which requires his own personal signature. Markhokouch was accused by his enemies of prolonging the war with France because he knew himself to be indispensable as General. Mr. GLAUSTORE is represented by his friends as the only financier who can deal with the crisis which he has himself produced. In this case the attempt at corruption is made, not by an ambiguous agent, but by the candidate in person; yet the smallest part of the impropriety consists in the undue influence which will be exercised over the constituencies. If it had been possible that the Minister could purchase votes with funds of which he could legitimately dispose, it might be useless to impeach the questionable bargain; but Mr. GLADSTONE, as a trustee for the nation, has no right to promote his own political interest at the expense of the public revenue. It has hitherto been a point of honour with every Chancellor of the Exchequer to keep his financial proposals secret until they are announced at the proper time to the House of Commons. Mr. CLARSTONE first postpones the Budget by a dissolution, and then for party purposes discloses his in-tentions two or three months before the proper time. It is true that the continuance or abolition of the Income-tax will not directly affect commercial operations in the same manner in which modifications of the tariff influence the market; but, in his exclusive concern for the prolongation of his own power, Mr. GLADSTONE has not remembered that his during bid for the support of payers of Income-tax renders it necessary also to announce a reduction of customs or excise duties. Accordingly, in direct violation of official precedent, he announces his intention of giving "some "marked relief in the class of articles of popular consump-"tion." Every dealer in tea, in sugar, and perhaps in malt, may be compelled during the early spring to regulate his purchases and prices with reference to the boons which are to form a part of the present election bribe. If direct and indirect taxes are reduced by equal amounts, Mr. Gladstowe will have displayed a prodigality in corruption which has not been equalled since the latest days of the Roman Republic. Ten or eleven annual millions will have been distributed as largesse to the electors, who, as it is hoped, will not reflect that the Minister's liberality is exercised at their own expense. Half of the amount is to be supplied by the surplus with which the Chancellor of the Exchequer hadno right to meddle until he asked the assent of the House of Commons to his financial scheme for the year. To refer the Budget in the first instance to the populace is a characteristic insult to Parliament. Election addresses substituted for official statements in the House of Commons bear a strong analogy to Royal Warrants. Whether an appeal to popular clamour, or the revival of an obsolete prerogative, supercedes the authority of Parliament, a step, is in both cases taken towards the establishment of a democratic dictatorship.

The sources from which the other five or six millions are to be drawn are indistinctly and yet significantly indicated. The present contributors of two-thirds of the revenue arising from the Income-tax may be well assured that they will have to pay for the relief both of themselves and their neighbours. In an earlier paragraph of his address Mr. Charstone deprecates "the danger which would "arise if Parliament were gradually to lay upon labour a "portion of the burdens hitherto borne by property." As no party and no person had ever proposed any transfer of the kind, except in the form of a repeal of the Income tax, it may be conjectured that Mr. Charstones intends number to relieve property nor to continue any immunity stains it may at present enjoy. His purpose is more painty intimated in the suggestion that "moderate assistances" may be had from judicious adjustments of sciences arising as may be able to be a continue adjustment of sciences arising created in the revenue, judicious adjustments of sciences arising as any may be had from judicious adjustments of sciences arising the suggestion, although it might beer an appoints interested in these were a question of the large which all the majority of electron. There can be not described as

ion they on lend; another adjust in the intrense of the Land-tax. There was Me. Graperous was guided by the instincts, as associate skill, of a great financier. His congramment belief in democracy and himself stands the political interest of a party the only olue to a faced or to his general policy. For the present, and in his party times, the owners of realized property, and especially a landed estates, will pay the price which is estimated estimated to purchase a Ministerial majority. Other naribators to the Income-tax will do well to notice a hint ag to the doctrine which seems likely to prevail, taxation that they also may be involved in future habilities. Accordwill besceforth be regulated, not by the economical ability of the taxpayer, but by his political disability. The tradesrve clamoured against Schedule D. may have to learn that they also belong, in common with aristocrats and fundholders, to the minority. The neisera plebs contributes intends to contribute nothing for the future; and while it names to itself, or rather to its leaders, the control of national policy, it will bear no share in the expense of war. According to the older financial tradition, the Income-tax was a war tax. For such a purpose it is invaluable. Men "are willing to sacrifice much, not only of their means, but of their privacy, time, and comfort, at the call of patriotism." In other words, the whole expense of war is hereafter to be provided by an Income-tax; and Schedule D. is delicately indicated by the reference to privacy. It might have been thought that the modern financial tradition was more to the purpose than the remedies which a great Minister devised seventy or eighty years ago for a desperate financial condition. After five years of the great revolutionary war, when the conflict with France threatened to last for an indefinite time, Pitt determined that for the future, if possible, the cost of the war, independently of the interest on the debt, should be borne out of the revenues of the year. He had already taxed every article of consumption and every transaction of life as high as it could bear; and he had no choice but to resort to a ten per cent. Income-tax. His great and meritod authority induced the House of Commons and the country to accept his proposals, and it must be remembered that the payers of Income-tax were then substantially identical with the Parliamentary electors. Almost the whole mass of Pirr's indirect taxes has since been removed, and Mr. GLADSTONE, in consideration of an expected equivalent, is about to continue the process of reduction He now coolly announces that the Income-taxpayers are "at the call of "patriotism" to pay the whole cost of wars as to which, if other parts of the Greenwich proclamation are adopted by Parliament, they will have no voice whatever. Twenty years ago Mr. GLADSTONE'S patriotism took the singular form of a hope that the burden of taxation would be found so oppressive as to render the Crimean war unpopular. Even this excuse for imposing on Income-taxpayers the exclusive burden of war will cease to be applicable when universal or household suffrage has finally swamped the middle as well as the upper classes.

The rule of official property which Mr. Gladstone has for his own convenience disregarded is founded on weighty reasons of public interest. A promise of the remission of a tax is irrevocable by the Minister who gives it, and by his successor, so long as circumstances remain the same. It was not to be expected that Mr. Gladstone, when he preferred his own political interests to the public good, would be hampered by subordinate considerations of fair play to his antagonists. He well knew that Mr. Disrarli must either adopt his pledge of abolishing the Income-tax or abandon all hope of success in the impending contest. He has therefore not merely pronounced the repeal of the tax, for by anticipation he has already repealed it. Within two days from the issue of the Ministerial proclamation, Mr. Disrarli has, without the smallest foundation, claimed for the Conservative party the credit of having been always opposed to the Income-tax. If electioneering motives had not been predominant in Mr. Gladstoneering duties was the reduction of the Matienal Bett. A pamphlet on the fature exhaustion of and and had arguments of Mr. Mill. And for the moment taken

Mr. Granerous is sometimes one of the most finitually of theorists, but his enthusiasm is happily corrected by a practical preference of party interests over ingenicus, dreams. It was not expedient six years ago to make great escritices for the reduction of debt; and it is not expedient now to abolish the Income-tax. One mistaken project is consigned to oblivion because nothing is to be get by pursuing it; and an opposite policy is substituted because it can be invested in votes.

The Budget which is subship and appropriate published.

The Budget which is selfishly and prematurely published is of the most startling nature. Mr. Grapstons undertakes not only to misapply the surplus, but to convert it into a large deficiency to be supplied by the taxation of the classes from whom he expects no political support. It must be confessed that the new burdens will be an almost necessary consequence of the repeal of the most equitable of existing taxes. It would have been impossible to devote the whole sarplus to the relief of the wealther classes. It follows that the void left by the Income-tax will be supplied by property taxes, probably of more than one kind. The taxes property taxes, probably of more than one kind. on consumption will be reduced as an equivalent to the relief nominally given to property, and then the barden which has estensibly been removed will be replaced, perhaps in a more oppressive form. The promise of a reduction of expenditure may be summarily dismissed as irrelevant to the apportunement, though not to the amount, of taxation. As a weapon against a possible Conservative Government there is always a chance that professions of frugality may be useful. Whether a great statesman consults his own permanent interest and his future reputation by unaccupulous resorts to the most transparent arts of the demagogue is a ques-tion for moralists and historians. Mr. GLADSTONE, if he were capable of thinking that he had coved, might perhaps find satisfaction in the thought that he had forced the leader of the Opposition to repeat his own produgal offers; but the tendency of lax political principles to propagate themselves is not consolatory to those who happen to prefer the welfare of England to the personal aggrandizement of Mr. Dishafli and even of Mr. Gladstone.

THE ELECTIONS.

THE suddenness of the dissolution and the financial surprise dangled before the eyes of the electors are not to be excused because it is possible that some of their consequences may be beneficial. But still it is not to be denied that they may have some beneficial consequences. The elections will have to be taken in a great hurry, and much hardship has been inflicted on members or candidates who had left kingland in the reasonable belief that a Prune Minister who had summoned Parliament to most for the despatch of business at an early date meant what he said, and intended that the existing Parhament should meet ut the time named. But, in point of fact, the time has been sufficient to provide most constituencies with the delights of a contest where a contest is possible. Plenty of candidates have been found on the spur of the moment. The fight will be a keen one, and will be fought out well; and it is difficult to find a single seat formerly held by a Liberal or a Conservative which the other side is not ready to struggle for, unless the retention of the seat by the sitting member was a matter of certainty. Some constituencies are even bewildered by the abundance of candidates ready to woo their favour. There are seven candidates for Nottingham, and six for Peterborough, and in one Irish constituency returning only one member there are three Home Rulers standing against each other. If there had been any lack of candidates, the constituencies would have had good reason to complain, but it must be owned in fairness that this is not the case. Every man of any political eminence on either side offers himself for reelection, with the exception of Sir Gronge Guer, and a hurried election is no doubt in favour of sitting members who have any pretensions to political eminence. In the harry to get candidates, too, constituences have been obliged to look out for men that would do some credit to their party, and local interests which require careful nursing have had scarcely enough time to tell. It is also satisfactory to think that the election will now com much less than it would have cost if it had taken place in the autumn. The great expense of a contest is not caused by the contest itself, but by preparation for the contest. An unknown man who thinks that he

could do good service and win some distinction in Parlinment manages somehow to be accepted as the candidate of his party in a borough. He must make himself known there, and, if possible, favourably known. He must keep his agent at work, organize meetings, make speeches, cultivate friendships, form acquaintances, reside for a time, if possible, in the neighbourhood of the borough, and live in the handsome generous way which befits a future member. All this, if the process is prolonged over several months, costs money. It is money spent in a way to which no exception can be taken, but the outlay is very considerable. A sudden election is therefore much in favour of men with small means who have intellectual or social advantages to recommend them to a constituency. There is probably a better chance now of the next Parliament being a creditable one than there would have been if the election had taken place later. And this not only because the prospect of getting fairly good representatives is improved, but perhaps still more because a sudden election tells against cliques and crotchet-mongers and the advocates of dan-gerous projects. The Home Rule party in Ireland is furious at not having had time to organize its forces better. At present there are about thirty avowed Home Rule candidates, and some of these are standing against cach other; and this is a state of things much below the boasts of a party which announced that sixty out of the hundred Irish members of the next Parliament would be Home Rulers. Under the pressure, too, of sudden and extreme excitement, the Permissive Bill people, the Women's Rights people, and others of their stamp are in some degree swept out of sight. There is no time to attend to them, and a happy accident may possibly condemn them to the insignificance they deserve. The contest will be as keenly fought as it would have been later on, but it will be cheaper, more likely to be productive of good members, and more distinctly dependent on issues of general politica

What will be the result of the elections no one can pretend to say. That there will be a large Conservative gain and only a small Conservative loss may be regarded as certain, but no one can say how large the gain and how small the loss will be. The Conservatives start with the advantage of commanding a great majority of the seats which are too safe to be attacked. There are at least a hundred Conservatives who will walk into the next Parliament without any trouble whatever, and there are already some scats lately held by Liberals for which Conservatives will be returned without a contest. There are some seats in English boroughs, lately belonging to Conservatives, which are now attacked by Liberals with a fair chance of success, but they are not many. On the other hand, the Liberals find themselves everywhere attacked, and what makes the issue so very doubtful is that the Liberals at the last general election won a great many seats by very small majorities. When a Parliament once begins to sit, and talk, and act, few people take the trouble to recollect how the members got there. But, when another contest is going on, we turn to the records of the past, and find that numbers of Liberals were returned in 1868 by majorities which were of the barest kind. Even where political feeling has remained the same, a little more zeel in attending to the registration on the part of Conservative agents may now produce a Conservative triumph in these constituencies. Perhaps the most remarkable feature, however, of the struggle is the effort which the Conservatives are making in those two great strongholds of Liberalism—Scotland and the metropolis. The event may show that this is only the desperate effort of men sure to be beaten, and who know they are sure to be beaten, but who like a fight for the fun of the thing, and to keep the party alive. But certainly it seems as if the Conservatives thought it better worth while to contest metropolitan constituencies and Scotch constituencies than it has been for a long time. The first Scotch town in size and mercantile importance is apparently in a state of complete bewilderment as to its political future. In spite of the minority vote, Glasgow returned in 1868 three Liberals. Two of the late sitting members have now retired, and five Liberals and two Conservatives are eagerly offering themselves to the astonished electors. So keen is the excitement now prevailing, that in many constituencies there are not only Liberals standing against each other, but even Conservatives, which is a rare thing in a party so well organized. Of course no party can prevent persons from stating that they belong to the party

and yet holding themselves aloof from it. At Newcastle, for example, the candidate recently defeated as a Conservative; has now offered himself as an Independent Conservative; and if he is a Conservative, he certainly is a very independent one, for he new says that his views as to Home Rule have been mistaken, and that he is really a Home Ruler pure and simple. Perhaps there may be a similar explana-tion of the candidature of other Conservatives who are seen to be standing against Conservatives. But even if there are a few instances where Conservatives are quarling with each other, there is nothing approaching to the quarrelling that is going on among Liberals. The Liberals have in many places no effective organization. Some of the reasons why this is so may be creditable to the Liberal party, as showing that it has a superiority in thought and varied activity. But the fact remains. The Liberal Committee tells a newly-arrived Liberal that he is not the recognized candidate of the party, and the newcomer replies that he does not care whether he is or not, and that he will go to the poll. The consequence in some boroughs has already been, it may be observed, that the recognized Liberal candidate has been gently shoved aside, and the pertinacious intruder has supplanted him. But there will be doubtless several scats lost by an excess of Liberal candidates, and thus, quite apart from changes in the current of political feeling, and from the issues offered to the decision of the constituencies, the Conservatives start with some considerable advantages. They hold the great bulk of uncontested seats, they were defeated in many places last time by majorities so small as to be capable of being reversed by more attention to the registration, and Liberals propose to endanger each other's seats far more than Conservatives propose to inflict a similar injury on their friends.

How far the bright financial visions that have been conjured up by Mr. GLADSTONE will really affect the manner in which electors will vote is a point as to which conjectures are worthless. But one effect of his manifesto is beyond worthless. But one effect of his manifesto is beyond question. It has tended to make the issue more than ever a personal one. Mr. GLADSTONE does not rely on his past services or on the history and aims of his party so much as put in the most naked and the barest form the one question for the electors to answer—Will you have me and my friends or Mr. DISRAELI and his friends? Mr. GLAD-STONE did his utmost both in his address and in his speech at Blackheath to vilify Mr. DISEARLI and his subordinates. He even went back to his old grievance that Mr. DISKAELI refused in the most unbandsome manner to take office last spring. He asserted, and believed that he proved, that the financial policy of the Conservative party—not of the old Conservative party but of the Conservative party under Mr. Disraeli's leadership—had been a policy of wicked and wanton waste. Mr. Disraeli replied in a manifesto bristling with epigrams, and written as he only could have written it. Mr. Lowe in turn answered him, and Mr. Lowe's reply is the best thing Mr. Lowe has offered to the public since the days of the great speeches in which he expressed his real opinions on the expressed his real opinions on the expression. pediency of extending the franchise. In this personal contest, putting aside the indefensible position Mr. Glabstone had created for himself by his sudden stroke in the dissolution and by his financial bribe to the constituencies, the Liberals have had much the best of it. Mr. DISBARLI is always getting lost in some mare's-nest of foreign policy, and Mr. GLADSTONE had an easy task when he exposed the exaggeration of Mr. DISRAELI's statement as to the command of the Straits of Malacca having been thrown away by a Liberal Government. The answer to Mr. DISPACIA'S statement that he had always been in favour of the repeal of the Income-tax was obvious, as a statesman does not do much to promote the ideas he favours if he keeps them locked up in his breast. There was excellent writing in Mr. Diskatli's address, but there was nothing more acceptable. mr. Diskaels address, but there was nothing more—no trace of solid thought or serious statesmanship, no cutting of a policy, nothing but the promise that if he were in office he would hymour the prejudices of his countrymen, and occasionally startle or amuse them. After we have now with Mr. Diskaelt, there is nothing on the Consequence with the read of listen to. A cloud of decorate delication. sources the utterances of the party. Many of Mr. Desault's main supporters are in the House of Lords, and comnot come to his aid when a general election is guit and therefore on an occasion like this the strength of the Conservatives does not seem to great really is. But this is only saying these party in by having most of its leaders in the Upper Rosse,

the House of Parliament with which electors have to do, and which they wink incomparably the more important. It is not only that Mr. Chambrons spoke at Blackbeath with ricebrical vigour which carried everything before it, or that Mr. Lows showed be could put a personal attack into writing nearly as well as Mr. Diskaell. Mr. Forster has made at Bradford a courageous and statesmanlike defence of the principles which have guided him in framing and wicking the Education Act. Mr. Bright has shown himself, dapable of keeping silence at a crisis when silence on his part must really be called golden; and Mr. Goschen and the Attorney-General, and such non-official Liberals as Mr. Children and Mr. Roebuck, have shown electors who are in search of the party having the preponderance in ability where they may find what they are looking for. It is quite fair that this consideration should be presented forcibly to the constituencies. Electors have other things to think of, but among the things to which they may reasonably give attention is this question of the comparative mental power of the leaders of the two parties in the Commons. The issue has been made a personal one by Mr. Gladstone, and has been accepted as such by Mr. Diskaell; and if the choice lies not between two lines of policy or two decisions of a distinct question, but between two sets of holders of office, it seems natural to compare the one set of persons with the other, and to ask which set is bost fitted to carry on the government of the country.

THE COUNTY FRANCHISE.

MR. GLADSTONE, with a prudent care for the tastes of all classes of political customers, offers for their selection a large variety of wares, from a London Municipal Bill to a modification or abolition of College Fellowships. He has perhaps not yet determined the main issue on which the election or the subsequent Parliamentary contest is to turn. On the question of finance, as he pro-bably anticipated, the Opposition, instead of accepting his challenge, profess to be as ready as himself to sacrifice the interests of the country to the immediate object of popularity. In default of Ministerial guidance, the subjects which are proposed by Mr. GLADSTONE for consideration will naturally arrange themselves in the order of their comparative importance; and, inasmuch as the erection of machinery precedes in order of time the construction of fabrics, Mr. GLADSTONE and his zealous adherents will be more immediately survious to provide themselves with a permanent majority than to readjust the institutions of the country in detail. In short, the ultra-Liberal party will be greatly strengthened by granting to the counties generally "that extended franchise which has been with general satis-"faction conceded to the towns, and to the populations of "a number of rural districts with a central village "which may perhaps be called peasant boroughs."
It is quite unnecessary to invent a new generic term for a class of constituencies which includes only East Retford, Shoreham, and a few clusters of Welsh boroughs. In consequence of the Duke of WELLINGTON'S obstinate aversion to the concession of the franchise to large unrepresented towns, East Retford was united to a rural district in the neighbourhood instead of being disfranchised. Consequently 10l. householders, who in the country were of course of a somewhat higher rank than in towns, voted for the district till 1867. The only election under the new law of household suffrage resulted in the unopposed return of the popular member who had represented the district for the popular member who had represented the district for several years. The half-dozen rural borough constituencies of Wales consist chiefly of small farmers employing but few labourers. It is a fantastic account of an immemorial practice that "our loyal, patient, and, as I hold, intelligent "peasantry are, with other important classes, now unenfanchised for no other reason than that they reside beyond the boundary of boroughs." The inhabitants of countries have never, except by accident, peasaged votes for neyong the noundary of noroughs." The inhabitants of counties have never, except by accident, possessed votes for towns: When Mr. Giangerous proposed in 1866, as a final settlement, the reduction both of the berough and county franchish, his neither intimated nor probably felt any disapproval of a distinction between urban and rural constituencies.

It is beside the question to inquire whether the labourers to whom Mr. Graperous, like Mr. Dunastit in Coningity, applies the nickname of passents, are more or less intelligent them becough homologies.

a certificate of attainment nor a badge of merit, but a power of selecting these who are to govern the country, and of ultimately determining the public policy. It may well be that the working class ought to have the large share of electoral power which they already possess, and yet that their monopoly of the representation would have revolutionary and ruinous effects. Trade Union agitators often-boast, with or without exaggeration, that they command hundreds of thousands of members who are disciplined inte-acting like one man. When Mr. Gladstone's proposal is adopted, the Unions will be reinforced by the whole of the loyal, patient, and, in Mr. GLADSTONE's opinion, intelligent, peasantry; and, if the supreme multitude still finds itself hampered by opposition, the democratic leader of the day will, in accordance both with Mr. Glapsroun's present policy and with his professed opinions, put an end to future conte opening the door to any part of the population which may be still excluded from the franchise. Those who repeat or tolerate the cant of educating the people by admitting them to political life, ought in consistency to prefer the least in-telligent part of the populace as the subjects of their philanthropic experiment. The Morpeth colliers intend at the approaching election to return, probably without oppo-sition, the Secretary of a Miners' Union. The Liberals of ten years ago, if they have time to reflect as they are dragged behind Mr. GLADSTONE'S chariot wheels, may perhaps doubt whether the substitution of Mr. Burt for Sir George Grev is a proof of decadence or of political progress; but there is no use in protesting against irrevocable measures, or their necessary consequences. Mr. Burr probably possesses more than average ability; and he will bring with him into the House of Commons a special knowledge of the wants and circumstances of his constituents. Members of his class will certainly be received by their colleagues in the House with a genuine desire to make the best of a social change which has perhaps become inevitable; but, while the choice of Morpeth is received with enthusiasm, it is more to the purpose to observe that the obliteration of the boundary line between the borough and the county would probably transfer to the Miners' Union the whole represen-tation of Durham. Even if the disfranchisement of the middle classes were confined to mining and manufacturing districts, it might be possible for sanguine politicians to view with complacency the concession of the boon which Mr. GLADSTONE hopes that the Legislature will grant "with-"out conflict, without intrigue, and by general consent."
Unfortunately the purely agricultural counties have their
ARCHES, who would act in close concert with the Northern
and Midland Unions. The constituencies of the past have never been accoustomed to vote at the word of command dolivered by officers who are appointed for the purpose of promoting the exclusive interests of a single class.

Mr. GLADSTONE has advoitly entangled his chief opponent in complicity with his profuse offers of fiscal relief. Another cast of his net has failed, however, to catch Mr. DISRAELI, who is not prepared to swamp the existing constituencies "without conflict, without intrigue, and by general con-sent." It was not to be expected that the former leader of Young England would question the loyalty, the patience, or the intelligence of his favourite peasant; but, if household suffrage in counties would increase Mr. GLADSTONE'S majority, it would clearly not suit Mr. DISRAELI's purpose. In the most statesmanlike passage of an address which is otherwise scarcely worthy of a great occasion, Mr. DISRAELI furnishes his followers with a key-note in the statement that the last Reform Bill and the Ballot have not yet been tested by sufficient experience; and he opportunely and significantly adds that the proposed measure would, by a necessary consequence, involve the disfranchisement of all boroughs having less than 40,000 inhabitants. It matters little whether the arguments which Mr. DISEARLI thinks suitable for his immediate purpose are the same reasons which determine his conduct. It was of the utmost importance that he should warn his loyal and patient, but not always intelligent, adherents that he had no intention of repeating his rash venture of 1867. There is at least one Cabinet Minister who must be profoundly convinced of the mischievous tendency of the extension of household suffrage to counties. Mr. Lowe cannot believe in 1874, more than in 1866, that it is prudent to undertake a journey to the back of the North Wind; nor is it conceivable that he should find a cynical satisfaction in punishing his countrymen for their former neglect of his warnings. Indeed it may be collected from his reference to the topic

in his address to his constituents that he has nothing to say in favour of Mr. GLADSTONE'S plans for the advancement of democracy. It may be hoped that the graduates of the University of London will appreciate the string of personal epigrams on Mr. Discussion which Mr. Lows substitutes for an exposition of political principles. They will certainly not be enlightened as to the real convictions of their representative by the remark that Mr. DIRRAELS "introduced the household " franchise into counties, and so made the distinction one " between a 10/. and simple household franchise; and he "has by the same measure of 1867 made the precedent of "reducing the former to the latter." Mr. Lowe, with honourable consistency, opposed Mr. DISRAELI when he sold the pass in 1867, as he had defeated Mr. GLABETONE in 1866. He disapproved probably of the 10% household franchise in counties, and certainly of household suffrage in boroughs; and he undoubtedly holds that the imitation of Mr. Disrabli's conduct would be as culpable as the original measure. It would, in fact, be infinitely more mischievous, because it would complete the process of abolishing varieties and distinctions of suffrage. An occupation frauchise in counties was introduced, not by Mr. DISRAELI in 1867, but by Lord Chandos in 1832. It was afterwards agreed by all parties that the 50l. limit of rental was too high; and when the standard was reduced to 101., the condition that the tenancy should include a house was a restriction, and not an enlargement, of the suffrage. 101. franchise in counties, whatever may be the other merits of the rule, excludes all but a few agricultural labourers. Household suffrage would give them the control of the counties, as well as the power of reinforcing their numbers by others of their class who happen not to be householders. Mr. Lowe, if he could be forced to answer a plain question, would admit that such a change would be disastrous, although he might think it worth while to add, as in his address, that it would serve Mr. DISRABLI right. It is for serious politicians, who care more for the public interest than for party, to consider whether a new and more sweeping Reform Bill is required for any purpose except to secure to Mr. Gladstons and his successors a perpotual majority.

PRINCE BISMARCK'S SYMPATHIZERS.

THE accidental absence of Lord Russell deprived the late No Popery meeting of any importance which it might have possessed; and, although it is a cause for regret that Lord Russell should have been unwell, his participation in an absurd proceeding could not have been con-templated with satisfaction. The policy and legislation of Gormany could in no case have been properly discussed at an English public meeting; and it was especially indecorous to take part against a religious body which rightly or wrongly complains of persecution. In former times Exeter Hall occasionally protested with little effect against the persecutions to which Protestants or other heretics were supposed to be subjected in Spain or in Italy; but in no previous instance has a foreign Government been congratulated on the severity of its ecclesiastical legislation. Having pledged themselves by the framework of their resolutions, and by the very act of meeting, to approve of Prince BISMARCK'S policy, the promoters of the movement, in imitation of Lord Russell, declined to inquire what that policy was. It might have occurred, even to a collection of blatant Protestants, that some laws might be good while other laws might be oppressive. If the speakers were ignorant of the only material facts of the controversy, they had no right to express, or to invite from their audience, any opinion whatever. It soon indeed became evident that the managers of the affair only took the opportunity of uttoring that hatred to the Pors and all his works which might have been taken for granted. The only speaker who knew anything about the German ecclesiastical laws was 'an American from Berlin, who was not allowed to address the meeting until spectators and reporters were worn out with the voluminous eloquence of the Dean of CANTERDURY, of Sir T. CHAMBERS, of Mr. NEWDEGATE, and of Sir ROBERT PEEL. The repeated denunciations of the dectrine of Infallibility were not perhaps consciously insincere; but Exeter Hall bated Home as bitterly and as loquaciously as at present long before the Porn had ever droamed of a Vatican Council. If the Does of Canadasuar and Sir T. CHAMBERS were in the habit of studying the

opinions of the statemen whose acts they discussly applaud, they might have known that within the last light night Prince Bismance expressly declared in his place in Parliament that he had nothing to say against the doctrine of Infallibility or the Vations decree. His quarral with the German hierarchy is founded on their political conduct, which may probably have been affected by the result of the Council, as it has been openly stimulated by the influence of the Holy See. It is the fixed resolution of the Engrecope and his Minister to establish the auglemacy of the civil power; but the Roman Catholic clergy and laity in Germany are at liberty to teach and to learn all the extravagances which excite the intolerance of restless English Protestants.

One of the orators interpreted the German Empaner's well-known letter into a warning addressed to the Porn to mind his own business. If the explanation is correct, the advice is generally applicable; and especially to busy-bedies who have much less to do with Germany than the Pore, and who have nothing to do with the doctrines of the Roman Catholic Church. Since different seets, much against their will, renounced the duty of questioning the soundness of their neighbours' faith, Protestants inclined to mind their own business have cultivated entire indifference to the successive enlargements and developments of Romish doctrine. To compare small things with large, and profess with sacred, changes in the rules of whist concern whist-players alone. There was a time when it would have been players alone. heterodox to call for trumps by the familiar process of playing cards in a certain order. A few years ago a general council of the most authoritative players determined to acknowledge a practice which it was impossible to prevent; and cribbageplayers or piquet-players have not thought it their duty to declaim against the decree which alters the rules of the whist-table. Mr. Newdegate and Sir T. Chambers never played the old game, and it is quite unnecessary that they should be shocked by the new. Sir ROBERT PERL'S enthusiasm has perhaps something more of a political colour; but he also, like his predecessors on the platform, carefully abstained from discussing the merits of Prince BISMARCK'S legislation. Sir ROBERT PREL'S interest in quarrels between Continental States and the Roman Catholic Church dates from the time when, as Chargé d'Affaires at Berne, he encouraged the Swiss Government to suppress the Sonderbund. Many years afterwards, as Secretary to the Lord-Lieutenant, he contrived to engage in unnecessary squabbles with the Irish Roman Catholic clergy, and he perhaps regrets the excitement of former contests. Whatever may have been his duties in Switzerland or in Ireland, he has nothing whatever to do with Prince BISMARCK and the German bishops. It may be hoped that the meeting will not attract too much notice in Germany. It would not be desirable that the importance of the No Popery agitation should be exaggerated; and, on the other hand, there would be serious cause for regret if the indifference or disapproval of the community in general produced an impression that English opinion is any way hostile to the German Government. The traditional dislike of any legislative or administrative interference with religious freedom is consistent with a candid desire for information as to the special grounds of a policy which has certainly not been lightly undertaken. The Prussian Government is entitled to the credit of the religious impartiality which it has always displayed; and a deference is not unreasonably paid to the sagacity of Prince BISMARCE which no other contemporary statesman could command. By a remarkable coincidence that can scarcely be accidental. the Swiss Government, which, representing a community of mixed religions, is necessarily and naturally tolerant, has lately thought fit to adopt stringent measures against one or two Roman Catholic prelates, and against certain. arochial priests. The conduct of both parties can be fully appreciated only by those who thoroughly understand, not only the immediate cause of quarrel, but the normal relations between the Government and the Church.

Englishmen have abundant reason to know the difficulty of dealing with Roman Catholic bishops and prioris. Political agitators who are always ready on occasion to fall back on their spiritual immunity are versions and unfair opponents; yet all attempts to restrain by law the clerical agency which has increasently disturbed breland have long since been deliberately and finally should be long since been deliberately and finally should be disaffection in likely to be practical at the content of the

is in not yet known whether the The bid still higher than before for popular his applications policy condemn the judgment of every Singlish Covernment and Parliament of modern times. It is true that the circumstances of England and of German Silfier widely, and that the German Government is dealing, no with a spiritual adversary, but with an Established Church; but no such distinction was drawn by the spitalers at the late meeting, because their antipathy to Rome is wholly independent of any but doctrinal considerations. Mr. Newdegare, as might have been expected, took consideration to repeat by demand for a system of visitation took occasion to renew his demand for a system of visitation of English convents, sithough no measure of the kind is at present proposed in Germany. Probably no attendant at the meeting was aware that the new ecclosiastical legislation is profoundly distasteful to the Protestant elergy of Prussia and to the more orthodox part of the Protestant laity. It is thoroughly understood that the Government is attacking no dogma or opinion, but the interference of ecclosinatical motives and interests with political affairs. The universal and exclusive establishment of civil registration is expected to alienate a large portion of the community from the Protestant Church, nor is it any consolution to a loyal and inoffensive clergy that they suffer for the hostility of the Pors and the Jesuits to the State and to German unity. It would seem that the old No Popery feeling of England is dying out, not through any modification of popular opinion, but because new issues have acquired a preponderating interest. At the same time the ancient habit of meddling in Continental quarrels has rapidly passed into desnetude. There was a time when every re-volution, and every new constitution in Europe, was welcomed with the warmest sympathy by Englishmen who believed that their national institutions were becoming naturalized abroad. The barren changes which have incessantly recurred in some Continental countries have convinced all judicious Englishmen of the inexpediency of too ready sympathy, and of even verbal interference. Officious approval or condemnation of measures which partake of a religious character is still more inconvenient than secular intrusion. It is desirable that foreigners should notice the absence from the No Popery platform of every person who could pretend even to secondary political importance.

THE LEGITIMISTS AND MARSHAL MACMAHON.

THE Duke of Broglie is not yet out of the wood as regards the law about the nomination of Mayors. When the Bill was passed, it became necessary for him, as Minister of the Interior, to give instructions to the Prefects as to the spirit in which it is to be carried out. If he had been content to confine himself to describing the miserable state of affairs against which the law is directed, and the blessed peace which comes upon a commune which has been relieved of the disastrous privilege of electing its own chief officer, no harm could have come of this circular. It might still have been made the subject of an in-terpellation on the part of some members of the Left, but it would have found the Right united in its defence. Here and there a model of eccentric consistency like M. DE FRANCISM might have found fault with the statement that sad experience has condemned without appeal the system under which the Mayors were elected by the Municipal Councils; but, with these exceptions, the majority would have acquiesced in this or any other plan for giving in-creased power to the Ministers in whom they place confi-dence. In an unlucky moment, however, the Duke went on to make a profession of faith on behalf of all the newly-appointed Mayors. The Prefect is directed not to exclude men from this office for purely political reasons. It will be sufficient if he is convinced that his nominees are thoroughly Conservative and thoroughly resolved to carry are thoroughly conservatives of the Assembly. The last and most out the resolutions of the Assembly. The last and most important of these resolutions is that by which the execuimportant of these resolutions is that by which the executive power has been conferred for seven years on Marshall MacManox. The power thus committed to him is now, and for the whole seven years will continue to be, entirely shove challenge. It is only the conditions under which it is exercised that can be medified by the Constitutional laws. Around this authority all good citizens may make their townships of the constitutions.

Severament, the Mayors must give all their support to the Marshal's authority, and lend themselves to nothing that can disturb or weaken it. To defend Marshal Machiner's power is to defend the Assembly which has created it, and the social fabric which that Assembly has committed to his once.

The organs of the Extreme Right make no secret of the dislike which they feel towards this theory of Marshal MacManon's position. It contradicts in all respects the doctrines which they have been preaching for this year past. In their eyes Marshal MacManon is at best but a pinchbeck Saviour, endurable so long as the real metal cannot be got at, but nover to be confounded with it, even for an instant. To speak of his authority as raised above all question for seven years is to give it a dignity which no honest Legitimist can stomach. It may please HENET V. so to modify his opinious that his Restoration may become possible even with the opinions of the country wh they are, or it may please Providence so to modify the opinions of the country that a Besteration may be possible even with the opinions of Henry V. what they are. Either of these miracles may be worked at a moment's notice, and the Legitimists will not acknowledge that the existence of Marshal MacManage Promident of the Bosenblia of Marshal MacManon as President of the Republic is to prevent them from taking advantage of it as soom as it has happened. After all, what can the Marshal do to protect society? There is something presumptuous in the assumption that a compromise which, as interpreted by the Duke of Broglie, keeps the King out of his own for seven years, can have any blessing reserved for it. If the Marshal considers himself as simply the Lioutenant-General of the kingdom, holding his office for so long as, and for no longer than, it pleases HERRT V. to deprive his waiting people of the light of his presence, he may be accepted as an honest subject, and the talk about seven years may be pardoned as mere surplusage which has no other object than to throw dust into the eyes of the Republicans. But if there is any real meaning in these phrases, and the seven years stand for a genuine trace between parties, during which all active operations are to be suspended, the Legitimists cannot accept the situation. How are they to serve as Mayors if they are pledged to lend themselves to nothing which can disturb or weaken Marshal Mac-MAHON'S authority? To scheme for the restoration of the King is in a sense to disturb the authority of the deputy who for the moment occupies the throne. Marshal Mac-Manon's authority is cortainly greater new than it would be if the Count of CHAMBORD had made his triumphal entry into his capital and were holding his court at the Elysée. As straightforward men, therefore, the Legitimista have no chance but to dispute the Duke of BROGLIE'S declaration, and to show by speech and action that they do not regard the Marshal's powers as placed above all challenge during the whole period for which he has been nvested with them.

The Left have seized the opportunity afforded by this schism in the ranks of the majority. M. GAMBETTA has given notice of an interpellation, with the evident object of forcing the Duke of BROGLIE to repeat in the Tribune what he has said in his Circular. Hitherto the Duke has been able to avoid this unpleasant necessity, but if, M. Gamberra plays his cards well, it will be exceedingly difficult for him to avoid it much longer. If the leader of the Left comes forward as the defender of the Marshal's authority against Legitimist attacks, and suggests that the Duke of BROGLE should make it perfectly clear that these attacks will not be allowed to go unpunished, the PRIME MINISTER can hardly either remain silent, or find words which shall not send the Extreme Right into open rebellion. The Ministerial Right showed their approciation of this danger by attempting to postpone the debate on the interpellation for three months, while the Legitimist Hight showed their readiness for the fray by demanding that it should be taken at once. In the end the date proposed by the author of the interpellation—the day after the final vote on the new taxes—was accepted by the Assembly. Whatever may be the fate of this interpellation, it seems very uncertain how long the majority can hold together. Duke of BEOGLIE probably hopes that his dread of Radicalism is shared by all sections of the Conservative party, and that their unwillingness to swap horses in mid stream will prevent any open breach until Conservatism has become better able to bear the strain. The Legitimist journals take every opportunity of warning him that this is not

They are as frank as possible in their declarations that the breathing time secured by the prolongation of Marshal MacManon's powers is only valuable in so far or marshal magmations powers is only valuable in so the as it admits of being turned to the profit of the Count of Chambord. The Gazette de France goes so far as to maintain that the Restoration was virtually decreed by the elections of February 1871. The Assembly, it declares, has received orders from the country to take all necessary steps for the re-establishment of the legitimate Monarchy, and it must not allow this mission to devolve upon a futuro Assembly the character of which cannot be foreseen. A Legitimist journal published at Lyons dis-ousses whether the Restoration can be best effected by proclaiming the Monarchy in principle and appointing one of the Princes of Orleans Lieutenant-General of the kingdom, or by proclaiming the Monarchy in principle and confirming Marshal MacManon in the possession of his powers under the law of the 20th of November. The writer declares himself perfectly assured that the first of these suggestions is made in good faith, but he is equally assured that it could never be accepted by the Count of Chambord. It would be a mark of unintentional but real defiance towards the Royal person. So long as the Assembly lives from hand to mouth, and legislates for nothing more remote than to-morrow, the existence of these theories and intentions may be a matter of little moment. But when the Constitutional laws come to be discussed, the Legitimists in the Assembly cannot well remain silent. As regards the real or supposed dangers to be apprehended from Radicalism, the new laws may be as reactionary as the most violent member of the Right can desire, but, if they are framed under Government influence, they will not contain a word about a Restoration. The Duke of BROGLIE may exert all his ingenuity to leave the form of government an open question at the expiration of the seven years, or even to give a monarchical bias to the new institutions which may take effect when that term is over. But this will not be enough for men who rightly regard the existing Assembly as the most monarchical which they see any hope of obtaining. They know that with the dissolution of this Assembly the last chance of effecting a Restoration will dispuse any they will appropriately large how. tion will disappear, and they will oppose any laws, however good they may seem in themselves, which put it into the power of the Marshal's Ministers to sustain his authority against Royalist as well as against Republican conspirators.

EDUCATION AND THE GENERAL ELECTION.

THERE are many persons in England and Wales whose votes in the present election will possibly be determined by their views as to elementary education. In spite of the paramount attractions of the financial programme set forth by Mr. Charstone, we can hardly say that this surprises us. Whether the Income-tax be abolished or retained, people know that they will pay about the same to the national Exchequer; and the question whether the tax-imposers of the future shall be instructed or ignorant is a matter which may in the end concern their pockets as well as their consciences. From this point of view many persons may be inclined to favour the advent of a Conservative Government on purely educational grounds. Their reflections may take some such shape as this:—We have been warm friends of the Education Act, and of the principles on which it has hitherto been administered. Down to 1870 our sympathies were with the voluntary schools. They had done a great deal of good work, which but for them would have been left altogether undone. We recognized their defects when regarded as a machinery for providing education for the whole country, but we had no wish to see them superseded. The Act of 1870 exactly answered to our views in this respect, and our object is to secure the maintenance and development of the policy of which that Act was the expression. In the ordinary course of things we should best promote that object by keeping the authors of the Act in power. But though the Liberal Government has hitherto resisted the importunities of the Education League, we cannot be sure that it will continue to resist them. Mr. Bright is now a member of the Cabinet, has disclaimed all responsibility for the measure, and has made it the object of exaggerated condetanation: Will not the tendency of the Government be to follow his lead,

and to win back the advanced Liberals by making dismentary education purely secular, and discouraging main
voluntary schools as may try to hold their place ander
the new system? We know how fatal to the progress of
education such a change would be, and in order to prevent
it we shall vote for a Conservative. If his views upon
educational matters are not quite in harmony with ours,
they are more so at all events than the views of the
Birmingham League. We have no quarrel with reasonable Liberals on this point; but what warrant have we
that the educational policy of the party will continue to be
determined by its reasonable members?

Whether or not this reasoning is sound, however, must Whether or not this reasoning is sound, however, must obviously depend on the position which is taken up on this question by Conservative candidates; and there is apparently some danger of a section of the party diverging from the broad path, and making the general cause of elementary education subordinate to the cause of voluntary schools. In January 1871 the Conservatives felt thankful that so large a sphere of action had been reserved for voluntary schools, and no hostility had then been shown to any further development of the Education Act. In January 1874, however, some of them hold a Act. In January 1874, however, some of them hold a different position. The evident unpopularity of the doctrines put forward by the League has given immense encouragement to this section; and, instead of being content with the fair field reserved for voluntary schools by the existing law, they are beginning to demand protection. They are not satisfied with opposing the erection of School Board schools in places where there is already sufficient educational provision for every child within the school age; they insist that no new schools shall be built and it is a school age; shall be built until the existing schools are full, and that, no matter what the requirements of the district may be, no School Board school shall be set down within a given distance of a voluntary school. The difference between this class of Conservatives and the moderate men on both The former are willing that the whole sides is this. sides is this. The former are willing that the whole country should be provided with schools, so far as this can be done without injuring voluntary schools. The latter are anxious that the whole country should be provided with schools, and they wish to make all possible use of voluntary schools as a means for securing this end. If the former section of Conservative opinion were represented in a Conservative Minister, we might have the sented in a Conservative Ministry, we might have to say good-bye to any extension of the Education Act; and a Conservative victory in this sense would inevitably prepare the way for a reaction. In spite of much lukewarmness, the country has pretty well made up its mind that education shall be universal both in its distribution and its obligation, and any appearance of a retreat from this position on the part of the Government would lead the Liberals to unite once more in an educational crusade. An immense impulse would thus be given to the Secularist party, because in crusades the boldest and most energetic section of the army naturally gets to the front. The Secularists would be able to point to the failure of the moderate Liberal policy as a practical argument of great weight on the side of a more thoroughgoing system. We warned you, they would say, what must come of this unnatural compact with Denominationalists. You insisted on making common cause with men who care for secular education only as a means of teaching religious dogma, and you must not wonder that, now they think the teaching of religious dogma secure, they have thrown secular education. overboard. The effect of such an appeal on the Liberal party may easily be imagined. To urge them to renew their alliance with the Denominationalists would be as useless as to propose University education as a basis of alliance with the Irish Roman Catholic bishops. The Secularists would command the situation, and the next Liberal victory would be a Secularist victory as well.

The resolute attitude of the Cabinet, and the really small influence which the Secularists after all appear to exercise over the Liberal counsels, must also be taken into account. It is not uncommon to find both there facts denied by Liberal journals, but the reason of the denial is not far to seek. Secularists who are not prepared to break up the party if their demands are not prepared to break up the party if their demands are refused are naturally anxious to make their retreat as inconspicuous as possible; and to effect this they declare themselves anable to accept Mr. Forster in this particular as the spekenman of the Cabinet, and talk of the unsectarism visitories which have been won in the School Board dicatons. Writers who refuse to accept Mr. Forster as the spekenman of the

Cabbinst on alemaniary education would probably be capable, if the increasity arone, of refusing to accept Mr. Gladetons as the application of the Cabinet on finance. Mr. Forster is not merely the Minister specially charged with educational administration; he is also the author of the particular legislation which the Secularists are assailing, and he is a statestime of sufficient energy and resolution to make it certain that he will cease to be Minister rather than assent to any substantial change of policy. What is there to set against his declarations? Nothing but certain seemingly strong but really guarded statements from Mr. BRIGHT—statements which he takes care to characterize as merely the expression of his individual opinion, and which are promptly followed by a virtual contradiction from the Vaus-President of the Council. There is no comfort for the Secularists in Mr. Gladetons's address to the electors of Greenwich. Any reguences which there may be in the statement that he has no preference for the later over the earlier adjustments of the Bill is removed when these very words are explained by Mr. Forster to refer to the Cowers-Temple Clause, and to mean that the Prime Minister, like himself, would have preferred to leave School Boards absolutely free to give any kind of education they wished. The Nonconformists who drew up the Resolutions adopted at Orewe on Tuesday perfectly understood his meaning when they expressed their "deep dissatisfaction and disappoint- ment at discovering that Mr. Gladetonal policy pursued by "the Government during the last four years."

The statement that the elections of School Boards have merally resulted in unsectarian viotories may be true in generally resulted in unsectarian victories may be true in the letter; but it certainly is not true in the spirit. Every consistent Secularist will admit that the teaching of the Bible under the Cowper-Temple Clause may be made quite as Denominational as the teaching of the Church Catechism itself, and what are called unsectarian victories turn out almost invariably to be simply the application of the Cowper-Temple Clause. Thus at Bradford the return of the "Liberal Eight" was only secured by their accepting in unmistakable terms the very settlement which it was the first act of the Liberal Eight at Birmingham to repudiate. At both places the old School Board had adopted a minute ordering the Bible to be read and adopted a minute ordering the Bible to be read and taught daily in all School Board schools. At Birmingham this minute was at once rescinded by the new School Board. The new Board at Bradford might probably have liked to do the same thing, but the Liberals had found that the only way to secure a majority for their candidates was to make them state distinctly that they were desirous that the regulations of the old Board should remain in force, and that their action would be as much against the exclusion of the Bible from School Board schools as that of the Denominationalist candidates themselves. We are no special admirers of the Cowper-Temple Clause, but it is obvious that a School Board election which returns candidates pledged to support the teaching, as well as the reading, of the Bible in all School Board schools is as far removed from a Socularist victory as an election which returns Mr. GREGORY. If, in even a few conspicuous instances, the example of Birmingham had been followed, moderate Liberals might have had some reason to fear lest the return of a Liberal majority in the election now going on should be equivalent to the return of a Secularist majority. So long as Birmingham has no one to share its honours, this alarm may, we think, be dismissed as groundless. On the whole, the best interests of national education will probably continue to depend on a combination of the moderate men of both parties.

THE RAILWAYS AGAIN.

B'oness Junction has again directed attention in a foreible manner to the subject of railway disasters. We need not dwell on the shocking details of the catastrophe. The express from Edinburgh to Berth ran into a goods train which was being shunted right across its path; fifteen people, including the engine-driver, were killed, and others have been dangerously injured. It is asserted that the danger-signals were up, and that the engine-driver design in defiance of them. It is at least certain that there was no block system at these point. Mr. Thomas Marking, an eminent railway engineer, who is now a discattly of the North-Eastern Railway, which, with the

Lancashire and Yorkshire and London and North-Western Railways, enjoys an unenviable notoristy for accidents, recently propounded the theory that the block system is responsible for all or most of the accidents which occur on railways. Mr. HARBIRON may be asked to explain how it happens that this accident occurred on a part of the North British line where the block system is not in opera-tion. We are afraid there is not much encouragement to be derived from the theories or explanations of railway officials. Mr. HARRISON holds that the block system is to a great extent the cause of the accidents which are always taking place; and at the same time he announces that "it "may be considered as settled that the block system will, "as soon as it is possible to complete the "works, be introduced throughout the whole of the railways in the United Kingdom." When this happens we must, from this point of view, make up our minds for a large increase of railway accidents; but what has just occurred on the North British shows that accidents take place even where this dangerous system has not been introduced. Mr. Harrison finds that resignation to a large amount of slaughter as an inevitable incident in railway travelling, and consequently the ease of mind of important railway officials, is greatly promoted by setting down all disasters to "human fallibility." The old lady at sea in a storm, who was told by the captain that she must put her trust in Providence, asked delefully whether it had really come to that; but "human fallibility" opens up a still more cheerless prospect. However, if it makes Mr. Harrison and other eminent railway people sleep more easily, that is a great deal, even though passengers are killed with increasing profusion. Mr. HARRISON has protested with some vehemence against the annoyance which is caused to railway managers by so many people being killed and mangled on their lines; it distresses them, he says, more than anybody else. He has seen Directors completely overcome on receiving a report of a railway accident; but purhaps that was because they had not discovered the use of that invaluable anodyne—the theory of human fallibility; the fallibility being, of course, not in the ruling, but in the common working, officials of the railway. Once make up your mind that all precautions are more or less useless, and that the multiplication of precautions only augments and encourages "human fallibility," and you can sleep quietly with any amount of accidents. Mr. HARRISON'S specific may comfort other Directors, but it is not very consoling to the public.

We are quite ready to admit that human fallibility is responsible for a great many disasters, but we suspect that this fallibility extends to Directors and managers as well as to pointsmen and engine-drivers. It might be urged with some plausibility on behalf of railway managers that their business is of a very difficult and complicated kind, and that they get through it about as well as the managers of any other large and difficult enterprise. This might be true, and yet it would not be an excuse for all the accidents which occur, for the simple reason that a railway is, in an important respect, very different from any other, In any ordinary business the effects of an accident are limited only to inconvenience and annoyance, and some degree of pecuniary loss; and these are injuries which are more or less capable of componsation. Railway managers, however, deal with something more valuable than property-The complaint against railway with human life and limbs. Directors really comes to this—that they carry on a business of a very dangerous kind, a very simple accident in which may produce the most terrible consequences, with only just as much care and caution as if it were an ordinary business in which as a continuous business in which are continuous business and caution are in the complete that they carry on a business are continuous and continuous business are completed to the complete that they carry on a business of a very danger than the complete that they carry on a business of a very danger than the complete that they carry on a business of a very danger than the complete that they carry on a business of a very danger than the complete that they carry on a business of a very danger than the complete that ordinary business, in which an accident would not involve any very serious results. It is quite true, as Mr. HARRISON says, that a great many accidents are due to human fallibility; but the question is what measures are taken by the Railway Companies as a check upon human fallibility.

"Observation and inquiry," he tells us, "have clearly demonstrated that the introduction of the block system, "and of additional signals, has caused the engine-men "and other railway servants not to keep the same look-out, "or to use the same care, as on a line apparently less pro-tected." It is conceivable that an engine-driver trusting totted." It is conceivable that an engine-driver trusting to the block system will probably not keep so sharp a look-but as if he had only his own eyes to trust to; but, if the block system were efficiently worked, the engine-driver would have a right to rely on it. Mr. Harrison has, in fact, given a most striking illustration of the weakness of the administration which he is defending. Where

Directors are to blame is in establishing the block system, and not taking ears to see that it is properly worked. One reason why there are so many accidents is that engine-drivers really do not know what to trust to, and between the block system and their own discretion they come to grief. It would have been more to the purpose if Mr. Harrison had shown that the Railway Companies are very particular in checking and guarding against "human fallibility," that they insist upon engine-drivers obeying signals, and on the block system being strictly enforced, and on trains being punctually started, and that they punish severely any infractions of these rules. In the Wigan inquiry, when certain rules which were alleged to be in force on the Great Northern Railway were produced as evidence, the London and North-Western officials could not help laughing.

The radical vice of the system on which railways are at present worked is the haphazard way in which everything is managed. The time-tables on many lines are little better than a farce, and the signals are also a farce. The engine-driver is expected to keep a good look-out, and to take care of himself as bost he can. He is late at starting, he gets later as he goes on, and he has to put on a spurt in order to make up for lost time. It is expected that he will see the goods train that is being shunted right across his track, or the inevitable mineral train that has been creeping all day, and is now making a sudden dash through an awkward junction; only, as it happens, he does not see it, and it does not see him, at least till it is too late, and so there is a bad accident. But of course there is not always an accident; one might happen every day at a particular point, only it does not. Either there is a sharper look-out, or there is time to pull up, or the train which might have been in the way is carlier or later than usual. And this is what the Railway Companies trust to, though it is only the chance balance of a straw in the wind. A nominal block system undoubtedly increases the chances of accidents, and there is too much reason to fear that the block system is on most lines little more than nominal. Signals also become a danger, instead of a protootion, unless obedience to them is rigidly enforced. can readily be understood that a fixed system of working is inconvenient to the Companies, and that they prefer to leave a large amount of discretion to station-masters and others. It is obvious, however, that railways cannot be worked at the same time both by rule and by hazard. The worked at the same time both by rule and by hazard. The replies which have been sent by the Railway Chairmen to the Board of Trade for the most part exhibit a strange and melanchely want of appreciation of the real points at issue. It appears to be assumed to be enough to show that, after all, when all the deaths and mutilations have been distributed among the various Companies, it does not come to so very much for each of thom. The question, however, is not how many passengers each Company; hall be allowed to kill annually, but how many they can avoid killing. Whether the victims are many or few, this question remains. The remonstrances of the PRESIDENT of the BOYED of TRADE are not to be mut by statistical sophistries or vague references to intended improvements. What has to be shown is that, in the case of each accident, no precaution has been omitted which would have been likely to avert it. It is certain that, after every conscivable precaution has been taken, accidents will not cease; but they may be expected to become less frequent and less serious, and that is something to the public, though it may be nothing to Railway Companies. The enly real check yet discovered is to be found in a system of summary remedies against the Companies for injury and breach of contract. At the present moment it is especially desirable that it should be borne in mind how injurious to the public interest is the prescuce of Bailway Directors in Parliament.

DESCRITORY BEADING.

principle for the guidence of ordinary readers. Reed, they have said, good books and good books alone. Be familiar with the great masters of thought, and preceive your mind from the treah of the circulating library. The motives which prempt the advice are easy too palpable. In days when a large proportion of the population is more or less capable of reading, it is inclinabilly to see that the effect is in one respect the very research of what might have been always and the proportion of the proportion of the greatest writers, though the capable have been added. The greatest writers, though the capable have been added to the proportion of the proportion

Their works are pushed saids by masses of ephaneaul literature, and even when read they are mad with little attacking. The mind becomes demoralized by the habit of desaltory and argumental study; and a man who reads at a gallop expects that Shalpane will yield up his secret as easily as the last new novelist. The greatest men are distinguished from the little men in nothing more than this, that the tenth er twentieth reading of their bookers more fruitful than the first; whereas a modean reads is far too impatient to give more than one audience to the most womenable of teachers. Nothing, therefore, is more natural than to demounce as a doblitating practice all study of inferior authors. Life is shorter than ever in proportion to what has to be crowded into it, and our minds are not larger. We should therefore lay down inmoveable regulations against the investor of distracting influences. The time which we dawdle away over the valueless parts of newspapers would enable us to become familiar with the thoughts of the Wissest and best of men. If a man had to cheese whether a few months hence he would be familiar with the instant outs of the Tichborne case, or have made a careful study of all the Greak dramatists, no reasonable being could heating. In one case he would simply have enjoyed a questionable amusement which leaves no traces behind it, in the other his imagination would have been stored with a perpetual source of delight. Yet hardly anybody has sufficient foresight or resolution to sacrifice the temporary excitement in consideration of the permanent advantage. The case, indeed, is up to a certain point too plain to admit of argument. Everybody should have an inner circle of friends amonget books, to which none but the really great writers should be admitted. So far as realing is not a mere pastime, but a part of the systematic cultivation of the faculties, it is only valuable in proportion as it implies close and intimate knowledge. No poetry is really worth reading unless it is worth learning by heart. A

Perhaps, however, the choice is never rigidly necessary. Hume somewhere remarks that he took to instory because he found reading a rather languid occupation after he had often permed all good books; and this, he adds, is soon done. Whether Hume had done it may be doubted if, as Johnson declared, he owned to having never read the New Testament with attention. Hume, moreover, was a man of leisure as well as genius, whose example cannot be quoted for the ordinary reader. But it is true that the number of books which can thus act as spiritual stimulants is very limited; and that it is only during a few hours that the mind can be kept at a sufficient tension to profit by them. It has been said that people starve when fed only upon the essence of meat; and to relish literary food requires some lighter sauce to make it digestible. There are moreover some obvious qualifications. When a man reads any book in the spirit in which a good Protestast reads his Bible, he may be profoundly edified; bet he should not flutter himself too easily that he really understands what he reads. He is generally unable to distinguish between what he fisids and what he brings, and he falls unawares into such arrors as those which are familiar in the biblical studies of ignorant people. The really great books become in a sense independent of time and place. Thousands of readers have-enjoyed Den Quizute who knew nothing of the author, or the language, or the conditions under which the book was produced. But though such reading may be a very good thing in its way, it fails to extract the most valuable part of its meaning. The really edicions such reading may be a very good thing in its way, it fails to extract the most valuable part of its meaning. The really edicions study of any great author should therefore lead to a good deal of supplementary study of books that are interesting only in a subsidiary sense. The boy who reads Gullicer's Travels just as he reads the Arbeitem Mydts, merely for the immediate enjoyment, may be prefure the results

the property and find that in discretions, as in real life, we must go through a punished of dradigary even to make one grandes thoughts. We winted order where the discreted spirits as to be interested that the maintain the man's life; we must sufficient to be been the many growy people from whose drawy remarks there pleases at more intervals some genuine are of solid information; and we approse altograther eveds the trouble of sifting out the relatable sufficient aftern the teach.

The decision, therefore, has to be somewhat enlarged. We should devete our apare time to the study of the best authors rather than of the colorantal wase, but we must admit that a great author cannot be allocately studied without a good deal of apparently apartities labous. If Mr. Garlyle had been deprived of the assistance of Bryandant, he would never have made vivid portraits of Oronwell or Frederick; and, vivid as his portraits are, they cannot be sailly appreciated by anybody who will not go through some part of the same trouble. Our moralizing should be directed against that purposeless reading which takes satisfaction in rubbish for its own asks, and which tends to fill the mind with a mass of chaotic unsterial valuates in itself and not capable of application to anything better. In short, it would be our advice to every one to provide kineall with a good serviceable holby for his spare moments. The attempt to become thoroughly familiar with some great mind is useful in itself, for even a cursory acquaintance with such minds is beneficial; but the familiarity has not produced its full influence until it has led us into a number of subsidiary trains of thought and reading which help to throw light upon the central

object.

Beyond this, however, lies another question which does not admit of a very definite answer. After all that can be said, there are many purposes for which a live dog is better than a dead hon. For ordinary people, the most ephemeral interature does a great deal for which the study of the greatest men of old times is not available. which the study of the greatest men of old times is not available. One of the main purposes of judicious reading is to rise above the unliness and commonplace of daily life into a region of purer thought and lotter imagination. But, unfortunately, commonplace readers find a great difficulty in bringing the two spheres into contact. The popular mind, as we know, regards Palestine as a country which has no real geographical position, and whose inhabitants were entirely out of relation to anything that is being represented in Evaluation to the nineteenth continu. Thus require inhabitants were entirely out of relation to anything that is being transacted in England in the nineteenth century. They require their preacher as well as their Bibles, and must not only have true principles laid down for them, but be instructed in the mode of applying them to the concrete facts of the present day. And therefore the most trifling of modern novelists has an advantage for ordinary minds which it would be foolish to leave out of account. Mr. Trollope is a very excellent writer, but we do not fear that he will be offended if we say that, in our opinion, he is not the equal of Shakspeare or Cervanius. We should not, however, draw the inference that it would be good for an ordinary young lady of the nineteenth century to good for an ordinary young lady of the nineteenth century to preserve a complete ignorance of Barsetshire, and devote all her spare time to the study of *Hamlet* and *Don Quiz te*. On the conspars time to the study of Hamer and Fore Quin 10. On the contrary, we should say that she would probably learn very much from Mr. Trollope which she could not possibly learn from the most attentive study of the older works of art, however great their intrinsic superiority. As one of Mr Tenny son's characters observes, a truth kooks freshest in the isshion of the day; and, indeed, it often the study and the study of the study of the study of the study of the study and the study of flies over people's heads altogether when expressed in any other fashion. The heroine of Orley Furm may be very inferior to Juliet or Rosalind, and the country clergy of Barsetshire may be unworthy of mention by the side of the immortal madman of Cervantes. But they have the advantage of speaking a perfectly intelligible dislect. Even the most powerful and the most musical comes rather dim and loses something of its harmony when it sounds scross two or three centuries. The ideal which is set before us in a modern chignon or black hat is more easily appreciated than one which, however exquisite, is draped in unfamiliar coatume. In fact, it requires a careful culture of the imagination coatume. In fact, it requires a careful culture of the imagination before the mind can get over the shock of an external change which seems trifling enough to the philosophical observer. We may protest against the rust which gathers so specifily round even the greatest reputations; but its influence is felt by ansophisticated people. Then we recuprise the difference which a little space makes in our sympathies, we feel that it is in vain to appeal against the influence of time. The death of a few railway passengurs in England affects us, rightly or wrongly, far more nearly than the starration of many more thousands in India; and we cannot be surprised if a modern pulies major which reveals some little touch of human feeling within our immediate neighbourhood affects us more than the most striking records of a herotom which did its work a few conturies ago. Thoustless, as people rise in the apple of intelligence, the distant and the past will emert their claims more powerfully on our imagination. It is eminately desirable that the process should be heatened; but meanwhile it is in with to buy down arbitrary rules for distantiability are interest in what is the past will appear arbitrary rules for distantiability are interest in what is the past will be processed. we arbituary rules for dissipationing our interest in what the important of the property. Some rule philosophers have included in its not really a virtue, buttone my should be must good to the best purple in the gre of importal he fact that a man is our patter or has intelliged a manuscript of the property of the provide to an importance in considering the still the in granific to a beliefied. With also in granific to a beliefied, which also in granific to interest and the interest and int

turn upon the petty incidents of the day; and that a man who always preferred Plate to the less number of the Times should be as impossible as the monster who should always be talking about the True and the Beautiful, and never about his dinner. Pricedable with the mighty should are highly useful; but one great part of their value is that they enable us to find from interest in the contemptible living, and even in petty books as well as in petty talk.

BURLESQUE.

amount of success. Laughter pure and simple, involving an call supon the thinking faculties, bringing with it no after-thought of seriousness, is necessary to the happiness of collected humanity, and it seems that what is called burlesque is the most convenient means for attaining this end. There is in human nature a carbain element of childishness which delights in anything absolutely about and grotesque, the gratification of which appeals alike to the greatest and the smallest capacities; to the greatest as a rolled from the graver occupations of life, to the smallest because it is the realization of their idea of the humorous, and also because, in the laughter which moves both, they feel a bond of common sympathy between themselves and the greatest. Whether it is this grotesque absurdity, unadulterated with anything clee, or whether it is the alliance of this with some touch of deeper meaning, which abould lay claim to the proper title of burlesque, is a question which has been variously answered. In the plays of the greatest classical comic writer, Aristophanes, there was at least one quality which belongs of necessity to burlesque, that of impossibility. But in his writings there was also a biting sature, a keen comedy, at times a brilliant chaquence and an exquisite poetry, contrasting with the rolliching fun which has been thought to bring his productions within the rigions of burlesque. In these respects there is only one buglish writer of modern times, Pencock, who in any way resembles the great Greek author; and it is curious that when in Gryll Grange he attempted a direct imitation of Anstophanes, he was less like Aristophanes than at any other time. But the exquisite beauty of the songs in Maid Marien, the brilliant wit of the dialogue, the sparking grace of the descriptions, the overflowing merriment, and the elaborate incongruity of the marrative have a close kindred with specifical procupation, has shown the world how clever and how finished a burlesque ought to be, in his travesty of Donahoe; bu

Mus. W.

I thought your aim was but to make us laugh?
These who think so but understand me half
Ind not my thrice-renowned Huonas Thumb,
That mighty unite, make mouthing Fustian mun?
Is 'litturina's madness void of matter?
Bud great Bombastes atrike no nonzenes flatter?
When in his words he has not one to the wine,
When in his chaff there's not a grain to seize on,
When in his rhyme there's not a ray of reason;
Hus slang but slang, no point beyond the fun,
Burksque may walk, for he will case to run.

It seems as if Mr. Planché, in writing these lines, had be spired with the prophetic faculty up to a certain extent, for an it vents all the conditions capressed in them have been fallil od, except unfortunately that contained in the last line. The venus were appropriately spoken by the only exponent of burlesque upon the stags whose performances have deserved any real attention as works, not perhaps of art, but certainly of genius—Mr. Robson. The success of his representations would no doubt go to show that this method is seen at its best when the purely humorous is intermixed with some hint of pathos, even of tragedy. His manner of suddenly and without any warning awaking the deeper curotions of his audience by a word of real anguish, a look or a gesture of tranendous anger, gave great effect to the reckless absundates of speech and action which followed them almost before they were fully heard; and whether this commanding of the actual and the impossible belong to the domain of pure burlesque or not, it has for years been the means of conveying the productions of great minds to the world. It may be urged that humorar with a serious or pathetic undercurrent is the province of comedy, but in the case of comedy the undercurrent runs all through the work; and however much the reader or spectator may laugh, that will cling to him through all his mirth. In the cline sens, we have the sense of extravances are larger than Swift and Rebelgie have been added writers of the means of a stravances of the means of the means of a stravances of the means of the mea

vile buffoonery—take them both out of the category of burlesque writers. In both there are many passages that consist of absolute absurd humour, and probably a child or a savage reading Gulliver's Travels would derive no impression from it but that of wonder and amusement; but the mocking hatred that moves the author's pen will scarcely fail to strike the ordinary reader, and spoil his enjoyment with the bitter flavour which it casts upon all the broad fun of the writing. Burlesque, if burlesque it was, was a terrible weapon in the hands of Swift; and it is well for the peace of the world that the burlesque writers of later days are unlike him both in their views and in their intellect.

But burlesque has been always associated with parody to a great extent, and the fashion set by Scarron, the first burlesque writer of France, who wrote an elaborate parody of the Æneid,

great extent, and the fashion set by Scarron, the first burlesque writer of France, who wrote an elaborate paredy of the Æneid, has been followed largely in other nations as well as his own. And in many respects the fashion is a good one; the preservation of the exterior form of serious interest affords, by its strong contrast to the grotesqueness which it cloaks, far greater opportunities for fun than are given by the presentation of unmasked folly. It is within certain limits much more amusing to see acts of ridiculous extravagance performed by persons with whom respectability and gravity are associated than by a professed fool; the sense of surprise which is a necessary component of amusement is more readily and surely aroused by an obvious incongruity than by one which is and surely aroused by an obvious incongruity than by one which is led up to. This is the explanation of the never-failing laughter which is drawn, not only from children, but from elderly gentlemen, by the exhibition of a policeman in impossibly ridiculous situations in a pantomime. If it were necessary to study this character as a hitherto unknown thing before one perceived that his actions more sure of leaving with his profession, and he that his actions were out of keeping with his profession and be-longings, the discovery long in coming might fail to provoke mirth when arrived at; as it is, the joke strikes every capacity with instan-taneous force. Here again the element of childishness before spoken of comes into play, as it does even more notably in the so-called comedies of the Italians, who, amidst all their quick eleverness and picturesque versatility, have an almost infantile faculty of being amused to the acme of enjoyment with that which to the rest of the world appears singularly poor and dull. Many of the councilies which are groken of as attropuls with hy of the coincides which are spoken of as extremely witty by them will strike the English reader as being more like weak imitations of a Palais Royal farce than anything else, as being in fact a feeble kind of burlesque. The Palais Royal has for a long time been the especial home of one sort of burlesque—that which time been the especial home of one sort of burlesque—that which, attempting no special parody, relies upon an absurd and unheard of version of the affairs of everyday life to create amusement, which object it very generally attains. There seems now to be some chance of this style of entertainment ousting the so-called burlesque of the English stage, in which case it will have accomplished at least one good object. But it is doubtful whether English actors as a rule will ever understand that the true method of making people laugh at the sight of incongruous folly is to perform it, not with a laboured attempt at being funny, not with the aspect of one who is well aware that he is doing something very droll and wishes his audience to hold the same position of knowledge as himself, but with the air of one who has no sense of the inconsequence of his actions, and is convinced of their wisdom and utility. Probably if the tragedy in the Critic were convergented with the gracity and decorate by the actors converged represented with due gravity and decorum by the actors concerned represented with due gravity and decorum by the actors concerned in it, the effect would be extremely anusing; as indeed it is to a reader of the play; to a spectator, on the other hand, it appears overladen with forced bufloonery. But this view seems never to have occurred, of late years at all events, to the exponents of the piece. They have said to themselves "Here is something very comic; let us make it yet more so"; and in the attempt they have succeeded in extracting all the fun from it, and converting it into a progressitation of drawn footbeloness. Included business under its succeeded in extracting at the full from it, and converting it into a representation of dreary foolishness. Indeed burlesque, under its own name at least, has had but a sorry time of it on the English stage since the days of Planché and Robson. There has been a gradual decadence, a slow oozing out of all its attractive qualities. Whatever original meaning there was in the word, whether according to Mr. Planché's definition or to that of others, became small by degrees and hidoously less. for a long time a quantity of puns, songs, dances, and pretty dresses made up the elements of success to a burlesque. Then the puns grow less, which was a good thing, but so did the dresses. Now the British public is content so long as it can see its chiefs rendered ridiculous upon the stage, and rushes with delight to witness the antics of comic actors made up accurately to represent its public men—a device which, after all, is as old as the time of Cleon and Aristophanes. It is unfortunate that the resemblance between ancient and modern performances extends no further than this.

DEATH OF DR. LIVINGSTONE.

Livingstone will cause almost equal regret in Europe and in America. His career was watched with interest alike by subscribers to Christian Missions and by promoters of geographical discovery; and as he possessed rare capacity, natural and acquired, for his special work, it is to be feared that no successor to him will readily be found. He was born in 1816 of Scotch parentage, and he supported himself by manual labour, while studying languages, divinity, and medicine, to qualify himself for missionary work. In 1840 he want to Cape Town, and thence to missionary stations in the interior of South Africa.

After nine, years of ordinary work as missionary be began those

explorations which have made him famous. A good idea may be formed of what he accomplished by observing that, in maps compiled with the greatest accuracy thirty years ago, the interior of Africa north of the Tropic of Capricorn is more white paper. In 1855 he received the Gold Medal of the Geographical Society "for traversing South Africa from the Cape of Good Hope by Lake Ngami to Linyanti, and thence to the Western coast in ten degrees South latitude." He subsequently retraced his steps, returning from the Western coast to Linyanti, and then passing through the Portuguese settlement of Tete, he followed the Zambesi river to its mouth in the Eastern Ocean. He came to England in 1856, and returned to Africa in 1858 as leader of an expedition which discovered the Lakes Nyases and Shirwa, and explored the upper course of the Zambesi. Thus he reached the high watersheds that lie between the Lakes Nyases and Tanganyika, and established the fact that these lakes all on to ommunicate with each other. Thus a probability was raised that Lake Tanganyika, if it did not empty itself to the west through the region of Ocngo, must find an exit for its waters northward by way of the Nile. In 1865 Livingstone departed on his last journey to Central Africa, having for his principal object the exploration of the sources of the Nile. For several years only scanty details soft his movements reached his friends at home, and in the absence of knowledge speculation was always busy with his name. The "armchair geographers" invented and demolished theories until the subject became tedious. The desire for facts concerning Livingstone was answered from an unexpected quarter. Mr. Stanley, employed by the New York Herald, started from Bagamoyo, on the mainland opposite Zanzibar, in March 1871, and reached Ujiji, on Lake Tanganyika, in November, having traversed about nine degrees of longitude in 242 days. At Ujiji he found Livingstone, and having spent four mouths with him, he returned to Bagamoyo in May 1872, and sent the news to Europe a

leing explored as slowly as was the coast more than three centuries ago. The Lake Tanganyika extends from north to south over three hundred and sixty geographical miles. Ujiji is on the east side of it, and considerably to the north of its middle point. This place may be regarded as the head-quarters of Livingatone's explorations. He quitted it in June 1869, and crossed to the western shore. Fifteen days' march to the west brought him to Bambarre, an ivory depot of the country, called Manyema. Here, says Stanley, he was detained six months by ulcers in the feet. This statement conveys a clear idea both of his difficulties and of the perseverance by which he overcame them. When recovered, he set off in a northerly direction, and after several days came to "a broad lacustrine river," called the Lualaba, flowing north and westward, and in some places southward, in a most confusing way. The river was from one to three miles broad. He followed its erratic course until he saw the Lualaba enter the narrow, long lake of Kamalondo in about latitude 6° 30° South. Away to the southwest from Kamalondo is another large lake, which discharges its waters by a river called Locke into the Lualaba. To this lake Livingstone gave the name of "Lincoln," in memory of the murdered President of the United States. This was done, as Mr. Stanley was careful to inform his American readers, from the vivid impression produced on his mind by hearing a part of the President's inauguration speech read from an English pulpit. Continuing his way north, Livingstone traced the Lualaba through its manifold and crooked curves as far as latitude 4° South, and here he heard of another lake to the north, into which it ran. This was his furthest point, and he was compelled to return home to Ujiji, a distance of 700 miles. Mr. Stanley reported that when he visited Livingstone "that the wast size and volume of the river and its standy flow northward search to oppose that theory. The caristral comments which Mr. Stanley's mas show between the Laulaba the l

fir. Stanley makes, however, another supposition, that a large lish has to the east of the Albert Nyanza, and that thus a conscious is formed between the Lucksha of Livingatone and Fetherick's heuseh of the White Nile. "Suppose," he says, "we give this manulase lake a langth of 6° of intitude." By this manulase lake a langth of 6° of intitude." By this method we can suppose the rivers one. It appears that Livingatone afterwards turned his attention to discovering the source of the Lucksha, rather than to tracing it to its outfall. He had haved of four fountains, two of which gave birth to the Lucksha and two to the Zambesi. These fountains were supposed to lin to the south or south-east of Lake Tanganyika, between 11° and 12° S. lat. After discovering these fountains he intended to return to 4° S. lat. to the point where he parted with the Lucksha, and either trace its connexion with the Nile or ascertain that that connexion did not exist. It will probably not be long before the task of Livingstone is completed. It is comparatively easy to follow in a track once opened, and it is manifest that Livingstone depended rather too much on himself, and did not seek assistance which might have enabled him to carry out his plan. He had rare capacity for his task, and an enthusiasm which no difficulties could quench. But if we can find hereafter no such leader, we may employ more followers. It is to be feared, however, that the slave-dealer will not be far behind the missionary in the rich country which lies to the west of Lake Tanganyika.

Mr. Stanley and Dr. Livingstone together explored the Northern coast of this lake in a cance, and ascertained that no tributary of the Nile flowed out of it. They then returned to Ujiji, started thence on 27th of December, and reached Unyaneambe on 18th of February. At this place Mr. Stanley had a depót of stores, and found lotters which had been sent up from the coast. After parting with Livingstone he continued his journey to Baramoyo, which he reached on the 6th of May. He describes his journeys to and frowith great particularity, and we infer that he had health, vigour, boldness, plenty of meney, and willingness to spend it, and that with these qualifications he performed his tusk easily and completely. We ask why somebody did not do the same thing soomer, and it is difficult to obtain an answer. Mr. Stanley hurried to the coast under the impression that he was going to render important service to Livingstone by sending up supplies and men. But the result of his proceedings was, that the supplies which had been provided from England did not go forward, and thus Livingstone had to wait a long time before he could commence his last journey. We do not of course blame Mr. Stanley, because those to whom he spoke inferred from his words that they need not do all that they had been sent to do for Livingstone. But it seems rather absurd that the great traveller should have been in want, as he sometimes was, of a pair of boots. The comparison of Livingstone's journeys with the voyages of the small and ill-found ships which first explored the coast of Africa recurs to the mind vividly. But in the sixteenth century all ships were small and poorly furnished, whereas now we do whatever we undertake as a nation magnificently as regards expense. Mr. Stanley makes it only too clear that the chief thing wanted to "find" Livingstone was a judicious outlay of money in cloth and beads. We observe that it is proposed to bring down Livingstone's body to the coast, which shows that the difficulties which he encountered in travell

The country which he with so much difficulty explored to the west of Lake Tanganyika would become accessible if we had a good base of operations at Ujiji. The character of Livingstone may have had something to do with the slowness and insufficiency of the efforts made to assist him. Those who do not ask shall not have. It is painfully evident, now that he is lost, that we did not make the most of his unrivalled talent as an explorer while we had him. He had served a lifelong apprenticeship to his work, and he seems to have possessed every branch of knowledge necessary to useful travelling. The interest which his labours have created in the geography of Central Africa will probably cause them to be completed at an expenditure far greater than would have enabled him to attain success.

SCOTCH LOYALTY.

I is quite clear that the Scotch, though they have their grievances, and like to grumble a little now and then, are as far as possible from seeking the cold comfort of a Republic. The tremendous outburst of loyal enthusiasm which filled, or rather overflowed, the Scotesson of Saturday last presents a curious contrast to the temper of the same country when "the wee, wee German lairdie" was an object of patriotic aversion and contempt. The Duke of Edinburgh is not only a descendant of the detested lairdie, but one of these days he will be a German lairdie himself. The Scotch, however, are determined to see in him only the Duke of Edinburgh, and to stand by him as a countryman. The title links the capital of Scotland with the Royal Family, and that is enough. The Duke is their own duke, in spite of Saxe Coburg looming in the distance. There is something very amusing in the walk-mass for the Jacobites with commissioners loyalty to a rule under which the Scotch have contributed to combine a sentimental weak-mass for the Jacobites with commissioners loyalty to a rule under which they have found themselves very well off. Six Walter Meet's romantic preposessions for the fallen more did not prevent

him from toadying George IV. when he visited Edinburgh in the most abject manner, even to posteting the wineglass which that august prince had put to his lips, and which afterwards the post hid the misfortune to ait down upon. The general absurdity of the reception culminated in the lease at which the representative of the Hanoverian dynasty appeared in a Highland kilt, which had formerly, as Macaulay remarks, been regarded as the dress of a thief. The dress which is usually worn by Caledonian patriots of theatrical tastes, under the impression that it is the old national garb of the country, was in fact invented by an English Quaker, who, when making reads for General Wade, was shocked by the sight of the Highland labourers, when heated, throwing off the long belted plaid or blanket which was their only garment. The Englishman divided the plaid into two separate articles of attire, and, in order to set the fashion, wore them for the first time himself. The Scotch have now adopted the Duke of Edinburgh pretty much as they adopted the Quaker's kilt, just because it happened to suit them. It does not appear that kilts were generally worn at the gatherings which took place in honour of the marriage of the Duke of Edinburgh; but it is evident, from the tone of the speeches which were delivered, that our Northern countrymen had made up their minds that the Duke, though not a Scotchman, was in some way peculiarly a Scotch possession, and that his marriage concerned them much more than any other part of the kingdom. It must be confessed that, as far as rejoicings went, the rest of the kingdom rather fell in with this view; for, except in Scotland, the day passed off very quietly. The general illumination which was expected in London somehow did not take place, and the few scattered jets of military Clubs and pushing tradesmen only made the general darkness more significant. Everybody of course hopes that the young couple will be happy, but the extraordinary national importance of the

match has not been discovered in the South.

The South are sometimes called a cold and calculating race, but it is impossible not to be struck by the glow and fer but it is impossible not to be struck by the glaw and fervour of the rejoicings which are described in such slarning detail in the Scotsman, so as to make even Mr. Gladstone's "prolix narrative" in the same issue look brief and pithy. There were indeed some places where the inhabitants were backward in their loyalty. In Auchterader, we are sorry to see, "business was carried on as usual." At Ardrossan "there was little illumination, except that afforded by ordinary gaslight, and the window-blinds being thrown up." At Coldstream the inhabitants pulled up their blinds "at the request of the magistrates." At Galashiels there were "no public manifestations of rejoicing," but "a number of private parties held social réunions," which we fancy happens not unfrequently there, and may be taken as number of private parties held social réunions," which we fancy happens not unfrequently there, and may be taken as a fine way of referring to whisky and hot water. "Little notice of the event was taken at Wigton," but "at night the youth of the event was taken at wigton, but "at night the youth of the town extemporized fireworks, which the constabulary vainly tried to prevent." An enterprising reporter who was despatched to Glasgow could find there only "a limited display of flags," and "no private illuminations except a brilliant star over a café door in Buchanan Street and some Chinese lanterns in the window of a toyshop." As a rule, however, there seem to have been illuminations, bonfires, torchlight ever, there seem to have been illuminations, bonfires, forchlight processions, and a great display of flags all over Scotland. There were also what are called banquets; but Caledonians, like Gilpin, even when on pleasure bent, have still a frugal, mind; and the banquets appear to have been of an elegant and inexpensive character. Interary magnificence is cheap, however, and has been liberally laid on in describing a glass of sherry and a bun as "a banquet of cake and wine." At Inversitation, the treatment of cake and wine. At Inversitation, the treatment of cake and wine. so the Provost and magistrates manfully paid for their "cookies" out of their own pockets. At Dunso, instead of a cake and wine banquet, there was "a fruit conversazione," whatever that may be. At Edinburgh there was a variety of entertainments. "The presence of numerous youngsters released from school gave to the streets somewhat more than their wonted animation." The church bells were rung, but those who have ever heard the bells of Scotch churches will be disposed to think their dismal knell more appropriate to a funeral than a wedding. Edinburgh, being the capital of Scotland, never forgets its dignity, even in moments of wildest excitement; and "in the early part of the day people went about their avocations as usual." At one o'clock, however, "a buzz of excitement was occasioned by the assembling of the distinguished company," who, "to the music of a Volunteer band, partook of cake and wine" in the City Chambers. The Lord band, partook of case and where in the trity channels. The large Provost, in proposing the health of the Duke and Duchess, was statistically eloquent, after the manner of McCrowdie, about the greatness of Russia. There is, it seems, a Russian river more than two thousand miles long, and he could hardly get over it. The idea of Scotland being connected by marriage with a country that had a river two thousand miles long was an event which filled him with patriotic pride. But, with an eye apparently to the Princes Street hotelkeepers, the Provost suddenly descended into the more immediate commercial aspects of the alliance. It would, he expected, bring a great many Russians to Edinburgh, and the more the people of Edinburgh knew of the Russians, the more they would the people of Edinburgh knew of the Russians, the more they would love them; for, as he might have added, they are not afraid of long bills, and always pay without grumbling. There was a public breakfast in the afternoon, and in the evening a "people's demonstration" in the Corn Exchange, where the company on going away each received a bit of wedding-cake. It is perhaps not supprising that the greatest burst of eloquence should have been

reserved for after dinner. A grave Judge got up to declare that "the glory and blessedness of this event is this—that it not only "the glery and blessedness of this event is this—that it not only bridges space, and mingles the waters of the Neva and the Forth, but it obliterates distinctions of personal, national, almost of social, kinds, and makes all blend—people, rich and poor, great and small, blend their voices and their sympathies in one great wave of delight and sympathy." And, floundering out of the wave, his lordship plunged, perhaps unconsciously, into poetry:—
"And he takes the Duchess by the hand, and claimeth for his lady-love the Princess of that land; he esteems that wedded hand less dear for sceptre than for ring, and deems her uncrowned womanhood to be the royal thing," At this meeting, instead of tosats, there were resolutions, which were proposed and secondary and put to the vote in the most formal manner. At night there was an illumination of the city, which must have been very beautiful; and we certainly campot wonder that the inhabitants should seek as many occasions as possible of witnessing such a should suck as many occasions as possible of witnessing such a noble sight.

There is no reason why our friends in the North should not regale themselves with "cake and wine banquets" and "fruit conversaziones" as often as they have a mind to do so; but it is at first sight difficult to understand why they should have worked thomselves up into what the Lord Provost of Edinburgh called a "fervont exhibition of loyalty" on such an occasion. No doubt the Duke, though born at Windsor, and heir to Saxe-Coburg, is the Duke of Edinburgh, and St. Andrew is a highly-respected Saint in Russia as well as in Scotland; but this is hardly enough to account for a grave people being seized by such a paroxyam of romantic enthusiasm. The secret, we suspect, is that, although Scotland is now as thoroughly incorporated with England as any English county, and appreciates and values the connexion in the highest degree, there is still a strong feeling of separate nationality in the country which demands expression. The demonstrations in honour of the Duke of Edinburgh, as in some sort of way a Scotch prince and the private property of Scotland, are the nearest approach that can be imagined to Scotch Home Rule; and they are a very innocent expression of the national spirit. The Scotch, although they are, as far as language, social habits, and even laws go, sub tantially the same people as the English, are yet very different from them in many respects. They have their own way of looking at things, and they have also moral and mental qualities which are in a great degree peculiar to themselves. And it is no doubt a in a great degree peculiar to themselves. And it is no doubt a very good thing that these differences should exist, and that Scotchmen should continue to maintain their characteristic judividuality. It is quite true that the Lowland Scot is of the same stock as the English, but he has been brought up in a very different way, and the sustained discipline of education kept up for several way, and the sustained discipline of education kept up for several generations has made a very different man of him from what the ordinary Englishman is. Large numbers of young Scotchmen cross the border every year, and compete with the Germans who are established here, and of whom we have heard so much of late, on their own ground. They work hard, live thriftily, and are glad to get small profits when they cannot get big ones. In this and other things the Scotch keep up a character of their own, and it is very well that they should do so. A variety of character y in different parts of the kingdom is not only more cheerful than a y flat, monotonous uniformity, but is also an important element of Imperial prosperity. The pretexts which are chosen for the Imperial prosperity. The pretexts which are chosen for the exhibition of Scotch nationality may sometimes be absurd enough, but the nationality itself is genuine and should not be ignored.

MONZA.

THE Kingdom of Italy is at this moment a fact, but it is hard, even in Italy itself, to take in the truth that it was a fact in ages long past as well as in our own. The world in general finds it hard to understand that Victor Emmanuel is not the first King of Italy, or at all events that Napoleon Buonaparte was not the first and Victor Emmanuel the second. And, as usual, the popular notion has some truth in it; like most popular notions, it is a half truth. It is certain that there never before was a Kingdom of Italy with exactly the same titles and exactly the same boundaries as the present one. By an odd chance, Victor Emmanuel really is the first King of Italy who, as King of Italy, has reigned over the land which first bore the name of Italy. That name, as every scholar knows, was first given to a small part of the late Kingdom of Naples or Sicily; and though several Kings of Italy—Henry the Sixth, for instance, and Charles the Fifth—have also been Kings of one or both Sicilies, yet Victor Fannanuel is the first King of Italy who has held either of the Sicilies as an integral part of the Italian Kingdom. On the other hand, a land which was not counted part On the other hand, a land which was not counted part of Italy till a comparatively late time, a land which was not yet Italy when thesar marched to Ariminum, became in another stage Italy when thear marched to Ariminum, became in another stage the specially Italian land, the seat of the Italian Kingdom, the theatre of the earliest life of the Italian Commonwealths. For some centuries Lombardy was the truest Italy, and, oddly enough, ages after it was one part of the old Lombardy which formed the groundwork of the sham Italian Kingdom of Buonaparts, as another part has been the groundwork of the real Italian Kingdom of Victor Emmanuel. Whenever there has been a King of Italy, he has been as continuation of that Lombard Kingdom from which Charles the Great did not disdain to take preparate title.

glory of the Italian comm plays of the Italian communication and the shame of the later Italian principalities, the measury of the true Italian Eingdon line almost died out. Lattle more than a name as it was for many ages, it had few associations to set against those of the rival phases of Italian history. It is therefore perhaps in some such not unfit that the house and seat of this almost shadowy kingdom, the "head of Loubardy," the "first place of the Crown of the Italian Kingdom," should be found on a spot which has but small claims to fame except on the ground of its being the home of the symbol of Italian kingship. The King of Italy, as King of Italy, has his special seat in a place which has fly disting the rank of a city, which can show no remains of classical satisfulty; whose name is not mentioned in classical history, and which, on the other hands plays no part of the least importance either in the communal, the ecclesiastical, or the dynastic history of later times. Modestia, Monza, Terra de Modostia, is the seat of the old Italian kingship, and it is nothing else. mwealth and the

and it is nothing else.

The Kingdom of Italy, at least in any reign before the present century, must be looked on as a Teutonic kingdom. The idea of such a kingdom could not arise till the eld notions of the Empire had been greatly enfeched by the Teutonic invasions. It was a kingdom first Lombard, then Frankish, then claimed of right by the prince who was chosen to the German Crown. It was only during the first half of the tenth century that the Crown of Italy was worn by princes who, though doubtless of Lombard or other Feutonic descent, could at all claim to pass as native Italians. For such a kingdomas this Monza was a most fitting seat. Its very existence in earlier times may be doubted. At all events it could have been a place of no moment whatever till its site attracted the discerning eye of the great Goth. Theodoric, not indeed a King of Italy, but a King reigning in Italy, was the fitting founder of the future home of the Italian Crown. The Lombard Paul tells us how he built himself a palace at Modicin-seemingly the eldest of the endless spellings of the name—on account of the healthiness of the air in a spot so near to the Alps. We can bear our own witness to the wisdom of the great King's choice from a personal experience that, when it is cold and foggy at Milan, so foggy that the great cupola of Santa Maria. della Grazia cannot be seen by one standing just below it, the half-hour's run which carries the traveller to Monza carries him. to a spot where all is clear and warm and sunny. One almost wonders that the spot was not lighted on in the age when Milan was the dwelling-place of Emperors; but, as far as we know, Theodoric was the first to make the spot, if not a dwelling-place of man, at any rate a dwelling-place of Kings. If Ravenna can show his church and his tomb, if Verona can boast of having inseparably yoked together her name with his, lowlier Monza in one way surpasses both of them as being his own creation. The one way surpasses both of then as being his own creation. Insecribing the certain notice of the place is an incidental mention in a letter by the contemporary Ennodius, flishop of Pavia, who complains that "Martinus, conductor de Moditia," was doing wrong to a blind woman, and speaks of his "rustica temeritas," which looks as if the house of Theodoric was not a city pelace, but a country seat. Moura then was the work of the Goth; but the glory of the Goth shone only for a moment; the continuous history of Monza begins with the more lasting dominion of the Lombard. At Moaza, as elsewhere, the more of the Arisu was wiped out, and local devotion gathers round the second foundress, the famous Queen Theodolinds. The local chronicle records indeed the earlier work of Theodoric, but the legend which that chronicle preserves, which represents the Queen as converting her husband Agilulf from the worship of idols, evidently looked upon Monza as a site which before her time stood desolate. She vows to build a church—an oraculum—to St. John the Baptist, and a miraculous voice causes her to build it on a spot where before there was only a great tree; and as the voice said "Modo," and the Queen answered "Etiam," the name of the place was called Mododia. And when we remember how of the place was called Modosiu. And when we remember how Theodoric is dealt with by the sculptor's art in the great minster of his own Verona, we can hardly wonder that he should be forgotten in his own Monza. Theodolinda stands by herself. When we read of the Bavarian Princess as "filia Garibaldi," then mame seems to carry us from the earliest age of strictly Italian history to the latest; and her two romantic marriages, allowed as she was to carry the Lombard Kingdom as her dower, her missionary zeal for the Orthodox faith, her friendship with the great Gregory—if these things really do not put her on a level with her Gothic predecessor, they may at least have easily made her more dazzling in local eves. She built the palace of whose painted orhaments the Deacon Paul gives so vivid a picture; how in his day could still be seen what manner of men the Lombards were in her day, and how, among other points of costumes and manners, her day, and how, among other points of costumes and manners, they were inner garments, loose and of various colours, "qualia Angli Saxones habere solent." She too founded the great church of Monza, the Basilica or Oraculum of St. John, which we would of Monza, the Hasilica or Oraculum of St. John, which we would gladly see in such sort as the famous Queen left it; not an episcopal church, but only a chapter of secular canons. The fame of the foundress and the riches of its treasury put it almost on a level with churches of higher rank, and the chief of its canons, the Anthoresbyter, bore, like our mitted abbots, the episcopal imagnia, and asserted, at least in theory, his right to perform the most densiting of episcopal functions. The treasury, as every visitor known, the tains, among its other wealth, the comb of Theodolinds, her gilt been and chickens, and the manuscript which an Englishman looks on with reverence, and feels in no most to doubt as critical and the sery handwriting of the aposition of the manuscript which are recorded in the year 1300, will probably flass to limit less alternation.

the that his acceptable Ret a glance may will be given, if to soliday disc, to the capitals made up of strange groups of luminal thick shared with a line of Kings who were also Emperors, the shared with a line of Kings who were also Emperors, the stall of Deser books over the church of House consists largely of the aking away and bringing back of its precious treasures, a process which happened more than once. The last taking away and bringing back of its precious treasures, a process which happened more than once. The last taking away and bringing back of its meet precious treasure has happened in our own day. The great possession of all of which Monsa boasts itself, after an Konstan capitality harmily not lone enough to be called Babyloniah. estricus captivity happily not long enough to be called Habyloniah, as come safe back to its own place, and is still kept with all werence in the church of Theodolinda. Since the freeing of two comes in the church of Theodolinda. Since the freeing or two countries and Verona, Italy has again got back the Orown of her Kings, the funcous from Grown of Monza. We almost tremble as we speak of this venerable relic, lest we should anyhow get wrong between the Iron Orown and the Orowns of Agilulf and Theodolinda, all of which are engraved together by Muretori, a illustration of the text of Paul the Deacon. Then too it is somewhat fearful to find the great Italian scholar casting to the winds the legend on which Mona has for ages dwelt with delight. fothing is more certain than that the Iron Crown is so called, not because it is made of iron, but because a rim of iron is wrought in the inside of the circle of gold and jewels. This rim of iron the local legend believes to have been made out of one of the nails of the Orncifixion. Against this belief Muratori argues with great force. If the story were really of early date, the local historian of the fourteenth century, Bonincontro Morigia, would surely have said something about it. Bonincontro has weight surely have said something about it. Donincontro has wise reasons to give us why the Crown should be of iron; iron is the strongest and hardest of metals, and rules over all other metals; so an iron crown rightly expresses the strong justice of the Emperor who reigns over all things earthly. It expresses too the greatness of the church of Monza, the noblest spot in all Lombardy, as Lombardy is the noblest district in all Italy. Surely, Muratori argues, if this writer had ever heard that the Crown contained so hely a relic, he would never have been driven to such arguments as these. He argues further against a certain to such arguments as there. He argues further against a certain Archbishop who was shocked at his disbelief, and who defended the genuineness of the relic on the ground that Matteo Villani spoke of it as a "holy crown"; for he says, first, that any crown, as being used in a religious ceremony, may be called holy; and, secondly, that there was a mistake in the text, the abbreviation which Matteo meant for Seconds having been mistaken for Seconds. "Seconds having been mistaken for Seconds." Seconds Corona" is a regular name of the Iron Orown of Monza, as it was in due order taken after the Silver Crown of Aachen, and before the Golden Cown of Rome. But, as usual, the arguments of outsiders have not much weight when the honour of a local relic is concerned, and Monza believes in the sanctity of the Iron Crown as if Muratori had never written. The Crown is shown to the stranger for the proper fee, but it is shown only with much of religious ceremony, with bending of knees and burning of incense; and, setting the religious legend saide, the horeic visitor is not chined to show some extra reverence to a Crown which had rested on so many illustrious heads, dashed perhaps a little by the thought of the sham coronations of the elder Buonaparte and of an Austrian Archduke still, we believe, living, though retired from We seem to come nearer to a past world as we look on the badge of dominion, not only of Charles and Otto and Flenry and Frederic, but of Kings older still, of the people who first estasd a lasting Teutonic dominion on Italian soil.

That the Iron Crown is at home at Monza, as the Bambino is at Rome is the church of Ars Celi, no man has ventured to doubt. The question is, whether the Iron Crown ought ever, like the Bambino, to go out to meet its votaries, or whether its votaries should not always come to it. On the walls of the church of Monza may be seen the names of the four homourable men who carried the Crown to Bologna for the crewning of the last Reman Emperor and King of Italy. But that journey at all events is no precedent. Charles the Fifth took his degrees in an irregular way by accumulation. He did took his degrees in an irregular way by accumulation. He did asservabing in the wrong place; if Bologna is not Monza, neither is it Home. But how stands the case between Monza and the neighboring metropolis? That is a point on which Monza and Milan the Archopresbyter and the Archbishop, have always held different views. Milan helds that the King should be crowned by the Archbishop in the church of St. Ambrose; Monza holds that King and Archbishop are bound to come to Monza for the commony, and that, if the Archbishop will not come, the Archymalyter has a full right to crown the King without him. There are undoubted precedents both ways. It is certain that several Elings have been crowned at Monza and several at Milan. Frederick Barbaroses, for instance, was undoubtedly crowned at Monza. But Barbarossa, for instance, was undoubtedly crowned at Menza. But when the men of Monza carnestly prayed Heavy the Seventh to come to be crowned in the right place, Miller got the better of them. Monza, we must think, somewhat westers our segment by esserting a distinct Modestian essention, which sounds to us not a little legendary, for several Kings which containly were crowned at Miller as well. On the other hand, we think that Mr. Tylor would argue that if Miller were the right crowning place, the Crown would argue that if Miller were the right crowning place, the Crown would argue that if Miller were the right crownsing place, the Crown would argue that if Miller were the right crowns ing place, the Crown would argue that if Miller were the right crown Miller, while great Miller could easily mercech on the rights of little Monza. Little Menza could never encrosed on the rights of little Monza. We have see all regument of our own, essentialing which, if known is to be given to the more worthy, we have no doubt as to adjudging the prime to Manza rather than to Miller. cheroese, for insta ce, was undoubtedly crowned at Menza. But

The dispute his between the church of St. Ambrowest Miles; and the church of St. John at Menn, both of which chigh; the cause honourable title of Oransian. Now we gote for Minna on the ground that the church of St. Ambrose him fallen into that state which collesiastical writers are fond of calling, by a kind of technical term, "spelunea latronum." Alike at St. Ambrose and at St. John you cannot see the chief wender of the place without a payment of five france; but at St. John's, when you have paid your money, you do see the sight, while at St. Ambrose the payment is exacted in full, while the sight to only allowed in part. Pay your five france at Monza and the Iron Crown is with all colemnity lowered from its height and set before you. Pay your rey your nee trance at Monza and the Iron Crown is with all solemnity lowered from its height and set before you. Pay your five france at Milan and you are cheeted out of the best part of the show. That show is that wonder of the goldsmith's art; the glided high altar, which claims to be of the days of Lewis the Second. Of this splendid work by far the most interesting part is the eastern face, where the whole life of the Saint is wrought in heaten cold. In November 1871 when the autonomer man and this beaten gold. In November 1871, when the money was paid, the whole might be seen. By November 1873 a backetiding had taken place, like that which happened at Westminster in the year which followed the year of the Great Exhibition. Three sides were shown, but not the great side of all. When the three had been looked at, the surpliced guide hinted that the show was ever and that the time for the fee was come. There was no more to see. When this palpable falsehood was found not to go down with those who had seen the fourth side two years before, then the key was lost, the lock was broken, this and that was in the way; altograther the show was to be shorn of its best part, but the lee was to be paid all the same. We may doubt very much whether the himperor Lowis and Archbishop Ansbert meant their altar to be shown for money to strangers and possible heretics. We may be sure that they did not mean that people should pay for seeing it and not

On these grounds, whenever the King of Italy chooses to take On these grounds, whenever the King of Italy chooses to take his Crown, we vote for Monza as his crowning-place. Hesides the Oraculum there is not much to see in the city. There is a town house called the Broletto, a rather striking building of the thirteenth century; but the communal history of Monza is not great. We might almost think that it was an open town till the fourteenth century, as we find that between the years 1334 and 1336 the "Terra do Modostia" was strongly fortified by Azzo Visconti. It had stood a siege about ten years before; but then it was defended only by a disch and a "nalaryeque", which then it was defended only by a ditch and a "palangatum," which we take to mean a paliside. Of course the "Torra" had its ancient and noble families, some Guelf and some Chibelline, but, as a whole, the municipal history of the place does not go for much. It is the crowning-place of the Italian Kingdom, or at least the dwelling-place of its Crown, and it is nothing more. We may add that one somewhat irregular coronation, that of Conrad the Third as opposition King to the Emperor Lother, was done in a somewhat irregular place—not in the Oraculum of St. John, but in the irregular place—not in the Oraculum of St. John, but in the lesser church of St. Michael. He heard mass however at St. John's, and was presently crowned afresh, or at least wore his crown, at Milan.

Why the Crown of Monza should be said to be, as it is by the local historian, "super Italiam, Normandiam, et Saxoniam," we do not at all understand.

CHURCH LEGISLATION IN GERMANY AND SWITZERLAND.

TIHE speakers at St. James's Hall on Tuesday last appear to have acted, with laudable discretion, on the significant hint supplied conjointly by Lord Russell, Dean Stanley, and Mr. Karl Blind. They carefully refrained from meddling with those details of Prussian legislation" which their distinguished advisers, civil and occlesiastical, consider so irrelevant; and perhaps it would hardly be uncharitable to assume that, with the exception of one speaker, whose speach alone betrayed any real acquaintance with the professed subject of discussion, they know that the professed subject of discussions are professed along the professed subject of the profes very little about them. However, we have expressed elsewhere our opinion of the Protestant meeting, and need not return to it here. Our present concern is with some of those "details" which to homely people who adhere to the hundrum and confessedly unronuntic method of forming their judgment by a reference to facts may appear not without importance. The programmes of three new schemes of ecclesiastical legislation are now before us, having new schemes of ecclesiastical legislation are now before us, having appeared within the list few days in the Gorman papers. We have the Hills supplementary to the Faik laws of last May just laid before the Prussian Landtag, and expected to be at once read for the first time, and referred to a Commission; the Bills introduced by the Austrian Government; and the laws just passed by an overwhelming majority of the Executive Council of Berna. There is, as might be expected a attenue family likeness between There is, as might be expected, a strong family likeness between these perions schemes of legislation, or at least between the Swiss and Prussian, but each case has its own peculiarities. The German Liberal press commends all alike as fresh triumphs of civil and religious liberty, and it is chiefly under this aspect that we desire to call attention to some of the "details" here. For we must confess ourselves too duli clearly to apprehend that grand corties ourselves too dust clearly to appreciant that grained way of looking at things which regards a code of laws en blue quite independently of all its component parts. A policy which on the whole is liberal and enlightened, although its particular enactments happen, when examined apart from their supposed general intention, to be persecuting and vexations, appears to us mather too like that perplaying combination or "a miserable simure.

in general with a saint in all the details" which pussled Hannah More's Coalebs. Ultramontanism may be a very mischievous system, and Papal infallibility a demonstrable falsehood; it may also be true that the conduct of the German bishops since the Vatican Council has been cowardly, shuffling, and disingenuous. Against all this we have nothing to say, except that it is not really to the point. Mormonism is more objectionable than Ultramontanism, and Spiritualism, which in America has become a form of religious belief, is a stupid and pernicious delusion. But it does not follow that all and every means of suppressing them should be regarded as legitimate. There may be cases when any stick is good enough to beat a dog with; as, for instance, if the dog is mad; but there are differences even among dogs, and human consciences can hardly be treated as canine.

instance, if the dog is mad; but there are differences even among dogs, and human consciences can hardly be treated as canine.

We will take first the proposed supplement to the Prussian ecclesiastical legislation of last May, on which our opinion has been already more than once intimated. It deals chiefly with the administration of dioceses during a vacancy of the See; and the practical importance of the subject will be obvious when we bear in mind that the see of Fulda is already vacated by death, and that several prelates, beginning with the Archbishop of Posen, are likely soon to be deprived by the new Supreme Court, while it is quite certain that no bishop in communion with Rome can accept the vacant place on the conditions now imposed by the Government. The proposed verulations therefore, if passed—as of course the vacant place on the conditions now imposed by the Government. The proposed regulations therefore, if passed—as of course they will be—cannot be expected to lie dormant. One diocese after another in pretty quick succession will be brought within their scope either by death or deprivation; and it is worth noting, further, that their action is to be retrospective, and will thus at once apply to the diocese of Fulda and any others that may be already vacant at the time of passing the Bill. The most important provisions are as follows:—Any one appointed to administer a diocese, sede vacants, is to give notice in writing to the Chief President of the Province, stating his qualifications and his readiness to take the oath of allegiance prescribed by law—the same, apparently, which is now prescribed to bishops, and which no Homan Oatholic ecclesiastic can be expected to take. The President can raise objections to the nominee of the Chapter before the new Ecclesiastical Court within ten days from receiving this notice. If no objections are raised, or if they are overnew Ecclesiastical Court within ten days from receiving this notice. If no objections are raised, or if they are over-ruled, the administrator is to take the oath, and any one exercising episcopal functions, or acting as the official of a deprived bishop, before complying with these conditions, is subject to imprisonment for a period varying from six months to two years; and any clergyman recognizing or obeying such efficials is liable to a fine of 100 thalers, or a year's imprisonment, which may be extended to two years if he has himself discharged any delegated extended to two years if he has himself discharged any delegated episcopal function. An elaborate series of provisions is made for the fiscal administration of vacant sees, of which the substance is that the Chief President is to direct the Chapter of the diocese to name an administrator; and if a properly qualified person is not appointed within fourteen days, the Minister of Worship appoints a Commissary to take charge of all the diocesan funds, and is authorized to stop the salaries of the recalcitrant canons. Then follow directions for filling up benefices during the vacancy of the see. The patron is to appoint, if willing, and if he fails to do so, after two mouths, his rights lapse to the parish. A meeting of adult male parishioners is then to be called, on the requisition of any ten of them, and the parish priest elected by a majority of votes, on complying with the conditions prescribed in the May laws, will at once enter on his office. These regulations are no doubt strictly cononce enter on his office. These regulations are no doubt strictly consistent with the code which they are intended to supplement. As far as one can see, the deadlock is now made complete, and the whole ecclesiastical action of the Roman Catholic Church in Prussia, diocesan and parochial, must within a limited period be brought to a standstill. Conditions had already been imposed on the bishops with which it was known that they would not, and without breaking with Rome altogether could not, comply, and thus their ejection from their Sees became a mere question of time. The their ejection from their Sees became a mere question of time. The supplementary code provides effectual means for their having no successors or representatives whom the Roman Catholic clergy can recognize, and for no incumbents being appointed to vacant benefices who are not independent of both episcopal and Papal jurisdiction. There is a cynical pleasantry in calling this legislation an advance of civil and religious liberty. If the Catholic clergy in Prussia are disloyal and dangerous to the State, that may be an excellent reason for disestablishing them, and indeed Mr. Karl Hlind told us the other day in the Times that disestablishment was the proper end and outcome of Liberal policy, but we must remember that "Rome was not built in a day." And the Allgemeins Zeitung in Eke manner observes that the present legislation may not be all that could be desired, but "the separation of Church and State is an idea not yet ripa" for application. Be it so, but it does not follow that you desired, but "the separation of Church and State is an idea not yet ripa" for application. Be it so, but it does not follow that you are justified in "walloping your own nigger" to your hearts content because the time has not yet arrived for expelling or emancipating him. A husband may have good reasons for desiring to separate from his wife, but if some delay is necessary before giving legal effect to his wishes, he would hardly be entitled to beat her every day, en attendant, as long as she remained under his roof. And that is pretty much what the Liberal plea for Bismarck's Church policy comes to. Disestablishment, it is argued, would be the best thing in itself—not that we feel at all sure that this is Prince Bismarck's own view—but, for certain reasons not very clearly explained, disestablishment is not practicable just at present in Prussia; and the next best thing is persecution.

closely akin to the Prassian, that this spology, evidently intendant to cover both cases alike, is put forward in the Allgander Leitung. And it proceeds to comment on this "interesting attempt" to settle ecclesiastical difficulties by distinguishing the inner and spiritual life of the Church, which is subjected to the State. If this means that individual members of the Church are not persecuted in Germany and Switzerland for their opinions, that is true enough, but hardly to the point. When once religious belief takes a corporate form and embodies itself is a community or Church, its "inner life" cannot very well be carried on without some outward expression. And accordingly toleration has been understood in modern times to include not only toleration of abstract opinion, but of religious organization and worship. And this is exactly what these Liberal codes interfere with at every turn. The new laws just enacted at Berne place all Catholic and Protestant parishes in the canton on the same footing. Each is toelect its Hyarrer by a majority of the votes of parishioners over twenty-one years of age, and the person so elected, if approved by the civil authority and ready to comply with its requirements, becomes at once parish priest, without any collation of the bishop, which has been "set aside," we are informed, "without any prejudice to canonical rights." There is also to be a Catholic Church Commission formed on the same plan as the Evangelical Synod, for purposes of general government; no episcopal edicts can be issued without the Government placet; and the laws provide for the erection of a Faculty of Catholic Theology at Berne. We have not the actual text of these enactments before us, and they are not perhaps so stringent and sweeping as Prince-Bismarck's, but the general resemblance in their drift and tendency is obvious enough. If the great body of Swiss Catholics approve of them, there is of course no more to be said; only it would have been a much simpler and safer plan to dissentabilish the Church fir

Parliament had undertaken to expurgate the formularies on ultra-Protestant principles before turning the Church adrift?

The draft of the ecclesiastical laws to be submitted to the Austrian Reicharath is more reasonable; but it is evident that a great deal will depend on the manner of carrying them out. It is perhaps a point in its favour that the Austrian Liberals are said not to be satisfied with the programme. The Concordat is finally abolished, but there is no provision for civil marriage; this is probably held to be rendered unnecessary by the proposal to accord State recognition, under certain conditions, to such dissenting communities as apply for it. There is no direct reference to the Old State recognition, under certain conditions, to such assenting munities as apply for it. There is no direct reference to the Old Catholics, and it is left uncertain whether their petition—again brought forward the other day—to be recognized for all civil purposes as members of the Catholic Church is to be complied with or not; it would clearly be within the competence of the Government, and would be only consistent with former public declarations of Herr Stremayer, to grant their prayer, and serious practical inconvenience, as regards marriages and other official acts of Old Catholic priests, has resulted from the undecided attitude of the Government on the question. The qualifications of citizenship and moral conduct are to be required for all ecclesiastical offices, and where the patronage lies with the bishops, the local magistracy are empowered within thirty days from the appointment to a benefice to submit objections to the Minister of Worship; if they are over-ruled, institution follows. The bishops are to ment to a benefice to submit objections to the Minister of Worship; if they are over-ruled, institution follows. The bishops are to notify their appointments to benefices to the civil authorities, and criminal conduct of incumbents will be followed by deprivation on the part of the State, if the bishops do not themselves. All episcopal manifestoes, orders for special services, pastorals, and the like, are to be submitted to previous inspection. There are sundry regulations about "stole-fees," and other financial details, and a law regulating the Catholic Faculties of Theology is promised. No new congregation or monastic community is to be established without Government authorization, which the bishop must apply for through the local authorities to the Minister of Worship, and which may be refused on civil or moral grounds, or as inconsistent with public order; and the State reserves the right of inspecting the statutes of existing on civil or moral grounds, or as inconsistent with public order; and the State reserves the right of inspecting the statutes of existing religious corporations and abolishing them for sufficient cause. It is clear that very much is left here to the decision of the Government for the time being, and everything would depend in practice on the spirit in which the new laws were actually applied. Some regulations, such as the obligatory notification of all appointments to benefices to thecivil power, look meddlesome and vexatious; but there may be special grounds for them in the circumstances of the country. No such plea can excuse the minute interference with every detail of Church opponization and life in the Falk legislespecial grounds for them in the circumstances of the country. No such plea can excuse the minute interference with every detail of Church organisation and life in the Falk legislation. It had become necessary, we are assured, to discover some new modus evends; but this is a method for ultimately extinguishing ecclesiastical life altogether. If it is consistently carried out, Catholicism will not simply cease to be an established creed, it will cease in fact, though not is name, to remain one of the lease religious of the Empire. There is something childlish and offensive in the shrill falsetto of the Ultramontane Jurnals about the return of the age of Diorietian, but the Prussian Government seems resolved to do its leat to make such language intelligible, though it is neither dignified nor exact.

THE SENSATIONAL SIDE OF THE ELECTIONS.

ECHLID Mr. Dismedt have the leisure to favour us with an ather political novel, the themse is ready for him in Mr. Chadstone's sensational dissolution. No man could handle a subject of the kind more cleverly than the brilliant author of the could be a subject of the kind more cleverly than the brilliant author of the could be supported by and he would bring to the task the livelest sympathy of the course with party passions and ambitious suddenly thrown into violant agitation. Recent legislation following fast upon scientific discovery has given the political novelist new opportunities. We do not say that the forms of election in our old unreformed and unrecements daws were not more abundant in the common place. te days were not more abundant in the commonplace elements of the picturesque; but they had existed from time immemorial, and their picturesqueness had begun to fade away with familiarity. They had been growing into part and parcel of our venerable Constitution ever since the days of the barons who, according to the elequent civic orator, rallied round their sovereign at Runnymeds. Dramatists and novelists had made them stock sub-Hunnymeds. Dramatists and novelists had made them stock subjects from the very infancy of novel-writing and the drama, and the vigorous originality of writers like Mr. Diaraeli, Bulwer Lytton, or George Eliot, had only freshened up what was stale and hackneyed. But, besides being confined to well-trodden ground, these writers had to rely mainly for their effects on what we may call the superficial action of elections—the postchaises and the colours, the bribing, treating and fighting, and the rest of it. The field is unquestionably more tame in these respects, now that we carry out an election like an execution in the presence of a handful of qualified witnesses, and have broken up the hustings to turn it into ballot-boxes. But the greater tameness will be more than compensated if we may look occasionally for coups so dramatic as Mr. Gladstone's announcement of last Saturday. It is the spread of railways, and still more the general diffusion of the telegraph, that has rendered possible that introduction of the element of surprise which the Premier has managed with such startling effect; it is the recent extension of the franchise that must have suggested the idea of surprising the country into a plebiscite of approval. One cannot conceive a Ministry venturing to face the constituencies in old times on such brief notice, on the very ove of the assembling of Parliament, and with so little visible very ove of the assembling of Parliament, and with so little visible reason. Unless Ministers could have pleaded urgent necessity, they must have risked seats by the dozen. They would have disgusted the interests which have vested rights in profuse and tedious election expenditure. Still more, they would have revolted English notions of fair play, because many unofloading members, who were innocently wandering far from their homes, could never have received the astounding intelligence in time even to declare their intentions or to communicate with their political friends.

On this occasion, although people may have strong opinions with regard to the propriety of the Premier's strategy, it is not probable that the idea of injustice done to their representatives will much influence the votes of electors. The telegraph flashed the news to all the cities of Europe before the London journals and reached the midland countries but then electors graphly had reached the midland counties; but then electors generally may not care to analyse the sensations of members surprised abroad, and this brings us back to the point we started from. It seemed a dead political calm everywhere, although of course it was only a lull before the party storms that were to be unchained only a full before the party storms that were to be inclumed in February. There were no important Cabinet announcements to be looked for, seeing that Her Majesty's Speech was to be delivered in less than a fortnight. No visible cause for an immediate dissolution was casting its warning, shadow before it. Many a member was making the most of the last days of his holiday. before coming home again to hard work. Some were yachting in the Mediterranean; others enjoying the early gaieties of Itome, or lounging in sesthetic contemplation through the galleries of Florence; others were nursing their lungs on the sunny alopes of the Cornics. Of a sudden came the thunderbolt out of the clear sky, lighting on one's table in the form of a missive from the tele-graph office. And here would come in the art of the novelist. The scene—a breakfast-room looking on the Piazza di Spagna. The dramatic persons—a young and rising politician honeymooning with his newly-made bride, taking little thought about the elections which he expects next autumn, but thinking perhaps a good deal of the banker's account on which he has been drawing a good deal of the banker's account on which he has been drawing pretty freely. He opens the despatch with that vague feeling of unesainess which always hangs about telegrams that reach you from a distance. It slips through his trembling fingers, as he is morally knocked over by the curt contents:—"Parliament dissolved; Opposition candidate coming down to-day; communicate immediately." Imagine the increasing agitation of his mind as he begins to recover the use of his faculties, and to realize the horrible anxieties of his situation, aggravated as they are by distance and uncertainty. All his ambitious are bound up in retaining the seat on which he has established a hold. He remembers remonsefully how he neglected to prepare a previsional political testament increase of anything happening in his absence from England. Perhaps be may have expressed no views at all on the burning topic which must have moved the Premier to take this most unprecedented step. He has no doubt whatever that his opponents, whoever they have telegraphing to inquire their manes, and to inform kinnelf as to his graphing to inquire their manes, and to inform kinnelf as to his spoken out trankly, or eventury, as some them nest. 22 mino the tele-graphing to inquire their names, on to inform himself as to his periodal prospects; he feels painfully that the absent must in-men who exhably be wronged at election times. He dare not talegraph to grounds. his great a corts blanche in the matter of expenses, for he doubts his own credit. He knows there is a train starting in an hour or so,

and he sends a brief message to say he will travel by it. Then we have the touching separation from the newly-made wife of his bosom, whom he is obliged to leave to follow with the maid and the courier, while he hurries onward by night and by day. Distracted between the thoughts of what he leaves behind and of what is awaiting him at his journey's end, black cares and anxieties crowd into his carriage. They come blacker and thicker as eleeplemeness and fatigue begin to tell upon him; his electioneering prospects grow more and more dismal as he regards them out of his jaundiced eyes; and his sustained endurance of the torments which his fancy inflicts on him supplies the materials for a bit of psychological snalysis which ought to be extremely thrilling, though exquisitely painful. The dénouement of the story may be the anxious traveller's success or defeat, according as the genius of the author tends to the gloomy or the cheerful; in any case the situation created by Mr. Gladstone or the cheerful; in any case the situation created by Mr. Ghe is clearly susceptible of highly sensational treatment.

As for the action of the electious, this, as we have remarked, is very much a thing of the past, and matters are now managed in a comparatively humdrum way. Nowadays, whatever may be the turmoil in the brain and bosom of the candidate, he shows nothing of it if he has ordinary powers of self-control. He takes his seat in the train like any common passanger having series of a manager. or if if he has ordinary powers or sair-control. He takes his seat in the train like any common passenger, having sent off a message before him to announce his coming and allay excitement. Formerly, pending his arrival, the population of his borough would have been on the tiptoe of suspense and the air would have been thick with rumours. For himself, he would have been flying down the road in a postchaise and four, and his electioneering expenditure would have begun already in the shape of heavy bribes to the postilions. On the great North or the great West road the postilions. On the great North or the great West road it would have been a race between him and a cloud of other gentlemen, bound on similar errands and all equally eager. At each of the post-houses there would have been a scramble for horses, and each change would have taken place in the midst of an agritated crowd, hungry for the latest news. The most phlegmatic of mortals could hardly have resisted the influences of the scurry and the pace and the general excitement all along the road. The excitement would culminate with his arrival at his destination, although whether in a way that was placeurable on the propagate and described the constitution. pleasurable or the reverse would depend on the popularity of his politics. His bespettered postchaise dashed up to the door of the "Lion" or the "Crown" amid vociferous expressions of the popular sontiment. The colours of his party were flying from the windows or the balconies, and, with the ribbons at their button-ho'es, the members of his numerous Committee looked like a decorated buttalion of merit. He was one of the rival heroes of the day, and, as he looked on the followers he was to take into action, he felt himself every inch a leader. Besides being the man of the party in the height of a bitter party battle, he was welcome as bringing the latest news from head-quarters. Of course the news he brought was of the most cheering character; victory was certain all along the line, and his borough had only to do its duty with the rest. The stereotyped announcement heightened the enthusiasm of the Committee, who, with the exception of a few wary wire-pullers, had been partaking freely of refreshments ever since the commencement of the contest. The spirit of conviviality reigned supreme in every public-house, and animated citizens of all shades of opinion; yet beneath the flood of joviality on the surface of things there ran conflicting under-currents of intrigue. The emissaries of the wire-pullers want gliding about the lanes and alleys with pocketsful of gold and pocketabout the lanes and alleys with pocketsful of gold and pocket-books full of bank-notes. The tipsy electors were not so drunk but that they could keep an eye upon business. There was a great deal of chaffering and bargaining over promises which might or might not be kept. When the liquor had been on the flow for some time, men's blood was apt to get unpleasantly heated, and when their heads began to ache and their stomachs to get out of order, they lost their tempers. Party spirit ran high, and private jealousies broke out when notes were compared over different bargains. By the nomination day, if the contest was close, political feeling was sure to be at its height. Amid the volleys of abuse, executions, and more dangerous missiles, the candidates abuse, executions, and more dangerous missiles, the candidates on the hustings might just as well, except for the glory and honour of the thing, have been pilloried. Their unenfranchised supporters showed their seal by getting up a series of fierce faction showed their seal by getting up a series of fierce faction fights, which were renewed later round the polling-booths, and again at the announcement of the poll. Then the losing again at the announcement of the poll. Then the losing side entered its protest, and the winning side celebrated its victory, in the time-honoured fashion of smashing the enemy's windows. The candidates had to spend very disagreeable quarters of hours in settling long bills whose items they dared not verify, and the borough was left a pray to an infinity of vendettas, which lasted a longer or shorter time according to the duration and the bitterness of the contest. Except in the sister island, our present system is likely to be fatal to the old excitement. The unconstitutional innovation of trying election petitions by Judges, the indiscriminate extension of the franchise, and the introduction of the Ballot, have all conspired to lower the value of a vote; and when the worth of a vote has to lower the value of a vote; and when the worth of a vote has become so inconsiderable, and the terror of election tribunals sets limits to hospitality, it cannot be expected that practical men will take the old interest in Imperial politics. Everything is settled within doors in the simplest way, by a few gontiemen who interest themselves faintly in the matter upon public grounds. Few persons find their sleep or their appetites affected by anxiety as to the issue, except the candidates themselves and some fasatical advocates of impracticable crotchets. Most people

1. " 的变性现象中

may think that the different of the room order of things, is compensated by the greater reaco-and quiet, but those who prefer the old excitement must at least admit that the Premier has done what he can to make things lively for us.

CANADIAN LITERATURE AND HISTORY.

Historical Society of Quebec for the Session of 1873," and it need not be said that both the literature and the history of Canada are deeply interesting to all subjects of Queen Victoria. Indeed the entire world is concerned in the establishment in America of a type of civilization slightly different from that which, for want of a more comprehensive word, we must call Yankee. Without disparaging the mental or physical qualities of the citizens of the United States, we may be permitted to think that it is no more desirable that these States should become co-extensive with North America than that France or Germany should accupy the whole of Europe. But if Canada is to exist for any useful purpose as a notion, she must have a literature capable of preserving and embellishing her history.

Perhaps the most interesting paper in this series is the journal of an Arctic voyage made by the surgeon of a whaler fifty-five years ago. The stripling of nineteen years, who was then entrusted with the health and lives of fifty men, is now an M.D. of seventy-four, and cherishes in a Canadian home the memory of a youth passed in Britain. The author was educated in Edinburgh, and sailed from Britain. The author was educated in Edinburgh, and sailed from Hull, which was then largely concerned in whaling. It is not wonderful that the supply of Northern whales should have failed under the systematic persecution of which this journal furnishes an example. Even the surgeon had an interest in the fishery, being entitled to a guines on every whale caught. Government allowed a bounty on each ship, and in time of war exempted harpooners, steersmen, and other skilled hands, from the press-gang, obliging owners to fill up their crows with Shetland men, who were clever in owners to fill up their crews with Shetland men, who were elever in beat work and always ready to embark. The system of bounties has been long since condemned, but if any trade deserved encouragement it was this of whaling, without which scientific veyages to the Polar Sea could not have been made. The Trafelyar, having completed her crew and stores at Lerwick in the Shetland Islands, sailed theuce on April 1, 1818. In ten days they made the island of Jan Mayen, which was much frequented by the Dutch for the purpose of boiling the fat of whales and seals. "They made more than one attempt to winter on it, but failed, the men being always found dead on the return of the vessels in spring." This passage might afford a hint for a prologue to Miss Braddon's next novel. might efford a hint for a prologue to Miss Braddon's next novel. On the twenty-fourth day the ship had reached latitude 74'30, and all hands were employed in fitting the whale-boats. Six lines, each about one hundred and forty fathoms, are smoothly spliced together, and coiled systematically in each boat, from the centre of the coil to the circumference, so that there may be no possibility of fouling. A harpoon is attached to the line. The boat carries three or four lances to despatch the whale when exhausted, a bucket to throw water or the line may never the content of the line may be a second or the line in water of the line i on the line when running out, an axe to cut the line in case of fouling, and two long knives to cut holes in the whale's tail to sten ropes to and tow him to the ship. The boat thus fitted can be lowered into the water in a few seconds. The harpooner, the steersman, who worked with an oar in the steer, and the specksoneer, who had charge of the line, were usually engaged at the home port. The rowers were many of them Shetland men. It is easy to imagine the attractions of a service which was, in fact, a It is easy to imagine the attractions of a service which was, in fact, a sporting excarsion of a particularly exciting kind in a region where there were no game laws and plenty of game. The first whale which the author saw hilled was the prize of another ship. It killed one of that ship's crew with a stroke of its tail. "His body was put into a box and placed in the misen top to be taken home to his friends." The advantage of a cold climate is more agreeably shown by the precise of buying logs of mutton at Shetland on the outward voyage to be presented to owners and friends at Hall on the return. The boats of the Transferr had assisted other server more than once. On the Lith May Trafelgar had assisted other crowsmere than once. On the 15th May the look-out man at their own masthead shouted "a fall." One of their boats had struck a whale, but it was lost among the closing ice. Within a few days, however, the sport improved. A whale rose near one of the boats, and the harpooner pulling the boat with the struck of the struck of the sport in the last of the struck of th right on its back, struck it. After going down and coming up twice, it lay close to the edge of a floe of ice, where it watched the bosts, turning on its side, and shaking its fin, with which it evidently knew it could destroy them. The chief officer got upon the ice, and made his way to the whale, when he threw his harpeon with such force as to drive it into the arbeble heads of the ricely ane ice, and made his way to the whale, when he threw his harpen with such force as to drive it into the whale's bedy to the stock. It instantly dived, and ran five lines out before it again came to the surface, when it was as wicked and mischisvous as before. One beat at last struck it, but in backing astern received a blow from the tail, which threw the steereman into the water. As the whale began to run the line was cut, and the best returned to pick up the steereman. After five hours' chase or light the whale was killed, towed to the ship, and "flinched" securities whale was killed, towed to the ship, and "flinched" securities whale was killed, towed to the ship, and "flinched" securities whale was harpooners put spikes on their boots, got upon the bedy and cut from it pieces of int of a ton weight, which were holisted on deck and thrown down the antehway, to contribute their above to the odour which used to pervade the streets of Hell. This whale was not so int as a more tame and tranquil animal might have been. Captain Dannett, with whom the writer sailed, when here

been one of the best seamen of his time, and he made a successful voyage. After passing stilly through the narrowing channel formed by two floes of ice, the writer looked back and new action which was following caught and crusted between them. The crow accumbled on the ice, not forgetting to wint the spirit-room at the moment of escaping from their ship, and they were all research and brought home. By the 11th off July the ship was nearly fall of blubber, and on the 21st of August she arrived in Hull. Such an event newadays would angage the attention of the sanitary authorities, but we helieve there is no vertige left in Hull of its succent trade, except the tusks which sometimes adorn a garden gateway. Probably whales were alanghtened recklessly in the Arctic Sea until the producing power of nature was overtasked. A space of clear water enclosed by floes of ice, and measuring a mile and a-half by a mile, was even by this writer "literally swarming with whales, looking like dreves of black cattle in a pasture." All the boats were dewered, with orders to keep together, and not to strike more than there sen at time. Presently two other ships arrived and joined the sport evidently this plenty would be exhausted in a few years. Such a profitable trade must have been overdone, and only a Buckland, with power of legislation over all maritime nations, could restore it. Although the historical interest of the Arctic whale-fishery is

Although the historical interest of the Arctic whals-fishery is great, it belongs to Canada only as part of the British Empire. (Ther papers in these "Transactions" relate to the history of Canada herself, and particularly to those struggles with her powerful neighbour to which her some refer with a satisfaction which we may share. A paper by Lieutenant-Colonel Coffia on the siege of Quebec in 1775-6 explains how the writer recently obtained from Government a grant of land in recompense for services performed and losses sustained by his grandfather in the War of Independence. The repulse of the assault on the Près-de-Ville at Quebec, in which the American General Montgomery was killed, was due to the "vigilence and good sense," as Sir Gray Carleton wrote, of a "gentleman not bred to arms," named John Coffin. He was "a volunteer soldier defonding his hearthstone." His wife with her twelve children was in the city, and on the morning after the assault she sent her two eldest beys to the outpost to see if their father were alive or deed. They were allowed to crawl out of an embrasure on the snew to the spot where lay the bodies of Montgonery and his steff. The grandfather, a resolute Loyalist, quitted his birthplace, Boston, leaving half his property behind, and came to Quebec, where the property he brought with him was lost or destroyed. The sons of such ancestors are not likely to allow themselves to be absorbed into a Republic, and this volume furnishes further proof of that lovalty of Canada to the British Crown which only Mr. Lowe and a few kindred spirits doubt or undervalue. The writer, with pardonable enthusiasm, ascribes to his grandfather's exploit the consequence that Quebec was saved, "and the flickering fame of fidelity to the British Empire blazed up therefrom, themselves to be siege, he got nothing else. He had been ruined by friend sand for ever a beacon of light inextinguishable in Canada." The siege was raised, and peace came to Quebec, but not plenty. "Whatever credit John Coffin may have acquir

A paper on historic Medals begins with one which was struck in 1690 to commemorate the repulse by the French Governor of Quebec of an invading fleet and army sent from Boston and New York under Sir William Phipps. A medal of 1720 records the commencement of the fortifloations of Louisbourg. In the interests of numinisatic study, it might have been wished that the recises of French successes in Canada had been longer. The Historic conquered by sea and hand, but they struck medals which in point of art were despicible. The latest of the series was intended for distribution among Indian chief which in honour of the Confederation. Consistently with the reliency fashion of petty savings, this medal was not alway, but allow-plated; and if we think this economy author mean; we must console encestes with the reflection that the chiefs would be unable to supply themselves with drink by pledging their Confederation mentals. The eigenstances which led to the issue of most of this centerare manifested by the writer in terms of natural indignation. "It is head," he ways, "to realize that from a land with which we were at passes there always are invaded our country in 1866." Unheeded, or at least measurable the movement of the most here are always the passeful literature. Brotherhood, were permitted to save, drill, and martin as in invaded the process the Consedient bonder, and for a way brief season they appeal confinion among the passeful literature between the bonder, and for a way brief season they appeal and the martin and always that material that the university of Welland struck a martin as for the model, and fail." The country of Welland struck a martin as of the model, in the country of Welland struck a martin as of the model.

CHEAP IMMORTALITY.

A. N enterpositing publishing. Company, of which, however, we have heard before, has just hit upon a curious expedient for pushing its business. It has projected a series of works in which the great men of the present generation are to be insmortalized at, we presume, a modernie charge; and some of the prospectuses of this scheme are new-before us. One appears to be addressed to the country sent, also obsetograph negatives from which to engrave portraits on steel. Intending subscribers are assured that the engravings and autotypes for the work will be executed by the best artists. "The abstahes may contain from one thousand five hundred words and upwards, and will be written by "—here follow-certain names which we forbear to publish—"and other eminent authors." The writer of the circular then goes on to point out the advantages of securing a niche in this most accommodeting temple of fame. "The advantages of such publication are that you obtain a portrait almost as valuable as an oilpainting." Mercover "the work can be made of great use as a family record to be headed down for many generations." In some cases such publication may prove of advantage to one freenesish, professionally, or publication may prove of advantage to one freenesish, professionally, or publication may prove of advantage to one freenesish, professionally, or publication to suggest how a portrait and a biographical also to the imagination to suggest how a portrait and a biographical also that to the imagination to suggest how a portrait and a biographical also the results into the enterpolation of his country seet about not be albumenized, and should be about the size of an ordinary steel engraving, or cabinot size." The person to whom the circular is addressed is also requested to send: "a full description of his country seat, describing the style of enchancement broker is to the same effect as that to the country gentleman. His is reminded that, if he does not care about the good opinion of poeterity, he may at least do hisself a good turn

We have not had an opportunity of seeing any of the prospectures which have been circulated emeny eminent scap-boilers, sugar-balars, blacking manufacturers, drysalters, wholesale slop-dealers, and other commercial classes to whom we suppose an appeal has also been made; but no doubt they are all framed on the earne model. The general idea of the project, it will be seen, is to ferms a record of men who are, or who choose to pay fee being called, eminent in various; trudes and professions. It would appear that no conditions are laid down in regard to what constitutes eminent in various; trudes and professions. It would appear that no conditions are laid down in regard to what constitutes eminent; in any line of life to the publishing Company; together, we suppose, with a subscription, will at once be accepted as eminent; in any line of life he choose a subscription; but it may be sammed in the prospectus about a subscription; but it may be sammed in the prospectus about the farms on which the favour will probably be said about the terms on which the favour will probably be said about the terms on which the favour will be conferred. We have, of comme, no means of knowing how far the "eminent authors" who are said to have talessachangs of the literary past of the enterprise have scally given any authority for this one of their names, but we may remain that in any case their onlinears indicates to semicust literary min are perhaps and the conferred to which have any to be some of their own literary and the eminent authors which have early to hear or experience the pasting and the eminent authors which have early to hear or experience of explicit promises and spelling, and to draw in a least market of their own literary markets and these are pasting may prove attructory and the eminent and the eminent may dealed, and the eminent and these are pasting may prove attructory and the markets of them.

rpensive opportunity of getting themselves rest of the ruck of nobodies are not justice. A many who has his particular broken, or many bolling or so be entitled to a olf us so f level of his class. It may be only a w others. It does not require a very suffice know nature to understand the insidious provocation exhibit a man's picture. Wise men, proof again other temptation to their vanity, have smeaning In the Royal Academy in May we me the mattle at 1th hi A portrait-painter who becomes a member of the Academy befortune made in advance; for though he may be a painter, a stick at drawing, blind to colour, and incapable painter; a stick at drawing, blind to colour, and incapable of under-standing either anatomy or expression, he has the right to sand as-many pictures into the Exhibition every year, which this Academy has no option of refusing, and which must be hing in a good place, whatever their artistic strocity. It is not so much appro-trait as an advertisement that is wanted, and an RLA van make some of a place for his advertisement beforehand, whereas a better painter-might have his pictures rejected. The photographers and carries-turists also minister to this passion; and a man must indeed be insignificant not to be known to all the world in the slop-windows of. No scoper does a name appear two days running London. No scoper does a name appear two mays running in the Times than a corte to match turns up in Regent Street. Line suffered for his popularity in this way, as it led to his identifiestion as a convict; but there are perhaps many passons to whom it is an agreeable or profitable advertisement. Not long ago, there was some talk of a great historical picture of the Court of Gineen's Bench during the Tichborne trial, in which everybody in any way connected with it was to be commemorated; and purhaps the canvas is now being covered. The next thing will be to find people paving handsomely to get themselves put in effigy into a war-west. paying handsomely to get themselves put in effiguent a war-west show. It must be admitted that the publication of which we have been speaking is a very cheep and simple way of getting oneself handed down to posterity; but there is perhaps some danger that posterity may not be disposed to take any notice of what is handed down to it, and in that case the object of the international data. what is handed down to it, and in that case the object of this vestment would of course be defeated. It is no use going to this expense of having one's picture taken in fine style, with a flattering hiography attached, for the benefit of people who will not look at it. On the whole, it is probable that a certificate of emissace of this kind is more likely to have an effect, if it has any effect at all, on one's contemporaries than on one's descendants. There is a tendency to receive anything which appears in print with superstitious deference; and there is no reason to doubt this superstitious deference; and there is no reason to doubt this superstitions deference; and there is no reason to doubt this increases. might, by incessant advertising, persuade people to think him eminent, just as other men, by the same means, propagate the de-lusion that their beer or cocca, or whatever they sell, is the very best under the sun. At the present moment the mere repetition of names in huge letters on the walls is in a great degree de-termining the issue of the elections. If Jones has more bills and larger bills, and more startling letters than Robinson, Joses is very likely to get in; and the fate of the country will depend on the result of this typographical rivalry.

The most armusing part of this publication, if ever it is published, will probably be the pictures and descriptions of the country

will probably be the pictures and descriptions of the country seats of the eminent persons who are to be handed down for the admiration of generations yet unborn. It will be interesting to compare or contrast the man and his dwelling-place. Cardis bearing, instead of a name and address, a picture of a house, were one of the freaks of fashion in Paris during the Second Empire. It was thus suggested that it was of mere importance to knew what sort of a house a lady or gentleman lived in, thus the name under which he or she chose to be known; and, considering the very peculiar composition of French society at the time, the notion was probably justified. A house is not a bad indication of a man's tasses and circumstances. One can conjecture from its size and appointments in what style the occupier lives, and whether he has room for many friends and the means of entertaining them without being able to keep it up properly; still it is not so easy to show a decent house as a man may borrow a house, or may own one without being able to keep it up properly; still it is not so easy to show a decent house as a good coat on one's back. It will be amusing to observe in the forthcoming collection how far the country seats correspond to the sminence of the persons who are supposed to inhabit them. A man's portrait, a picture of his house, and his biography, composed by himself and re-written by "eminent authors," in the richest style of ornamental English, are materials for forming a very fair idea of his character. The portrait is a check on the biography, and the hease may explain the portrait. A work which is to contain a detailed account of all the eminent persons in the country in every walk of his, with full particulars of their houses, including "the style of architecture, grounds, and objects of historical interest," will present a cort of camera view of their houses, including the seasies and the subscribers will probably find that, in seeking eminence, they have only mixed themselves up more hepelessly than ever wit

THE PROPHET MINE

A MIDST all the lugulatious vaticinations of our time one cheerful and animating voice is being lifted up. A Mr. Edward Hine, author of certain crasy pamphlets such as England's Coming Glories, The Anglo-Saxon Riddle, Flashes of Light, &c., has discovered that the English nation cannot possibly come to any permanent harm, because it is not really English, but Israelite. Years of careful "study" of the Old Testament have brought him to the conclusion that nearly every book of it, from Genesis to Malachi, is mainly occupied with the prophetic History of England. The author of The Coming Man has already discovered that the initials of Ireland, England, Wales, and Scotland indicate that the inhabitants of these kingdoms are in some mystical sense "Jews." Mr. Hine, however, strenuously asserts that we English or British are not Jews, but Israelites; if we were Jews, there would be no hope for us until the discovery and identification of the lost Ten Tribes. The Jews are now being punished for their crucifixion of the Saviour. We Israelites or Englishmen had no part in that crime; our forefathers, the Ephraimites, were carried away captive into Media and Assyria, "the very place to which Mr. Sharon Turner traces the Anglo-Saxons"; they turned up again as Englishmen in the North of Garmany. They came over to Britain under the banner of the White Horse "blinded," as the prophet Hosea says. They lived for centuries in the delusion that they were Englishmen, and not one of them had a suspicion that he was an Ephraimite until the Prophet Hine arose and wrote pamphlets. In spite of this blinded self-ignorance, however, they were compelled to bear witness to their true origin by their substitution of the Lion and the Unicorn for the White Horse. It seems that our High Churchmen have gone near to an act of apostacy in turning this secred emblem out of our English churches. The prophet Micah says, "The remnant of Jacob (that is, the English our High Churchmen have gone near to an act of apostacy in turning this sacred emblem out of our English churches. The prophet Micah says, "The remnant of Jacob (that is, the English people) shall be among the Gentiles as a Lion," and in the Book of Numbers the other half of our proper flag had already been indicated by the words, "He (that is, Israel or England) hath, as it were, the strength of a Unicorn." As a small number of clergymen, who have not unnaturally selected the John Bull newspaper and their companyion of the property of the second of the se s a medium of their communications, have accepted Mr. Hine as

as a medium of their communications, have accepted Mr. Hine as the last of the prophets of Israel, we may perhaps expect to see a restoration of the sacred symbol in some of our churches. We hardly like to suggest that the Lion happens to be the symbol of the tribe of Judah, to which Mr. Hine so constantly affirms we do not belong, lest we should spoil this happy thought.

Mr. Hine has been pouring out his ridiculous pamphlets for some time. We have now received the fifth of them, of which nine thousand have been sold. The first, we hear, has gained a circulation of ninety thousand. A considerable quantity of these, as one would expect, have been shipped to the United States and to Canada. At Boston a conference of ministers was gathered together to discuss the Hine theory. Mutual Associations and Literary Clubs have made it the subject of their young eloquence. It is this fact perhaps which has now led Mr. Hine to use the word Anglo-Saxon interchangeably with the words English and British. The Americans naturally do not want to be kept out of their share of "England's coming glories." Do they not also speak that English, or Israelite, or Anglo-Saxon language, which the prophet Isaiah describes as "another tongue"? "Hebrew," says Mr. Hine, "is the language of the Jews, but has long since been discarded by Israel. There is but little difference between the Hebrew and the Irish. We must not waste our time by acquiring the dialects of the Gentiles, but rether they should acquire ours. It is essential in order that must not waste our time by acquiring the dialects of the Gentiles, but rather they should acquire ours. It is essential, in order that Israel's seed may be the means of blessing to all the earth, that her language should become predominant; and the fact that ours, and our language alone, is becoming universal, is another proof that we are Israel." Mr. Hine thinks that native missionaries will do little toward the evangelization of the world, because those who train them do not recognize that their languages are unholy, and English or modern Israelite alone holy. We ought to teach them the holy language of Israel or England. A general burning of Hebrow Bibles, Greek Testaments, and Vulgates would perhaps greatly delight Mr. Hine; and the Bible Society ought

of course to prohibit any further translations of Holy Writ into Gentile languages.

A prophet of Mr. Hine's type is helpless without a mystical number. "Six hundred and sixty-six" has been worked to death. Mr. Hine has no interpretation of it; indeed he seems to number. "Six hundred and sixty-six has been worked to death. Mr. Hine has no interpretation of it; indeed he seems to have a kind of shyness of the New Testament; he scarcely ever quotes it; and perhaps he shows himself to be a truer Israelite by his evident preference for the Old Testament. Besides, Lord Macaulay once found the mystical number of the Apocalypse to be exactly fulfilled in the British House of Commons—658 members, three clerks, one sergeant-at-arms, one deputy-sergeant, one librarian, two doorkeepers—666. Mr. Hins, on the contrary, sees in the members of the British Legislature the historical continuation of the elders of Israel and the princes of the congregation. The rival prophet who has lately discovered us to be Jews takes the number "Five" to be the key to all mystery and prophecy; the universe is "a Pentad," there are five acts in a drama, five senses, and so forth. Mr. Hine has adopted the number "Twenty-seven," although we fail to see the reason of his choice, as it is only once mentioned in the Bible. There are exactly "twenty-seven identifications of the English nation with the Lost Ronse of Israel." There are exactly "twenty-seven reasons why it was impossible for Israel to have ever been restored before this date," that is, the date of Mr. Hine's appearance as a pamphletser.

"England's coming glories" are enactly twenty-seven in summber. Some wicked critic has thrown out the rationalistic objection that if such good things await one branch of the Teutonic family, all the other branches may claim a charge in them. Mr. Hine binnelf has encouraged the belief that Denmark may be the mark of the Danes, Danites, or tribe of Dan; but he is now preparing to issue "a monthly magazine, under the expressive title of Life from the Dead," in which he will demonstrate from the Bible "the immense possessions, together with the nation of America, by the identification of the British nation with Israel"; and in an early number of this magazine he proposes to furnish "twenty-seven reasons why

of this magazine he proposes to furnish "twenty-seven reasons why the Teutonic Continental nations cannot form parts of Israel."

The "Twenty-seven Glories" which are awaiting our nation, and which in some degree await every person or thing which a penny-a-liner has ever called Anglo-Saxon, are at present kept back by a very little hindrance. Our identity with the Ten Tribes of Israel is proved; but we shall not derive the blessing of this identity, and the whole world will be kept in consequent misery, until we accept it "nationally" as a fact. Every person of Anglo-Saxon flesh and blood, from the Queen on her throne to the beggar in the streets or the criminal on the treadmill, must believe that we are not Englishmen and Englishwomen, but Israelites. The moment streets or the criminal on the treadmill, must believe that we are not Englishmen and Englishwomen, but Iaraelites. The moment we one and all declare Mr. Hine to be the Prophet, "Glory the First" will begin; it will consist in an "outpouring of the spirit." This outpouring will take place "in the lands of our captivity, which are the British Isles and our colonies," not in our own land in the East, for which we shall then set off in company with our brothers the Jews. This outpouring will show that we, and "not the French or the Russians, are competent" to claim Palestine as ours. In the light of our first "Coming Glory," Mr. Cook's winter tourists in the Holy Land begin to assume a very sacred aspect. They are the first swallows of that great co-immigration of Britishers and Jews of which Hine and not Cook is to be the Joshua. No Irish need apply; there is no doubt at all, says our Prophet, that "the Irish are Canaanites." They have been once turned out of the Holy Land; it would be positive have been once turned out of the Holy Land; it would be positive wickedness to take them in again. They trouble us now because the Pentateuch says they shall be "thorns in our sides." Perhaps the Yankee contingent of the children of Israel will present North America to the Irish before leaving for their own country. Mr. Hine omits one "Glory" which strikes us as necessary. We will call it "the Glory of Acclimatization." At present the Anglo-Saxon children of Israel who go to "their own land" in Asia in the winter come back to the "land of their captivity" in Britain in the summer. Some physiological presents the measurement in order to represent the present in order to represent the present in order to represent the present of the summer. captivity" in Britain in the summer. Some physiological pre-paration will be necessary in order to prevent us, when we are once settled in the land of Israel, from lusting after the pleasant coolness of the land of Britain, as our English forefathers in the Desert lusted after the good things of the land of Egypt. In the majority of Mr. Hine's Twenty-seven Glories, crowded as they are with absurdities, there is one point of refreshment. Our Prophet is what Archdeacon Hare calls an idolcalest, and most of

Prophet is what Archdeacon Hare calls an idolociast, and most of the idols which he breaks are idols which we can very well spare. In "Glory the Third" he breaks the Evangelical Alliance to pieces; in "Glory the Fourth" he casts away with scorn the literature of Apologies and Vindications known as clergyman's science and platform logic; "Glory the Eighth" will consist in the "Disuse of Preaching"; "the institution of preaching," says Mr. Hine, "taken in one sense, is most undoubtedly a calamity." Taken in another sense, perhaps, than Mr. Hine's, we think so too; and we were glad to learn that he has ninety thousand readers who do not are glad to learn that he has ninety thousand readers who do not think that going to hear sermons will be the chief occupation of humankind during the Millennium. We can echo our Prophet's pious outery, "If that is so, all that I can say is, Save me from the Millennium!" Mr. Hine's predecessors, Ezekiel and Jeremiah, both assure us that there will be no sermons delivered to the Israelites or English during the Millennium. "Glory the Tenth" will liberate us from the Liberation Society; not because there will be no more Parliaments—for it appears that we shall take the whole British Constitution with us into Palestine, our brothers, the Jews, having already given their sanction to it by becoming members of Parliament and Privy Councillors—but Mr. Hine will be substituted for Mr. Miall. "Disestablishment by the Liberation Society would be a national scandal, but disestablishment through the Identity would become a national glory." Mr. Hine's method will thoroughly satisfy the Dissenters without are glad to learn that he has ninety thousand readers who do not establishment through the Identity would become a national glory." Mr. Hine's method will thoroughly satisfy the Dissenters without displeasing the beneticed clergy. "The disunion of the Church from the State will not abstract or divert one farthing from its legitimate application. Church property now is as nothing to what it will shortly become." Though sermons will cease, churches will be multiplied; and the "Eleventh Glory" will consist in "the erection of immense houses of prayer." "Glory the Twelfth" will, we are glad to learn, destroy the Peace Society, but the "Thirteenth" will be the most satisfactory of the whole series. There is not one carnal-minded and unbelieving ratepayse in England who will not gladly welcome "The Glory of Saving in England who will not gladly welcome "The Glory of Saving Millions a Year." Mr. Hine proves in his Flashes of Light that, if we would only believe we were Israelites and not Englishmen, u we would only believe we were Israelites and not Englishmen, "we should save some hundreds of millions in the expenditure of the country." The "proof" is very simple; it consists in the quotation of the promise, "Five of you shall chose an hundred, and hundred of you shall put ten thousand to flight." Any passon who can do a sum will see from this text of the Bible that England or Israel does not need so large and costly a standing army as a false Gentile nation. When Russis some her thousand men, England only need arm a hundred. "God forbid, "asyn our prophet," that

district is substituted as advocating these great containments at the life temporalism matter is to have our identity materials. The first important matter is to have our identity materials and his materials in the second district investigation in hand. With their interes at stake, samply it is not an impossible that these matters should be extremed answering of samplession by our maintenant Government."

It is impossible to review the whole of our twenty-seven coming places as investigated in Mr. Hine's hermeneutics. We shall close the places as investigated in Mr. Hine's hermeneutics. We shall close the places of the Return Procession." This British Moses has found a British Asses to help him in the treatment of the coming "flag question." One Mr. Glover, it seems, has proved that the present Queen of England is the very "Root of Jesse which shall stand for an ensign." "Where," asks Mr. Hine, "shall this ensign be set up? In Palestine, or in England, the land of Israel's captivity? Most assuredly in England. The picture may almost now be seen, the materials are all at hand. In this foreground, Victoria, the root of Jesse, may stand, the surroundings have only to be collected together." Here is a damper to all the hopes of our English Republicans. The identity of the Hanoverian succession with the family of David is drawn out at length (and in the process we are treated to a number of odd conclusions about the Coronation Stone) in the Anglo-Saron Riddle, the Prophet's latest work. "What was the Prince of Wales," it is asked in this pamphlet, "that we should pray so carnestly for him on that wonderful Sunday? There are plenty of sons and brothers to take his place." It is hinted that the Prince's health was restored in order that he might become the leading figure in the eighteenth coming glory of England, "the Glory of the Return Procession" of the Anglo-Saxon Israelites and the Jews. "May he not be," asked a believing correspondent of the John Bull, "the Lord's Anointed, who is to gather together his people, and make them a blessing to all the nations upon earth?"

Prince's health was restored in order that he might become the leading figure in the eighteenth coming glory of England, "the Glory of the Return Procession" of the Anglo-Saxon Israelites and the Jews. "May he not be," asked a believing correspondent of the John Bull, "the Lord's Anointed, who is to gather together his people, and make them a blessing to all the nations upon earth?" Although our Prophet has not considered all the difficulties of the return, there is one difficulty which has occupied much of his thought. Eager correspondents wish to know whether there is sufficient room and sustenance in Palestine for all the Anglo-Saxons and all the Jews at present on the earth. The rich Jews at Salonics told Miss Mackenzie and Miss Irby some years ago that they devoutly hoped the great return would not come in their day, as it would disarrange all their speculations. Our Anglo-Israelite prophet is of course far above such sordid calculations; but the suggested difficulty of finding house-room for us all in our own land has sent him again to the reading of cussions; but the suggested difficulty of finding house-room for us all in our own land has sent him again to the reading of his Concordance. In the prophet Jeremiah he has discovered the following re-assuring provision—"I will take you one of a city, and two of a family, and I will bring you into Zion." There will be an election of representative Israelites in every Anglo-Saxon parish; the majority of us, after all, will have to stay in Britain, since, "on account of the vastness of our numbers, and the circumscribed limits of the land, it will become requisite for Israel to return representatively." The eve of the return will be a great to return representatively." The eve of the return will be a great time for British hotelkeepers; for "all the Jews (according to Jeremish iii. 18) must be collected in Britain, because we go from here together. The House of Judah shall walk with the House of Israel, and they shall come together out of the land of the North to the land which I have given for an inheritance unto your fathers." If the French were a Bible-reading people we should commend Mr. Hine's theories to the supporters of the claims of Henry V. They may be as easily adapted to we should commend Mr. Hine's theories to the supporters of the claims of Henry V. They may be as easily adapted to France as to Britain. They need only one assumption—that the prophets of the Old Testament never meant what they said; if for the "seed of David" we may read "Queen Victoria," we may quite as justly read "Count of Chambord"; if we may substitute "Britain" for "island" throughout the Old Testament, we may as well substitute "Corsica" or "Australia." Mr. Hine's theory is not quite so new as he thinks it. It was anticipated in Abvasinia by a stray British sailor, whose knowledge of drawtheory is not quite so new as he thinks it. It was anticipated in Abyssinia by a stray British sailor, whose knowledge of drawing was on a level with his knowledge of history. Our Jack tar was employed to paint a picture in one of the Abyssinian churches, and the subject given to him was the passage of the Israelites through the Red Sea. Realizing the fact that Israel held the victorious side and Egypt the losing side, he thought that he could best express it by painting the children of Israel in the costume of the British grenadiers. According to Mr. Hine, he represented a fact instead of a symbol. For is it not as true that Moses led the Anglo-Saxon army out of Egypt as that the children represented a fact instead of a symbol. For is it not as true that Moses led the Anglo-Saxon army out of Egypt as that the children of Iarael, united with the Gentile Prussians, conquered the French at Waterloo? Mr. Hine has published another pamphlet entitled Oxford Wrong, in which he shows that "Israelite names are common among Englishmen," and demolishes Canon Rawlinson, the British Association, and Dr. Talbot, but we have not had the advantage of seeing it.

REVIEWS.

ANDREE'S WENDISH STUDIES.

THE author of this interesting and valuable book tells us that.

all the time he was at work upon it he could not rid himself

* Wendische Wanderstudien, nur Runde der Laueite und der Borbenenden. Von Bieberd Andres. Ekstägert: J. Mahr. 1874.

8. 356

of the impression that he was writing a necrology. He fait that he was dealing with at least a meritumed, if not a definicity mationality, with the remains of what had been a mighty people, but had become "a mere ethnographical curiosity." This faciling seems to have least an air of soleanity to his occupation, but not to have least as a line to those produced by the stilling but not depressing influence of such an eventide as holds forth the promise of a splendid morn. In his opinion, it is true, the day of the Lusatian Wende as a filavonic tengue is well high run. But no sconer do they sink out of sight as filaves than they reappear on the scene as Teutons; their tiny rivulet of Wendish talk is fast losing itself in the sands of time, but he looks forward to the approaching day when it will be their glorious privilege to claim the possession of the widely-rolling river of German speech.

Such are the opinions entertained by Herr Andree with respect to the past and future of the Lusatian Wends, and expressed neither unkindly nor over-triumphantly. They will not be acceptable to the Panalavists, who may even be disposed to contest their accuracy; but, in spite of that they seem to be sufficiently well founded. The small Slavonic island which the Wends occupy has gradually been yielding for centuries to the encroschments of the swelling German tide. In olden days the attacks

Such are the opinions entertained by Herr Andree with respect to the past and future of the Lusatian Wends, and expressed neither unkindly nor over-triumphantly. They will not be acceptable to the Panslavists, who may even be disposed to contest their accuracy; but, in spite of that, they seem to be sufficiently well founded. The small Slavonic island which the Wends occupy has gradually been yielding for centuries to the encroachments of the swelling German tide. In olden days the attacks made upon it were fierce and hostile, but now, we are told, all is changed. The process of "Germanizing" still continues, but it is of a friendly and soothing nature. As a babe sinks into slumber on the bosom of its nurse, so will this offspring of an alien race pass into forgetfulness of its origin on the capacious breast of its mighty fostermother Germany. It is almost to be wondered at that the Wendish tongue has held its own so long in a land which cannot boast, as Bohemia can, of an environing rampart of mountains. Further north it was all but silenced long ago. The penalty of death, incurred in many places by its use, must have been sadiy against it, and even the minor punishments by which its utteres were corrected in more humane districts were probably of a discouraging nature. On the island of Rügen, once a stronghold of Slavonic heathenism, the last woman who spoke "Wendish" is said to have died in the year 1404. She was known as Frau Gillsin, a name worthy to be recorded along with that of Dolly Pentreath, the last Cornish-speaking native of Cornwall.

Although Herr Andree looks forward with great complacency to the rapid extinction of the Wendish language as a spoken tongue, yet he is much interested in it as a subject for philological research, and he gives a number of curious details about its historical existence. While in search of information respecting its present speakers and the relics of their forefathers which lie scattered about the land in the shape of cairns, stone circles, and the like, he traversed the country in different directions, and the present volume is the fruit of the notes which he jotted down during his wanderings. Beginning with Bautzen, he gives a pleasant sketch of that town, in which an enthusiastic Czekh friend had told him he would feel "the genuine Old-Slave breath." But he found, he says, a thoroughly German town, curious in many respects, but not slavening. One of its most absentional feel was a state of the says One of its most characteristic features seems to be the interior of the Münchakirche, a fine old church, formerly belonging to a Franciscan monastery, which was burnt in 1508 and never restored. Inside its walls has sprung up a labyrinth of tiny huts, the tenants of which consider them insured against all perils from fire, inasmuch as their foundations rest on consecrated ground—the fire which rendered their tenancy possible not being taken into account. With this old church a legend is connected. From time to time, at midnight, a mighty treasure is supposed to become visible to mortal eyes. All men who happen to be present can see the tall silver crucifix, surrounded by gold and silver sacred vessels, of which it consists, but only he who is free from sin can lay his hand upon it and live. Sinless people not being more common at Bautzen than elsewhere, the treasure has not yet been realized. Its last appearance coincided with the outbreak of the Seven Years' War; its last but one with the death of Augustus the Strong. Not unworthy of note among Bautzen curlosities is the Büttels Flasche, a sandstone disc, weighing some thirty pounds, on which are represented two scolding wives. To this stone is attached an iron yoke, by means of which it was in former days attached an iron yoke, by means of which it was in former days hung round the necks of shrews and vixens. It was last used on December 13, 1678, when a woman who had struck a neighbour was obliged to carry it three times round the Guildhall. Another curiosity, also in sandstone, is the statue of a Roman knight, thoroughly in the Renaissance style, and possibly two centuries old, which is fondly regarded by the Bautzeners as a priceless relic of immense antiquity. According to them it represents an ancient Wendish prince who tried to leap on horseback over the fountain in the murket-place. But the result was that he fell ancient Wendish prince who tried to leap on horseback over the fountain in the market-place. But the result was that he fell into the fountain and was drowned in its waters. From this fall into the Ditsche he received the unpoetical, though popular, name which he bears of Dutschmann. While speaking of this "mythical" Wendish prince, we may as well mention the good service Herr Andree has done in exploding a fable which has too frequently been quoted as a fact. The story ran that the Wends, although outwardly loyal to their German masters, secretly preserved unshaken their allegiance to a king of their own race, to whom they paid honour and taxes just as they would have done had he been their actual as well as their rightful mousreb. This romantic tale has been thoroughly investigated by Paster Jentsch, who has shown how utterly fallacious it is in the

Journal of the Matica Serbela, a Wondish learned Society. But it is not every one who can read Wondish with facility, and therefore Herr hadree has conferred a great benefit on acholism by placing on second the result of Partor Jenushis investigation.

placing an second the result of Paster Jentschis investigation.

From Bautzen Herr Andree takes his renders for a pleasant excession among the Wendish villages of Upper Lusstia. Passing through the suburb of Seidau, he points out the supposed locality, in the neighbouring Brotschenberg, of a cave wherein the Jews of Bautzen, as legends tall, used to hide their valuables. Chased sway suddenly from the land, they were obliged to leave them behind, and these the treasures remain to the present day. In the year 1618, on St. Ursula's Day, one Martin Rocks entered the cave by chance, and reached a fast-locked iron door. Suddenly there are see a sound as of felling waters, and open flew the locks with a clang. But the faint-hearted visitor, instead of profiting by the happy chance, fled from the cave, which closed tight behind him, and has never again opened. Herr Andree then rambles from one hantlet to another, remarking that the smallness of these him, and has never again opened. Herr Andree then rambles from one handet to another, remarking that the smallness of these villages is characteristic of Wendish as opposed to German eccupation. The villagers seem to be a kindly and a pious race, who greet the wayfarer with a cordial "God be with thee!" and who speak of "God's rain," or "God's harvest," the beggars asking for a momel of "God's bread." Cheerfulness and good humour are their characteristics also, says Herr Andree, who declares that it is a real placeure to watch the simple and ismocent gaiety of old and young alike, whether at fair-time, or at a marriage, a christening, or a dance. Even their songs are light-hearted, though the lyric poetry of their Slavonic brothers in other lands is for the most part imbred with a marked melancholy. In accordance with this comparative freedom from grief might seem to be their singular habit of mouraing in white; but they share it with the inhabitants of some other districts now or formerly Slavonic, such as the Voigtland and several parts of Hanover and Bohemis. They still adhere to some ewtent to one of their old institutions, gathering together as of yore in the communal assembly; but the use of the lamous kelude, or other kind of summoning staff, by which such as of yose in the communal assembly; but the use of the famous kelula, or other kind of summoning staff, by which such assemblies were in former days convened, seems to have become obsolete. On the memory, however, of this "thoroughly Slavonic instrument" Herr Andree dwells foadly, and he gives a most valuable assemut both of it and of the various symbols of a like nature which used to be passed from hand to hand among the Slaves, as was the Fiery Cross among the Scotch Highlanders, and still is the budstikke in Norway. Until recently, it appears, the salidia, a wooden staff surmounted by an iron hand, played a similar part in Bohemia, and Herr Andree has given a drawing of one which he was so fortunate as to find in the year 1859 in the hamlet of Otretschin. Long ago, however, the original meaning of these symbols of authority was forgotten, and the staff which once represented the majesty of the law sank into the sign of a tax-gatherer's effice, regarded by the people with no more veneration than is evoked among ourselves by the auctioneer's hammer.

After a time Herr Andree passes into Lower Lusatia, drawing a charming picture of its chief town, Kottbus, on a market day, when the country girls come in from all sides in their bright costumes, rendered gay by a truly Slavonic feeling for colour. In the year 1654 the authorities passed a severe sumptuary law forbidding the Wendish peasantry to indulge in gaudy attire, but it has long ago fallen into abeyance. It must have been a picturesque spectacle that the market-place of Vetschau afforded on the gala days set apart for the grand dances, one of which is said to have been attended by a thousand girls in red dresses. Beyond Vetschau lies the Spreewald, a region of meadows and Beyond Vetschau lies the Spreewald, a region of meadows and marshes and slowly flowing streams, where white and yellow roses and other flowers grow in profusion, and above the waters dart thousands of agure dragonflies, and where the place of the carriage or the cart is supplied by the flat-bottomed boat, in which he bebe is taken to the christening, and the bride is brought to her new home, and the dead are carried to their last resting-place. A very attractive picture it is which Herr Andree brings before our eyes of this peaceful region, inhabited by a quiet and simple people, who, langed in the tranquillity of an almost amphibious life, devote eyes or ters peacetti region, inhabited by a quiet and simple people, who, lapped in the tranquillity of an almost amphibious life, devote their attention to the catching of fish and culture of gherkins—those dainties introduced to the Western world, as their name shows, by the Slaves—and trouble themselves but little about events which may be shaking the outer world to its foundations. The only change that takes place among their in the foundations. only change that takes place among them is the forgetfulness of their ancient tongue which slowly steals upon them; with a gentle Einschlafen the pristine speech glides slumbrously into the German wave, and in a little time will be no more than a philo-

logical memory of the past.

About the Wendish language, its nature and its history, Herr About the Wendish language, its nature and its history, Herr Andree gives much exact and valuable information. The number of Wends in Prussia and Saxony together amounted, in the year 1871, to about 128,000 souls. But at one time the race which they now feebly represent occupied a great extent of country, and formed a numerous population. Now the sncient Wendish occupation of the land is in many districts to be traced only by the forms of geographical names. The torm Wendish, it should be remarked, is only a German designation applicable to all Slaves; in their own tongue the Wends speak of themselves as Serba, and therefore their leading literary Society is at the present day denominated Scribbs or Serbian. In many parts of the Germany of to-day the Wends were, in the interests of Christianity, completely attentions. In many parts of the Germany of to-day the wends were, in the interests of Christianity, completely attentions. Thus from the manifest the lime-tree, comes Leipzig; from toply, warm, we have the limits;

from 1700, a fick, we get Ribaita. n of a : explanation of a name has been attempted. Then (Fulish, Kostraya) is Halad a story about "ich kins it is not more satisfactury than that which coplains

Polish, Kostrsyn) is limbed a story short "ich kines This" in it is not more attinuously then that which explains the same a Altona by its visinity (allow soil) to Hamburg. Sometimes also a Slavenic has been consupted into a German tenne, as limbered into Lickrose, or Wynoka into Wedesig.

Some of Herr Andree's anerdotes with respect to the old line guage of the country are noteworthy. Thus when Peter the Class with the Country with adults written in Yendish and in Latin, in which he had guest sthere at the close relationship between the Russians and the Wends, make of Peter as "our Tar," and in fact enunciated the quintons of the Panalavists more than a century before the term Panalavism was invented. His remarks may have impressed the moment to whom they were addressed, for "our Tar," when he visited the Library and other institutions of Wittenberg in 1712, is said to have called the Wendish students together and chatted with them, probably in a sort of compromise between their tangue and his own. Acceptant a sort of compromise between their tongue and his own. Accounty after Frentzel's time there lived at Postwitz an old clergyman who With her fell in love a Hungarian efficer, and Prentzer's time there inved at Postwizz an old designate who had a young daughter. With her fell in love a Hungarian afficer, Michael Klausner by name, who was quartered in the particular during the antumn occupation of the town in 1752. When the war ended, the soldier wanted to earry off the maiden to his Hungarian home, but her father refused to let her go away from him, and declared moreover that she should marry none but a slergy-man. So Klausner went to Leipsic and there studied theology, naturalize after a time to Postwitz of which he hasses to 1775. nam. So klaumer went to Lappac and there studied infology, returning after a time to Postwitz, of which he became in 1779 the pastor, having in the interval married the object of his affections. Slovak, or Hungarian Slavonic, it accma, had been familiar to him from his boyhood, so he easily mastered the kindred Wendish tongue. Half a century before Klaumer wood the clergyman's daughter, an English diplomatist master Hales passed through Bautzen, and became much interest to Analysis. Wends. Before he went away he gave a tract to Archdescon Prætorius, and asked him to translate it into Wendish, net only paying the expenses of print and paper, but even (says the entired and gratified chronicler of the period) "favouring Prætorius with an honorarium for his trouble in making the translation." In 1782 appeared a book containing a part of Pope's Essay on Mon translated into Wendish, but of other links between that language and ours we do not hear. The effect which Wendiah has produced upon the German spoken in Lusatia does not appear to have been of a favourable nature, the Germanized Wend finding the letter h as troublesome to him as it is to our Cockney, calling heaven "Immel" and labour "Harbeit," tracing his acceptry to "Hadam," and ending his prayers with a devout "Hamen."

"Hadam," and ending his prayers with a devout "Hamen."

One of the most interesting passages in Herr Andree's book is
that in which he describes his interview with J. E. Schmaler (in
Wendish Smelef), the joint editor with Haupt of an invaluable
collection of Wendish folk-songs and popular tales. Originally
a student of theology, he obtained a stipend from King Frederick
William IV. which enabled him to spendsometime at Breslau, where
he devoted himself to Slavonic philology under the teaching of Czelnkowsky. Returning to Bautzen, he became, and has eversine countinued
to be, "the soul of the literary movement of the Wends," founding
their chief scientific Society and creating and keeping in circulachief scientific Society and creating and keeping in circulation their principal newspaper, the Serbske Nowing, which appears once a week and sells two thousand copies. There are in all, we may remark, six newspapers in the Wendish language, four of which are published at Bautzen. To labours of this kind Schmaler has devoted himself for many years, refusing every offer, however lucrative, which would compel him to desist from his patriotic and disinterested task. What he and his grand band of the course have done to remark invariant the advertision and in the course have done to remark the course in and in the course in the the moral tone of their countrymen is known to but few persons beyond Wendish and Panslavist circles; but their labours are of a truly noble kind, and deserve to be fully and generously ap-

Here we must pause. But we have done by no means full justice to Herr Andree's excellent book, having been able to say nothing about two of its most interesting chapters-those which deal with the Lusatian Heidenschwanzen and other Rude Stone Monuments, and with the Wondish Sprachgebiet from the sixteenth century up to the present day. To archeologists the former, to philologists the latter, may be heartily recommended.

GROTE'S MINOR WORKS.*

A COLLECTION of Grote's minor works was not needed for the purpose of adding anything to his reputation. The historian of Grecce, the commentator on Plato and Aristotle, the writer who lived to see opinions which he held as one of a small sect. or which he himself put forward as novelties, become accepted maxims, the Radical politician who lived to refuse a peerage, would be equally sure of being remembered though any of his lesser performances were left dispersed or unpublished. As far as Grote's memory was concerned there remained little for the editor of these pieces to do. Still he deserves the thanks of all who take any interest in Grote's life or works for having brought together the contents of this volume in a readily accessible form. The matter

[&]quot;The Minor Works of George Grute; with Critical Research on Intellectual Character, Writings, and Speeches. By Alexander Be London: John Muzzig. 2873.

and dell paramidists in the fire most part interest.
They constitute a certain of landinaris in the
additity as a thinkler and writer, and therefore
his wild note with which he dealt.

millet on Parliamentary Referen, and in Mr. Bain's sensit of the speeches in Parliament on the Bailet and The particular of the speeches in Parliament on the Ballot and other sandless, we have a received of the political stage of Grote's sincer by which his first became generally known. The essays is which his stagent to show a line between the historical and the pre-historical in Greek and Roman tradition mark the lines of the critical studies which prepared the way for the author's principal work. The philosophical fragments, of which the part hitherto unpublished is only a selection—and, we are inclined to think, too small a selection—from that which is preserved, show Grote returning from time to time to the huxury of meanistive discussion. In his love of this he was thoroughly formatic, though neither his philosophical tenets nor the general turn of his mind here much resemblance to those ascribed to Scarstar by Pisto. We might perhaps find more points of likeness to Brote and his contemporaries in the Scarstes of Xenophon, if it were not irrelevant in this place; and we are by no means sure that the real Scarstes would have been a much more sympathetic commentator on the Platonic Socrates than Grote in fact showed himself. The only part of this book which has to do with Grote's work on Plato is a paper on a much disputed passage in the Timess. The obscurity of the point being out of proportion to its importance, Grote merely stated the conclusions in their place in his exposition of the Timesus, and put forth the discussion separately.

Various as the topics of these collected pieces are, they all bear the impress of the same clear and vigorous mind. The quality which appears to us to stand out most prominently in Grote's eriticism is one which we may take leave to call intellectual objectiveness. He is never fast bound to his own way of looking at things, and still less to the way prevalent in his own time. This power of realising points of view out of one's own immediate aphere is one of the most important elements in the constructive interchapter margination marginal for a true histories. imagination needful for a true historian. Here it is illustrated in a small detail, but the more clearly on that account, in the essay On Plato's Boetrine respecting the Rotation of the Earth." The usetion proposed is whether Plate affirms the rotation of the earth in a certain place in the Timerus. The words themselves, though obscure, favour the inference that he did affirm it; and it is certain that Aristotle so understood the passage. But modern critics have objected that in the same dialogue Plato affirms a rotation of the celestial sphere which is obviously inconsistent with this rotation of the earth. To this Grote rejoins that, though the inconsistency is obvious to any one familiar with modern astronomical conceptions, it does not follow that it was obvious to Plato; and that in fact it was not detected either by Aristotle or by numerous subsequent commentators. Boeckh and others following him, says Grote, "have too hastily made the intellectual extrencies of their own minds a standard for all other minds, in different ages as well as in different states of cultivation." And he concludes that Plato did entertain the two incompatible opinions without

perceiving their incompatibility.

The same disposition appears in a more general and diffused form in the essay on "Grecian Legends and Early History" (first published in 1843). Here Grote insists on the readiness of mankind to accept plausible fiction as absolute fact, in an age before they have acquired any "thirst of rational curiosity." Plausibility, again, means "consonance with pre-existing feeling common to speakers and hearers" at the time when the legend is started, not speakers and hearers at the time when the required to make a story the fulfilment of such conditions as are required to make a story seem plausible at the present day. He observes that even in modern times large numbers of people may be in the state in which a fletion "drops into its place like the keystone of an arch, and exactly fills the painful vacancy in their minds"; and he cites for example a romantic incident in Byron's life which was wholly unfounded in fact, but was (with many others) current on the Continent, and was accepted without question by Goethe as a satisfactory explanation of many allusions in Byron's poems. Then he infers from the credulity of men even in our own times a probable credulity in much earlier times, exceeding anything that now find among superior races. He proceeds to show the impossibility of disengaging any nucleus of trustworthy historical fact from the Greek legends, and gives incidentally an interesting account of the attempts made at rationalizing the Homeric poems account of the attempts made at rationalizing the Homeric poems by various (lireck writers. And he concludes that the early Greek legends (in which he includes mythology) are pure fiction, mixed up probably with more or less matter of fact which it is impossible to pick out. As far as the credulity of mankind goes, he succeeds in removing all objection; the difficulty is that he must presuppose an extraordinary fund of pure invention to feed that credulity, and that the circumstances can hardly be imagined under which the mere invention of several of the Greek myths could have been mere invention of several of the Greek myths could have been appropriate. This easy is in truth very curious, as showing how much and how little can be made of prehistoric legends without the means now given by comparative mythology. Grote was right in holding it useless to look for a foundation of actual history in the Greek myths, but he was wrong in trying to account for them as pure fiction. He thus classifies "the accredited narratives which float in acciety"—accurate matter of fact, exaggrated matter of fact, and entire though plausible fiction. But compandive mythology has added to these another category which could not have been foretold—namely, transformed fact. A myth, as

more unideratood, is a fiction which corresponds as a sufficial facts, but firsts of a totally different hinti from these substitution in its existing form it purports to represent. The "substandad linguishing pullengation found in the Greek mythology, and which were contemporal found in the Greek mythology, and which were contemporal found in the Greek mythology, and which were contemporal found in the Greek mythology, and which were contemporal found in the Greek mythology, and which were contemporal in the Greek mythology, and which were contemporal in the contemporal in th

he.

The papers on Philosophy are likewise remarkable for the straightforward and clear-eighted transment of the quantiens discussed in them. In the earliest fragment Grote upholds fluckeley's idealism (or perhaps we should say anti-materialism, alone he accepts only the negative part of Berkeley's system) against the accepts only the negative part of Berkeley's system) against the accepts only the negative part of Berkeley's system) against the accepts only the negative part of Berkeley's system) against the accepts only the negative part of Berkeley's system) against the accepts only the negative part of Berkeley's system) against the accepts only the negative part of Berkeley's system. that the question is a sophism, for the supposition of his min annihilated precludes any judgment or answer whatever. It will be seen that this does not really differ from Berkeley's proposition that not only no notion of "material substance" can be formed, that not only no notion of "material substance" can be formed, but it is repugnant that there should be a notion of it. However, the downright way in which it is put is striking, and the following remarks suggest, though not directly, the modified statement of the question at issue in the form—What do we really mean by existence? which is the form in which it should be stated in order to understand the answer given at a more recent date by Ferrier. With him Grote exchanged notes in 1860 on the vexed question of subject and object. The discussion cannot perhaps be appreciated without having in arising more of Ferrier's peculiar system than appears in his condensed reply to Grote's first memorandum. But Grote has some scetts remarks on the "various sources of confusion in reference to this retithesis on the "various sources of confusion in reference to this matithesis of Subject-Object," the interest of which goes beyond the point immediately under consideration.

We have left to the last that which comes first in the book—

we have left to the last that which comes and in the book—
the "Essentials of Parliamentary Reform." This tract preserves in
a felicitous shape the manifesto of the advanced Liberate of 1831.

It is curious to note how political parties have shifted their ground
since that time, and how far the exportations of Grots and his companions were in accordance with the results, or were disappointed. For instance, Grote seems to have expected the Ballot almost at once, and national education only in the time of statesmen then unborn. They have both come almost together; but in the meantime Radicals had ceased to be unanimous about the Ballot, and education (notwithstanding some local and partial exceptions) has not been treated as a matter of party politics at all.

Mr. Bain's introduction to this volume must not go without a

word of praise. It gives a continuous survey of Grote's writings and public doings, including an account of his Parliamentary career, and cannot fail to be of considerable use.

PEEPS INTO THE HUMAN HIVE.

DR. WYNTER is a writer of some audacity. He has written P. WYNTER is a writer of some andactty. He has written some fairly interesting articles upon various details of our social machinery, and has republished some of them in volumes called Curiosities of Civilization, Our Social Bees, and so forth. As he has continued the same pursuit, game has naturally become scarce. He finds it increasingly difficult to hit upon any subject which has not already been worked to death. However, by dint of prying into various odd places—shoddy manufactories, false that the has manufactories, and the like—he has manufact to rake targether the manufactories, and the like—he has managed to rake together the materials of some tolerable newspaper articles. We have no right to complain of the faults produced by the scarcity of his prey. The newspapers published his articles, and we must presume that readers studied them. We confess that when we come in any periodical upon a description of the invention of the steamengine, we turn over the pages with a very cursory glanes at the Marquis of Worcester's invention. Neither are we profoundly interested by a description of the last new method of turning to account old rags or preserving photographs. This, however, may be due to some intellectual weakness on our part, and we freely admit that newspaper readers are sometimes expected to annount themselves with more questionable stuff. We may therefore owe a kind of negative gratitude to a writer who provides them with matter which is harmless, if it is not very exciting. The remarks of that industrious writer who is always adding up the ages of the or that industrious writer who is always adding up the ages of the persons whose deaths are recorded in the Times, and publishing the results of his investigations with uncessing surprise, may be open to the same kind of praise. It is perhaps more profitable to know that the united ages of twenty people who died at nearly the same date amounted to 1,700 years than to be posted up in the details of the last murder. We may admit too that Dr. Wynter has gone further afield for his information, and has to make greater demands upon his literary skill mation, and has to make greater demands upon his literary skill in presenting his results to the world. But it is another question whether it is right to publish such esticles in a collected form. England, according to the usual formula, is a free country, and a man may publish the feeblest kind of literature if he pleases. We may still ask whether in such cases it would not be desirable that

^{*} Peaps into the Municipalities. By Andrew Wynter, M.D. London: Chapman & Hall. 1874.

critics should inflict some kind of chastisement upon the author. After labouring through many pages of this exceedingly fashle literature, we feel a vindictive desire to say something disagreeable to the author of our suffering. We shall refrain, however, partly because serious criticism would be rather out of place in regard to such trifles, and partly because Dr. Wynter has mixed two or three articles of a superior kind with the rubbiah. Perhaps none of his chapters rise to a very high level; but those which deal with certain professional topics, such as the right treatment of the insane, and recent advances made in curative surgery, are pleasant reading enough, and, though they do not profess to give original information, are fair specimens of popular writing upon such topics. We are more inclined to pity than to condemn him for having filled his two volumes with a quantity of inferior matter which in our opinion had better have been allowed to remain in

for having filled his two volumes with a quantity of inferior matter which in our opinion had better have been allowed to remain in the obscurity of the original columns.

As detailed criticism would be out of place, we shall venture to indulge in a few reflections of our own. Reading the very miscellaneous collection of articles of which Dr. Wynter's second volume is composed, we have been reminded by the force of contrast of a writer of a very different class. Mr. Ruskin is preaching to a world which we fear pays him less attention than he deserves upon the various defects of our modern civilization. He proposes the sholition of steam-engines, and indeed of all kinds of machinery, social as well as material, and suggests that we should all return to something like that "state of nature" which had such charms for the sentimentalists of the last century. Dr. Wynter is troubled with no such speculations. He takes the commonplace, and therefore, most people will add, the sound, view of what is called progress; and sings hymns over the triumphs wrought by modern machinery with the ordinary complacency of the middle-class Briton. It would be anusing to read a comment by Mr. Ruskin on the text supplied by Ir. Wynter. At every point we should have a curious problem presented. Are we to take the improvement of machinery as a sign of real improvement or degeneracy? Dr. Wynter rejoice over sewing-machines because they save a certain amount of labour. Do they really improve the art of sowing, or do they simply enable us to have a greater quantity of garments worse put together, and encourage women who would formerly have had a peaceful employment at home to spend more time upon their frivolities? The Post Office is undoubtedly a much more perfect bit of mechanism than the poor old posts which before the days of Mr. Palmer used to circulate correspondence at the rate of three miles and a half in the hour. But has the art of letter-writing improved? Is there anybody living whose letters are asparkling as Horace Walpole's,

Another article deals with railway season-tickets and tells us how by their help a great part of London has managed to invade the country, and a merchant may now live fifty miles away from his counting-house. Is such a change desirable? The mere fact of travelling a hundred miles a day is said on high medical authority to cause all manner of evils to the frame; and many people who endeavoured to combine work in London with seaside air have either given up the practice or have had their constitutions seriously injured. This is merely one incidental evil of the prevalent desire to be in two places at once. We must add that those brick and mortar encampments which have grown up in suburban districts combine many of the evils of town and country. They are badly drained; they are bleak and miserable; and their inhabitants are isolated, without becoming really rusticated. Moreover the good old merchant, who used to live over his shop and superintend the morals of his apprentices, has become a thing of the past; and the town suffers from the drafting away of its best population as much as the country is injured by their presence. Manufactures are improved, but the improvement results in processes of which the bare mention almost turns one s stomach. We make perfumes, R. Dr. Wynter be rightly informed, out of the excrement of a whale. An ingenious gentleman in Paris makes food out of the fragments of bread picked up in the gutters. Ladies' chignons are made in great part from hair which has been imported from Italy, and which is there collected in all manner of unsavoury places. It is cleaned, indeed, and Iv. Wynter assures us that there is no danger of living parasites; but it is admitted to come "from the most objectionable and repulsive sources," and to be espable of conveying contagion. It is better for the imagination not to

follow too closely the various articles which go to make a medical fine lady beautiful, or we might draw a picture too much in the taste of Swift. If we walk a little further we see streams pullities by filth which ought to fertilise our fields, the sky darks and by matter which is so much wasted fuel, vegetation poissed by noxious odours coming from objectionable manufactures, and our houses contrived so as to take fire easily and keep in the effluvia from drains. When we add to these evils all the unhealthy or harassing employments of civilized beings, all the lying and imposture by which the social machinery is carried on, we may easily draw a picture calculated to startle us out of our ordinary complacency. Mr. Ruskin, as we have said, is constantly attempting to impress these ugly facts upon his countrymen, though with indifferent success. What kind of answer should we make to him? Certainly we cannot deny the existence of grave evils, nor indulge in the easy optimism which congratulates itself on every advance in the same direction. Perhaps the best that can be said is that there have been a good many disagreeable things in the world at all times; that, if we endeavour to find some general mode of comparison, we shall perhaps discover that, with all our vices and follies, we are rather better off than our grandfathers; and, finally, that if improved scientific knowledge introduces many evils, it also shows the way to get rid of them. But we have no room to enter upon so will be a problem; and perhaps the reflections we have suggested are of rather too grave a nature for so modest a text as Dr. Wynter has provided us.

MORLEY'S ROUSSEAU.*

MR. MORLEY has followed up his study of Voltaire with a study of Rousseau, which may be regarded as its natural complement. The two men follow each other in moral as well as chronological sequence, and the one supplies the explanation of chronological sequence, and the one supplies the explanation of the other. They are, in fact, different parts of the same subject. Voltairism cannot be thoroughly understood without observing the reaction which it provoked, nor Rouseeauiam without going back to the philosophical system which preceded it. The antagonism of the rival prophets has coupled them inseparably, so that Voltaire immediately suggests Rouseeau and Rouseeau Voltaire, and it is scarcely possible to say anything about the one without referring to the other. Having written a book on Voltaire, Mr. Morley was therefore under a sort of logical obligation to write another on Voltaire's most conspicuous adversary. tion to write another on Voltaire's most conspicuous adversary. tion to write another on voltaires most conspicuous adversary. He has made a difference, however, in his treatment of the two subjects. His Voltaire was a broad historical canvas; his Rousseau is an elaborate portrait of a single figure. Mr. Morley appears to have been struck by the want of a "full biographical account" of Rousseau, and has set himself to supply the deficiency. This undertaking at once suggests two reflections. In the first place, is the supposed want a real one? It is true, no doubt, that Rousseau exercised a subtle and widespread influence at a critical period of European history, and it is of course necessary to analyse this influence, and to know something of the man who will be in a course to the man who will be in a course to the spirit of the course. wielded it, in order to catch the spirit of the age. It does not follow, however, that it is necessary for this purpose to devote oneself to a microscopic examination of all the secret passages of a morbid and loathsome life. In point of fact, Rousseau's influence had very little connexion with his personal history, and critical pathwing spirit than in conveyages of his character, and existed rather in spite than in consequence of his character and habits. He attracted attention, not because there was anything habits. He attracted attention, not because there was anything very remarkable in himself, but only because he gave eloquent and passionate expression to the sick fancies of the time. There was nothing new either in the mood he represented or in the ideas with which it was associated; but there happened just then to be a good many people suffering from the malady. For our own part, we cannot help thinking that the personal history of this unhappy creature belongs to the order of things which it is as well to leave underground, and to stir as little as possible. It is only fair to Mr. Morley to say that he conducts his analysis with the utmost delicacy and propriety, but no deodorizing process can get the better of the nature of the material, or prevent the reader from being at times unpleasantly reminded of one of the laboratories of Laputa. There is also, it seems to us, another diffilaboratories of Laputa. There is also, it seems to us, another diffi-culty in dealing with the personal history of Rousseau. It has to be gathered chiefly from his own writings, and he was not only an habitual and unscrupulous liar, but a person almost incapable of talling the plain, soler truth on any subject. He would may anything that he thought would produce a sensation and draw attention towards himself; and besides, he looked at everything through the artificial medium of a diseased imagination. He through the artificial medium of a diseased imagination. He lived in a world of shadows, and one of the shadows was the ideal Rousseau or Rousseaus, for they changed from time to time, whose feelings and emotions he professed to describe. An historical work based on testimony of this kind necessarily rests upon a very equivocal foundation. It is startling to find on page after page of Mr. Morley's book serious references to chapter and page of the Confessions as authority for statements in the text. Semetimes no doubt. Rousseau is talking the texts between the or the Confessions as authority for statements in this text. Semi-times no doubt Rouseau is telling the truth, but just as offen he is only weaving a rousence, and in his hands even truth acquires a considerable flavour of fiction. Mr. Morley acknowledges that there are acrious discrepancies, of which he himself gives various examples, between Rousseau's statements and the evidence of more

* Roussens. By John Morley. 2 vols. London: Chapman & Hall-1873. imposited and treatmenting witnesses; but he seems to think that Rossman's management of the money may be accepted when it is not actually southen his to believe Rousseau only when he was fully contracted. The should have thought that the safer orders would be to believe Rousseau only when he was fully contracted.

In Mr. Moder's pages Rouseau becomes an imposing and even respectable figure. Certainly no attempt is made to palliate his vices or to justify all his opinions; but we are called upon to admire his surnestness and seriousness, his sincerity and "unqualing versatity." Mr. Morley selects as the motto of his book some lines by Victor Hugo, suggesting that in some souls, as in a stagmant pool, we may see two things at once:—

Le ciel, qui tient les eaux à peine remuées, Àvec tous ses rayons et toutes ses nuées ; Et la vase, fond morne, affreux, sombre et dormant, Où des reptiles noirs fourmillent vaguament.

Without denying the prismatic glories of the cesspool, we think that a fifthy and poisonous nuisance had better be called by its right name, and that its dangerous character should be distinctly

recognised.

Putting together what Rousseau says of himself with what is said by his contemporaries, it is not very difficult to form some idea of the sort of man he was. While yet a child, his natural sensibility was intensified by a passion for romances, which he had caught from his father:—

I had (be afterwards said) no idea of real things, though all the sentiments were familiar to me. Those confused sensations, striking me one after another, did not warp a reason that I did not yet possess, but they gradually shaped in me a reason of another cast and temper, and gave me strange and romantic ideas of human life, of which neither reflection nor experience has ever been able wholly to cure me.

He read Plutarch, and resolved to be an ancient Roman; but measwhile he was idle, greedy, slovenly, told lies, shirked his work, robbed his master, and at last, in cowardly terror of a beating, ran away. He met a priest, who gave him a nice dinner, and he was straightway converted from Protestant heresy to the true faith. "I was too good a guest," he tells us, with his tongue in his cheek, "to be a good theologian, and his Frangi wine, which struck me as excellent, was such a triumphant argument on his side, that I should have blushed to oppose so capital a host." The priest sent him to Madame de Warens, who adopted and educated him, and whose kindness he repaid by deserting her when she was sick and destitute—"I groaned over her," he said, "and did not follow her"—and by attaching to her name a shangful notoriety. His musio-master, who had also been a good friend to him, and whom he had accompanied to Lyons, fell down in a fit in the street. Rouseau called for help, told the crowd the name of his friend's hotel, and then slipped off when nobody was looking. He stole a ribbon and imputed the theft to an innocent girl. He got a place as tutor, and used to feast on stolen cake and wine. At Paris he formed an intrigue with a tavern wench—a gross, ignorant creature, almost brutish in understanding, who could never be taught to read, who could not even follow the order of the months of the year, or master a single arithmetical figure, or count a sum of money, and who in her imbecile stupidity frequently used words which were the very opposite of her meaning. Five children, the offspring of this union, were dropped into the box at the foundhing hospital as soon as born; not even a note was kept of the day of their birth. Rousseau boated of his determination to do no more work than was absolutely necessary for his own individual support, and affected an austere and savage independence. It is evident, however, that in point of fact he was maintained during the greater part of his life by the charity of his friends, who

air, good appetite, the freedom of the alchouse, the absence of everything that could make me feel dependence, or recall me to my situation—all this sets my soul free, gives me a greater boldness of thought. When I came to a place I only thought of eating, and when I left it I only thought of walking. . I had not the least care for the future." After spending the night on a wall in the open air, "I rose up, and gave myself a shake; I felt hungry, and started gaily for the town, resolved to spend on a good breakfast the two pieces of money which I still had left." When he found that the world was not exactly adapted to this sort of careless animalism, he railed at it, and wanted to turn it upside down. One of Rousseau's favourite phrases—and it stamps the character of his school—is "the fatality of my life." We are asked to believe that naturally he was the sweetest, purest, and most virtuous of men, but that somehow a bad world was always getting in his way and tripping him up. When he falls into any of his dirty or dishonest tricks, it is not himself, but society, that is to blame. "Man is born good, but society depreves him." If he had only not had to run away from his master at Geneva—it was his own thisvish propensities that got him into trouble—he is sure he would have peaced "a mild and peaceful life," such as his character required. He would have been "a good Christian, good man in all." Skill, if he has failed in any of these respects, he is not at all dissetiated with himself, because it is clearly other people's fault. He will have a laws believed himself; and skill believes himself, to be the best of men. He would admire and love him still more if

there a more tender, better, juster heart." In spite of "the suiffment of his vines, he has always had a high setseam for kinsulf." True, he sent his infaints to the frandling hospital; but this was because he frequented a particular tavers where there was demoralizing talk on such matters. He "formed his finding from what he perceived to reign among people who were at bottom extremely worthy folk, and said to himself, 'Since it is the usage of the country, as one lives here, one may as well follow it." This was one of many excellent reasons by which he excused or justified this paternal outrage. He thought he was "enrolling himself a citizen in Plato's Republic"; that it would be better for the children, who would be brought up to plain, honest industry, instead of becoming advanturers and fortune-hunters; that it would be better for himself as well, as, under the bad influence of their mother and her family, the children might have been taught to hate and persecute him. Anybody is to be pitied, it is poor Rousseau himself; "I deprived myself of the delight of seeing them" (the children), "and I have never tasted the awestness of a father's embrace." He delivered them from misery by sacrificing himself. Yet this heroic act was just what the barbares selzed upon in order to vilify his character. "Comme ils as sont plus à me peindre en pere dénature, paree que j'étais à plaindre." In the whole literature of the world there is probably not such another sickening example of whining, hypocritical can't as his letter to Madame de Francus que j'étais à plaindre." In the whole literature of the world there is probably not such another sickening example of whining, hypocritical can't as his letter to Madame de Francus of the objection that people should not have children when they cannot support them he replies, "Pardon me, madame; nature means us to have offspring, since the earth produces sustemance enough for all; but it is the rich, it is your class, which robs mine of the bread of my children." Afterwards Rousseau

Such was the man as painted by his own hand. In a characteristic passage he imagines himself advancing at the sound of the last trumpet to lay down the story of his life before the Sovereign Judge, and saying boldly:—"See what I have done, what I have thought, what I was. Eternal Being, gather round me the in-numerable crowd of my fellow-creatures, that they may listen to my confessions." The idea of the human race being summoned before the throne of Heaven to listen to the crapulent confidences of the paramour of Madame de Warens and Theresa Le Vasseur is certainly somewhat startling. It is clear that the Confessions were dictated by the diseased vanity which shaped his career. He wished to show at he could afford to do what few men could do-to lay bare his life, with all its weaknesses and views; and he was confident that, when he had told the worst, the world would be full of admiration for him. If he could not win admiration, at least he was de-termined to have notoriety. It is absurd to attempt to construe such a work literally. It is not so much a biography as a romance; and some of the darker as well as brighter tints of the portrait may be set down as tricks of fiction. It is safer to trust to the impressions which Rousseau produced on his contemporaries. He was nearly forty years old when he first attracted public attention, and his previous life had been simply that of a reckless and disorderly vagabond, loose, sensual and thievish, who tried to keep on good terms with the people on whom he sponged by service attentions and cringing flattery. There is a consumption of testimony that Boursan's investigations. is a concurrence of testimony that Rousseau's importinence and cynicism date from the time when he was thrown into good society, and thought he could carry off his own deficiencies as well as produce a more striking effect by an insolent bluntness and harsh austerity. Grimm, who knew him in his first state, says he was then honeyed and fatiguing in his elaborate and artificial fatteries. All at one he put on the expirit clock and scent to was then honeyed and latiguing in his elaborate and artificial flatteries. All at once he put on the cynic's cloak, and went to the other extreme; but he was still shrewd enough to try to keep in with the people with whom he lived, and especially to compliment women with what he thought pretty talk. Marmontel says the same thing, only more strongly. The servility and toadvism of his earlier manner continued to mingle with his arrogance and brutality. At one time he would make himself misorable because frequenting the society of dukes, he had a little dog called Duc frequenting the society of dukes, he had a little dog called *Duc*; and then he was afraid lest his changing the name to *Ture* would offend the dukes still more by calling attention to the matter. Another day he would watch for or contrive an opportunity to say something rude and impertinent to a great man. "Will you allow me to pay you a compliment?" said the Duke of Deux-Ponts. "Yes," was the reply, "if you cut it short"; which, as Grimm told him, would have been an impertinence to a water-carrier. Yet Rousseau bragged of it in company. When he brought out the *Village Soothsayer*, he advertised himself and his piece by going into the Café de Procope, and crying out, "The new piece has fallen flat, and deserved to do so; it wesried me to death. It is by Rousseau of Genevs. I am that Rousseau." "The new piece has failen flat, and deserved to do so; it wesried me to death. It is by Rousseau of Geneva. I am that Rousseau." Afterwards he printed the piece he had pretended to despise. When in England Garrick invited him to the theatre on a special night, and set apart a box for him; but when the time came Rousseau would not go lest his little dog should feel lonely when left at home by itself.

Grigmu touched the next of disease in Rousseau when he

Grimm touched the seat of disease in Rousseau when he said, "He is a poor devil who torments himself, and does not days to confess the true subject of all his sufferings, which is his comed head and his pride; "to raises up imaginary matters, so as to have the pleasure of complaining of the whole human

race." Madame Diderot took a similar view of him. "He is devoured with envy; he goes wild with race when anything fine appears that is not his own. You will see him one day commitsome great crime rather than let himself be ignored. I declared would not swear that he will not join the ranks of the Jesuita, and undertake their vindication." We are disposed to agree with Mr. Morley in questioning the theory of Rousseau's insanity. If he was mad, it was because he made himself so by giving way to his solfishness, envy, and bad temper; and this is by no means a rare form of what is called mania. It is doubtful how far at any time the imaginary wrongs of which he complained were actual delusions; he no doubt know very well that he was telling lies, but, as Grimm says, he wished to have the pleasure of complaining of the whole human race. With his love of pothouse freedom, his insufferable vanity, and shameless selfishness, he was constantly uneasy and affronted in decent company. So he demounced society, and flew to the wilderness. In his hermitage he was wretched unless he thought there was somebody peeping at his antics.

Done into plain prose, Rousseau becomes not only as exceedingly contemptible, but really a very commonplace, humbug. There have always been plenty of Rousseaus in the world. He was a lazy, selfish, dirty, lying, canting, ill-conditioned vagabond, who shirked honest work, accepted alms and snarled at the hands that fed him, and whined and raved against the world because he was himself such a nasty and ignoble creature. That his eloquent and romantic sophisms, coming at the time they did, when feeling and imagination had been unduly repressed, and when a sick and disordered society found its condition gradually becoming intolerable, should have produced a deep impression, is natural enough; but, except his literary faculty, there was really nothing in Rousseau to distinguish him from any other loose and shiftless adventurer. He was a great phrasemonger, and thought that fine words would answer any purpose; but in other respects he belonged to a very common type. In our own day there is no lack of sham hermits, who want the world to be made over again, in order that it may be adapted to their own weaknesses and passions. Nor has the race of sentimental theorists died out. It might perhaps be worth while for the Land and Labour Lengue to bring out a cheap edition of Rousseau's easey on Social lucquality. He proves that the cultivation of land is the origin of evil. From the fact of land being cultivated followed its division, and from its division property, and from property civil society. "The first man who, having enclosed a piece of ground, could think of saying, This is mine, and found people simple enough to believe him, was the real founder of civil society. How many crimes, wars, murders, miseries, and horrors would not have been spared to the human race by one who, plucking up the stake or filling in the trench, should have called out to his fellows, 'Beware of listening to this impostor; you are undone if you forget that the earth belongs to no one, and that its fruits are for all."

BELT'S NICARAGUA.

THE successive expeditions organized within the last few years by the Government of the United States with a view to the canalization of the Isthmus, abortive as they have been in regard to their primary purpose, have had for their result a large amount of knowledge bearing upon the country between the two great oceans. The geography and general physical features of the State of Nicaragua have thus been, to a considerable extent, explored and authentically laid before the public. Yet beyond those facts which hear immediately upon the problem of transit by boat or rail from sea to sea, not many details relating to the intermediate region have been brought together by the surveying parties. Nor have many qualified travellers been led by the love of adventure or the thirst-for scientific knowledge to enter upon the harvest of new and interesting truths which never fails to reward such as are the first coners to the rich fields of tropical nature. The flora and fauna of Nicaragua have never before been studied and described as they have lately been by Mr. Thomas Belt, already well known as a naturalist and practised observer of the phenomena of life, who, in the intervals of daty as engineer to the gold mines at San Domingo, has within the last few years had a watchful eye for this class of facts. Taking as his guide and model the admirable work of Mr. H. W. Bates, The Naturalist on the Amazons; he has accumulated a store of new and valuable facts in natural history; and these additions to our knowledge give to his book a value wholly apart from the theories or speculative crutehets on which we fear he would himself prefer to fix its claims to attention.

Mr. Belt's work, he prepares us by saying, is full of theories, which he trusts to bear out by facts, some of them thought out on the plains of Southern Australia, some during a solitary sleigh drive over frozen lakes in North America, some in the great forests of Central and South America, some on the ocean, or in the bowels of the mine. That he owes these creations of his mind not to methodical and prinstaking study so much as to a vivid facey and a bold habit of generalization, may be

inferred from the bindy afficient the sale couled problem to read up, during his brief wiferen in Hingland, the Riche various questions involved at well, as from his authors whose works he may have failed to men the various questions involved, all well as from his specifical authors whose works he may have failed to mention. His knowledge of languages, moreover, being limited to that of his mother-tongue, must have been a serious diswback to with each thorough research. It is not as a writer of scientific cultureses trained habits of logically weighing evidence that Mr. Belt comput forth claims to our attention or confidence. We have but to expose in their own naked simplicity one or two of the pet crotchets which were evolved during the wanderings has just spoken of, in order to judge of the scheme of science which is ready, to use his own mataphor, to rise and grow out of the urn of his brain "like the genii of the Arabian tals." What are we to think of such a geological phantom ash manual lewering of the waters of the ocean all over the world to at least one thousand feet, produced by the prodigious quantity of water locked up in this frozen masses that covered a great part of both hamisphareness. Surely Professor Agassiz himself would have stood as aghiest are the fisherman of the Arabian story at the mighty shape which him risen out of so slender a vessel as the theory of his glacial sheet. The monster may be raised to a height far above this; but Mr. Belt professor to err on the safe side. When geologists have mapped out the limits of ancient glacial and continental ice all over the world, and when hydrographers have shown on their chart the shoals and sub-moreoid had a prosent that would be laid dry by restoring: to night the limits of ancient glacial and continental ice all over the world, and when hydrographers have shown on their charts the shoals and submerged banks that would be laid dry by restoring; to sight the configuration of land and sea as it existed prior to the sinking of the fielded Atlantia between the New and the Old continents, such that of the Makey continent which is plausibly thought to have held the place of the existing Makey island groups in the Southern Pacific, then will it be possible, our author/thinks with satisfaction, to calculate the minimum of water which was so between the form and at launth weatered to the sea, and in this ways for tion, to calculate the minimum of water which was so abstracted from, and at length restored to, the sea. And in this way, for better than by the theory of subsidence based by Wallace and others upon the distribution of life as well as other physical aspects of nature in the Southern hemisphere, and upon the like considerations, coupled with the voice of traditions, as regards the lost Atlantis, does he consider the ordinary belief in the Doluge to be explained and vindicated. To the same conclusion he has been led in part by the traditions extant among the Faster islanders and others of the Malayan races; but chiefly by study of the fauna and flora of the insular groups of the Southern Ocean. We are grateful for the stores of observation and the many new varieties of animal and vegetable life which Mr. Belt has come across in the course of evolving these speculations. Belt has come across in the course of evolving these speculations. The proofs of glacial agency, many of which he has now to add to those adduced in a former work of his upon the subject, are full of value, and only need a more soher and discriminating process of reduction for their true and full significance to be made clear. A careful study of the phenomena of glacial action as now in operation over the whole extent of Greenland, and much neares the tropics in the ranges of the Himalays and the Kuen Luz, would supply him with the means of explaining the series of evidences of similar agencies at work in ages long bygone, without having recovered to hypotheses of so fur fetched and expelling a nature. It is interested to the contract of the contra course to hypotheses of so fur-fetched and startling a nature. It is inc course to hypotheses of so har-fetched and startling a nature. It is incomparison with this but a minor and less and actions instances of Mr. Belt's power of grappling with difficulties that he dispersawith a stroke of the pen of whatever impediments, physical, financial, or political, have hitherto barred the way of the off-projected ship canal through Nicaragua. Where no official commission or proposable department of the contract of the co sion or responsible department of Government has as yet felt itself prepared with a definite engineering scheme, or a serious proposal for supplying or even estimating the requised funds, he seems to think it the simplest thing in the world; and he already seem in imagination the long lines of shipping which are ere long to rival or surpass those which at time block the Suez Canal.

It is in the richness and requires of invest life that the translate

It is in the richness and variety of insect life that the tropical lands of the Western continent are most worthy of note. And in this respect Nicaragua opens a field for observation in which our author's qualifications as a naturalist have been employed to-valuable purpose. From this point of view his book is fill of interest. Notwithstanding the strange epidemics which he found prevailing not only among the birds, but among many classes of insects, at the time of his sojourn in 1872, he was always lighting upon novel and characteristic species or variaties. Monotoness he found the scenery from the very profusion and luxuriance of the vegetation, where perennial moisture reigns in the soil and perennial summer in the air, the earth and the leafy masses them with minute and innumerable forms of life. So abundant were the butterflies that awarmed on the wet sandy banks of the Artiques river on hot summer afternoons, polluted as it is by the gold-mining works through which it passes, that with one awoon of his net Mr. Belt has enclosed more than therty in its gauny folds. More than twenty different species would reward the toil of a single-afternoon, the finest being a lovely white, guern, and hashes swallow-tailed possible, the tirst capture of which filled him with all an entomologist's delight. A large spider (Newhile) builds strong; yellow silken webs, joined on one to another so as to make a complete curtain with their meaks, to entrop these beautiful creatures, which, however, show infinite destroics in their attempts to evade the soars. There is a yellow-banded was attempts to evade the soars. There is a yellow-banded was attempts to evade the soars. There is a yellow-banded was attempts to evade the soars. There is a yellow-banded was attempts to evade the soars. There is a yellow-banded was attempts to evade the soars. There is a yellow-banded was attempts to evade the soars. There is a yellow-banded was attempts to evade the soars.

^{*} The Naturalist in Nicaragus: a Narrathu of a Residence at the Gold Mines of Chanda: Journeys in the Sacanachs and Florest: With Observations on Assemble and Plants in reference to the Thomps of Enclusion of Links, Forms. By Thomas Bells, Firis, Anthon of "Mineral Values," The Gladal Period in North America, Sec. With Mine and Illustrations, London: John Murray. 1874.

sless owing to its sublity, being less liked than most other
as. It would appear that through long ages the trees and
sate or other insect foce of Central America have been modiis antis or other insect foes of Central America have been modi-id tegether. Varieties of plants that arose manifolis for the its find an immesse advantage over those which suited their site; an ithat in process of time, under the operation of natural steption, every indigenous tree which has survived in the great images will be found to have done so by virtue of some quality district either had originally or has acquired as a protection against a destroyer. There can hardly be a more noteworthy instance of a destroyer. There can hardly be a more noteworthy instance of ne working of the master-key which Mr. Darwin has placed in he hands of the chervent naturalist. Of all the topics touched the name or the conservant maturalist. Of all the topics touched in Mr. Belt's lively pictures of nature, name is more vivid or novel than that of the leaf-cutting ants (*Ecodoma*). These insects are only known in tropical America. The ravages of these swarming, consciously tolling hosts are incalculable. But for the vast recuperative powers of the tropics, what forests could stand against

them?

The first acquaintance a stranger generally makes with them is on encountering their paths on the outskirts of the forest crowded with the ants; and to carrying off the pieces of leaves, each piece about the size of a six-mass; and hald up vertically between the jaws of the sat; another lot unrying along in an apposite direction empty handed, but eager to get eachst with their leafy burdens. If he follows this last division, it will lead thin to come young trees or shrubs, up which the ants mount; and where such one, stationing itself on the edge of a leaf, commences to make a circular set, with its scissor-like jaws, from the edge of a leaf, commences to make a circular set, with its scissor-like jaws, from the edge of a leaf, commences to make a circular set, with its scissor-like jaws, from the edge of a leaf, commences to make a circular set, with its scissor-like jaws, from the edge of a leaf, commences to make a circular set, and it teams. When the piece is mearly out-off, it is, still stationed upon the and it deams, as though it would fall to the ground with it; but, on sing facily datached, the ant is generally found to have hold of the leaf with one feet, and soon righting itself, and arranging its burden to its satisfaction, it sets off at once on its return. Following it again, it is seen to ofn a throng of others, each laden like itself, and, without a moment's delay, thurries along the well-wern path. As it proceeds, other paths, each shanged with busy-westers, come in from the sides, until the main road fining gets to be seven or eight inches broad, and more through than the treets of the city of Londan.

After twevelling for some hundreds of yards, often for more than

After travelling for some hundreds of yards, often for more than half a mile, the formicarium is reached. It consists of low wide mounds of brown clayey-looking earth, not placed under trees which would affect the ventilation and sunlight, but on the outakirts of the forest, or in some ample clearing in the wood. Numerous round tunnels, from half an inch to seven or eight mehes in diameter, lead down into rounded chambers below ground in the form indicated by the woodcut of a nest dug up by greund in the form indicated by the woodcat of a nest dug up by our author in his garden. Down these galleries troops upon troops of the busy workers carry their leafy loads, a veritable Rizaam Wood of insect life. What use is made of these leaves has been a pussele to naturalists. Do they serve for food, or for roofing the underground nests? In Mr. Belt's opinion they are used as a manne, on which grows a minute species of fungus; on this fungus the auts feed. They are in fact meahroom growers and setters. seters. Leaves are not the only substance which they cannot be and the flowers of analy plants of which they eschewed the leaves, our author found them very partial. To check their ravages among the young and mannor trees in his garden, he had recourse Leaves are not the only substance which they carry into bename, orange, and mange trees in his garden, he had recourse with great effect to pouring diluted carbolic acid down their burrows. Wonderful signs of instinct were displayed in the way in which the ents effected their migration to new burrows in which the ents effected their migration to new burrows at a distance. He was told by a Spanish gentleman of a powder which caused the ants to go mad and prey upon such other. On making trial of this powder, which tarned out to be corrosive sublimate, he found it effectual in turning back a column of ants, who thereupon rolled themselves into a hell, all hiting one another. Coal-ter was found by him in unanamong the Americana at Colon to keep these pasts out of their gandens. The Indiana haffle them in according young trees by tying thick wisps of gazes round the stems with the sharp points downwards. Formidable as they are, these leaf-outters are very much in four of the small black auts, whose numbers give them the administer over their comparatively gigantic adversaries. The many and the highly diversified phases in which life presents itself on the teeming soil of the tropics enables a skilled naturalist like Mr. Belt to fill a volume with a series of spisodes or experiences of which the reader will never tire.

MARSHALL'S HISTORY OF WOODSTOCK.

TYOPOGRAPHY takes many abases, from the most frivolous in compilation by way of a guide-book to works in which the notice of a particular spot or district really rises into a branch of history. Setting aside these last, we have local books in which we get fine writing combined with integrately, others in which we get the inaccuracy without the fine writing, parisage none in which

* The Berly History of Woodstook Ministr. and its Environs, in Sunhaton, New Woodstook, Blankein; with later Notion. By I Inthing, M.A. Quelard and London: James Parker & Co. 1873.

and sugation spititism only a ne are local g, but which we amen to Under this last head we with being not a little dall. Under this ... put Mr. Manshall's Early History of if Mr. Marshall had called his book Ohro Woodstook. If Mr. Marshall had called his book Unremotogreal Thems, or Notices, or even Annals, we should have found no sult. It might then have passed for a book of reference, and, as a book of sub-rence we should have had little or nothing to say equint it. But Mr. Marshall calls his book a History, and a History, in the common use of language, implies something that can be read and not merely referred to. And we speak from experience. Mr. Mar-shal's History of Woodstock it is impossible to read. Esthage he never meant anyhody to ward it. But they he should not shal's Mistory of Woodstock it is impossible to read. Penhaps he never meant anybody to read it. But then he should not have given it a title which might persuade one to try. And the difficulty is certainly not inherent in the subject, for there are many local books which may be read, and Woodstock, one would have thought, belongs to the more promising class of local subjects. Woodstock is not one of the great historic spots of the world. It is not even one of the great historic spots of our island. Still, as having been so long a royal seat, a good deal of one kind and another has happened there, and a great number of persons of note have been dwellers or visitors there. It was at Woodstock in the land of the Mercians that one of the Gemots of the reign of Ætheired was held which put forth the earliest among the laws of his reign—a reign whose laws were more commonly put forth in the royal seats of Oxfordshire and other border shires than in the the royal seats of Oxfordahire and other border shines than in the great cities of the realm, like Atthelatan's laws of Exeter and Cnut's laws of Windhoster. Somewhat later we find Woodstock a favorited dwelling-place of the two great Henries, made famous in zoology and in legent by the menagerie of one reign and the labyrinth of the other, by the percapine of the first Heavy and the Resemond of the processing the first Heavy and the Rasamond of the second. In soher history the strange death of Robert Blost, the homege of Malcolm and Rhys, and the part which Woodstock plays in the long controversy between Flancy and Thomas, may perhaps be thought to have a higher interest. Then, among a crowd of royal residences, royal visits, and more Then, among a crowd of royal residences, royal visits, and more than one royal birth, we get the real or supposed comexication of the place with Gooffrey Chaucer; and, harrying on to later times, we come to the performances of the Woodstock Devil in the days of the Commonwealth, and to the time when, to the possible confusion of geography, the old dwalling-place of so many kings lost itself in a name taken from a battle-field in lavaria. Now here are things enough to work into constitue of a powertime. to work into something of a narrative. None of them perhaps is of the very highest historic interest, but still there is a great deal of curious and not unimportant incident apread continuously over an unusual number of centuries. But, instead of such a narretive, Mr. Marshall gives us only a painstaking collection of dates and facts and extracts and references. Now all these, put together, as they evidently are, with real care, are, we most thankfully allow, ten thousand times better than the usual local twaddk. Still, we think, out of a subject so remarkably rich in at least a secondary kind of interest, something better still might have been

In the early part of the book we see how the researches of great scholars gradually come down to writers of the second class. It is a great thing to find a local book in which Kemble, Guest, and Stubbs are familiarly quoted, and which makes it plain that the writer has gone to original authorities for his facts. At the same time we are not quite sure that Mr. Marshall thoroughly takes in the difference between such writers as we have mentioned and others of the earlier school of antiquaries. And it is odd to find one who describes himself in his title-page as late Fellow of Corpus Christi College, a college which has a special comexion with the Latin tongue, quoting William of Malmeshury and Henry of Huntingdon in somebody's translation in Bolm's Autiquarian Library. But Mr. Marshall has the rare and precious gift of being able to tell history from legend, and to see what is the force of an argument. And he rises too above the temptation of swallowing everything which seems to do honour to the place about which he is writing, to make out Woodstock older or more famous than it has any right to be made out. The Millenariaus and their dinner are silently rebuked when Mr. Marshall comes to the legend of Alfred having lived at Woodstock and translated Bostins there, and dismisses the fable with the remark, against all probability that he ever had a residence within the Biercian kingdom." So, further on in his book, Mr. Marshall ruthlessly casts aside another of the legendary glories of Woodstock, namely the connexion of the place with the poet Chaucer. There is, or was, a house at Woodstock called Chaucer's house, and in 1411 Thomas Chaucer received a grant of the farm of the manor of Woodstock and hundred of Wootton. This Thomas Chaucer has been commonly thought to be the son of the poet; but even if he were so, this would be very small evidence on which to build a theory of the poet's own birth or even residence at Woodstock, inasmuch as, at the time of the grant to his supposed son, he had already been dead eleven years. But it is a good specimen of the way in which the so-called "tradition"—that is, of some not real tradition, but some one man's guess copied over and ever again by other men—goes down at the first touch of anything this kinterical criticism. But, on the other hand, Mr. Marshall shade some crumbs of comfert in the fact that, as Chancer was counted about the Court, and as the Court was often at Woodstock, Chancer is almost sure to have been at Woodstock some time or other, though not in the character of a native or resident. As for to build a theory of the poet's own birth or even residence at

Rossmond, Mr. Marshall there too prefers the history to the lagend, though he seems to feel a little more reluctance to get rid of her than to get rid of Alfred and Changer. We are not sure however that Mr. Marshall is after all quite right as to the date of the real Rossmond story, about which Professor Stubbs has a note in his Preface to Benedict. Still it is something to find a local book in which historical criticism is brought to bear upon such a matter at all.

Mr. Marshall goes on with the constant notices of the presence of successive Kings at Woodstock down to the seventeenth century. As in the time of Henry the Second we find Woodstock playing a part in the controversy between the Henry and Thomas of those days, so under Henry the Eighth we find Woodstock again mentioned in connexion with two other famous Thomases, More and Wolsey. As the "customs" were discussed at Woodstock under one Henry, so the King's "great concern," the divorce and all that came of it, were discussed there under the other. Queen Elizabeth was kept there in ward during her sister's reign, which was perhaps the reason why she does not seem to have been much there as Queen. But both James the First and Charles the First were there a good deal, and the readers of Scott will be glad to find that there was more than one real Sir Henry Loe of Ditchley, one of whom was "Lieutenant of the Queen's Manor and Park of Woodstock under Elizabeth." But we find it intimated that he was not altogether a faithful steward, in regard either to the Queen's deer or to the Queen's rights in money. In the Civil War we find Woodstock and its neighbourhood the scene of a good deal of fighting, and the royal manor-house is naturally garrisoned for the King, and is as naturally besieged and taken by the forces of the Parliament. Then comes the dismantling of the place by its new owners, and the tale of all the wonderful sights and sounds by which the Parliamentary Commissioners were disturbed, about which we really think that Mr. Marshall might well have been a little more full. The Devil of Woodstock, the "just Devil" as zealous Royalists called him, was only a practical joke; still he was one of the most ingenious of practical jokes, and he has won for himself a good deal of fame both in history and fiction. In fact, setting aside graver impostors like King Alfred and Geoffrey Chaucer, the flend of the seventeenth century may fairly divide the romantic history of Woodstock with the beauty of the twelfth. We by no mea

story.

Lastly comes the grant of 1704 to the Duke of Marlborough, the building of the modern Blenheim Palace, and the barbarous destruction of what was left of the old manor-house and the levelling of its site. After this the history of Woodstock and Blenheim does not differ much from that of any other small town with a nobleman's house hard by. Mr. Marshall has an unpublished letter or two of the famous Duchess Sarah to print; he has to express a due dislike of the cockfighting tastes of the Woodstock Common Council in 1715; he has to record some princely—vulgarly, royal—visits within the last thirty years, and the fact that in 1872 "efforts were being made to stock the lake with Neufchâtel trout." In thinking of the modern history of Woodstock the thing that most naturally comes into our heads is the vigorous electoral contest of 1868, with the elaborate educational or professorial influences brought to bear upon the minds of the electors; but the Parliamentary history of the borough comes in another part of the book, and all that we find there is the fact that Mr. Barhett is the present—or, at the moment that we write, the late representative.

Parlamentary history of the borough comes in another part of the book, and all that we find there is the fact that Mr. Barhett is the present—or, at the moment that we write, the late representative.

Lastly we come to the ecclesiastical history. The town of Woodstock, it appears, is still not a distinct parish, but merely a chapelry in the parish of Bladon. Its church is still only the Chapel of St. Mary Magdalen, but it has the advantage of the parish church in still keeping some ancient parts, some as old as Henry the First and his menagerie, while Bladon Church was rebuilt in 1804. Blenheim Park however became a distinct parish in 1858, the royal manor having been extra-parochial. In the old manor-house there was more than one chapel which perished with the rest of the building. A chapel had been built by Sarah "in my house, commonly called Blenheim Castle"—Palace is the more familiar name—and consecrated in 1731. Though Bladon has always been a rectory, yet parts of the tithe belonged from the days of the first Robert of Oily, first to the church of St. George in the Castle of Oxford, and secondly to the Abbey of Oseney. But what can Mr. Marshall mean by saying that the existing tower of Oxford Castle was "used as a campanile" to St. George's church? No building can be less like a campanile than that singularly rugged tower. The contemporary tower of St. Michael's church is not exactly like St. Zeno, but it comes a good deal nearer to it than the tower in the castle.

FIVE YEARS OF THE ARUNDEL SOCIETY.*

IT is now just a quarter of a century since the Arundel Society started with the purpose of improving the tasts of the people

by the publication of works of a high historic order. It is small known that during this time we have witnessed in this country a revival almost beyond precedent; the best examples of Classie, Italian, and Gothic periods have been made familiar; the knowledge of art in its historic developments and in its fundamental paintiples has been extended; and, as a consequence, the art of the mineteenth century is to a good degree brought back to the true standards of the best epochs. To this advance the Arundel Society has materially contributed. Into the midst of a modern and, in great measure, a commercial art, trivial in thought and sometimes meretricious in taste, it has boldly thrust works of noble aspired in the rear of the advanced knowledge of a scientific age, yet always containing wholesome teaching to those who would learn aright. We may remark that we have found it a good sign of the mental condition of the immates of a country mansion when we have been greeted in the hall or corridor with chromolithographs of Annunciations, Nativities, Crucifixions, and Ascensions. We need not say that such themes show a family to be better read and more widely travelled than the households who use as wall-furniture horses by Stubbs, pigs by Morland, or even the Meeting of a Hunt by Sir Francis Grant.

The handsome volume now issued by Mr. Maynard, the Secretary and the such themes and the production of the Secretary and the such themes and the production of the Secretary and the such themes and the production of the Meeting of a Hunt by Sir Francis Grant.

Hunt by Sir Francis Grant.

The handsome volume now issued by Mr. Maynard, the Secretary, containing photographs from the publications of the Society for the last five years, with descriptive letterpress, has the common official fault of being industrious and dull. The text would have gained greatly in liveliness if, in the place of careful compilations from Vasari or biographical dictionaries, it had ventured to record the transactions of the Council, with the difficulties encountered, and the means taken to secure satisfactory results. We might also have wished that it had been compatible with an official position, and with "the sanction of the Council," that Mr. Maynard should have told his own experiences when, in the course of summer tours, he has with praiseworthy zeal tracked back these chromolithographs to the local habitats of the originals in Italy or Germany. The transactions of the Arundel Society, with personal narratives of explorers in search of half-forgotten or wholly neglected frescoes, including the impediments in the way of copyists, and the difficulties which have from time to time delayed or marred these reproductions, would furnish materials for an interesting volume. Such a narrative would gain colour from the successive political vicissitudes of Europe. Over a period of five-and-twenty years the Arundel Society has witnessed fresco-painted churches and cloistors first suffering under the neglect of drowsy ecclesiastics, then sustaining injury and insult from soldiery bivouacking in sacred precincts, and lastly subject to the perils and pecuniary perplexities of secularization or disendowment. In France of late there have arisen anxieties of another sort, as when the reproductions of Durer's Evangelists were shut up in Paris with the besieged Communists. Throughout these and other alternations in the fortunes of empires, the Arundel Society, ever watchful of impending contingencies, has acted as the guardian of historic monuments.

The quality of the reproductions issued by this Society, though still leaving somewhat to be desired, has of late years improved. But certain members—a minority, however—prefer engravings in simple black and white, such as the woodcuts from the Arena Chapel, and the copper-plates from I'ra Angelico's freecoes in the Vatican. And we confess that we are among the number of those who esteem more highly these quiet renderings than the blaze of colour in some of the inferior order of chromolithographs. The Council, we think, might have saved the members from such coarse crudities as the figures from Dürer, especially as these Evangelists were already familiar by means of engravings. On the whole, chromolithography proves itself better suited to the reproduction of frescoes than of oil-paintings; for example, the renderings from Van Eyck's masterpiece in Ghent lose the gem-like lustre and transparency of the original. On the other hand, Titian's fresco in Padua translates truly. Four years ago, in our review of "Twenty Years of the Arundel Society," we pointed to these frescoes by Tordenone in Piacenza, as offering a fitting sphere to the Society. We are glad to say that of this suggested programme the wall-paintings in Piacenza alone await time and opportunity. On the whole, it must be conceded that, after making considerable deduction for failures, the Society has done good exvice in its strenuous and sustained effort to combine the element of colour with that of form. We live in an age of polychrome; hence in part the popularity of these chromolithographs.

in part the popularity of these chromolithographs.

The most important step taken by the Society within the last few years is the reproduction by chromolithography or otherwise of sepulchral monuments erected in Italy during the middle sges or the period of the Renaissance. It was rightly thought that the revival in this country of Gothic and other historical styles rendered the present a fitting time for entering on this new field of labour. Thus the Council, who at first directed their attention to fresco-paintings, some of which were in imminent peril of destruction, are now reverting to the fundamental idea of comprising all the arts of design, collectively as well as singly. Accordingly there are now selected for illustration certain mutuments unrivalled in Europe "as examples of the successful combined continuents." The senses fitly commences with the tends of the "Oavaili family in the church of Santa Americals, Verona." A finer example of printing in colours we have seldom seen, whether for

^{*} Hescriptive Notice of the Drawings and Publications of the Arandel Spointy, from 1869 to 1873 inclusive; being a continuation of "Twenty Tears of the Arande Swarzy," illustrated by Photographs of all the Publications, arranged in the order of their type. By Frederic W. Maynard, Secretary. Landon: Published under the sanction of the Council of the Arandel Society. 1973.

problem of descript, characters of detail, or harmony of tone. The subject sealed emerably have been better chosen. Here we have brought together into one picture marbles of varied colours and taxteries, frances which glow as painted missale, atonework carved with heathlife figures and arabeaques; and lastly, yet chiefly, is the selemn image of one of the Cavalli family stretched at full length on the tomb, clad in armour, his sword by his side. Mr. Baskin, a member of the Council, who naturally from the first full warm interest in the project of publishing these Lombard tombs, has kindly furnished an explanatory text, which, if we may be permitted the use of a vulger phrase, reads like the cry of stinking fish. It is a curious anomaly, that the Society has been at the be permitted the use of a vulgar phrase, reads like the cry of stinking fish. It is a curious anomaly, that the Society has been at the pains of publishing a work and then is put to the expense of writing it down. A few words may be quoted as a sample of much besides. The eloquent critic might almost have been a cynic when he wrote:-

It will be seen by reference to the plate that the freecoes round the tomb have no symmetrical relation to it. They are all of earlier date, and by better artists. The tomb itself is roughly carved and coursely painted, by men who were not trying to do their best, and could not have done anything very well, even if they had tried. It is an entirely commonplace dull work, though of a good school, and has been raised against the highest freeco with strange disregard of the merit of the work itself, and of its historio value to the family.

The historic sketch given of the Cavalli family, though diffuse and far from the mark, is vivid as a picture. Mr. Ruskin, unrivalled as a word-painter, sets forth how for three centuries Milan, the oldest archbishopric of Lombardy, had been the central point at which the collision between the secular and ecclesiastical powers took place in Europe. "The Guelph and Ghibelline naturally must and warred throughout the plain of Lombardy; but the intense civic stubbornness and courage of the Milanese population formed a kind of rock in their tideway, where the quarrol of burgher with noble, embittaged and brought again and again to trial by bettle noble, embittered and brought again and again to trial by battle, confused itself with that of Pope and Emporor." In the year 1035 the warrior-Archbishop of Milan "organized the first disciplined resistance of foot soldiers to cavalry by his invention and decoration of the Carroccio." Only on the death of Frederick II. decoration of the Carroccio." Only on the death of Frederick II. was the supremacy of the Church secured. Innocent IV. enwas the supremacy of the Church secured. Innocent IV. entered Milan in triumph, and the road for ten miles before he reached the gates was lined by the entire population of the city; and, as a sacred car had been invented for the advance of the standard in battle, so did the Milanese invent "some similar honour for the head of their Church as the harbinger of peace; under a canopy of silk, borne by the first gentlemen of Milan, the Pope received the hosennas of a people." Mr. Ruskin has been tempted into this digression for the sake of the following hit at a "Baldacchino," a structure of late much discussed:—"It is not uninteresting for the English traveller to remember, as he walks through the vast areades of shops, in the form of a cross, by through the vast arcades of shops, in the form of a cross, by which the Miknese of to-day express their triumph in liberation from Teutonic rule, that the 'Baldacchino' of all mediaval religious ceremony owed its origin to the taste of the milliners of Milan, as the safety of the best knights in Furopean battle rested on the faithful craftsmanship of her armourers." We regret to say that the connexion, in chronology or otherwise, between all this and the tomb at Verona is not made very apparent. Neither do we see much more than a vain attempt at moralizing—an infirmity to which the author of Modern Painters has of late been prone—in the concluding passage on this fresco-painted tomb. In place of art-criticism comes sermonizing, and the reader, when he asks for aid, is told to help himself after this fashion:—

The reader may follow out, according to his disposition, what thoughts the freezo of the three kneeling knights, each with his helmet-crest, in the shape of a horse's head, thrown back from his shoulders, may suggest to him on review of these passages of history; one thought only I must guard him against, strictly—namely, that a Condottiere's religion must necessarily have been false or hypocritical. The folly of nations is in nothing more manifest than in their placid reconciliation of noble creeds with have practices. But the reconciliation, in the fourteenth as in the nineteenth century, was usually foolish only, not insincere.

A visit to the rooms of the Arundel Society shows that the A visit to the rooms of the Arundel Society shows that the labours of the past five years will find a worthy sequel. Historic art is proved to be, practically speaking, inexhaustible; and the plan of making in savance copies of works worthy of illustration has given to the Council an accumulative store of drawings which will tax to the uttermost their resources for many years yet to some. Among the projects of the future is a systematic illustration of the Church of Assisi; already a beginning has been made with the freezoes of Giotto, and we trust some day to see faithful renderings of the master-works of Climabus in the upper church. Mr. Ruskin, it is hoped, may sid the enterprise by explanatory text; a hope in which we devoutly share, if he will for once kindly stick to the subject without digression into theology, morals, or political economy—topics which the funds of the Arundel Society are not supposed to cover. Mr. Maynard tells us in this volume that his "ultimate intention is to give a continuous history year by year of the work of the Arundel Society"; we trust he may live to record the publication of the great freezoes of Pietro della Francesca at Arezzo, and of many other works, such as a few, at least, of the wall-paintings in the Campo Santo of Pietro and healtating consideration. Some of these compositions at Grvisto and healtating consideration. labours of the past five years will find a worthy sequel. Hisfor such and healthting consideration. Some of these compositions are all but impracticable. Yet we trust the Council will suffer no

discouragement in their expect and continuous efforts; the forth-coming illustrations of Libri and Montagna, artists of Lombardy as rich in colour as the painters of Venice, will be welcome to students who desire to extend their knowledge of the less known painters of Italy.

LADY MORETOUN'S DAUGHTER.

RS. EILOART'S new book has such merit as comes from a decidedly original incident introduced into a well-worn theme. We cannot say that we like either the story or the hand-line any the better for this originality; on the contrary, we prefer the more timid harpers on a single string of iniquity rather than the present author, who doubles her situation, and to an adulterous mother in fact adds a like-minded daughter in intention. Save this repetition there is nothing new in Lasly Maretoun's Daughter. It is the old, old story of a grave but worthy man and a fascinating scamp contending, like the angel and the devil in the Chess-players, for the possession of a pretty, silly, and wholly unreflecting young woman, who is scarcely worth the trouble she gives; with the inevitable result of the scamp winning for the greater part of the game, though the grave, worthy winning for the greater part of the game, though the grave, worthy man comes off conqueror in the end. But as the victory comes. too late for the happiness of those concerned, it does but little towards enlivening the sadness of the catastrophe, or reconciling us to the absurdity of human nature as exhibited in Euphemia, or Phemie, Burton and her sisterhood.

This Phemie Burton is a composite kind of person. She has such lovely possibilities of moral perfection and she does such outrageous things, she is so full of tractable aweetness and so swayed by perverse obstinacy, so overflowing with tender love on the one side and so stonily unimpressionable on the other, that we scarcely know where to have her, and find it rather difficult to give the correct analysis of a character the hues of which change as swiftly as a chameleon's or a dying dolphin's. She is no longer a child but a young woman, with the instincts of her wax fully developed as the sequel shows, when she indulges in the slightly dangerous pastime of talking from her bedroom window every night with Maurice Graham, a young man living in the neighbourhood. But she has so much maidenly modesty and prudent reserve at the back of this Juliet-like imprudence, that when he asks her to be his Maud and come down into the garden to take the Shelley which he has brought her to read, rather than let it lie all night on the ground for snails to crawl over the binding and earwigs to nestle between the leaves, she regards this as a tremendous breach of decorum; and blushes and draws back and puts on airs of tenderly affronted womanhood just as if she had been a "well-and-wise-walking" young lady of irreproachable demeanour. In the end of course she does as she is bid, and comes into the garden by moonlight and at midnight, to have her "little brown fingers kissed by Maurice over and over again,' and to be transported into fairyland by the passion of his voice and the consciousness that she was doing wrong and that this was love— the same love as that of which she had read in the books Maurica Graham had lent her. Fortunately for her she is caught by her cousin, the grave and good Stephen Radley, who thus hips in the bud a liaison which promised more pleasure to Maurice Graham than profit to Phemie Burton.

Of Stephen there is not much to say. He is the man with whom we have all made acquaintance so frequently in the world of fiction; the wise, calm hero of loyalty and unselfishness, who gives his heart where his reason condemns, and for all his wisdom suffers himself to be fascinated by the paltriest skin-deep beauty, just as any lesser man might be. Phemie Burton loves Maurice just as any lesser man might be. Phemie Burton loves Maurice Graham, and by the arbitrary intervention of his aunt, Miss Beauville, finds herself openly engaged to her not too worthy lover, instead of being left to play at love in the hide-and-seek manner in which she had begun. But though she is thus openly engaged, and makes no secret of her attachment, Stephen Radley has so little self-respect or honour as to try to win her for himself, on the little self-respect or honour as to try to win her for himself, on the plea that Maurice is "not worthy of her." To which I'hemie retorts scornfully, "And you are, I suppose." Nothing, however, is able to chill or repress the love which the men of Stephen Radley's kind feel for pretty little women. Sages in all clee, they are fools here; and, while able to govern every other passion with ease, and to make martyrs of themselves with the most heroic statement on the clientest waves with the most heroic constancy on the slightest provocation, they are as helploss as children when it comes to their weakness for a pair of blue eyes or a cascade of chestnut hair flecked with gold. We hold this to be an entirely erroneous reading of character.

A strong man will be strong all through, and a wise man will be wise even in the presence of his love. No man of case and honour could have acted as Stephen Radley is made to act, and yet he is presented to us as both rational and honourable. ect, and yet he is presented to us as both rational and honourable. Even when he wins his doubtful prize, it is at the cost of a lie by implication, the suppressio vert which is as bad as a direct untruth, and in many cases even worse, because more cowardly. When Phemie finds out that Maurice Graham is not married, many (then) husband Stephen had led her to suppose, she turns spained that worthy doctor with contempt and fury, and will

Lady Moretoun's Daughter. By Mst. Effect, Anthor of "The

listen to no explanations. All her passion has returned at the sight of Maurice, who pleads his own cause with more vigour than most of Maurice, who pleads his own cause with more vigour than most married women would have allowed, and who comes secretly to her house in Esselburgh Street, as he had formerly visited her secretly at Gable End on Heisdon Green. The end of this part of the story is, that after Phenie has soundly rated her husband of a having deceived her, and has made herself "only the shadow of a him." Allowing Mourice to right has end made level on the large of the start of the shadow of a secret when the shadow of th having deceived her, and has made herself "only the shadow of a wife to him," allowing Maurice to visit her and make love to her as her revenge, she suddenly runs away, not with Maurice, but from him as much as from her husband, and takes up her abode with Betty, the old Helsdon servant, who scolds and warns and loves and protests by turns, according to the way of old retainers in three-volume novels. She then takes a situation as companion in the house of Lady Moretoun, who, unknown to her, is her own mother. Meanwhile, however, she has had a child, which she leaves; and which, though there is the proper quantity which she leaves; and which, though there is the proper quantity of tears and exclamations of "Oh, my baby! my baby!" and the like, has so little softening effect on her that she neither informs her husband that he is a father, nor thinks she owes either child or father the duty of such information. Yet we are required to or father the duty of such information. Yet we are required to believe in Phemie as, it may be, a badly educated girl, but one with true womanly impulses, pattering with danger now from very ignorance of its true meaning, now from excess of human feeling, but always loving, and always with a fine and noble nature underneath, for the sake of which hor sins are to be forgiven. We deny this reading. We see nothing in the character and actions of Mrs. Eiloart's heroine but vanity, wilfulness, selfishness, and latent animalism; and all the monologues about "my mother," and the bleatings after "mamma! mamma!" and "my baby! my baby!" do not soften the essential repulsiveness of this pretty piece of selfishness and folly. selfishness and folly.

In her life at Ashleigh Hall Phemie finds happiness, and a woman to love. Lady Moretoun recognizes her as her daugh-ter, and treats her with as much indulgence and affection as is Phomie loves her with more than the ordinary love of young lady-companions serving graceful and pleasant mistresses. But when my lady finds out that her companion and daughter is being surreptitiously visited by a handsome young man, she makes a clean breast of it, and reveals herself as the runsway wife of the stern dry old naturalist who cared more for his infusoria than he did for wife or daughter, and who therefore lost the one and alienated the other. This then is the originality of the situation. A runaway mother reveals herself to a runaway daughter living in her house as her companion, and by the narration of her own shame seeks to prevent her from falling into the abyss where ahe once fell; but where she has found comfortable lodgment all things considered, the non-recognition of the great ladies at the annual considered, the non-recognition of the great ladies at the annual flower show being about the heaviest cross my Lady Moretoun has to carry. If the psychology of Lady Moretour's Daughter has been odd hitherto, it is now stranger, because more abrupt, than before. No sconer has the mother spoken and exhorted than Phomie becomes transformed. She sees the character of Maurice of Linhau in its transformed and because and on the point of Graham in its true selfishness and baseness; and, on the point of running away with him as she was, turns now to as ardent love of her husband as she has all along had for her lover. Lady More-toun finds out that Maurice had been on the eye of marrying in India, though he had not really married as Stephen had said, because the lady of his choice died a day or two before; and when Phemie hears this her "idol is levelled to the dust":-

Maurice had been 'ale—doubly, trebly false. He had been ready to put her raide for the sake of a richer bride, and then had uttered lie man lie to her to assert his feal.y. She remembered it all,—the ready protest, the passionate disclaimer, to smooth, well-varnished story; and it was for this man that she had been r ady to make a wreck of fame and honour.

There was nothing to be said for him. In that moment he passed out of her life. Maurice as she had believed him, she had never known,—the Maurice whom she had been ready to save, even by the utter sacrifice of herself, had been weak, varillating, easily led wrong, but true in his her had been ready to make her ideal Maurice,—her young, buy lover, whom she had hoped to mould into a man,—and the true Maurice was a false, mercenary thing, who, for a mere whim, the delight a child has in a toy, would have levelled her to the dust—and left her there.

After this Phemie gives herself up to a search for Stephen, who has left Esselburgh Street, and finds him only when too late. He has caught the fever that was raging in a little village where he had been taking the practice of the local doctor; and Phemie discovers him more by intuition than direction, seeing that he has discovers him more by intuition than unsection, seeing has a dropped his surname, and goes about the world now as Mr. Stephens only. He has been seeking her "through half a world"; "for her sake he has been kind to little children, pitiful to fallen "for her sake he has been kind to little children, pitiful to fallen women"; but he has not been businesslike all the same. Maurice Graham, with not half his love, nor, "poor, wretched poetaster!" as Mrs. Eiloart angrily calls him, with half his brains, has unsarthed Phemie twice under two disguises; but Stephen Radley has not hit upon the track with all his pains, and is only discovered by accident and intuition. On the whole, we cannot commend Lady Moretona's Daughter as a healthy or a carefully studied production. It is clever in parts, and in the beginning amartly written; but it is a loosely-jointed and somewhat maundering book, and reads as if the author had not fully known her own mind, nor pictured very clearly to herself the people of whom she wrote. It is a story, too, that deals with the fringes of impropriety in a very disagreeable manner. It is all but sudaction, all but adultery, with the irresposition of the dies or machine at the very nick of time. For so much we are thankful; but we not the less

refuse to endorse a plot which saves itself from crimin process known to the writers of sleng as a flake, and laters of chances as an improbability, twice repeated. es fluke, and to i

MILITARY MEMOIR OF COLOREL BIRCH:

A N actor who undertakes and succeeds in an unamiable part A gives proof thereby of his professional talent. In like manner a writer who takes up a sulogistic memoir of a self-ceeking Round-head, and so illustrates and elucidates it as to interest readers head, and so illustrates and elucidates it as to interest readers despite their prejudices, must be allowed the credit of high literary skill. The Camden Society may congratulate itself on having found good proof of such skill in the masterly commentary and annotations wherewith a deceased antiquary, the Rev. John Webb, has imparted the zest of veritable history to a partism's panegyric of a Parliamentarian weathercock—a panegyric in itself mostly remarkable for exaggeration, cant, and flattery. As a conscientious historian, Mr. Webb is judicially careful to avoid any expression that can prejudice the subject of his volume at the bar of postority; yet, with all his endeavour to be strictly even-handed, the result of his labours is anything but favourable to the reputation of Colonel Birch and his devoted secretary; while the veteran tion of Colonel Birch and his devoted secretary; while the veteran student who has recalled them to notice deserves posthumous honour for enabling us to read aright a memoir in which both these worthies had a hand, and which is on that account more or less a lying chronicle. Dealt with as it has been by Mr. Webb, it is a real contribution to the social and military history of three eventful years of the Civil War.

The student of Charles L's struggle with the Parliament—that "war without an enemy," as Sir William Waller sadly designated it to his ancient comrade Hopton, ere they met on opposits sides in the field of Lansdown—will learn with surprise how much of the success of the party which "made war for the King against himself" was, according to Roe, the result of his hero's counsels, energy, and prowess. He will need to be warned that Roe was Birch's major, quarter-master, or secretary, and was possibly still connected with his old regiment after Birch exchanged it in 1646 for a sont in the House of Commons; and that he wrote his chronicle of his superior officer's achievements under the impulse of a gratitude which may or may not have been a keen sense of favours to come. It ought to be premised, too, that the narrative, written in the second person throughout, was submitted to Birch himself for revision, and that if the Colonel did not suggest the description of his sayings and doings—which represents him as a mixture of Nestor, Achilles, and Baron Munchausen, carrying a pass and protection through the thickest fight from Divine Providence—he at all events endorsed and sanctioned it by correcting the manuscript, and adding touches to enhance himself and depreciate others. By the aid of the Notes and Commentary it will be found that in the Memoir credit is ascribed to Birch for exploits and successes which were due chiefly to those others, and that, whereas in particular instances the Parliamentary generals did make honourable mention of Birch's services, he and his eulogist generally contrive to omit all mention of such generals, and to monopolize all the glory of which he was at best only a partaker. Not that it is to be denied that Birch was a dashing and fearless soldier, even as he was a resolute, selfseeking, and politic schemer; he was a man withal of considerable seeking, and politic schemer; he was a man withal of considerable ability, though of little principle; not wantonly wasteful of human life, whether of friends or foes, though coarse and almost brutal in his estimate of its cheapness. As to Roe, we feel little interest in extricating him from the oblivion which has gathered round an interested eulogist; but Birch, though dear at his own price, was indisputably a prominent person in the times in which he lived and acted, and it may be worth while to justify the strong language we have used concerning him by references to the Memoir and the Commentary before us. To this end we do not think it necessary to insist on his having begun life as a carrier or a packhorse driver, because, as Mr. Webb has shown, a comparison of dates and circumstances disproves the alleged fact. At the time when the circumstances disproves the alleged fact. At the time when the legend, adopted by Mr. Townsend in his History of Leoninster, represents the packhorse driver attracting Cronwell's notice and winning a commission by his pluck in resisting some Roundhead freebooters, Birch was really exercising the calling of a general merchant in the city of Bristol. That his origin was low is, we think, established by Bishop Burnet's reminiscences of his manner and creek, as well as by the contrast, in point of refinement and delegate, between him and other and creeks landers on the Parliamentarian etween him and other and greater leaders on the Parliamentario side. Raids upon helplese ladies in their travelling carriages, eavy of merit in others, ready imputation of low motives, and resort to bribery and corruption as a never-failing means of gaining a point-all these bespeak an origin remote from the influences of gentle birth and breeding such as shone out in striking contrast in not a few ornaments of either camp.

At the very time when Birch was pleading with Sir Francis Otley, Governor of Shrewsbury, for the actuan of certain intercepted butts of sherry, and urging that he was not one of those malignants who had taken up arms against the King, he was actually a

^{*} Military Manoir of Colonel John Blook american ford in the Civil War. Written by Ree, his finitestary. V and Critical Community, Notes, and Appendix, by the Wabb, M.A., F.R.A., F.R.L.K. Edited by the State, the J.M.A., F.R.A.S. Printed by the Complete Secretary. 2579.

Relation of widenteess of this part of Tarliament for the decisions of Relation the servers. These, however, did not avail on the second castaught, seven months after the first, the city being then entered by a branch in the mosth side, while Birch was on duty against the Counish forces who were besieging the south. Of source, as the two heroes were not there, "the line was unhappily entered, for I cannot call it stermed" (this is Boe's account), and the immediate result so far as Birch was concerned was that, "while some were running to Oxford, others were getting pardons, and the best saving what they had beyond the sea, God carried you beyond these to raise a foot regiment," &c. This regiment was under the command of Sir Arthur Haselrig, and formed part of the army of Sir William Waller. Haselrig seems to have had faults enough of temper, tact, and intellect to deserve some of the depreciation poured thickly on him in the Memoir. His taste was for horses and cavalry service, and the Leicestershire baronet may perhaps have turned up his nose at the general merchant; but somehow it is not only Haselrig, but Waller and the veteran soldier of fortune, Sir Andrew Potley, who had served under Gustavus Adolphaus, who were continued in the server of the country the terms of the continued to the country that the terms of the country that the country Haselrig, but Waller and the veteran somer of container, on Potley, who had served under Gustavus Adolphus, who were continually in the wrong; stopping the pursuit when the Royalists might have been crashed, or thrusting Birch into the thickest of the most hopeless fight to the intent that a speedy termination of his career might remove a cause for jealousy. Being marched to the country about Farsham, Birch and his regiment did wonders, according to Roe, in the fierce fight at Alton, where a part of the Earl of Oraford's forces, under a gallant Colonel Boles, were cut off and brought to bay by Waller's forces, and obliged to swait the outsumbering foe in the churchyard and the church. await the outnumbering foe in the churchyard and the church.

According to Hoe, Birch was the first to enter the street, oven as he had recently been the arbiter of the day's fortunes at l'arnham. His name, however, does not occur in the official account of this fierce encounter, where not a man surrendered till Boles was slain, heres encounter, where not a man surrendered till Boles was stain, nor in a very minute letter extant which seems to have been written by an eye-witness. It was at the assault of Arundel, shortly afterwards, that Birch was exposed to a perilous hazard—as his secretary says—out of Potley's jealousy of his forwardness at Alton. He need not have complained, for it constituted one of his strongest credentials as a leader of pluck and desperate valour. Having bivouncked under some of the "best-spread trees in the park"—which here, as well as at Hom Lacey in Elerefordshire, remain to tell of Parliamentarian moderation as regards these old memorialshe really did surmount the rampart in the teeth of overwhelming odds, and cheer on his swerving bands till they drove the Royalists odds, and cheer on his swerving bands till they drove the Royalists pell-mell into the town. In the moment of victory he was struck down by a musket ball, and given up by the surgeons, though they found, when they revisited him at nightfall, that the severe weather and its effect in congulating the blood had proved remedial. The soldierlike demeanour of Birch on this occasion would say much for his gallantry but for the hint threwn out that the dangerous enterprise was forced on him. He got himself conveyed to London for the best surgical skill, at that time according to Mr. Webb, represented by Sir Theodore Mayerne and Sir Martin Lister (father, we imagine, to Queen Anne's surgeon Sir Martin Lister (father, we imagine, to Queen Anne's surgeon of the same name who edited Apicius in 1705), who did not let partisanship interfero with their gifts of healing. Direh had doubtless other objects in this visit than to trouble the doctors. He had made himself a creditor to the Commonwealth, and, having taken occasion to remind the Purliament of its debt, he soon returned to the army with an eye to further loom at heavy in-terest. At Alresford he displayed valour and resolution, which terest. At Airesford he displayed valour and resolution, which his chronicler exalts to the exclusion of all the services of others, though he does not omit to blame a nameless commander for not crashing the Royalists by pressing the pursuit. The editor remarks that the reason of Waller's forbearance (for Waller is of course meant) was the policy on which both he and Cromwell acted of not fighting with the King to the utterance. In like well acted of not fighting with the King to the utterance. In like manner Waller's mistake and the capture of his shotless artillery at Copredy Bridge is shown up by Roe, while Birch's aid in retrieving the mishap is magnitied to the exclusion of Sir Thomas Middleton's name, who had no small share in the matter. Roe likewise imputes hame to the Parliamentary Generals for letting Charles get through the hostile armies from Oxford; but his commentator (p. 85) says with justice that the King had no other "pass" but that of sugacity and vigour, and was indebted for it to "his own ability and resolution, aided by the experience of his advisers."

Had we space, we might must Roe's really metalic account of

Had we space, we might quote Roe's really graphic account of Birch's hair-wealth escape is a cross country road after the battle of Basingstoke in the astamn of 1644, and how he converted the affairs into a success. This exciting episode—though his triumph was in truth over a disabled veteran and his helpless lady and her luggage—is a good sample of Birch's particular tatent and resource. With much that was dashing he combined a great deal of coarse-With much that was desking he combined a great deal of coarseness, unscrupulousness, and trickiness. So, too, when later on, after the successful storming of liristal—as to which Cromwell praises Birch's help in his despatches, while Birch and Roe never mention Cromwell's name throughout their account—he was agust to distress the city of Hereford at the close of 1645, the panegyrist talls a wondrous take of dash and skill and able generalship; but he forgets to tall how, as of old, it was hard each that opened the gates of Hereford, and crushed the strenghold of the Royalista, which Bernahes Scudanore had till then heavely defended. Two negitales, Arderne and Hewesth, desires the intenty of this treachers, which Birch organized with the help of Sir John

Baydges, who had some anness for his complicity in M. knowing had his easile of Wilton, many Boss, benned by the Boydlists. The Appendix xvi. we find that a commencently partition paraphlist attributes the capture of Hersford to the "general of Hersen. Birch's weapons and instruments were doubtless oundinotest, but it was the omnipotence of gold. How Goodrick Cardia held out, and at last fell, the reader may learn from the account of Ree, as explained and corrected by Mr. Webb.

We must not conclude our notice of this hateresting volume without mentioning a few of the proofs that Birch's conduct and motives were those of a self-necker rather than of a partiest. He carried into the camp in which he sorred the instincts of a teader and money-lender. He invested in lucrative loans for the purposes of ex-

money-lender. He invested in lucrative loans for the purpose listment and raising regiments, and he applied himself to the perfect ing the system of sequestrations and confiscations with a view to his own ultimate advantage. The grievance of certain petitioners at Bristol in whose case he was sequestrator caused him to be sent for to the Bar of the House in safe custody; but the ends of justice was compremised when it appeared that the defendant was a heavy Government creditor, and the inquiry ended lutherously (pp. 61-2). Mr. Webb attributes Birch's continuence in the grapy after throwing up his commission at Abingdon to the motive of the adventurer "Qui zonam perdidit ibit," and shows (p. 96) that the urgent business which called him from Plymouth to London in the autumn of 1644 was to get from the Committee the estate of Henry Hudson, a delinquent, towards the payment of a loan of 1,500% for the service of the State. As soon as he had felt his ny in Herefordshiro, he set his heart on certain church property which he scutely saw would constitute an excellent investment, and played his cards so well that, after he had sacked Goodrich and esta-blished himself in Hereford, he found himself in possession of the bishop's palace, and the purchaser, at a very advantageous price, of the best of the bishop's manors. True to his ruling passion, he got hold of all the best bargains of this nature, and played his cards so well that for whatever he had to discorre at the Restoration—when he took care to be, like the Vicar of Bray, on the winning side—he was compensated analy and with interest. Perhaps the best illustration of his trusting instinct is to be found in Appendix xxiii., where, in a brief chronological notice of some of his proceedings after the capture of Harriaged we find the follows. his proceedings after the capture of Hereford, we find the fellowing record :-

Oct. 26. An order was sent to the Lords, that the lead of the clockium or great steeple attacked to Worcester Cashedral should be sold for the repair of certain churches and almshouses in that city. This noble building, seventy yards in height, constructed, at an early period, of great unsused linish timber for the purpose of holding the being, was in consequence destroyed, and the materials relused at 1,200, purchased by Birch for 6171. 4s. 2d. But for his sent in Parliament, he would have been probably questioned for this at the Restoration.

The clever tactician lived to assist in bringing William III. to England.

Of the rare interest of Mr. Webb's Commentary we have been able to say but little. It will be found to afford a wonder-fully graph's picture of the times, and to abound in very curious matter on such subjects as the occupation of letter-carriers, the state of cross country roads, the use of arrows in comparatively modern warfare, Court physicians and army surgeons in the time of the Civil War. We hope that Mr. T. W. Webb will fulfil his intention of publishing his father's "Memoirs of the Civil War" as affecting the country of the roads. Civil War" as affecting the county of Hereford.

MINOR POETS.

R. FINLOCH tells us that his "rhymes are true productions of a young untutored poet," and he "solicits an approjudiced perusal of the entire work, which will be the best means." he says, "of judging both of his abilities and the merits, if any, of each of his compositions." It would be almost as reasonable for a wine-merchant to called his compositions." It would be almost as reasonable for a wine-merchant to solicit a customer to drink the entire contents of a cash of Hamburg sherry as the best means of judying of its quality and its strength. He admits, and with good reason, that he is unand its strength. He schuits, and with good reason, that he is untutored and that his posme are "very faulty;" and yet, instead of sending himself to school and his poems to the flames, "he has succumbed to the importanties of many zeadous friends, and given succumbed to the importunities of many zealous friends, and given these poems to the world." If we cannot admire his poetry, we can at all events admire his honesty. He has, without even reading Byron's Parisina, written a stanza which "so nearly rembles a copy of the third stanza of said poem, that the author feels compelled (though it will show the feebleness of his own composition) to place it in these notes for comparison." Unfortunately "the comparisons were not pointed out till it was too late to make any alterations." We might add that, if Mr. Finlock had not pointed out the comparisons himself, there was very little likelihood of any one among his readers—assuning, that is to say, that he has any—assunging it of himself. A story is told of a lady with somewhat short night who on a morning call at a young mother's house asked to see the haby. The bell was rung, and a few moments afterwards

in came the servant with the coal-scuttle. "Oh, how like its father!" the scalous friend exclaimed. Will Mr. Finloch forgive us if "Oh, how like its we venture to conjecture that it was out of some such good-natured desire to find a likeness where it was known that a likeness was supposed to exist that the comparisons between his poem and Purising were pointed out. A few more such obliging friends, and Purising were pointed out. A few more such obliging friends, and he would have found it necessary to quote half Shakspeare by way of comparison. There is, for instance, mounlight in A Millsummer Night's Dream, and in the Merchant of Venice too, by which lovers meet. Some one, therefore, might suggest that such "an apparent plagiarism" as the following verse required also an apology, and the quotation of the parallel passages from Shakspeare of the support of the parallel passages from Shakspeare by the parallel passages fro speare :-

Lov'st thou the harvest time,
As we thy silv'ry light?
O lumin'ry sublime!
Shine on the lovers' plight.
Bright Moon, wandering Moon!

Bright Moon, wandering Moon!

In one of Mr. Finloch's longer pieces we have represented a strife between the powers of good and evil for a human soul. We have on one side a Chorus of Angels singing softly, when "a soothing symphony pervades the air," and a Chorus of Demons singing loudly and shouting out to the sleeping soul, "Awake! ha! ha! ha!" when "follows passionate and discordant music." The end we do not make out so clearly as we could wish, though we fear the Demons carry the day, for towards the close "the southing symphony pervading the air gradually dies away," while "the passionate and discordant music is gradually approaching." It ends with the following chorus and solo between, if we are not mistaken, the Demons and the soul:—

(Chours) Come away! come away!

CHORUS)

Come away! come away!

Ere break of day,

Come, come away!

Solo, Alvin, in sleep)

Come, I como. (CHORUS)

(Som, Chorus) Away I

(Sozo)

Away!
With me he's e'er respected—
This soul immortal—
And ne'er shall be restricted
Within hell's portal,
Come away! come away!
Ere break of day,

(CHORUS)

(Solo, Alvin, in sleep) I come— (Chorus)

Away!
Come away! come away!
Come, come away!

It might at first be thought that whon it is said that the soul

ne'er shall be restricted Within hell's portal,

it is meant that the Good Angels have made it their own. We feur, however, as it seems to be the Demons who are singing, that it is they who have carried it off, though, with a highly unbecoming laxity, they have no intention of being over-particular so far as

laxity, they have no intention of being over-particular so far as keeping the bounds are concerned.

While Mr. James Finloch is fearful lest he may be suspected of stealing from Byron, the author of the Origin of Evil is well aware that against himself "the facile accusation of theftuous conveying from the unique Paradise Lost will be advanced." He, however, is caroless of such a charge; for, in the first place, he knows that, as a matter of fact, he has stolen nothing (and here his roaders go altogether with him), and, in the second place—but here he shall speak for himself speak for himself:-

The answer to calumniators on this head, (not by the author, who will make no defence, but) by those who shall see, in the performance, the most unequivocal evidence of superb originality,—the answer will be: that the author of the work in question is so obviously and signally an original thinker that he did not need to stand as a leggar at any other author's door—be that other who he may.

Though he needed not to stand as a beggar at any man's door for a poem, yet we are glad to find, for the sake of that modesty which should always go hand in hand with "superb originality," that he has condescended to borrow assistance for a preface. "It need hardly be mentioned," he tells us, "that this Preface is, to a considerable extent, by another hand than that which penned the Drama itself." Doubtless our author has secured the services of some brother poet, and will repay him in kind whenever he needs a preface and a puff:—

Thus we dispose of all poetic merit, Yours Milton's genius, and mine Homer's spirit; Call Tibbald Shakspeare, and he'll swear the Nine, Dear Cibber! never match'd one ode of thine.

The author of the preface is troubled also "to prevent false conceptions on a material point." He represents a succession of scenes, though "Time as yet was not in any strict sense," "Whether," he goes on to add, "the angels measured duration by the movements of any of the stars—with which they appear to have been familiar enough—this is by no means certain." Besides apologizing for the introduction of Time into a Celestial Drama, he thinks it needful to account also for the measures of "a player he thinks it needful to account also for the presence of "a player on the banjo." But here again we shall not venture to be the interpreter of "superb originality," but shall let it speak for Itself:—

What is actually meant, is, not by any means material objects, such ex.
gr., as our Musical Instruments, but the original, because spiritual, representatives of those earthly objects. In place of instruments, or other things, as adapted for human use, understand their enelogues, as adapted to the constitution and circumstances of Angelic, and generally. Superior Beings.
Thus, a player on the benjo being mentioned, understand a performer playing on a something corresponding, as analogous, to the sampled lestrument which we, men, call a "benjo," and with which we are so well acquainted.

Having satisfactorily accounted for Time and the banjo, and having "benefitted (sic) the general reader" by a short "specification of the chief irregularities in the versification," he opens his Celestial Drama with a dialogue between two Archangels. The Second Archangel, after a moderate speech, parenthetically observed.

These Morning Stare' department thus describe I.

What he means we do not understand, but we scarcely suppose that he is referring to "the analogue" of a Radical journal stately deceased. After a good deal of talk, and after two or three acts, and "even Æons," have passed, "the Second Archangel steadily looks towards the First Archangel, who, at length, node, and them are the property of the state of the second Archangel steadily looks towards the First Archangel, who, at length, node, and then "We have been also as the second Archangel should be and the second act the second act to the second a universal shout and harmonious singing in accord follow." We are sorry to find that the angels, like hymn-writers among men, make move and prove rhyme with love, God with abode and abroad, and ways with grace. The only wonder is that they did not find out that word rhymes with Lord. It is not perhaps very hard to account for the falling away of any among the angels, if the the Celestial Court they had to listen to many such verses as the following:-

Yea, if lower than the Angels, they
By Nature, they shall yet
Ascend above all Heavens, the Way,
The Truth, the Life, being met.

By this the nature so taken on, The man his God shall touch. A double nature shall that Son His Incarnation vouch.

They are worse off in one respect in the choirs above than we are here on earth, for there we learn that, when the hymn is over, "An echo from the Universe invoked answers back," and answers back too in a fresh hymn. Presently a meeting is held of the rebellious angels, when "Beelzebub and the other leaders advance, and take their places at the quasi-platform." After a long speech, where as much patience was shown by the audience as is ever shown in Exeter Hall, "a special spy rushes into the meeting." As he speaks there is first "great commotion" and then "immense commotion." A second meeting is held, when Lucifer addresses "my precious peers." After speaking for about fifty lines, he "tries to sneer and afterwards resumes." At the end of another fifty lines, "deriding and laughing satanically," he asks, "Why laugh ye not, my peers?" There is no response, however, for twenty more lines, when—

(Lucifer waits, as if for a response. At length, the whole Assemblage, Leaders They are worse off in one respect in the choirs above than we are

(Lucifer waits, as if for a response. At length, the whole Assemblage, Leaders and all, are convulsed with grimaces, Sardonic and Sutunic. Not laughter—nor even smiles: but Heavenly smiles, and laughter, travestied and parodied—lugubriously withal. After a time, Lucifer goes on:)

Pleased with the effect he has produced, he contents himself with "sneering quietly," and with another long speech. Later on there comes a volcanic eruption, followed by a calm for a season. Lucifer counts too much on its continuance, and says:-

Since now we have subsided to Our usual state—by believes undisturbed, At least by belehes mountainous,—our rest In future, still and softly flowing, shall be.

At once there comes "a perceptible shaking of the quasi-ground. Immediately thereupon affright seizes upon the devils," but Lucifor has courage for a speech of two hundred lines, and then calls for a war-song. It is in the accompaniment to this song that the banjo of listening. In his next long speech he first "pauses," then "sneers," then "again pauses, meditating," then "broods," then "laughs satanically," then "reflects complacently," though his complacent reflections must have been at one time a good deal disturbed, as "sounds, like fearful sobs, accompanied by doleful howls, prevail extensively." Even a devil, it would seem, at last gets tired of speaking, and so Lucifer and the "Celestial Drama"

do come to an end.

Mr. Austin Dobson need have no fear, so far as we are concerned that his "little book" will not "'scape the critic Ogre-land." Even it that his "little book" will not "scape the critic Ogre-land." Even if his Vignetics in Rhyme had come by itself we should have given it a kindly welcome. But we picked it up out of a pile of the most worthless among the Minor Poets, and we felt as grateful as ever feels a man who in the pocket of some garment among a heap of cast-away clothes has found a bright new shilling. It is pleasant to turn away from a "Celestial Drama" and "superb originality" to vers de société and a skilful versifier. Mr. Dobson, however, is more than a mere versifier. In two or three of his poems he shows a skill in painting with his pen that might well raise the envy of many of his rival artists with the brush. It is a long time since we have seen a better piece of word-painting, as it is called, that his poem on "A Centleman of the Old School":—

Revnolds has painted him—a face
Filled with a fine, old-fishioned grace,
Fresh-coloured, frank, with ne'er a trace
Of trouble shaded;
The eyes are blue, the hair is drest
In plainest way,—one hand is prest
Deep in a flapped canary vest,
With buds brocaded.

And then, after we have been told in pleasant easy verses of his pleasant easy ways, we are reminded that, even in "that past Georgian day," beneath the "brown old Brunswick cost," there assionate heart :had been a pe

Cone he had loved, but failed to wad A sed-cheshed less who long was des Bit ways work for too store, he said, To quite hought bury

And still when time had turned him gray, The earliest hawthorn bude in May Would find his lingering feet astray, Where first he mot her,

Rearcety less well done is "A Gentleweman of the Old School." In them we have a pair of highly finished portraits which hang well aids by side. We find nothing, we must confess, in the rest of the veolume that equals these two poems. Mr. Austin Dobson must meet his "Gentleman," and his "Gentleweman of the Old School" steadily before his eyes to show, like the flood-marks on some old bridge, the height to which he has already risen, and to which he can again rise.

The best of Mr. Graves's Songs of Killarney is that which, to speak of an Irishman in the Irish fishion, is no song at all. In the poem which he calls the "Girl with the Cows," he tells at considerable length, but in a very pretty way and with a good deal of

siderable length, but in a very pretty way and with a good deal of humour, the laves of Nora Maguire and Patrick O'Neale. She was an orphan, but

Her father and mother both died at her birth, So grief for their sakes didn't trouble her mirth.

Though "her looks were a fortune," yet she was a small heiress as well, having half a hundred of cows and a good house. She was admirable for her charity to the poor and for her devotion to the services of religion. Her "fresh fervent voice" rose truest and highest in the anthem,

But that didn't make darlin' Nora desire To adjourn to the convent on lavin' the choir.

Fully worthy of her was Patrick, poor though he was:-

For there wasn't a boy in Dunkerron was able To dance on the ground as he could on the table.

Bold though he was at dancing, yet he was not equally bold at love-making, feeling too strongly the great gulf that was set between a poor lad and the owner of half a hundred of cows. But though he almost avoided her, yet,

Her thoughts they kept runnin', surprisin' to say, Most of all on the man that was laste in her way.

While as for him-

And as he went clippin' the briar wid his bill, And as he went clippin' the briar wid his bill,
Or rowed up the river, or reaped on the hill,
Some fancy of Nora would come to him still.
The arbutus fruit now, or a stretch of the sky
Would recall her red lip or her laughin' blue eye,
The heath flower to-day of her blushes would hint,
And to-morrow the furze took her treases' own tint—
The spring leaped with her laugh over pebbles of pearl,
And the sailing awan signed him his white-bosomed girl.

But one evening in the mist as she is driving her cows home, she has a fall over a cliff, lighting on a ledge some way below. Patrick, who had been close by, hurries off for help, and as no cords could be found rapidly, twists a strong hay-rope. His courades let him down over the edge of the cliff, and as he goes he cheers them by saving:-

Have no dread that we'll fail, For I'd not be afeard, why, to balance the Pope Himself from the clift by so hearty a rope.

As he was let down he was attacked by some eagles, whose nest was close by, but in spite of all the dangers he had to face he brought up Nora alive, but senseless. After that he managed to pluck up courage to tell Nora his love, and the next spring they were married. Pretty though this poem is, yet we cannot say that we find much to admire in those of Mr. Graves's songs which are written in the well-known rollicking Irish fashion. Such songs as these have a great air of being humorous, yet it is by no means easy to find where their humour lies. They might well have been left in the pages of *Punch* and other periodicals, in which, as we learn from the preface, they have already been published. lished.

We beg leave to state that me decline to return rejected Communications; and to this rule we can make no exception.

University, Buildington Garden. All reclusives whose Raines are on the Registery of Convocation are invited to attend at such time appear.

JOHN LUBBOCK, Vice-Chancellor, Returning Officer,

TO the ELECTORS of a the CITY of LONDON.—

GENTLEMBN.—The time has arrived when it becomes my duty to inform you that it is not my intention again to offer myself as a Candidate to represent the City of London in The continued enformment of your confidence that

not my labelium again to offer myself as a Candidate to represent the City of London in Parliament. Plus centimed enjoyment of year confidence throughout a long period of consecutive years has fully satisfied every motive of personal distinction of ambition by which then are for the most part led to seek the attractions of public life, and I fiel that I may now tairly claim to retire from the burden of labelroises duties to which I have for a long time become aware that my health and strength are no longer equal.

I trust you have not found my sunting at any time in my personal attention to those constant demands upon your Members' errives which you have a right to claim. The datice of a Representative of the City of London are manifold and labelous. There is not a branch of our commerce, trade, finance, or industry in which your interests are not principled, and there are few, if any which have not level shell the form the legislation of recent years. In the discussions which have attended these changes, and the colonion to take the part which became a representative of your great community. Upon questions of public policy, the principles of that party to which I have been attached from my earliest life, from secondation and on violen, have represented my unvarying support. I have carried to a start of the kindows at the part which became a representative of the companies. With a fasting same of the kindows shown to me personally.

se shown to me personally.

the honour to remain.
Your faithful said obedient servant,
ROBERT WIGRAM CHAWFORD.

THE ELECTIONS.

HISIN Mr. GLADSTONE took the rash step of suddenly dissolving Parliament he was supposed to have a majority of sixty-eight. This was an outside calculation, as it included some very doubtful names. But although the majority, after all deductions had been made, was a very considerable one, it could not, he thought, be trusted. was discouraged by the suspicion that the feeling of the country was against the Ministry, and it was torn by intestine divisions. In order to retain their seats Liberal subject would, it seemed probable, think rather of what sections of their constituencies were crying out for than of supporting the Ministry, and thus Mr. GLADSTONE had the prospect of a wearisome and ineffective Session. The buoyancy of the revenue suddenly suggested to him that he might at once terminate his suspense and consolidate his position. He dissolved Parliament, and asked the constituencies to pronounce at once between him and his opponents. Those of his advisers whose special business it is to calculate the chances of the party and to watch over the currents of opinion in the constituencies were of opinion that he would meet a new Parliament with a diminished insjority, but with a majority compact and devoted to him, and they estimated this majority at from twenty to thirty. The event has signally belied these calculations, just as similar calculations made on behalf of Mr. DISKAELI in 1868 were shown to be altogether wrong by the event. The truth is that it is impossible to tell how the English boroughs will go. When the elections are over it is easy to see that there has been a current of opinion running through the boroughs in one direction, but of the prospects of the party, in each particular borough no one seems beforehand to have any accurate knowledge Strongly as the title has been going against the Liberals generally, they have had some striking successes. Boston, Shrewsbury, and Falmouth have gone over to them entirely. At Tambuta have gone over to them churchy. At the Captain HATTER, who last year was twice defeated at Conservative, heads the poll. The Liberal defeat at Strong in December was alleged by Mr GLADSTONE himbarton, have been one of the immediate causes of the dissolution of Parliament; and now Mr. Derringfon, who was then elected, finds that he has achieved the honour of having marred on a Prime Minister to his run, without having had the opportunity of taking his self-and Stroud has reverted to its old political predilections and geturns two Liberals. Both sides complain with equal bitterness of the disastrous effects of the suddenness of the dissolution, and it may therefore be supposed that it really has not made much difference in the result so far as the want of preparation on the part of candidates is concerned; although these who strongly disapprove of Mr. Mr. Market and act are entitled to think that a legitimate in the course he took has largely cont. ibuted to think general result.

Of the general character of this result there is no doubt, he whole of Mr. Guaparone's majority is already gone, the only question is what majority the Conservatives, the only question is what majority the Conservatives, if have to start with. If they have a gain, after deduction have a few seats beyond what was necessary to despite the pre-existing Liberal majority, they will have the pre-existing Liberal majority they will have the mough strength to carry on the government of the liberal in a creditable and satisfactory manner. They want then have a majority of twenty, and their then have a Majority of twenty, and their kind be of a singularity of twenty, and their kind be of a singularity, distinct kind. The lives will vote together while a machine. It is there are two singular majors who have been Conservative flows Majors. Mr. Handen at

Newcastle, and Sir Joseph McKenna at Youghal. A Conservative Home Ruler is like a Protestant Jesuit, for if a Conservative will not conserve the integrity of the Empire, what on earth would be conserve? these speckled sheep may be trusted to go gently enough with the rest of the flock. And the consciousness that they have the English constituencies with them will give a merited confidence to the Conservative leaders. Even in the last Parliament they were on an equality with their opponents in the English constituencies taken as a whole, but this was because of their permanent preponderance in the counties. Now they have the boroughs with thom. It is not in one district or in one class of boroughs that they have gamed. They have carried their candidates in boroughs in the West, in boroughs in the East, in Metropolitan boroughs, in great Southern constituencies like Plymouth, Portemouth, Devenport, and Brighton, in big Northern boroughs like Manchester and Newcastle On the issues raised during the election the English boroughs are, taken as a whole, undeniably with the Conservatives. The borough constituencies have been asked to pronounce their decision, and they have decided that they wish for religious education in some mild and unaggressive form; that they do not wish the trade in beer to be interfered with except for police purposes; that they do not wish the county franchise to be extended at present. Further they have decided that such superiority as the Liberal Premise may have in dealing with finance is not worth having at the price of accepting it when offered as a mere bribe to electors. On all these points the Couservatives know that the great bulk of the moderate Liberals are with them. It is belo means by Conservatives alone that the accession of a Conservative Ministry will be hailed with pleasure. And if there is to be a Conservative Ministry, it is much better that there should be a Conservative Ministry with a decent working majority. Too close a balance of parties is a misfortune; and Parliamentary government assumes a character painfully grotesque when the fate of Ministries and the policy of Governments tromble in the balance according as one man has got the gout or another has tumbled off his horse

Considering the great extent of the changes made in various constituencies, the displacement of men of eminence has been insignificant. Much the greatest loss is that of Mr Fawceri, who constantly exhibited the curious spectacle of an independent Liberal who was independent, not because he was bitten with a crotchet, but because he had thought out the subjects on which he spoke Every wind, lawever, blows somebody good, and the clique of minor Minnsterial officials will find in the rejection of Mr. Faver 11 at Brighton the only comfort earth could give them for being turned out of office The Conservatives have been deprived of the services of Sir John Parisonos, who was defented by a large majority at Droutwich. But there are comforting thoughts about him too, and Conservatives will secretly console themselves by reflecting that it would have been equally impossible to puss him over and to make any real use of him in the distribution of offices. The moderate Liberals of the new Parliament will regret the absence of Mr Hights and Mr Mountson, and the ladies have had to weep over the fallen fortunes of the angel and apostle the great and indomitable Jacob Briont. But, as a rule, the constituencies have proved faithful to men of mark. Even that superior person Mr. The Source of the Source of the skin of his self-in of his self-in of height Liekeard. The Source of the colleague, and even the majoric might of heer could not induce the Oxford

their long connexion with Mr. CARDWELL. esults of the poll none has been received with a satisfaction as that of Bradford, when it was forms that Mr. FORSTER had not been sacrificed for a miserable outburst of sectarian spite, and that in a stronghold of the sourcest Nonconformists there was stronghold of the sourcet Nonconformists there was still left enough of gratitude and self-respect to uphold a statesman in the paths of liberality and courage. Sheffield, too, is to be congratulated on having returned Mr. Roebuck, not only because it thus rejected Mr. Chamberlan, but because it has renewed its old ties with a representative who, with all his defects, had at least the merit of being as ready to tell Sheffield us the rest of the world of its faults. In Scotland there has not been, nor will there probably be, any change of importance, unless Sir William Stieling-Maxwell gains a seat in Perthshire. Sir WILLIAM STIBLING-MAXWELL gains a seat in Perthshire. As to the Irish elections, it is impossible to understand their drift until they are all over, and it is seen who pulls the wires of those who are returned. In Tipperary two Nationalists and three Home Rulers are all standing against each other, without any competitor with a comprehensible programme to interfere with them. All that can safely be said is, that up to the present time the Home Rulers have not been nearly so successful as they boasted that they were sure to be, and even the much threatened O'Donognue has kept his seat at Tralee. The general composition of the new House will probably not be far different from that of its predecessor. The special candidates of the working-men have, as a general rule, failed, but one has been returned at Stafford, and another will no doubt be returned for Morpeth. They will be able to bring the wants and wishes of their class before Parliament, but they will not affect the character or before Parliament, but they will not affect the character or type of the new House of Commons, which may be expected to be in the main Conservative, but with a Conservatism of a distinctly Liberal colour. Unfortunately, if the result of the elections is not to be regretted, the mode in which they have in many places been conducted is very much to be regretted. There have been disgraceful riots in several boroughs, and the services of the military have been so urgently required that the supply of soldiers has been found inadequate. The Ballot has in this respect done some good, but it could not be expected to change all at once the desperately low and brutal character of the roughs who are the curse and torror of some of the central districts of England.

MR. DISRAELI.

MR. DISRAELI got the worse in the first exchange of arguments and sarcasms with Mr. GLADSTONE, though his speech at Aylesbury was better than his printed address to his constituents. When all reasonable allowaddress to his constituents. When all reasonable allow-ance has been made for his surprise at the sudden Dissolution, it is strange that Mr. DISRAELI should not have in the first instance made a better use of a fair opportunity. There has always been a doubt whether he was in the higher sense of the word a statesman, and he certainly is not a skilled financier; but it had always been supposed that in a political struggle he was one of the most formidable of combatants. It was a grave mistake to commence an address which was intended to serve as a text for the election discourses of his party with a reference to idle gossip about the apocryphal "writ of pains and penalties," and with indignant denunciation of the supposed sacrifice of the freedom of the Straits of Malacca. It is perfectly clear from the unprofitable controversy which has ensued that neither the late nor the present Prime Minister had any definite knowledge of the geographical or political facts which they have been discussing. It would have been a sufficient and conclusive reply to the original attack that, if important rights had been compromised by the Dutch Treaty of 1871, it must have been the duty, as it would undoubtedly have been the pleasure, of the leader of the Opposition to denounce the ill-advised transaction. The whole discussion is on both sides an afterthought, and it relates to a matter of little importance. By old treaties the Dutch had engaged not to extend their possessions in Sumatra; and the only value of the restriction consisted in the possibility of exacting a price for its with awal. In 1871 the prohibition was abrogated in consideration of the transfer of the Dutch settlements on the Gold Coast and of certain privileges for English trade and navigation.

If the Straits of Malacca are consequently closed to
English commerce in the improbable commingency of war with Holland, it follows that every narrow see in the world is a mure clausum, except to the Power which possesses both its shores. If the Straits of Malacca are closed to the English possessions of the Malay Peninsula, they will be equally closed to the Dutch sovereigns of Sumatra. No light is thrown on the subject by Mr. Diseaeli's statement that they traits are five hundred miles long, or by Mr. Gladstoned by that they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles wide. Traite they are a hundred and fifty miles with the light literature of the Regency as with the Iliad and Odyssey, he might with better effect have described himself as having, like the Corsican monster in another hemisphere,

With a foul earthquake ravaged the Malaccas.

Mr. Lowe's discourtesy to Mr. DISRAELI was more deliberate, and therefore more offensive, than Mr. DISRAELI's attack on Mr. GLADSTONE. In the personal controversy which has ensued Mr. DISRAELI has proved himself the more perfect master of his weapons. He has never been more brilliant than in the statement of his imaginary reasons for enfranchising the University of London, with the single object of providing a seat for Mr. Lowe, in the ulterior confidence that Mr. Lowe would break up any Cabinet of

which he might be a member.

In the interval between the publication of his address and his speech at Aylesbury Mr. DISRAELI discovered that he had been too hasty in instantly proposing to follow Mr. GLADSTONE'S lead by removing the Income-tax. He might have dwelt more forcibly on the vicious precedent of laying the Budget before the constituency instead of submitting it to the legitimate judgment of Parliament; but perhaps Mr. DISRAELI feared to describe himself as less liberal in his intentions than his rival. He unconsciously furnished his intentions than his rival. He unconsciously furnished Mr. Gladstone with an argument for repeal by declaring that the Income-tax was especially adapted to become a resource in war, and that it should therefore be reserved for extraordinary occasious. The proposal that it should be abolished by degrees naturally supplied Mr. Gladstone with an opportunity of contemptuous criticism. If the inquisitorial character of the tax is objectionable, it is better to improve inconvenience for the number of raising a large portion of revenue than for the sake of a comparatively insignificant amount; yet it must be remembered that every penny in the pound of income produces a million and a half. The moderate rate of three reasons. might with great advantage have been retained; but even three millions would, according to Mr. GLADSTONE'S calculations, have obviated the necessity of the mysterions readjustment which now excites just uneasiness. Mr. DISRAELI'S argument on the relation between the Income-tax and duties on articles of consumption was ingenious and to some extent sound. If the merits of the tax are to be tested by its early history rather than by financial principle or by modern experience, it is not less allowable to refer to the intentions of Peel than to the practice of Pitt. If the tax was a war tax in 1798, it was in 1842 an instrument for remodelling and reducing the tariff. With the aid of the Income-tax nine-tenths of the indirect duties of thirty years ago have been abolished, and the residue have, with few exceptions, been largely re-There is therefore some plausibility in Mr. DISRAELI'S contention that the proportionate reduction which Mr. GLADSTONE proposes has already been accomplished; and he might have strengthened his argument by pointing out Mr. GLADSTONE'S obvious intention of reimposing taxes upon property when he has reduced taxes on consumption under the protext that property has been relieved. It would have been still more judicious on the part of Mr. DISHAELI to transfer the conflict of parties to some other ground; though he supplied in his speech at Newport Pagnell many of the deficiencies and oversights of his address and of his Aylesbury speech. In discussing financial questions with Mr. Gladstone, Mr. Disrael occupies the position of a layman who engages in a legal controversy with an astate lawyer. The less skilled disputant is apt to be embarramed, and almost paralysed, by conscious inferiority. As might have been expected, Mr. Gladerous taunted Mr. Dustabli, not only with his hesitating proposal of retaining fraction of the Income-tax, but with his inability to hid against splendid offers of relieving ten and collect and sugar, not to mention ratepaying complement inaminated as Mr. Gladerous

the by his own superior knowledge of finance, he is religiously but his irregular and ungenerous to the multitude on an issue exclusively belonging to cognisance of the House of Commons has not answered his expectations by earning popularity and by per-

the Opposition.

TADETONE'S reference at the conclusion of his Dept-fort Deech to Sir ROBERT PEEL suggests some useless regrets. If the Opposition possessed a leader of undoubted patriotism, thoroughly acquainted with the principles and practice of public business, a PEEL of the present day would be generally preferred to the brilliant Minister who will leave nothing alone. Mr. Diseasul's protest against harassing legislation was answered by Mr. Lowe in a series of sparkling sarcasms, and more effectively by Mr. Buight in the only really witty sentence, with the exception of Mr. Diseasul's London University episode, which has been uttered in the course of the present election. If, according to Mr. BRIGHT, those who complain of Mr. GLADSTONE'S measures had been in the Wilderness, they would have said that they were harassed by the publication of the Ten Commandments. A great orator has seldom produced a more pointed and more argumentative epigram, and yet Mr. BRIGHT is of course fully aware of the sophism which is implied in his jest. It does not follow that, because some good legislation is harassing, therefore all harassing legislation must be good; and it might be further remarked that neither Moses nor his successors were in the habit of amending the Decalogue as reformers incessantly tamper with the English Mr. GLADSTONE himself is so far convinced Constitution. that the original attack on the licensed victuallers was a blunder, that he now endeavours to persuade himself and his supporters that both parties were equally responsible for vexatious interference. It is true that some members of the Opposition prepared Bills for the regulation of publichouses; but Mr. BRUCE's proposal of putting up licences to auction was peculiar to himself. Less powerful classes of the community, such as the members of the Universities, are at this moment threatened with legislative changes which may or may not be conceived in a friendly and equitable spirit. The proposed adjustments of taxes are anticipated with well-founded alarm by those who examine Mr. GLADSTONE'S expressions on the comparative claims of labour and of property. The timid and the prudent would willingly find a champion; but they can hope little from a brilliant amateur who in a financial controversy, like the awkward prizefighter described by Demosthenes, always follows the motions of his antagonist by guarding the place where he has last received a blow. The Greenwich address and the speeches by which it has since been expounded and defended are vulnerable at many points; but Mr. DISBALLI had, before his speech at Newport Pagnell, given scarcely any profitable advice to his party as to the most effective mode of attacking their opponents. On one question alone he pronounces a sound opinion with statesmanlike decision. The Conservatives owe something to their leader for his refusal to engage in a new electoral revolution.

MR. GLADSTONE.

IT is satisfactory that, among the catastrophes which have befallen the Liberals, the defeat of Mr. GLADstons at Greenwich has not been one. The PRIME MINISTER had to see a young Conservative distiller preferred to him by a considerable majority, but he also had a considerable majority over his next rival. It is true that a man in Mr. Gladstons's position cannot be kept out of Parliament, and that a seat would have been found somewhere for him at once. Possibly Ireland might have shown its henefactor STONE at Greenwich has not been one. The PRIME MINISTER have come to his rescue, and have shown its benefactor the kind of gratitude that consists in the expectation of favours to come. But a defeat would have been mortifying to Mr. Gladstone personally, and there is something ignoble in electors putting a slight on a statesman of so much emission. His return for Greenwich probably closes one period of Mr. Gladstone's career. Greenwich has known him as Prime Minister, and more recently Greenwich has known him as a candidate. In the latter

1620 166

all his might, and had the triumph of being able to take the noble line of unwillingness to imitate his rivel by traces intrusions into private life. The electors of Grandwich must feel that if the last intrusions into private life. The electors of Grandwich must feel that, if they have done something for him, he also has done much for them; and that, having a point to gain, he has shown them the stimulating spectacle of a man trying with all his might to attain his end. But the days of leading a Ministry and canvassing electors are, to all appearance, over for him for the present. It will soon be in the new character of leader of the Opposition that he will figure. The circumstances will be so different from those under which he was leader of the Opposition in Mr. DISRAELI'S last Ministry that the character will be a new He will not now, as then, have a majority at his back which he is kept by clever jockeying from being able to use. He will address himself to a triumphant audience of that faithful, stupid party on which his arguments will make no impression. No doubt he will show his great powers of language and arithmetical combination to much advantage in such a state of things. The criticism of Mr. GLADSTONE on a Budget prepared by Mr. WARD HUNT will be an intellectual treat. If Mr. DISRAELI'S promise of a spirited foreign policy is anything more than talk, which is not likely, Mr. GLADSTONE will rise in his wrath as the angel of peace. Parties will be tolerably well balanced, and the dissensions of the Liberals will rapidly fade away when the party is out of office. He will thus be always able to endanger the position of his opponents, and he and his colleagues, having been for five years in office, have the threads of recent political history at their command to an extent which the Conservatives will not for some time be able to rival. On the other hand, Mr. Glansome time be able to rivel. On the other name, Mr. Charlestone will probably prove to have some serious disqualifications for his new position. It will be very hard for him to give the new Ministry that fair trial which the country will wish it to have. He will burn to confound his enemies with his superior knowledge and vehemence. He will have almost to step himself down to his sast if he is will have almost to strap himself down to his seat if he is to make any approach to the dignified and contemptations tranquility of Mr. DISEARLI; and there will be many moments when, thinking of what he could say so well to a mob, and what he feels it unwise to say to the House of Commons, he will long for one hour of the old broken waggon of Blackheath.

As his speeches went on, and as he began to feel more and more where the real centre of contest lay, he dropped one by one the articles of baggago which he could not carry with him. No one, he found, cared in the very least for the municipal affairs of London or the redistribution of the revenues of the Universities. Even the agricultural labourer was remitted to the slave of abscuring form tural labourer was remitted to the sleep of obscurity from which he has had a short and fitful awakening. It was no use trying to get near Mr. Gladstonn's cart in order to find out what peasant boroughs might mean. contest has not turned on any of the favourite crotchets of the Liberal party. The world seems all at once to have forgotten about ground game, and entails and about ground game, and entails and redistribution of seats, and even to some degree about the Bible and Beer. Mr. GLADSTONE puts aside all the subjects on which Liberals are disunited, and tries to induce others to put them aside also. He thinks the 25th Clause ought to be reconsidered; and it would be odd if he did not, as every morning the newspapers show him that his colleagues have been reconsidering it as hard as they could go, and have arrived at the most various results. He cannot bear to speak plainly even about Home Rule, and, lest he should give offence, affects not to know in the least what any one means by it. All his thoughts, all his heart and mind, are devoted to offering to repeal the Income-tax, and to beating Mr. DISRAELL. At one of his Greenwich speeches he thought it worth while to go back to the reasons which had led to the sudden dissolution of the last Parliament, but he could not really give his attention to a matter which is now a week old, and out of date. All he could say was, that the Government did not feel very comfortable, and he thought that if he asked the country whether it would like to have the Income-Greenwich has known him as a candidate. In the latter tax repealed, a result that would make the Ministry more tax repealed, a result that would make the Ministry mo thing particularly beautiful in an arrangement by which a burden is to be taken off the shoulders of other people. Those who do pay Income-tax partly calculate that, if the Income-tax can really be properly taken off, it is sure to be as much taken off by one Ministry as by another, and they partly fear that the Income-tax may be only taken off in name, and that they may be squeezed by new taxation to make it possible to get rid of it. There is nowhere any enthusiasm for Mr. Gladstone's financial scheme. There is, on the contrary, no little surprise that a scheme proposed by so eminent a financier should be open, so far as it is disclosed, to so many obvious objections. And when to the objections to the scheme itself are added the enormous objections to the manner in which it was proposed, there was perhaps more to repel than to attract even electors who do not pretend to go very deeply into things, and Mr. Gladstone has probably lost more than he has gained by his strange piece of strategy.

Even the good news from the Ashantee regions will scarcely do the Ministry any good, although bad news would have done them much harm. The constituencies are voting not so much on this ground or that as in obedience to the general inclinations of the voters towards the one party or the other. If there is any one political question present to their minds, it is that suggested by the comparison between Mr. DISRAELI and Mr. GLADSTONE, which Mr. GLADSTONE has done his utmost to put in the strongest light possible. We do not think their recent animated personalities have been very creditable to either statesman. We do not admire Mr. Disraell's cynical reference to Mr. Gladstone's dovotions, nor do we admire the verses on the Aylesbury farmers which Mr. GLADSTONE thought fit to compose or to quote. There has been some hard hitting on both sides, however, and both have obtained advantages. Mr. GLADSTONE had a triumph when he showed that the famous Straits of Malacca are a hundred and fifty miles broad at the point where Mr. DISRAELI said the concessions of a Liberal Government endangered our command of them. Mr. Dis-NABLI lind perhaps a greator triumph when he gave a history of the Peace Preservation Acts in answer to Ministerial boasts of Irish tranquillity. But even if we allow that each gave as much as he got, and that they stand on a parity of successful vituperation, yet Mr. GLADSTONE laboured under disadvantages from which his rival was free. Mr. DISRAELI was able to take advantage of the criticism bestowed from very different quarters on Mr. Gladstone's financial proposals. He could shift his ground and be ready or not ready to repeal the Income-tax as he pleased, while Mr. GLADSTONE was obliged to keep in the position he had chosen for himself. He could ask triumphantly what Mr. GLAD-STONE really meant to do, and Mr. GLADSTONE could not reply, as he could not go into the details of a Budget out of Parliament. The mere fact, too; that Mr. GLADSTONE had attempted to do a very smart stroke of business and had failed, told in favour of a competitor who had simply done nothing. Nor was this all. In order to make his financial proposals all-important, Mr. GLADSTONE had to hint at large projects of Reform without filling up the outline. The notion that Mr. GLADSTONE rushes without consideration into wild schemes of change could not but be fostered by the discovery that such a violent disturbance of the political balance as that involved in the extension of the county franchise had been warmly taken up by the Phine Minister, that the mysterious invention of peasant boroughs had been offered as a heavensent security against all dangers, and that then, all of a sudden, the county franchise and the peasant boroughs had dropped out of Mr. GLADSTONE'S thoughts. The feeling of distrust thus inspired was increased by the precautions which Mr. GLADSTONE took while endeavouring to heal the divisions of the Liberal party. In order to offend no section of his adherents, he was obliged to use vague and ambiguous language. It seemed as if it were possible, from what he said, that some day Mr. GLADMONE would yield to the Nonsaid, that some day Mr. GLADSTONE would yield to the Non-conformists on the 25th Clause, and that he might be won over to participate in an attempt to show that Home Rule would be a new means of bind-ing together more closely than ever the different parts of the British Empire. We do not mean to say that either suspicion is well founded. For a Ministe-rial majority he needed a united Liberal party, and he thought probably of nothing but how to get the Liberal party united, at least for ten days or so. But then, in party united, at least for ten days or so. But then, in yielding to the exigencies of his party, he naturally inflamed the apprehensions of timid people who think that Mr. Grasstone is a dangerous man, and that no one can tell what he will take up or what he will let alone. Very probably they have very much the same opinion of Mr. DISRABLI, but then Mr. DISRABLI has been a long time out of office, and a credulous world always believes that new brooms will sweep clean. In the course of time it will be Mr. DISRABLI'S brooms that will be old, and Mr. GIA that will be new, and we may be quite sure that Millians stone will then advertise his new brooms as the very flewest that were ever heard of.

MODERATE LIBERALS AND THE GOVERNMENT.

MR. GLADSTONE has very naturally taken every occasion of exhorting the Liberal party to maintain the union which is indispensable to success. He successly congratulates the Conservatives on their superior discipline; and many of his followers are in the habit of apologising for their divisions on the ground that vigorous and philosophical minds are more prone to difference of opinion than the stupid supporters of existing institutions. As all the Conservatives wish to turn Mr. Gladstone out of office, while the Liberals are not equally unanimous in desiring to keep him in, the greater harmony of the Opposition is perfectly intelligible. The Examiner, the only organ of revolutionary opinions in that part of the London press which addresses educated readers, furiously denounces Mr. GLAD-STONE and his colleagues, and expresses a hope that a band of a hundred independent Radicals will in the new Parliament hold the balance of power; but both Mr. GLADSTONE'S apprehensions and the expectations of the extreme democrats have been greatly exaggerated. Two or three seats, including Nottingham, have been lost to the Government through the competition of a number of nominally Liberal candidates; but in general the constituencies have displayed a wholesome dislike of political extravagance; and it is probable that the violent faction will, with the exception of Home Rule members from Ireland, be insignificant and powerless. In the whole of Great Britain there have been only a dozen or fifteen candidates who professed the principles of the Parisian Communists or of the Spanish Intransigentes. The few working-men who sought election would have had a better chance of success if they had not all been political demagogues, as well as representatives of the interests of the labouring population. Intelligent and respectable voters are not disposed to tolerate the doctrines of the Land and Labour League on the pretext that workmen have a moral right to express their own wants and opinions in the House of Commons. Revolutionary agitators of the middle class, such as Mr. Bhadlaugh and Mr. Baxter Langley, or fanatical gentlemen holding the opinions of Captain MAXSE, are still less acceptable to the friends of property and order. Mr. GLADSTONE'S appeals for united action fall flat on moderate politicians who are asked to vote for anarchy and Socialism. There is a culpable audacity in the appeal of some Liberal members to their party to vote for the Odgers and the Bradlaugus, who are separated by an impassable gulf not only from Conservatives, but from Mr. GLADSTONE and his colleagues.

Next to the Intransigentes comes the section of the party which corresponds to the followers of Gambetta in France, or of Castelae and Salmeron in Spain. The success of some of their number may be attributed to local causes, while the defeat of conspicuous members of the party probably indicates the repugnance of the better class of voters to their opinions. Sir C. Dilke, and his shadow, Sir H. Hoare, Mr. P. A. Taylor, Mr. Trevelyan, and Mr. Chamberlain are among the best known supporters of every measure which would increase the power of the multitude, and destroy all remaining institutions which involve privilege or inequality. The town of Sheffield has done itself signal honour by preferring Mr. Roebuck to one of the ablest and most intolerant of democratic politicians. If Mr. Glapstone had been consulted, he would have preferred an extreme Liberal to the veteran member of the party who, while he has modified some of his opinions in later years, retains the boldness and plain-speaking which won him reputation in his youth. Of all the contests which have taken place, the result of the poll at Sheffield and at Bradford may be regarded with the most unqualified satisfaction. In both places the Conservatives had probably the good satisfaction support the less violent candidates; but it is quite certain that the large majorities for Mr. Boxson, Mr. Forema, and Mr. Barley included a large large.

of the Committee at Bradford which undertook dissipation that of unanting Mr. Forers entirely of the character of his own party when he alleged their two obscure nominees were the regular Liberal their two obscure nominees were the regular Liberal sting Mr. Poneran entirely that their two obscure nominees were the regular Liberal conditation. The caucases and nominating conventions of the United States have fortunately not yet been acclimational design of preferring the candidate whom they personally practs, and whose opinions, whatever may be his conventional denomination, correspond most nearly with their own. In Marylebone there can be no doubt that many Liberal voters preferred a Conservative of character and ability to the favourite of the local wire-pullers. The rejection of Mr. Hughes on the sole ground of his characteristic courage and honesty had probably no tendency to istic courage and honesty had probably no tendency to excite the enthusiasm of the better class of his electors for his Liberal rival. Among all the late members who have failed to secure their return, Mr. Fawcert's absence from the new Parliament will be most justly regretted. No abler or honester candidate has asked the suffrages of any constituency; but perhaps he was too wise, too upright, and too independent to command popular enthusiasm.

If the secrets of the ballot-box were revealed, it would probably be found that an unprecedented number of the most intelligent and conscientious Liberals have either recorded their votes for Conservatives, or abstained from the polls. The proposal, not to Parliament, but to the populace, of the worst Budget of the present generation, has excited general and indignant disapproval. A great majority of those who are best qualified to judge hold, in opposition to Mr. GLADSTONE and Mr. DISRAELI, that a threepenny Income-tax is one of the most equitable and convenient modes of raising a moderate revenue. more indisputable that the wanton creation of a deficit, when there is a large surplus, would in any circumstances be a vicious financial operation. It is also known that Mr. GLAD-STONE held only two or three years ago that the first duty of Parliament was to reduce the National Debt; and it is therefore inferred that his scheme of exhausting the surplus and producing a deficiency is exclusively dictated by party motives. The juggle by which direct and indirect taxes were tossed about in his project like a conjuror's balls suggests and justifies a suspicion of questionable policy. To take off a direct tax, then to take off and indirect tax, then to take off and indirect tax. policy. To take off a direct tax, then to take on an indirect tax as a compensation, and finally to reimpose a direct tax as an equivalent for the compensatory measure, is a puzzling and unsatisfactory process. Although both Mr. GLADSTONE and Mr. DISBAELI are mistaken in treating the Income-tax as a temporary burden, Mr. Diseaseli's argument is, on their common assumption, unanswerable. The Income-tax, according to both the party leaders, was imposed for the purpose of reducing duties on consumption; and it would follow, if the statement were correct, that when the object was accomplished the Income-tax ought to be repealed without compensation.

The intrinsic demerits of Mr. GLADSTONE'S Budget are the more objectionable because they are closely connected with the inexcusable mode of publishing the scheme. The Court of Chancery deals severely with trustees who use the funds which they control for their own personal advantage. Mr. Gradstone was by universal consent allowed to be the ablest living financier, and his opponents as well as his friends welcomed his assumption of the office of Char-CELLOR of the EXCHEQUER, not only in the belief that it would terminate the long series of Mr. Lowe's misadventures, but also because it was thought that Mr. GLADSTONE would best know how to dispose of a great surplus for the promotion of the public interest. His continuance in office now seems improbable; but if it is his fate to pick up his Budget out of the mire, and to furbish it up for presentation to the House of Commons, he will find it impossible to displace the suspicion that his proposals were not in the first instance disinterested. Even if a apeculation with trust funds proves successful, the experiment is not the less a breach of trust. There can be little doubt that the unparalleled attempt at corruption has failed of its purpose, if indeed it has not produced an unfavourable impression on the constituencies. The

the panie of 1866, which was followed by a depression extending through the first year of Mr. Grant and commerce have flourished to an anyrecedented extent, and comequently consumption of every kind has been extended; and the doomed Income-tax has been more productive than at any former time. As it is desirable to avoid unacceptable phrases, the offer of a bribe to the opustituencies must not, in fear of offending Mr. Lows's sensitive taste, be described as a scandal; but, to use a colourless term, the Zanzibar affair, the Post Office affair, the Collier affair, and the Ewelme affair sink into pardonable insignificance in comparison with the into pardonable insignificance in comparison with the Budget transaction. The success of the prodigal offer has happily not been such as to encourage future imitation. It is not an unmixed advantage to the country that the Liberal party should have been temporarily defeated, but it is a just cause for congratulation that a large section of its members are firmly opposed to every kind of revolutionary project.

THE BENGAL FAMINE.

THE despatch from the Duke of Argvil to Lord North-- BROOK which was published on Monday may appear to many readers to fall short of the occasion which calls it forth. It is, in the main, a summary of some half-dozen despatches from Lord Northbrook to the Duke of Argyll; and those who think that, at a crisis such as the Bengal famine, the India Office ought to impress its views upon the VICEROY, instead of being content to accept views from him, will naturally find fault with a document conceived entirely in the latter spirit. It may be questioned whether the wellintentioned persons who would like to see the government of India taken for the time out of the lands in which it is usually vested, and carried on by continuous interferences from London or Inversry, have ever considered what the position of the VICEROY really is. They seem to regard him as a kind of superior telegraph clerk, whese main business is to communicate to all whom they may concern the orders he receives from home. The truer theory of a Viceroy's functions, so far at all events as the affairs of India are concerned, regards him as a responsible representative, sent to act as well as to report. However complete may be the despatches sent by Lord Northbrook to the India Office, there are opportunities of knowledge open to a Government on the spot which are never possessed by a Government at a distance. The Viceroy of India has at his elbow the means of clearing away uncertainties, correcting mistakes, and filling up gaps which cannot, even under the most perfect system of communication, be equally at the disposal of the Secretary of State. And even if it were possible to make the latter instantaneously aware of every report, or minute, or conversation which bears upon the famine, there is no reason to suppose that his opinion would be as valuable as that of the Viceroy. The Secretary of State is a Cabinet Minister, and as such he has much to occupy his thoughts besides the affairs of his own department. The Viceroy has, for the term of his office, cut himself adrift from English politics, and has nothing to make demands on his attention, except the work he has been sent out to do. The amount, therefore, of home interference that is compatible with the relative situation of the two authorities is restricted within narrow and well defined limits. The Home Government may conceivably differ from the Vicercy upon some matter of principle, or they may think the measures by which he proposes to carry out his principles altogether inadequate, but there is no room for any such distinction in the present instance. The Duke of ARGYLL and Lord Northbrook are agreed as to the end which the Government of India ought to propose to itself in dealing with the famine, and they are agreed that the measures to which it is intended to resort are the best that can be taken. Consequently the language of simple approval and confirmation is the language which the SECRETARY If it should of STATE most appropriately employs. hereafter appear that the Vicenor has underestimated the an unfavourable impression on the constituencies. The reiterated boast of the surplus may perhaps have been more successful, though it is sufficiently obvious that the greater question may arise whether the Home Government has part of Mr. Granerous's five millions proceeds in ordinary been to blame in trusting him. But, in the total absence of counselful of the population, without the smallest reference to this effect, any interference with Lord Nournables action could only do mischief. We have in India the midst of the party which happened to be in power. The Counselful Government took office in the midst of best organised Civil Bervice that the world can show, and

the whole energy of this large staff of highly-trained officials is engaged in dealing with the famine. When the India Office has promised its support and approbation to all that they think it well to do, it has pretty well oxhausted its power of useful action.

It may be objected perhaps that the despatch of the Dake of Argyll reveals a condition of affairs in which something more than this is wanted. The Government of India and the Government of Bengal are at issue upon the propriety of prohibiting the exportation of rice. Every other suggestion made by the LIEUTENANT-GOVERNOR has been complied with, but to this Lord NORTHneook has refused his consent. The despatch informs him that, after again weighing carefully the whole case and the grounds on which he came to his decision, "HER MAJESTY'S "Government" desire to intimate "their entire concurrence" with him " that the objections to this measure far outweigh "any recommendation in its favour." It would have been well, we think, if the Duke of Angym, had set out in full the objections here referred to. If the whole weight of Indian official experience were on the side of the VICEROY, reasonable Englishmen might be content to inquire no further. But on this one point Indian official experience is divided, and when the opinion opposed to Lord North-BROOK is the opinion of Sir GEORGE CAMPBELL, even those who have most confidence in the Vickroy may be pardoned for wishing to know what has been said on behalf of the rejected course. The objections to it, says the Duke of Aroyll, "are so many and so grave that "nothing could justify having recourse to such a mea"sure unless it were a certainty or a reasonable proba-"bility that exports of food will so exhaust the resources of "India as to render them incapable of affording the supplies which may be required for the distressed districts. So fur us is known to the English public, Sir George Campbell's demand for a prohibition of exports may either imply that he thinks there are other things which might justify such a measure besides the probability that India will not retain enough food for the supply of the distressed districts, or that he does not agree with the VICEROY in thinking it certain that India will retain enough food for this purpose if exportation be not forbidden. It makes a great deal of difference which of these interpretations of Sir George Camphell's attitude is the correct one. A difference on the first point might imply only a conflict of economical or political theory; a difference on the second point would imply that on the most important of all the data on which the action of the Government of India must be founded, the VICEROY and the Lieutenant-Governor of BRNGAL are disagreed.

We have stated the two interpretations of which Sir GEORGE CAMPBELL's persistence on the question of export is capable, because so long as the precise nature of the controversy between him and the VICEROY is unknown there will always be some who will adopt the graver explanation of it. But though it would be well, if it is possible, to deprive them of all justification, it must not be supposed deprive them of all justification, it must not be supposed that such evidence as is available points at all to this conclusion. On the contrary, it will be found, we believe, that Sir Grorge Campbell has been led to give the advice which he has given mainly by his desire to satisfy native opinion. The Secretary of State admits that the fact that it would do this is a "not unimportant" recommendation of a policy of prohibition. But it does not appear that the prohibition of exports advocated by Sir George Campbell is quite the same thing as the prohibition of exports advocated by native critics. The former is a prohibition extending to the province former is a prohibition extending to the province as a whole—a recommendation that no grain shall be allowed to leave Bengal. The latter is a prohibition extending to each of the units that make up the province—a recommendation that no grain shall be allowed to leave any district for any other district. The ground of this latter recommendation is obvious enough. The natives see no reason why a district which possesses a sufficient supply of food should be deprived of a part of it, even though that part should be subsequently recovered by private or public part should be subsequently recouped by private or public agency. There is no need, however, to show that such a prohibition as this would immensely increase the duties thrown on the Government of India, while at the same time it would proportionately increase the difficulty of discharging those duties. Private dealers would virtually be driven out of the market, and the Government would have to transport food from Calcutta to the remotest parts of the distressed districts. If native opinion can only be consiliated by such

an impracticable measure as this, it would be useless to make trial of any less desaits expedient merely in the hope that it would convince the natives that the Govern ment are in earnest. After the telegram from Sir RICHARD TEMPLE read by Sir GRORGE CAMPRILL at the Relief Meeting in Calcutta on Wednesday, there can be no doubt that the sufficiency of the Vicing's preparations will soon be put to the test. In Patna alone—which at one of the three divisions in which as long ago as the 17th of November it was foreseen that the distress would be the greatest—about a million and a half of the inhabitants will be on the hands of the authorities for several months to come. "Already," says the summary of the telegram given in the Daily News, "numbers of the people are "limiting themselves to one daily meal. They are anxious, "but wonderfully patient." Lord Northbrook has left so enormous a margin between the amount of food provided by the Government and the probable need as estimated by the best authorities, that there can hardly be any fear that the quantity of food required will not be forthcoming. What is less certain is that it will be forthcoming in the right place and at the right moment for here of course the question of carriage comes in, and upon this point very little is really known. But there is no reason to doubt that, with whatever success, all has been done that could be done. Nearly three months back the Government of Bengal was urging its officers to test and perfect all transporting agencies, whether public or private, at as early a date as possible. It is not to be supposed that these orders have been disobeyed, or that any arrangements which would have enabled food to be carried to the distressed districts are still incompleted.

PRINCE BISMARCK AND THE CHURCH.

THE zealous friends of civil and religious liberty who lately held a meeting to approve the ecclesiastical legislation of the German Government will be gratified by learning that Count Ledochowski, Archbishop of Pcsen, has been arrested and imprisoned. Protestants of a milder type, while they hesitate to condemn on imperfect information the policy of a great statesman, may reasonably doubt the expediency of a conflict which among other results seems likely to produce a large crop of religious martyrs. It matters little whether any of the Roman Catholic clergy or bishops disapprove of resistance to the civil power; for they will be compelled to prefer the Church to the State by a professional point of honour, which constitutes a more universal or more certain obligation than conscience itself. Every Prussian bishop will, as the occasion arises, feel himself compelled to follow the example of the Archbishop of POSEN; and it is therefore probable that in a short time the prisons will be filled with contamacious prelates who have scarcely a choice between conformity and disobedience. Modern martyrdom, involving no risk of death or torture, is, however disagreeable, not without its consolations. Imprisoned priests and bishops may safely count on exciting the enthusiasm of sympathetic laymen belonging to the two classes which confer the most agreeable kind of popularity. The peasantry and the gentry will unite in opposition to official persecution. At a late Court festivity at Berlin the nobility of the Catholic provinces declined to attend; and the recent elections have shown that in many rural districts the clergy command large majorities. Prince BISMARCK must be well aware that no punishment which the Courts can inflict will have the smallest tendency to detach either clergy or laity from the ranks of the Opposition; nor is it improbable that the laxer Catholics who have hitherto supported the Government may be alienated by the spectacle of undue severity. experience shows that persecution, when it is not carried to an excess incompatible with modern opinion, tends to confirm the obstinacy of religious zealots. The influence of the Catholic clergy in Prussia and in the German Empire was politically misobievous before the beginning of the present quarrel; and it is difficult to understand how the new legislation can tend to weaken its effect.

The exact nature of the offences with which the Catholic hierarchy are charged has never been fully explained. It may be assumed that many of them are disaffected to the Empire, on the ground that it promotes Projectant supremacy; and in Bavaria, if not in Francia, the good wishes of the Church attended the Francia rather than the German cause in the war of 1870. On the other hand.

ne never been alleged that the Catholic priesthood are, spi in a figurative sense, engaged in a conspiracy inst the Gevernment. Those among them who may the previous of French predominance in Europe, as alterinary to a restoration of the Pore's temporal power, publishly not anneunced their opinions in public; d the can assuredly have taken no steps towards the completiment of their object. The French Government itself professes with perfect sincerity its present intention of maintaining peace, and, in the words of the Duke DECASES, of cultivating friendly relations with Italy such as circumstances have made it. With the thoughts, the dreams, and the remote aspirations of the Catholic clergy, the Prussian Government has no legitimate concern.

Prince Bismarck is entitled to perfect credence when he declares that he has no objection to raise against the dogma of Infallibility or any other spiritual proposition which the Roman Catholic Church may think fit to adopt. If the Holy See were to require the faithful to believe, on pain of excommunication, as several Popes have personally pro-fessed to believe, in the miraculous wanderings of the Holy House of Loretto, there is no reason why Kings or Parliaments should object to an additional strain on the elastic credulity of a particular religious body. According to modern notions heresy is not a civil crime; and the only misdemeanour of which Archbishop Ledochowski and his colleagues are accused consists in their refusal to submit to legislation of an expost facto character. Bishops and priests who have undertaken their duties on the assumption that they were entitled to certain immunities incur comparatively little moral blame when they practically protest against a fundamental change in their position. The Prussian Governmental change in their position. The Prussian Government was the aggressor by introducing new laws which could scarcely fail to result in a conflict. It might perhaps be necessary that the bishops should sconer or later be deprived of their exclusive control over the education of the clergy; but the time was inopportunely chesen. It was at least possible that the future Pope might be a statesman, and not a wrong-headed fanatic; and that he might be disposed to renew the friendly relations which formerly existed between Prussia and the Holy Sec. A few years undisturbed by sectarian conflicts would perhaps have rendered the unity of the Empire unassailable; and the Roman Catholic clergy, like the rest of mankind, gradually learn to acquiesce in whatever exists, if only their hostility is not kept alive by artificial provocation.

In Posen religious conflicts are the more untoward because they coincide with national divisions. The Poles, who have never been fully reconciled to union with Germany, are also Catholics under a Protestant Government. Historians still dispute whether Irish disaffection was originally political or religious; and it is agreed on all hands that national antipathy and sectarian batred have for con-turies been closely or inseparably connected. The advocates of Home Rule would give much to see an Irish Archbishop arrested for disobedience to some statute passed in England; but in this country the inconvenience of religious prosecutions has long been fully understood. The Rhine provinces, which a generation or two ago might have looked to France which a generation or two ago might have looked to Franco for protection against Protestant legislation, are now happily loyal; but great confusion might arise if the devout Catholics were suddenly subjected to a practical interdict by the exclusion of the clergy from their churches. The Government can searcely hope to succeed, like Henry VIII. and ELIZABETH, in inducing the laity to accept a form of Catholicism independent of Rome. In the sixteenth century the Catholic Church included in its creed the whole body of Protestant faith, which accordingly survived after the body of Protestant faith, which accordingly survived after the removal of external accretions. In the modern Church the characteristics which were once superficial and accidental have become in popular estimation the central doctrines of maye become in popular estimation the central doctrines of the faith, and consequently a reformed religion is no longer to be found at the heart of Outholicism. A Catholic Church without a Pope is to the mass of the people not so much heretical as simply inconceivable. It is true that a few thousands of Old Catholics have formed a Church of their own; and they have lately enjoyed unex-

。 (17) 新建设。

It is possible that the Government may throw the Old Catholics over as soon as it has secretained the inability to create any considerable schism. When half the Catholic bishops and a detachment of the clergy are in prison, the churches must be shut up, to the great annoyance and irritation of the general community. When a much less violent quarrel with the State occurred in Scotland a large number of the discontented clergy and laity second from the Establishment, and formed a Church of their own. It may be doubted how far an imitation of their course would be consistent with the legal or administrative system of Prussia. Even if the Catholies are allowed to constitute themselves as a religious body unconnected with the State, Prince Bismanck will not only have failed in his enterprise, but he will have strengthened his opponents for mischief, though not for the useful and beneficent purposes of a Church. A Nonconformist sect, whether Popish or Protestant, is exempt from the salutary restraints which are imposed on established Churches. Cardinal Cullen and Archbishop MacHala would have been much less troublesome if they had, like Archbishop Ledochowski, held a legal rank. According to the apparent state of affairs, the Prussian Government has hitherto done nothing towards the attainment of its object. The Catholic clergy have become not more, but less, loyal; and any power which they may exercise is rather increased than diminished. I'rince BISMARCK's crusade may or may not be justified if it succeeds. He will have been altogether in the wrong if he fails.

DISSENTERS AND THE ELECTIONS.

THE Dissenters of Bradford may take comfort. It has not been given to them to be victorious in their own borough, but in other constituencies they can record a series of successes. It has been the boast of the Nonconformists that they could break up the Liberal party, and the result has shown that they did not overcalculate their strength. Nothing happens quite in the way in which it is expected to happen, and the Dissenting triumph has been no exception to this rule. They intended to show how completely they had been alienated by the action of the moderate Liberals, whereas what has actually been shown in how completely they had read what has actually been shown is how completely the moderate Liberals have been alienated by the action of the Dissenters. One constituency after another has virtually declared that it distrusts a Liberalism of which the Dissenters are the backbone. In comparison with this the electors prefer an invertebrate Conservatism. No doubt other influences besides Nonconformity have had their share in the Conservative reaction the existence of which has this week been established. Not to speak of graver and larger considerations, much has been done by the wrath of the publicans at being obliged to shut up an hour earlier, and to admit the police into the citadel; much by the wrath of the British tradesman, who sees those two pillars of his prosperity—adulteration and over-charges—undermined by public analysts and co-operative stores. But when all due credit has been given to these and other active allies, the honour of the day rests, as we cannot help thinking, with the British Dissenters. No other faction has shown itself quite so obstinate, quite so impracticable, quite so unenlightened. The publicans and the tradesmen went out from the Liberal camp, and the numerical strength of their secession could be estimated with more or less accuracy. But the Dissenters remained for the most part inside the Liberal camp, and under a system of secret voting it is impossible to say how many moderate supporters were not alienated by their presence there. There is one plea, however, which they might fairly urge in mitigation of sentence, if they had been convicted on the charge of having overthrown the Liberal Government. They might not have succeeded so conspicu-onaly had not their exertions been aided by some members of the Cabinet. Mr. GLADSTONE seems to have all along mistaken the quarter from which the real storm was coming. He has been trying to conciliate the Education League when he ought rather to have accentuated his quarrel with it. We do not mean that he was prepared to charced of their own; and they may straig enjoyed unexpoeted good fortune in the recognition of their solitary
inches by the State. If Prince Busiason could induce the
great trials of the Catholic laity to asknowledge a set of
new history of the Utracht constantion, his victory
over his opponents would be complete; but the Popu's
furiant about of Bishop Ramanus will by the Catholic bedy
in general be accepted as conclusive against his claims.

the moderate Liberals might far more than counterbalance any good that could come from the renewed confidence of the Radicals.

This miscalculation probably led him to attach an exaggerated importance to the return of Mr. PRIGHT to the Cabinot. Yet when read by the light of this week's elections, it seems probable that no single event has done the Government more mischief. Mr. BEIGHT signalized his re-entrance upon office by a speech remarkable for its apparent recklessness and its real caution. But the caution passed almost unmarked either by friend or enemy, while the recklessness made a profound impression upon both. For the first time probably many Liberals began to doubt whether the Government could be trusted to resist Dissenting pressure. As we pointed out at the time, and have frequently insisted since, there was no real ground for this uncertainty. The responsible MINISTER of EDUCATION never changed his tone, and amidst all Mr. BRIGHT's abuse of the Education Act, he had taken care to slip in a warning that until it had had a fair trial it was useless to expect that it could be altered. But the facts that Mr. BRIGHT had come back to the Ministry, that he had been allowed to censure in the severest terms an Act of Parliament for the passing of which the Cabinet was in a sense on its trial, and that the Dissenters on the whole had consented to condone the sins of the Government in consideration of his renewed association with it, were far more conspicuous than these logical niceties. Mr. Bright's return to office has had, we suspect, its perfect work, but this work has had further consequences than those which Mr. Gladstone looked for. consequences than those which Mr. GLADSTONE looked for. If the prodigals have returned, too many of the elder brothers have gone away in a rage. A speech which was only delivered last Tuesday may be thought to have come too late to exercise much influence on the elections. But if there were anything wanting to the complete alienation of Liberals who would have been true to the Government but for their first that for their first that for the contract that for their first that for their first that for the contract that the contract ment but for their fear that the Government might not be true to itself, it was supplied by the passage about education in Mr. Lowe's speech to the electors of the University of London. He proposed to settle the difficulty about the 25th Clause by repealing the clause and exempting parents who plead that they cannot with a clear conscience send their children to other than Denominational schools from the obligation to send them to school at all. It is impossible that a Minister who proposes such a compromise as this can have a genuine zeal for the extension of compulsory education. A loophole of this sort would prove wide enough in the long run to let any number of indigent parents slip through. Whenever a man wanted to have the benefit of his child's wages, instead of allowing his child to have the benefit of education, he would be seized with scruples about the lawfulness of School Board schools. The School Board would not be able to pay the fees for the child at a school which his father's conscience would allow him to attend; the father's conscience would not allow him to avail himself of the Board's offer to remit the fees at their own school; and the only way out of this dilemma would be to send the child to work.

The return of Mr. FORSTER at the head of the poll for Bradford is a deserved reward for plain speaking at a time when plain speaking was eminently necessary and lamentably wanting. In this one instance the Dissenters gave the Government their harmless opposition instead of their disastrous support; and, if there had been more contests in which parties had been thus distributed, the results of several among them might have been different. The battle raged round the 25th Clause; but, as Mr. FORSTER pointed out, in answer to Mr. Illingworth, it is a great mistake to suppose that the mere repeal of the 25th Clause would heal the educational difference which divides the Liberal party in two. The Dissenters say that their consciences will not allow children to be educated at the public cost in any school where Denominational teaching is given. If this scruple is once recognized, there is no escape from two conclusions. The first is that no religious teaching can be given in School Board schools. All religious teaching is Denominational as regards some section of the ratepayers. Christianity is Denominational to a Jew. Theism is Denominational to a Denominational to a Jew. Theism is Denominational to a Positivist. The second conclusion is that no State aid can be granted to voluntary schools. If it is a violation of conscience to give a few thousands every year from the rates to have indigent children taught to read and write at Denominational schools, it must be a greater violation of conscience to give three-quarters of a million every year.

from the taxes to keep Denominational schools going. Thus the whole principle of Secularism is involved in the repeal of the 25th Clause, and that principle, when put forward in this shape, is as intolerant and as sectarian as the fiercest type of Denominationalism. There is no appreciable difference between the man who would refuse to have indigent thildren tangels at any but agrees. appreciable difference between the man who would remae to have indigent children taught at any but secular schools, and the man who would refuse to have indigent children taught at any but Church of England schools. They are both alike enemies to secular education, because neither will allow of its being given except under the impossible conditions which they themselves lay down. But fanatical Denominationalism is hidden away in country parsonages or among the maiden hidden away in country parsonages, or among the maiden sistors of departed canons who are still to be found in cathedral cities. Fanatical Secularism is rampant wherever the minority which chooses to call itself the Liberal party has a chance of making its voice heard. Of late, therefore, the real attack upon secular education has been made by its professed friends. It remains to be seen whether the source of the danger will be changed by the Conservative victory which Dissenting arrogance and Ministerial irresolution have done so much to promote.

M. OLLIVIER AGAIN.

I has been announced that M. Dalla Very shortly to present himself to the French Academy very shortly to present himself to the French Academy T has been announced that M. EMILE OLLIVIER proposes in order to deliver his address and take his seat among the Immortals. M. Olliving was elected a member of the Academy soon after he became a Minister. This was the climax of his ambition, but he was destined immediately afterwards to a rude reverse. His Ministry collapsed with the disastrous commencement of the war, and he fled from Paris before he had a chance of being received by the Academy. It appears to be supposed that M. OLLIVIER'S present views are not limited to literary renown, and that he sees a possibility, in the increasing complications of French parties, of regaining his political position. Perhaps there could hardly be anything more characteristic of M. OLLIVIER than that he should venture to think of returning to public life. There is no reason to suppose that the conscience of this buoyant and light-hearted states-man is in the least disturbed by a recollection of his own share in the fatal policy which brought ruin upon France; but the mere association of ideas would be so painful to most men that they would rather keep at a distance from the scene of calamitous experiment. In the summer of 1868, before he was a Minister, but when it was known that he had been received by the EMPEROR and was supposed to be rapidly tending towards office, M. OLLIVIER made a fine speech in the Chamber, denouncing the idea of a war with Prussia in particular and all war in general. He assumed of course that France would be victorious, but he pointed out that even when Prussia had been overthrown and the Rhine provinces annexed, France would have to remain armed and watchful in self-defence, and that settled peace would be more remote than ever. He continued to hold this language consistently enough after he was in office, and down to the very day when it was resolved to fight. On the 15th of July, 1870, the EMPEROR and his advisers determined to go to war, and M. OLLIVIER rushed into the tribune to declare that it was with a cour léger that he accepted the responsibility of a decision which outraged all the principles and convictions he had previously professed. M. PREVOST-PARADOL took the news differently; for when he heard what had happened, though not personally responsible for it, he shot himself in decision. himself in despair.

Whether M. OLLIVIER had it in his power to avert the war by threatening to resign is a speculative question into which it is unnecessary to enter. There can be no doubt that consistency would have required that he abould oppose the war with all his energy; but it is also true that there was a strong popular feeling in favour of it, and M. OLLIVIER may have conscientiously persuaded himself that, as it was inevitable, it was his duty to stand by his country, and give it the benefit of his counsels. M. OLLIVIER had previously been accounted of configuration with the previously beautiful and the previously beautiful.

23

The state of the s

function of antegrountic parties by following an independent course, and he also refers in the body of the work to Con-gram's attempt to reconcile the First Naromon and liberty after the return from Elba. "However uncertain," wrote Constant, " may be the chance of liberty for a country, it " should not be repulsed. If I fail, I shall incur the raprosch of fickleness and inconsistency; but if I succeed in grating a single good principle adopted, in mitigating the four of a single arbitrary law, the gain will be to France." It is clear that M. OLLIVIER intended to justify his connexion with the Second Empire in a similar manner. He had attacked the system of the Empire at every point, and he adhered to his opinion that it was full of evil. But then he thought he could turn evil into good, and out of the eater bring forth meat. He took up the Empire not for its own sake, but for the sake of making it something entirely different; and he had such sublime confidence in himself, such unhesitating faith in the magical power of words, that he thought he had only to spin fine phrases in order to construct an ideal State in which the Government should be very strong and the people perfectly free. There were a good many obstacles in his path, and even M. Olliva became aware of some of them. There was, for example, the EMPEROR himself, who was very willing to have M. OLLIVIER'S assistance in keeping the Democrats quiet, but who was not prepared to abdicate altogether; and there was M. ROUHER, or the Vice-Emperor, as M. OLLIVIER called him, who was quite willing to bear as much of the purple mantle as his master chose to drop from his shoulders. The Empire, in short, proved to be more substantial than M. OLLIVIER imagined. It was a compact body of men with prejudices, opinions, and, above all, interests; and these prejudices and interests were decidedly opposed to M. OLLIVER'S beautiful projects. The EMPEROR might in time have shaken off the scandal of the Coup d'état, but he could not slake off the men who helped him with it, and the kindred spirits whom they had gathered around him; and it was this in the end that brought the Empire to the

There can be very little doubt that the unfortunate experiment of the OLLIVIER Ministry was indirectly the cause of the fatal war which so quickly followed. There is reason to suppose that the EMPEROR appreciated the force of Prussia more adequately than most of his advisers, and that, without being aware of the utter rottenness of his own preparations, he shrank from a conflict with so powerful an enemy. It was the domestic condition of France which swayed his decision. It is evident from M. Mérimér's letters that for some years there had been considerable uneasiness and divided counsels at the Imperial Court. The aggrandizement of Prussia in 1866 galled the French, and the Democrats seemed to be gaining ground. ROCHEFORT'S pamphlets, the VICTOR NOIR funeral, and similar incidents, might be trivial things in themselves, but it was not unreasonable to be afraid of sparks in the neighbourhood of inflammable materials. The EMPEROR himself had a notion that by granting a certain amount of freedom to the Chamber he could put an end to all further changes. "It is necessary," he said in a remarkable letter to M. OLLIVIER, "to trace "resolutely the ends which I wish to attain without "seeming to be dragged on year after year to fresh con"cessions, for one always falls on the side to which one
"leans." It cannot be said that the Empenon leant too enthusiastically to the side of Liberal government; but at least he leant too much for the stability of the Empire. Ménuée was clear-sighted enough to see that Parliamentary government was hopeless in the hands of a man like OLLIVIER, who was clearly incapable of praca man like Utilivies, who was clearly incapable of practical administration, and whom he believed, with or without reason, to be corrupt and insincere; and he also understood that Personal government had become impossible. The EMPEROR himself saw through OLLIVIER, but he had attended to himself or his star; and he imagined that the attention of his that a successful war to distract the attention of his subjects from home affairs and flatter their vanity would subjects from home attairs and flatter their vanity would set everything right. All the evidence that has been published would seem to show that he decided on attack-ing Prussia as the only remaining chance for his dynasty; and, in fact, the Prussian Government had so contrived to complicate matters that, if he had not done so, the irrita-tion of the French on this subject, coupled with their general political discontent, would almost certainly have produced a revolution.

When M. OLLIVIER returns to Paris he will perhaps

find it necessary to offer an emplanation as to some points in his official career which certainly appear to require. In the meantime he cannot be acquitted of having, by hextravagant vanity, his fantastic confidence in himself and the magic of his eloquence, and his shifty and self-deluding impulsiveness, contributed very largely to the injury and humiliation of his country. Phrasemongers have been the ruin of France, and perhaps we have had in our own country some recent experience of the mischief of phrases as well as of light-hearted statesmanship. We have seen Ministers rushing into vast projects of change, in the realisation of which human nature and existing interests are to be entirely disregarded, and allowing the casuistry of vanity and ambition to persuade them that principles may be taken up or abandoned at pleasure as long as the end is to secure the predominance of the only statesman who is supposed to be capable of saving society. M. Ollivier's disastrous official career may sorve as a warning to public men against the illusions of a canting self-sufficiency and the idolatry of verbiage.

MEN OF ONE IDEA.

It is common enough to hear a man condemned on the ground that he has only one idea. We all know the kind of person whose portrait is summoned up by such a description. At election times innumerable specimens are on view. Many thousands of rational beings are profoundly convinced that they are in possession of the simple secret which would introduce the millennium. We have only to swallow their nostrum, whether it refers to drainage, to electoral reform, or to universal philosophy, and the world will go right ever afterwards. It may be disputed whether, on the whole, such people do more harm by their stupidity, or more good by incessantly hammering upon a single point. It would be ungrateful to ignore the services often rendered by men who, by concentrating their energies upon a single point, have succeeded in at least forcing some important question upon the indifference of mankind. But it seems to be an error to speak of such persons as possessing an idea, even in the popular sense of that vaguest of philosophical words. All that they can really be said to have assimilated is a fragment of an idea—a mere formula detached from the system of thought to which it owed its real value. To have an idea at all a man must have something like a general theory of the world, or at least of that department of speculation with which he is principally concerned. The so-called man of one idea does not understand the principles of his science, or he would appreciate the relative value of his own doctrine and be unwilling to apply it in season and out of season. He has simply caught, or been caught by, some incidental corollary from a wider principle, and goes about measuring all things in heaven and earth by his private footula. The more accurate mode of classifying mankind would be into the unideaed and the one-idead. Itsally to possess a single idea and to be capable of impressing it upon the world at large is to be a man of genius. To possess two or more ideas with the same completeness is to be one of those rare intellect

How rare it is to find a man to whom we can confidently attribute the possession of more than a single idea may be proved by a survey of some of the different branches of intellectual activity. To have contributed a single thought which can be distinctly called original is to have a permanent place in the history of knowledge. Mr. Mill, in one of his later essays, declared that Berkeley was the equal of any metaphysician in real acuteness, because he had contributed three distinctly new discoveries to metaphysics. This view is of course open to discussion; for the validity of Berkeley's discoveries is still discussed, and his most original theory is denied by the greatest authorities. Moreover, the three doctrines, true or false, were so closely connected that it may be disputed whether they really amount to more than three deductions from a single principle. It is, however, plain enough that, if we admit the truth of the statement, we must further admit that Mr. Mill's eulogy would be amply justified. Few indeed are the metaphysicians of whom so much can be said with any degree of plausibility. All Berkeley's writings are simply applications, with more or less ingenuity, of his distinctive theory; and what is true of him is true of more pretentious and incomparably more voluminous philosophers. When we see one of the claborate systems which have been worked out by the industry of a German thinker, we are almost appalled at the implied affluence of ideas. Nor should we deny for a moment that this power of working all conceivable topics of speculation into a single system shows a degree of energy as wall as of patience which is in some cases truly

admirable. It is equally true that, as we overcome the first impressions of astonishment, we sometimes discover that the vast structure is only the development of a single thought. Most systems of metaphysics can be packed into a single metaphor. The philosopher thinks that the mind is the proverbial sheet of blank paper, or that it is a receptacle for certain innate ideas, or the mould which shapes the restorials sampled from without or a piece which shapes the materials supplied from without, or a piece of complex mechanism, or the modification of a divine idea; and he proceeds to state all knowledge in the system of notation appropriate to his conception. This task is one of which few people are capable; but it does not necessarily involve more than one idea, from which the whole marvellous superstructure may be evolved. We are apt to be unjust to the men who content themselves with civing leading principles and leaning their application to with giving leading principles, and leaving their application to others; and fall into the delusion of estimating a man's intellectual power, not by the intrinsic value of his thought, but by the number

of forms in which he has presented it.

To leave, however, this unpleasant region, the same thing may certainly be said of speculations of a less abstract order. Nobody, as his disciples tell us, has produced a greater effect upon legislation since the beginning of the century than Jeremy Bentham. And Bentham, as even his disciples admit, had not room in his head for more than a single idea. Those heavy volumes from which all ordinance and as a single idea. nary readers shrink in disgust are but incessant applications and nary readers shrink in disgust are but incessant applications and reapplications of the great doctrine that the criterion of morality is the production of the greatest happiness of the greatest number. The theory occurred to him early in life, and stack by him to the end of his days. It never struck him that it was not absolutely true, or that it did not afford a sufficient answer to every conceivable problem in ethical or political speculation. It may be disputed whether an opinion capable of being compressed into so narrow a formula had any proper claims to be called an idea, and in that case Bentham would have to be placed amongst the inferior class of people who cannot even boast of a single idea. We do not hold that this would be just, but, if so, it would strengthen the argument. If the mere possession of one fraction of an idea gives a man so undeniable an influence over the minds of his contemporaries, how great must be the force of a mind comprehensive enough raries, how great must be the force of a mind comprehensive enough to take in a complete idea and regard it from all its sides!
Innumerable illustrations might be adduced from politics. The single idea of the indefeasible rights of man upset the world and made two or three distinct reputations. Even the dogma of Free-trade, which at most involves a negative idea, and may be held along with the most imperfect social theory, has provided more than one man of undeniable ability, if not of true genius, with sufficient materials for talking and preaching throughout the

whole course of his life. It may be disputed with more plausibility whether the same theory admits of an application to the great imaginative writers as well as to mere reasoners. It certainly sounds improper to limit the number of ideas which might be contained in the brain of a Shakapaare or a Goethe. And yet, in a certain sense, it would seem that, if we set aside the very greatest names, the opinion is plausible even in this case. The most original and vigorous preacher of our time, who applies the practical method to political and moral questions, has certainly made such use of two or three thoughts that his cardinal dectrines might be summed up in a page. Take away from his writings the doctrine as to the superiority of silence to speech, as to the vital importance of hero-worship, and two or three more such fundamental opinions, and the bulk of his volumes would shrink into a very limited space. Jean Paul Richter says that many of his volumes expanded out of the single phrase in Shakspeare about our little lives being rounded with a phrase in Shakspeare about our little lives being rounded with a sleep. Certainly the same may be said of our own writer, who owes something of his method and perhaps of his manner to the teaching of Jean Paul. We meet with that single thought, expressed with infinite vivacity and variety it is true, but still with substantially the same meaning, in innumerable pages of his writings. The example may suggest that even Shakspeare, the "myriad-minded," owes after all a very large proportion of his influence to his constant embodiment of the same thought. Out out from Shakspeares the character of Handet. Out out from Shakspeare the character of Haulet, and all the subsidiary characters into which the Hamlet element enters as a main constituent, and, though Shakspeare would still be a very great poet, he would have made a long descent towards the level on which Jonson and Fletcher and a number of scarcely inferior rivals may be placed. But the essence of Hamlet is given in half a dozen of the great speeches which we all know, or ought to know, by heart; and, if we dared to venture the experiment and had the processor consists. periment, and had the necessary capacity, we might possibly sum up the secret of the charm in one or two sentences. We will not attempt a task so provocative of hostile criticism; and indeed it attempt a task so provocative of hostile criticism; and indeed it might take a Shakspeare to do it satisfactorily. But if the process be possibly applicable to the greatest name in our literature, it is certainly applicable to many of the minor ones. A couplet or two gives the essence of Pope; a few lines from one of his odes would be enough to express Wordsworth; and a stanza or so from Don Jum would give all Byron's message to the world. It is an accepted rule in oratory that you should say the same thing over in a great number of forms if you would impress it upon any common audience; and the rule might be extended much further. Every great work of art has some dominant idea; few writers have left more than one great work; and when they have, the dominant idea has generally been the same in all, though different aspects of the central truth may have been exhibited. exhibited.

4.

The question would of course become difficult if we a The question would of somes become distinctives in what the to define an idea, or to say with any distinctness in what the unity of an idea consists. But the moral remains unaffected a young writer should endeavour to get hold as soon as possible of some good fertile dogma, and then not be afraid of working it to death. He is exceptionally lucky if he can find one; though the number of modes of expressing it may be practically unlimited.

A DAY'S JOURNEY IN THE FOURTEENTH CENTURY.

A DAY'S JOURNEY IN THE FOURTEENTH CENTURY.

In the general prologue to the Canterbury Tales Chaucer drew the plan of his work. Each pilgrim was to tell four tales, two in going to Canterbury, two in returning; and the poet was to relate the remnant of the pilgrimage. But the judgment of the host of the Tabard was not to be taken literally. Each was to contribute something; how much must depend, as would happen in a real journey, upon the length of the united stories, and upon accident or caprice. The host interpreted his own law when he reminded the Franklin that he would break his word if he did not tell at least one tale. At the close of the journey to Canterbury this is again made clear. The compact would be fulfilled when the Parson had told his tale. One was enough to satisfy the promise, but the Poet was free to tell two or more out fulfilled when the Parson had told his tale. One was enough to satisfy the promise, but the Poet was free to tell two or more out of the mouth of either of the travellers. Accordingly the prologue of the "Wife of Bath," which the Friar calls a long preamble of tale, is a tale in itself; the Sompnour's prologue is a tale, and so is the introduction to the dismal story of the Pardoner. Chaucer for his own part recites first "Sir Thopas" and afterwards "Melibeus"; and the Monk, who, when called upon, had offered to tell a tale, or two, or three, had in fact told sixteen tragedies when he was interrupted by the Knight. The Nun's Priest weaves into his own tale a ghost story from Cicero, with other tales of dream and vision, while the Canon's Yeoman relates the distinct histories of his master the projector, and the other Canon the histories of his master the projector, and the other Canon the

In considering how far Chaucer accomplished his original design, two things appear; the one, that he did not carry on his work beyond the gate of Canterbury, where the Parson's tale ended; the other, that portions of the outward journey were unfinished. The prologues of the Canon's Yeoman, the Manciple, and the Parson, taken together, show that the Parson's tale, a translation from some homily on penance, was told close to Canterbury, and was the last of the outward journey. If the enlique to that tale were Chaucer's and designed to be a conthe epilogue to that tale were Chaucer's and designed to be a conclusion to the whole work, it would show that there he abruptly closed his poem, meaning to add nothing more. But the beginning and the end of the epilogue are the translated words of the author of the homily, to which little treatise they belong, and not to the Tales, and the middle was foisted in by some well-meaning clerk. the Tales, and the middle was foisted in by some well-meaning clerk. Yet, being found in the earliest and best manuscripts, the epilogue, read with its prologue, does show the general belief of the time that Chaucer had ended his work with the Parson's tale and the arrival at Canterbury. The prologue to Lidgate's Story of Thebes, and the otherwise worthless prologue to the Story of Beryn, seem to leave no room for reasonable doubt that the belief was well founded. That the history of the journey to Canterbury was left unfinished is plain, not so surely from what is wanting, for it may have been lost as from certain signs in that which remains. may have been lost, as from certain signs in that which remains. may have been lost, as from certain signs in that which remains. Seven of the promised tales are missing, and two are but partly told. The legend of St. Cecilia, like the Knight's tale, which was taken from the source from which loccaccio took his Theseida, had been already written by Chaucer. It was literally translated and happily chosen for the Nun; but, because the twelve introductory stanzas were not pruned off, she becomes a man, not telling the tale for the edification of pilgrims, but translating it—a self-imposed task—as a remedy against idleness. So also the epilogue to the Parson's tale is not addressed to listeners present, but to future hearers and readers. future hearers and readers.

Beside these and other defects and blemishes which the hand of the master would have supplied and removed had he finished his work, transcribers of manuscripts and editors had carelessly confounded the order of the tales and of the prologues which connect them. Tyrwhitt, a scholar and a gentleman, a critic perfectly free from arrogance, with quick and sound judgment, applied himself to bring them into order. It is the fashion to undervalue him; to commend him, if at all, by that imposition of hands which Beauclerk dreaded to receive from Tom Davisa. Doubtless, to borrow from Dr. Boteler's praise of the strawberry, a better edition of the Canterbury Tales than Tyrwhitt's might be made; but doubtless a better never was, nor will be, until some critic like himself, and versed in the modern learning of language, will openly build on his foundation, not seeking to supersede him. Unexampled use, both in the quantity talesn and in the manner of taking, is made of his notes and energy and of his text; and, in return, we are reminded of our obligations to him mainly by editions of the other poems, without an introductory essay; without a note, and with hunders in the text which could not have escaped his eye. He found the earlies editions of the Canterbury Tales corrupt and full of disorder. He corrected the text, and he set the tales in order by sleven temperations. He did, not bring in the tale of Gamelyn, which belongs to Robin Hood's Ballada, nor did he add to the second part, affected well finished, of the Equire's tale a couplet, lightward we larget whence, and of the master would have supplied and removed had he finished

need for the worse, of some idle scribbler on a blank space of

Apollo whirleth up his chare so hie Til that the God Mercurius hous the siye;

nor did he offer to us as Chaucer's:-

When that this yoman his tale ended hadde Of this false chanon whiche that was so badde;

twelve verses following worthy of their leaders; nor with some twelve verses following worthy of their leaders; nor did he lant his pilgrims at Boughton, within seven miles of their journey's end, to carry them thence backwards twenty miles to ter, and anon, in a third part of the time, twenty-three miles forward. Not for the negative merit of having avoided these blunders, but for what he has actually done, it seems strange that blunders, but for what he has actually done, it seems strange that those who profess themselves to be almost idolaters of Chaucer should be ready to throw aside Tyrwhitt as a worn-out garment, with threats to wring the neck of any editor who shall merely reprint his text. If his edition can indeed be put away, then in process of time the name of the man to whom Chaucer owes more than any other English classic to any critic or editor will be forgotten, and his mantle may be caught, and cut, to patch up, with-

out detection, a modern frippery.

One of the means by which this end may be accomplished is to divide the day's journey to Canterbury into three or four pieces. There is nothing in any printed copy, nor, so far as appears, in any manuscript of the Centerbury Takes, from prologue to epilogue, to raise a suspicion that the journey lasted prologus to epilogue, to raise a suspicion that the journey lasted more than a day, much less to suggest that the pilgrims slept on the road night after night. If this had been the poet's plan, it must have appeared in some one verse or word. After nearly five hundred years it was discovered that the journey ought to have occupied a day and a half, or two days, or two days and a half, or three days and a half, or four days—three days and a half, or four days—three days and and a half, or three days and a half, or four days—three days and a half being preferred; and it was concluded that Chaucer was a fool if he meant to tell us that the pilgrims went from Southwark to Canterbury in a day. The discovery was made in this manner. Dean Stanley mentioned the pilgrimage from London to Canterbury of Isabella, the misorable widow of Edward II., in four days, and of John King of France in five days, sleeping at Dartford, Rochester, and Ospringe—as to Ospringe, Richard II. might have been added to the royal pilgrims, for he rode from the shrine to Ospringe, and slept there. These royal progresses having been discovered, it was too rushly concluded that a commany among whom were a noor parson, a concluded that a company among whom were a poor parson, a poor clerk, a bailiff, a ploughman, a server of summonses, and a cook, must needs have travelled like kings and queens. There is not a syllable in Chaucer to suggest that the pilgrims breakfasted, supped, or slept in or went forth from any other hostelrie than the Tabard, from which the Canon's Yeoman saw them ride in the morning; and his master, desiring to be one of the company, rode after them at foot pace and trot, until, towards the close of the journey, resolving to overtake them, he galloped three miles into Boughton. Upon no other foundation than that a king and queen, making the same journey, travelled so many days and rested so many nights, we are bidden to assume that our pilkrims did so likewise. To prop up this assumption, the poets verses are shuffled, fragments brought together, trial tables drawn, groups arranged, abstruse calculations made, and an elaborate scheme prepared; and the end is that, if Chaucer had so pleased, he might have told of four days, instead of the one day of which he has told. It is said that in the fourteenth century the road to told. It is said that in the fourteenth century the road to Canterbury was all stiff, sticky; London clay, except one little bit of chalk and two bits of drift; that it was a swampy field, and that a slongh is twice mentioned by Chaucer; that sixteen miles was a reasonable day's journey for a large party riding along the bad narrow roads of nearly five hundred years ago; that some of the pilgrims were ill mounted, and that their pace could not have been more than a walk. If these things were so, they would have some weight, especially if also there were passages in Chaucer which made it doubtful whether the journey was of one day or more; but there is no such passage; noither can the things affirmed be allowed. The pilgrims travelled on one, the first and the best, of the four great Roman roads, the road from Dover to Wroxeter and thence to Stone Street and Chester—Watling Street, a name which, as Chaucer tells us, the English gave to the galaxy, calling it the Watling Street of the aky. Since some parts of Watling Street, according to Camden, were named by the people High Ridge and Fortie-foot-way, and the Romans made their roads to last, so that at the end of two thousand years parts which have not been broken up or covered over remain hard as iron, it may be demied as a lawy lawyer that is over remain hard as iron, it may be denied that Chaucer's road was a bad, narrow way. Camden does, indeed, say elsewhere that in one place the greatest width of Watling Street was not more than one place the greatest width of Watling Street was not more than seven yards, and that a little while before the Conquest parts between London and the Chiltern Hills were repaired and levelled; yet it is not therefore to be thought that in the reign of Richard II. the great highway of the kingdom from London to Dover, especially when and where it was incessantly crowded with pilgrims from every county in England, was neglected. The same care which made provision for post-horses would look to the road. A company of thirty riding together did not always keep the besten track. The sloughs were by the waysids, and the only pilgrims and danger were the host beamand in sleep, and the cook in heat. According to the order of the tales, not in Tyrwhitt's, but his against addition, both sloughs were in the forest of Blean, both and reads. A. Marie

The day's journey of fifty-six miles was not impossible. Le Petit Meschin with his companions, men in armour, in the year 1362, rode more than forty miles in a night to surprise Pont-de-Saint-Esprit. Charles VI. of France and his brother, the Duke of Touraine, in the year 1369, for a wager of five thousand france, rode from Montpelier to Paris, about fear hundred and fifty English miles—the Duke in four days and a third, the King in four days and a half. To tell the whole truth, they had, like Jeanic Deans, divers easements in their journey; the terms of the wager allowed them to travel by water and in carts. Passing over these feats, for they were done in France, there is proof enough preserved by Rymar, Froisant, and Walsingham that here in England, in the fourteenth century, fifty-Walsingham that here in England, in the fourteenth century, titysix miles might be travelled in a day. In the year 1360 Edward III landed at Rye about vespers, and, riding all night, raived at Westminster, sixty-three miles off, on the morrow bears have none. Whatever that hour may be, it was early enough to enable the King to summon and to hold a Council, at which he delivered the Great Seal to his Chancellor. In the year 1383 Richard II., in one of his few hereditary flashes of valour, rising hastily from supper with a resolve which lasted until the next morning, that he would reconquer France, rode furiously through the night accountry to what through the night, seventy-two miles, from Daventry to West-minster. The monks of St. Albans remembered the journey by this token; the King came to their Abbey in the middle of the night, and borrowed the Abbot's palfroy, which he never returned. In the year 1394 the Earl of Rutland and the Earl of Nottingham, Earl Marshal, landing at Sandwich, rode in less than a day and a half eighty-seven miles, to Windsor. With these instances of kings and earls before her, mentioned incidentally, not recorded as wonders, it was lawful for Chaucer's Muse to travel from Southwark. to Canterbury in a day. But Edward and Richard, Rutland and Nottingham, had relays of horses; so had the pilgrims. They who had horses of their own left them at the end of one stage or more, to be reclaimed on their return; and, as well they who had, as they who had not, availed themselves of the livery stables on the road. There was a company of hackneymen—the names of some of them have been handed down—who let horses to hire at Southwark, and at Dartford, Rochester, and other towns between London and Dover. The hire of a hackney had been sixteen pence from South-wark to Rochester, and the same sum from Rochester to Canterbury. By an ordinance of the year 1396 these prices were reduced to a shilling. No calendar has registered the speed of the the speed of the hackneys; but the ordinance tells us that they were at times ridden hard, and it may be inferred from Chancer's prologue that our own pilgrims did not walk all the way. They would hardly start at their full speed, and the pace from the "Tabard" to the Watering Place of St. Thomas was a little faster than a walk:—

827. And forth we riden a litel more than pas.

The length of the day was fifteen hours. Twelve hours, at less

than five miles an hour, would bring them to Canterbury.

But it is time, ending these idle answers to more idle obections, to conclude that on the whole we ought to acquiesce in the supposition of one uninterrupted day's journey; and although the scheme for Chaucor's justification is nought, we although the scheme for Chancer's justification is nought, was must refuse to write him down an ass who made a mess of his geography. He does not need to be absolved by a table of groups and fragments, tales and chats, allusions to places and times, distances and stages. Prior laughed beforehand at the critics who would be big with laughter because he had given Apelles a dish of tea; Cowper claimed, in right of his Muss, liberty to make a Sensitive Plant next-door neighbour to an Oyster; and Chaucer may be forgiven even if he did change a possible into an actually existent day's journey, and although he possible into an actually existent day's journey, and although he left trifling imporfections in the noble creation which he did not live to complete. We do not quarrel with specks upon the unfinished work of a great artist, but are reasonably offended when it is marred by unskilful hands, striving to scrupe them away. We say unskilful, not unfriendly; the love to Chaucer is undoubted, only it shows like the devotion of the rude friend in the fable who crushed the fly which his master had forgotten to brush away before he slept.

FARMERS' ORDINARIES.

MR. DISRAELI dining at the farmers' ordinary at Aylesbury suggests a passage in those amusing memoirs of Paul de Kock which were brought out the other day by the veteran's son. Dumas the Younger had expressed a desire to meet the old gentle-man whose writings he had been familiar with from boyhood, and a common friend had brought the two together at a breakfast on the Boulevards. The historiographer of the grisstle and the Parisian cockney had preserved the vigorous physique which had inspired the boisterous animation of his earlier novels. According to his habit, he made a most hearty meal, going from the oysters through matit, he made a most hearty meal, going from the oysters through entries, riti, and entremets, all in due course, and finally declaring that, for his own part, he could gladly eat a slice of plum-pudding and a pear, or some trifle of that kind, by way of topping off handsomely; "Aha! voilà mon Paul de Kock!" exclaimed the youthful censor of morsis, in an affected ecstacy of envious admiration on hearing this last proposition. All the time, Paul de Kock tells us, Dames himself had been pecking at the dishes like a bird, while, in place of swallowing down bumpers of Leaflite and Chambertin, he had been signing delicately at a bottle of mineral water. And so the sturdy author of Georgette and Gustave came away with a hearty contempt for the effeminate sponsor of the Dame aux Cumélias, because he had a feeble appetite and a poor digestion. We need hardly say that we desire to indulge in no personalities, nor can we tell of our own knowledge whether Mr. Disraeli has a large or small appetite. But we may assume that an elderly atatesman who has long been heavily weighted with responsibilities, who lives in the great world, who keeps his intellect in severe training, and seeks his relaxation in literary labours, does not as a rule dine at two o'clock on substantial old English fare. Mr. Disraeli is a practised orator, and may probably be trusted on the spur of the moment to say or not to say pretty much what he intends. Yet he would scarcely choose the moment when he is addressing himself to the constituencies of the kingdom over the heads of the Aylesbury farmers to violate his usual habits of diet, and wash down wedges of solid meat with libations of ale and heady port. It is possible that, in virtue of his exceptional position, Mr. Disraeli may long ago have received a tacit indulgence permitting him to trifle with meats and drinks when he meets his constituents on these great occasions. Yet we do not know. When a man goes canvassing to Rome, he must do like the Romans, if he means to be popular; nor is there any point to which men look more sensitively than the behaviour of their social superiors, when their social superiors solemnly condescend to them. They make small allowance for the influence of very different habits of life, and expect you to eat and drink regardless of consequences. Mr. Disraeli has a very safe seat; but it may be that he holds it under the condition of formally sacrificing himself at political banquets like that of Aylesbury, and, if so, his party may pay the penalty in seeing the brilliant powers of its leader undergo some temporary celipse at the critical time of a general election.

Farmers' ordinaries have gone very much out of date, and the very name nowadays has an old-world ring about it; but they still preserve their character for heavy eating, although there is not the hard drinking that there used to be. Time was when the ordinary was the latest refluement in the foreign customs which London im ported from France; it was the only ground on which the would-be aristocrat, who shone by his showy exterior, might meet the genuine leaders of fashion on a footing of ephemeral equality. We remember how Lord Dalgarno and Nigel Oliphant made a party to dine with the renowned Chevaller de Beaujeu. promiscuous mingling of ranks was altogether opposed to our English ways; cookery like the Chevalier's, under the hypocritical disguise of sauces, was ill adapted to English stomachs, and thin polations at fabulous prices suited neither the tastes nor and thin polations at inbulous prices satisfied neither the tastes not the purses of citizens. The ordinary lost credit, and was speedily banished from the capital, to reappear in an unmistakable English dress in our country towns of all places in the world. Down there the butchers broke up their beef into joints, and had never cut a finikin filet in their lives. The cooks boiled rounds and roasted saddles and sirloins at gigantic open ranges, where great fires of cheap fuel went roaring recklessly up wasteful chimneys. They served scarcely anything smaller than sucking-pigs by way of entrées, and anything that could be compressed into a corner dish was contemptuously designated as a kickshaw. The bill of fare was wholesome if it was monotonous, and the guests brought healthy appetites and excellent spirits to the board. when the farmers' ordinary was in the height of its feather was in the golden days of the beginning of this century. It is an ill wind that blows nobody any good, and the storm of war that devastated Europe brought nothing but wealth and prosperity to the British farmer. In those good old times it was the agriculturists who turned everything they touched to gold, and while the people were starving in the towns, and the working-men went in for bread riots instead of Trade Unions, the farmers saw their wheat mount steadily in the markets. The market day was a great day then, and the market town wore a very different aspect from the gloomy quarters of the manufacturing cities. Its tradesmen shared the prosperity of the manufacturing cities. Its tradesmen shared the prosperity of their customers, who knew nothing of wholesale prices, had never heard of the principle of co-operation, and were ready to pay anything that was asked of them in reason. From early morning on the market day you might see the town astir. The townsfolk of all classes had begun to gather in knots in the spacious market-place, with its clean well-kept pavingstones, with its bright red-tiled houses, picturesque with their quaint gables and lozenged bow-windows. The market-place was the creat centre of trade, and the shonkeepers had taken their quaint gables and lozenged bow-windows. The market-place was the great centre of trade, and the shopkeepers had taken their shutters down early, and were standing sunning themselves, in their respective doorways, rattling their handfuls of silver in their breeches' pockets. They had been awakened long before by the penderous waggons, piled high with sacks of wheat and trusses of hay, that had come lumbering in to take up their positions. There were the saddlers, who dealt in old-fashioned articles of harness that with them been switched by the hundragic in the contractions. were the saddlers, who dealt in old-fashioned articles of harness that might have been weighed by the hundredweight; and the seedsmen, who were content to sell a few simple seeds and did not deal in endless varieties of samples of newfangled grain; and the grocers, who did a lucrative business in those tees and sugars which were ordered by the goodwives, although they were "so mortal dear"; and the habordashers, whose flaunting Coventry ribbons were recled out of the drawers as by a conjuring trick for decorating the necks and bonnets of the farmer's buxom daughters. All these stood on the tiptoe of busy expectation, but it was mine host of the "Lion and Crown" who was to resp the flon's share of profit. With its great sign in red and gold, swinging in creaking irons over the doorway, with its many-windowed brick façade, with its broad flight of low steps leading up to the wide hall-passage, with its great arched gateway opening into the vast yard at the side, the "Lion and Crown" was the most conspicuous architectural feature of the place. It was the County House. It was there that a score and a half of coaches changed horses daily as they dashed up and down the Great North Road. It was there that the county assemblies were given. It was in the assembly room that the rare meetings on Charch and State affairs were held, under the presidency of the bector, the mayor, or one of the county members. Above all, it was the scene of the weekly farmers ordinary; and so on market mornings, of course, it was in extra bustle. There was extraordinary excitement in the capacious kitchen where the cooking had to be done for the great dinner at noon, in addition to the ordinary coaching breakfasts. The portly landlord stood lounging on his threshold to greet his friends; while Madam, his wife, notwithstanding the earliness of the hour, was there to do the honours of her bar in all the glory of her cap-ribbons. It was remarkable that the landlord always welcomed his guests as if he gave them the run of his larder and his cellars for nothing; while one and all of them made it matter of civil etiquetts to keep up that pleasing fiction. The formalities gone through with were pretty much the same in all cases. Gig after gig came jolting round the corner; horseman after horseman came jogging in; now and then there was the more stylish equipage of the small squire or the gentleman farmer. One of the troop of ostlers in waiting led the animal away into the vard, where horses were stabled by troops, and vehicles drawn up in battalions. Then the owner exchanged cordial greeting with the host, with the same stereotyped remarks about the weather and the prices and the mistress at home; then he passed into the bar for the deep draught of ale that was de rigueur after the fatigue of the ride or drive; then, wiping the froth from his lips, he

with his friends, and get up an appetite for his dinner.

That dinner was of course the event of the day, if not of the week. And if the ordinary became an institution in rural England, it was simply because, as far as company went, it resembled as little as might be the foreign table-d'hôte from which it had been borrowed. In place of that blending of all classes which gives table-d'hôte society its piquancy, the ordinary was a large family party. Every man knew his neighbour, and on the whole liked his neighbour's politics and principles. All made their money by the same pursuit, had come to town for the day with money by the same pursuit, had come to town for the day with similar objects, and were following a common interest in life.

They regarded Protection as the inviolable palladium of the great agricultural interest; to a man they stood manfully by the Church, although they detested tithes with harmonious hatred; and they knew that the national curse of the European war and they knew that the national curse of the European war was nothing but a blessing to them. Prices were sure to have been good, and all their pocket-books were bulging with bank-notes. Their calling was a most salubrious one, and they had magnificent constitutions which drinking could scarcely undermine. Most of them were men modelled in the same magnificent mould; broad, burly chests that strained the buttons of their cut-away coats, jolly flushed faces, portentous calves thrust into capacious topboots. The chairman might have shrunk a little with long keeping, but he looked as hard as any of them, although he was in the way of boasting that man and boy he had missed but one market-day for five-and-sixty years. With a ten miles ride or so, after a six o'clock breakfast, it is needby he had missed but one market-day for five-and-sixty years. With a ten miles ride or so, after a six o'clock breakfast, it is needless to tell how they handled their knives and forks. We do not know whether their modern representatives have fallen off as trenchermen now that meat is harder to come by; but we are glad to think that the farmers of our time cannot hold a candle to their grandfathers in the way of drinking. The degenerate statesmen of the age, with their weak heads and digestions, have discovered that the Mothuen Treaty which fostered the Oporto trade was a mistake, and that light Bordeaux is your only safe drink. was a mistake, and that light Bordeaux is your only safe drink. We should like Gillray to have depicted the faces of a gathering of yeomen of the old school, followers of the Minister who primed yeomen of the old school, followers of the Almster who primed for his speeches with a bottle of port, had you set them down to a bottle of ciladstone claret. In the old times of the ordinary the county landlord might safely lay down his port by the dozen hogsheads, where the present man buys it by the dozen of bottles from the small grocer over the way. After "The King, God bless him!" had been given from the chair, the bottles made their way merrily round the table, and the gentlemen held long-winded arguments on politics and things in general, until, in spite of the soundness of their heads, their speech became as hesitating as their ideas were hazy. When at last they turned out, as their ideas were hazy. When at last they turned out, they were like a mob of owls blinking in the sunshine, and their fingers could scarcely be trusted to strap their own harness or buckle their saddle-girths. But they were in the very harness or buckle their saddle-girths. But they were in the very best of tempers with themselves and all the world, and if they returned elevated to the bosoms of their families, the conviviality of a "farmers' ordinary" was an excuse that passed current everywhere. Are there any such merry meetings nowadays, even at Aylesbury? We greatly doubt it. Rents have gone up and prices down, leaving but a narrow margin between the two. High farming has come in, involving heavy outlay on artificial manures and newfangled inventions in machinery. The apple of discording been cast into the political camp. There are farmers who are Radicals, and Dissent is rampant. Still it is pleasant to see old customs survive, although they be but the shadows of their former selves; and no doubt a more temperate handows, brightened by Mr.

Dismeli's wit and aloquence, is in happier harmony with the tendenctes of an advancing age which studies refinement and goes in for universal advention.

THE OLD CATHOLICS AND THE PRUSSIAN GOVERNMENT.

Ledochowski of Posen was arrested and sent to prison on Toseday morning last, and, now that the ice is once broken, there can be no doubt that other arrests will speedily follow. The German papers announce, apparently on official authority, that the Prussian Government intends to seek the assistance of the Imperial Dist in pursuing its crusade against the bishops. Whether this means that the Falk laws are to be submitted to the Reichstag, or that some corresponding action on its part is to be demanded for the purpose of carrying out the same policy throughout the Empire, is not explained; but we are told that the object is either to "intern" or banish all the recalcitrant prelates—which penalty may be preferred seems to be as yet undecided. It may perhaps be remembered that a very similar course was pursued by the Prussian Government between thirty and forty years ago, the particular point in dispute at the moment referring, if we are not mistaken, to the conditions of mixed marriages. The contest ended, as a contest of physical with moral force generally does end in the present age, without credit or advantage to the State. In November 1837 Count von Droste Vischering, Archbishop of Cologne, was sent to prison, and the Archbishop of Posen, curiously enough, followed not long afterwards. But the revival of Ultramontanism in Germany may almost be said to date from this strong-handed effort to suppress it. Certainly there was no Bismarck in those days; but neither was Pius IX. on the Papal throne; nor was the Papal party in the Church what thirty years of restless struggle and unacrupulous advocacy have made it. Persecution, like marriage, is a lottery; but, unlike marriage, it admits of no middle state. It must either succeed altogether, or fail altogether, and where it cannot be thorough, it is pretty sure to fail. The present, it is true, is the most thoroughgoing attempt in that direction which has been witnessed for many a long day in Europe; but still, in spite of all the eloquent denunciations of the new D

Nor can Prince Bismarck really be said to be fighting for any great cause, whether bad or good. It is very well for the Dean of Canterbury to discourse on Romish corruptions and the dogma of Papal infallibility, and for Dean Stanley to unge "free scope for the development of those elements" of religious belief in the Koman Catholic Church which a Protestant Government thinks most in accordance with its highest views of truth. They forget that Prince Bismarck himself has expressly disclaimed any right or desire to interfere with religious belief. And we were rather oddly informed on the day of the No Popery meeting, in a telegram from two political associations at Leipsic, that "the London meeting (of Protestants) is a recognition of the fact that Germany in this struggle does not seek to undermine the truths of the Catholic religion." One might have been tempted to imagine it was a recognition, if anything, of the contrary; but at all events, according to their own loudly reiterated professions, the Imperial Chancellor and his sympathizers do not aspire to the honours of ecclesiastical reformers. The one principle for which he declares himself to be contending, and for which also he has received the applause of Denn Stanley—with a discreet reservation as to all the "details" of his contention—is "the supremacy of the law." And the supremacy of the law is just one of those convenient phrases which may mean anything or nothing, which in one sense convey an obvious trusm and in another a mischievous falsehood. In all cases to which the law where its interposition is vexatious or worse, and its enforcement and they are mischievous falsehood. In all cases to which the law where it interposition is vexatious or worse, and its enforcement and the on indefinite and absolute submission in the future. And to submit, that it is to this kind of legislation they are required to submit, and not only to submit, but to pledge themselves by outh to an indefinite and absolute submission in the future. And to such a supremacy the

Catholic body itself. There is a considerable and apparently growing party in the Church, known by the designation of Old Catholics, who are notoriously well affected to a great deal of the Falk legislation for its own sake, and can therefore honestly and heartily support it. In Austria the Old Oatholics are in the awkward position of being ignored by the State, except on the condition, which they cannot conscientiously accept, of enrolling themselves as a separate religious community. But in Prussia they are fully recognized as having the legal status of Catholics, and if they can succeed in making their influence as widely felt throughout the Catholic body as they seem to anticipate, there would be some fair prospect of a peaceable solution of the present complications being found without injury or dishonour to either of the contending parties. As far as we can see it is the only prospect.

see it is the only prospect.

It was probably under this impression that the recent manifesto of the Central Committee of the Old Catholics of North Germany was issued. We are obliged to rely on the summary published the other day in the *Hour*, as we have had no opportunity of consulting the original text. But it has all the appearance of being a genuine document, though the translation is not as felicitous as might be desired. Whether it is published with the official sanction of Bishop Reinkens is not stated, but his influence might have been used with advantage to moderate the bitter and half-sarcastic tone which is adopted throughout. Nor is it dignified or altogether decent for the Old Catholics to accept such an entire solidarity with the acts of a Government which is indeed fighting their battles against an enemy from whom they have experienced scant measure of courtesy or justice, but which is fighting them, to say the least, with very carnal weapons. Their language will inevitably expose them to the taunt of subserviency to a persecuting State, especially if it is true that "the manifesto is issued with the approbation of the Berlin Government," and was occasioned, as the opening paragraph suggests, by the results of the recent election. At the same time, putting saids faults of taste and temper, the document is a weighty one. The Committee begin by reminding their "Oatholic fellow-citizens" that the bishops have concerted together to disobey the ecclesiastical laws of the State, which the Government has therefore undertaken to enforce by penal measures, which they designate a Diocletian persecution. Hence followed the electoral agitation, which has resecution. Hence followed the electoral agitation, which has resulted in a gain of ninety-three as against eighty-two votes for the Ultramontane Centre, who demand the abolition of the Falk laws as the sole condition of peace, and thus play into the hands of our neighbour thirsting for revenge." This attitude, it is added, has forced the leader of the Government to pursue the battle to the bitter end, and thus make good his declaration, "We will not go to Canossa." The next paragraph goes more to the root of the matter. The essence of Ultramontaniam is affirmed to be "the Romanization of the entire Catholic Church," which culminated in the dogma of July 18, 1870, the attenuated legalizabe "the Romanization of the entire Catholic Church," which culminated in the dogma of July 18, 1870, the attempted logalization of all previous corruptions, and crown of the Jesuit policy. "One portion of the Catholic Church turns away in disgust from this Ultramontanism, and thus the Church is divided into two parties, and in danger of being relegated either to Pagauism or Athelsm." And in this internal conflict the State can do very little. "It can only avail itself of repressive measures, which only serve to embitter its enemies," and which, one would have thought, had better therefore be left alone. "The State itself requires assistance, and this assistance Old Catholicism alone can give it." So far all is plain sailing, but the next sentence, in its English dress as presented in the Hour, has sorely perplexed us. "That Old Catholicism," we are told, "is not, as is often said, only an association of those Catholics who protest against the dogma of infallibility, but it is the positive essence of our faith that our leaders have emanciis the positive essence of our faith that our leaders have emancipated from Roman dictation, and to which the infallibilist dogma has only given a concrete existence." The meaning, as far as can be gathered from the immediate context, appears to be that can be gathered from the immediate context, appears to be that the specifically Roman element is an accident and accretion of Catholicism, which has an independent substance and life of its own apart from it, and which the Old Catholics desire to restore to its pristine integrity. For it is at once added that an eminent (ierman scholar and true Catholic has described Catholicism as the strength of the Papacy, and the Papacy as the weakness of Catholicism. And accordingly "hitherto we have forgiven the Papacy many crimes for the sake of the Church, in consideration of its universality and historical continuity. But the 18th of July has created an immessable gulf. continuity. But the 18th of July has created an impassable gulf. Catholicism is being freed from the parasite that has been exhausting it, and can now follow its ideal." The closing paraexhausting it, and can now notice it is a state of the manifesto calls upon all Catholics who are not identified with Ultramontanism to abandon their passive attitude and come forward to support the Clovernment in its enormous difficulties by inscribing their names as Old Catholics and members difficulties by inscribing their names as Old Catholics and members of the nearest Old Catholic congregation. There can be little doubt that on the response to this invitation will depend in great measure the future both of Old Catholicism in Germany and of the secclesiastical policy of the Berlin Government. Those who really sympathize with the anti-infallibilist movement among Prussian Oatholics, whether priests or laymen, can no longer plead any secondary motives for remaining silent. They have much to gain and nothing to lose by speaking out. The next six months can headly fail to supply a tolerably sufficient test of the real strength of the cance, moral and material. In a long and lugubious pastical, comparing his own sufferings with those of the Redeemer, Archbishop Ledochowski expresses a conviction that "his cross, heavy as it is, will be short." That depends very much on how far the bulk of the Catholic population are ready to bear it with him.

AN AMERICAN GOSSIP.

THE Americans are known to be the keenest and most pertinacious sights of foreign countries they usually include all persons of distinction. Public men, in their opinion, are public property, whom every one is entitled to follow about, stare at, interview, analyse, and anatomize, as opportunity serves, with perfect liberty to publish the most minute confidential details of the investigation. This passion appears to have been highly developed in Mr. Maunsell B. Field, who has just put together his recollections in an amusing book entitled Memories of many Men and of some Women (S. Low and Co.) Mr. Field seems to have cultivated the society of public men in his own country, and to have travelled a good deal in Europe, and at one time he temporarily filled a diplomatic office. Accident, opportunity, and a resolute curiosity combined to bring him more or loss closely into contact with a great many celebrated persons in both hemispheres. He saw most of the Sovereigns of Europe, and had talk with several of them. He gave the Duke of Nómours a light for his cigar at the Champ de Mars, and saw the Duke of Montpensier split his kid gloves by his enthaisatic clapping when the chorus "Jamais l'Anglais ne rignem en France" was played at a concert. He met the late King of Holland in the Picture (fallory of the Hague, and received a cigar from him. When travelling in Switzerland he fell in with the present German Emperor, then Orovu Prince, and had some talk with him to Berlin. At Vienna he sew the Emporer Ferdinand, "a man of low stature and defective intelligence," and the Empress, "an unusually tall woman, who looked like a giantess by the side of her diminutive husband." He saw King Charles Albert of Sardinia, a man of "very lofty stature, overtopping most of his subjects by a head." At Turin he also fell in with the Grand Duke of Lucca, who used to ride about strutched full length on the top of a drag drawn by four horses, his long legs dangling over on one side, and his head extended beyond the other. This interesting

On one of his voyages across the Atlantic Mr. Field had Prince Lucien Murat for a fellow-passenger. This was in 1848, and the Prince had apparently begun to seent good fortune in the air. He had been doing pretty well as a sort of squatter in New Jersey, but he now aspired to higher things. He had with him his father's famous white plume, or rather the stalk of it, for the moths had enten all the rest. Prince Lucien had a great contempt for the whining weakness of his uncle Joseph, and teld Mr. Field that he had once given him a bit of his mind on the subject of his repinings. "Compare," he said to his uncle, "our respective fates. You were born a miserable Corsican peasant. You happened to have a brother who possessed more brains than are frequently aliotted to mankind. He grasped the sceptre of the world, and elevated you to the rank of a sovereign. You had not a very quiet time of it in your exalted position, it is true, and you were soon compelled to descend from it. But you came to the ground unharmed—with not a feather ruffled; and while your illustrious brother was completing his destiny on a barren rock in the midst of the ocean, you retired in safety to this charming place, where you are living like a prince, with the comfortable income of 60,000 dollars a year. I, on the contrary, was born upon the steps of a throne. My father was shot in Italy; I was condemned to a like fate at Gibraltar; I escaped with extreme difficulty, and with nothing but my life; I got to America, and have been ever since a poor New Jersey farmer." Prince Lucien's name and the remains of the white feather gained him a place in the Assembly as soon as he reached France. In London Mr. Field went to consult Sir Benjamin Brodie, and found a very affable companion in the waiting-room—a heavy, dull, impassive-looking man, with half-closed eyes, his arms very long, his legs quite short. His accent made Mr. Field take him for a German. It was the time of the Chartist riots, and the foreign gentleman was unbounded in his praises of the

tinues to move on here in old and well-worn grooves. The London shopkeeper of to-day follows the same business at the same stand that his father and grandfather followed before him, and he knows that in a general scramble he has more chances of losing than gaining. The agricultural population is only instinctively, not intelligently, loyal. I do not mean at all to imply that the shop-keepers and artisans are not dissatisfied with many things; but at bottom they know that the Constitution is a self-purifying machine, and that there is a never-ceasing tendency toward improvement. On the contrary, notwithstanding all that experience has shown him since the commencement of the Revolution of 1789, the average French bourgeois cannot be convinced that another violent change will not better his condition by some means which he can neither explain nor distinctly comprehend." Mr. Field afterwards learned that his companion was Prince Louis Napoleon.

Napoleon.

Mr. Field in 1854 was for a short time acting-Secretary of the American Legation in Paris, and supplies some curious illustrations of American diplomacy. Hawthorne, in his Note-books, has deplored the absurd ideas of his fellow-countrymen as to their claims upon the time and services of their official representatives abroad; and a Secretary of Legation appears to be quite as much persecuted in this way as a Consul. "Hundreds of our countrymen of proverbial modesty," says Mr. Field, "who were entitled at the most to have their pasports vised, would ask of us the most unreasonable facilities and unheard-of favours. Citizens, not even accredited by letters of introduction, would ask of us the most unreasonable facilities and unheard-of favours. Citizens, not even accredited by letters of introduction, would insist upon private audiences of the Emporer; and no matter how politely you declined to act as the medium of their laudable ambition, they would anathematize you, and threaten to 'go for' your official head immediately after their return to America." Crackbrained inventors gave a great deal of trouble; and many ladies seemed to think that the despatch-bags of the Legation were expressly intended for the conveyance of corsets, bonnets, and similar articles. The announcement of an official ball or fête filled the poor Secretary with despair. Applications for tickets poured in all day long; and there was always a foul on this subject between resident and travelling Americans. The former thought they were entitled to favour as old friends; the latter claimed consideration on the ground that they would The former thought they were entitled to favour as old friends; the latter claimed consideration on the ground that they would never have another chance. Mr. Field tried to avoid responsibility, on the occasion of a grand ball at the Hôtel de Ville, by posting up at the Legation a paper on which those who wished for invitations were to write their names. Several hundred names were put down, and the list was duly sent to Baron Haussmann, who replied very politely that more invitations had been asked for by Americans than could be granted to all the foreign nationalities together; but that he could tind room for thirty-five. "To have by Americans than could be granted to all the loreign methalistics together; but that he could find room for thirty-five. "To have to select thirty-five out of perhaps eight hundred! I forget how we did it; but the vision of outraged fathers, indignant mammas, and hysterical daughters still floats before me." Wholesale presentations at Court were accorded at varying intervals. Before the arrival of their Majesties the subjects of the United States had to wait in a room along with South Americans, or perhaps Italians, or the subjects of some other Continental State; but never by any chance with the English. The French Chamberlain seems to have thought that Americans and English would be sure to quarrel if shuk up together. The Emperor was particularly anxious to know something about each guest beforehand in order that he might say something about each guest beforehand in order that he might say an appropriate word in passing along the line, and odd mistakes occasionally occurred. On one occasion the Emperor said to a gentleman, "Ah, I understand you are a member of Congress from Ohio," "Oh, no," replied the American; "but I have a cousin who once was." Mr. Field himself, who was President of the "Board of United States Commissioners to the Universal Exposition," was introduced at a reception at the Palais Royal as President of the United States. He also gives an instance in his own experience of the contempt of Americans instance in his own experience of the contempt of Americans for foreign usages and etiquette. To the consternation of the officials, M. Soulé, the American Minister at Madrid, insisted upon presenting Mr. Field to the Queen of Spain without notice, upon presenting Mr. Field to the Queen of Spain without notice, and in plain clothes, as he had no uniform with him. The Chamberlain protested, and said that only a few days before the French Ambassador had asked leave to present a diplomatic official who was in uniform, but for whom an audience had not been arranged, and the request was refused. M. Soulé, however, stuck to his point, and requested that the Queen's personal commands should be taken. The Queen good-naturedly consented to waive the point of etiquette, but that did not diminish the impertanence of the intrusion. It should be observed that Mr. Field want to the Palace entirely from mere personal curiosity.

Palace entirely from mere personal curiosity.

On his return home Mr. Field did not fail to turn his European experiences to account in elevating himself into prominence when any distinguished foreigner arrived in New York. He seized upon Prince Napoleon as an old acquaintance, and took charge of him during his visit to New York. He was also Secretary to the Committee for entertaining the Prince of Wales. It was originally proposed to have a public dinner, but Lord Lyons and General Bruce hinted that the Prince was very young and fond of amusement; he could not himself speak, as he was incognite, and nobody could speak for him. Residen, at a large dinner something might be said by some of the speakers which would produce awkwardness. It was evident, in that, the English were decidedly afraid of an outbreak of American custory. A ball was therefore decided upon. There was a luncheon at Montreal at which the invitation was presented, and "all the

Americans were mitably astired, and conformed to the useres of polite society, except one gentleman who ast opposite the Prince, and who ats with his traifs, and wore a white waistcoat upon which the busious were missing; he had, however, supplied that place with piece, and these pins were provokingly visible. The Committee divided itself into seven sub-Committees, one on Invitations, one on Thotas and Finance, one on Reception, one on House and Music, one on Decorations, one on Police and Carriages, and the or Supper and Floor. "All New York became wild upon the subject of this ball; venerable citizens who had never attended a place of public amusement in their lives humiliated themselves in every possible way in order to have their names placed on the Committee, ladies begged for tickets almost upon their bended knees." The Prince was brought to New York in an American revenue cutter, and the company were much disgusted to find one "old and rather prosy gentleman" monopulizing the royal visitor. It was decided that General Scott should head a relief party, which was accordingly done, and the Prince then became common property. After an "elegant luncheon," His Royal Highness "smoked cigars of a very superior quality, which he produced from his pocket," probably, it is suggested, Mr. Buchanan's, who at Washington smuggled cigars for him behind the backs of the Duko of Newcastle and General Bruce. There was a great question as to how the Prince should be dressed on entering New York. His saide thought that, as he was traveling incoming he should appear in ordinary citizon's costume. But the Americans thought differently. "They desired to receive him as the Prince of Wales, as the son of Queen Victoria." The matter was finally compromised by the arrangement that he should wear his military uniform as a colonel in the British army at the review, and the ribbon of the Order of the Garter at the ball. Mr. Field casys, "The ball was magnificent; but, in spite of all the efforts of the Committee, there were too many e

Mr. Field seems to have had a large acquaintance among the public men of his own country, though he has nothing very remarkable to say about them. He was present at President Lincoln's death-bed, and gives a minute description of the scene. He also records one or two of the President's "little stories," of which the following is perhaps the best. It was told in reference to a compromising policy on some diplomatic question. A very pious old negro in Indiana, too infirm to go about himself, used to send his grand-children to the schoolhouse to hear the discourse of any itinerant preacher who might come there, and report the substance to him. One day a Methodist preached a sermon to the effect that there were two kinds of people in the world, Methodists and Baptists, and that the former followed the road that led to heaven, and the other the road that led to a very different place. Next week came a Baptist, who said it was all right about there being two kinds of people, but it was the Baptists who were going to heaven. When old Josh heard this, he scratched his head and said, "Each one says that there are only two roads, and that his own leads to heaven, the other to hell. Well, this old nigger will go across lots." Mr. Seward told Mr. Field the secret history of the famous Emancipation Proclamation. For months the subject had been constantly discussed in the Cabinet; but Mr. Lincoln had taken no part in the controversy, which at length grew so bitter as to create personal dissensions and to lead to a cessation of Cabinet meetings. After an interval, the President again summoned his Ministers to meet him. When they came, he told them that he would read them the Proclamation which he meant to issue, but that he not only did not wish, but would not listen to, any discussion as to the propriety or inspropriety of issuing it, for his mind was made up; but he would like to have their opinion as to matters of form. When he had read the Proclamation there was silence for a time. There are some passages in Mr. Field's M

TENTH-CENTURY ARCHITECTURE.

E had really thought that anything like controversy as to the use of stone in the architecture of the tenth century had cause to an end. The facts are so perfectly plain; but ingenious man are always to be found to prefer theory to fact. We thought that we had shown about a year ago what the plain facts of the case mane; that a great number of churches and other buildings

are recorded to have been built of stone during the tenth century, are recorded to have been built of stone during the tenth century, especially during its second half, though, from a variety of circumstances, which historical students very well understand, not many of them are standing now. But Mr. Parker, the real merit of whose researches within his own range we should be the last to undervalue, had the bad luck some thirty years ago to dream, or to be told by a French antiquary, that nothing could have been built in the tenth century, and so the statement of contemporary writers that many things were built then goes for nothing. It is a case of "so much the worse for the facts." We really had thought that the matter was done with, or at least that the dream might case of "so much the worse for the facts." We really had thought that the matter was done with, or at least that the dream might safely be classed with other dreams, with the dream that Alfred had something to do with Oxford, that Russia was Muscovy in the eleventh century, or that Abraham went into Canaan out of Ireland. But Mr. Parker, nothing daunted, springs up again in the last number of the Archæological Journal to say once more all the old things save one, and to say some new things besides. We say all the old things save one, because we now, we think for the first time, have the case argued without any reference to the verb timbrian. Marry! this is somewhat. After so much storming, we have really broken down one circle of the fortifications. Perhaps in a year or two more we shall hear no more of the passage from Rudolf Glaber, and a year after that we may hear no more of Cnut's minster of stone and lime. The constant dripping on the rock really does something. It does pay in the long run to on the rock really does something. It does pay in the long run to say the same thing over and over again. As Cuddie Headrigg says, "A gude tale's no the waur o' being twice tauld, I trow; and a body has aye the better chance to understand it." We feel slightly cock-a-whoop at having told our good tale often enough to persuade Mr. Parker that, because a widely-spread Aryan root is found in English as well as in Chank and Latin it does not the section. found in English as well as in Greek and Latin, it does not therefore follow that the men who recorded the building of the churches of the tenth century were somehow deceived into thinking that they the tenth century were somehow deceived into thinking that they saw buildings reared of stone, while in truth they were really only of wood. So we trust that we may bid a long farewell to the timbrism argument. But it would seem that we must etill explain once or twice more the real force of the place in Rudolf Glaber, and the real force of the entry about Onut's minster. Once more then, and we hope for the last time, Rudolf Glaber nowhere says that nothing was built in the tenth century, but only that a great many things were built at the beginning of the eleventh. He does not say a word to countenance the belief that people left off building in the tenth century because they thought that the world would come to an end in 1000 A.D. This last notion brings up so many curious questions that we may perhaps some time have up so many curious questions that we may perhaps some time have something to any about it again, but we have said now all that need be said on the present matter. So again, once more, and we hope for the last time, it was noted as something remarkable that Cnut's church at Assandun was built of stone, because it was built in the stoneless region of Essex, while it was also noted as something remarkable in a region so rich in stone as Somerset that the old church at Glastonbury was of wood. We really need not go through the whole matter again. Any one who has learned by study what the history of the tenth century was, instead of forming dreams as to what its history ought to have been, knows that a whole crowd of buildings in England and elsewhere were built at this particular time. It is true that, owing to the introduction of a new style and of a fashion for larger buildings in the next contury, most of them have been destroyed. The destruction of tury, most of them have been destroyed. The destr many of them is recorded as well as their building. that, because they were pulled down, therefore they never were built, is like arguing that, because we know when a man was killed and who killed him, therefore he never was born.

We said, as we think, so nearly all that is to be said about the matter a year ago that we should not have said any more about it; only one or two of Mr. Parker's comments in his last paper are really too amusing to be passed by. Mr. Parker in his former paper said:—

In the long interval between the years 500 and 1000 (in round numbers), it appears to have been the general custom in most parts of the world to live in wooden houses, and to use wood shnost entirely for other buildings also.

We suggested that some at least rather important exceptions to this rule were to be found—not to mention smaller places—at Constantinople, Ravenna, and Venice. But now Mr. Parker answers:—

Obviously, I was thinking of England and the north of France only, not of Italy or Aquitaine; but I had omitted to express this, and my very learned friend the Saturday Reviewer took advantage of the oversight to amuse his realers at my expense, which rather annoyed me when I first heard of it.

We are as sorry to have rather annoyed Mr. Parker as we are proud to be called Mr. Parker's "very learned friend." But really when he says a thing, it is not unnatural that we should understand him as meaning what he says. Mr. Parker spoke of "most parts of the world"; what means had we of knowing that Mr. Parker's world was so small? How could it be obvious to us that, when he spoke of "most parts of the world," he was thinking of England and the north of France only? And our pussledom gets greater when, a little way further on in his article, he dismisses northern France also from his world as well as Italy and Aquitaine:—

I published a small work on Ravenna some years since, and I am well sequented with the buildings of Italy and of France. I therefore could not mean "the long interval of five hundred years" to apply to any other security than England.

We are sorry that we have not seen Mr. Parker's work on Ravenna, but we know perfectly well that Mr. Parker is well acquainted with the churches of France and Italy, only we do not see the logic of his "therefore." We repeat that we do not feel at all to blame for not finding out that, when Mr. Parker spoke of "most parts of the world," he was not so much as thinking of any part of the world except England and northern France, and that he did not mean his words to apply to any country except

But what goes just before the passage which we last quoted is more curious still:—

I am surprised to see my very learned and able friend trying to revive the old Saxon theory which we thought had been thoroughly upset by Rickman and Willis nearly half a century ago.

Now of all charges this is really the very oddest to bring against us. First of all, we have no theory; we stick to the facts. It is Mr. Parker who has a theory by which he is trying to upset the facts. And surely Mr. Parker knows us well enough to know that of all theories a Saxon, or even so much as a Semi-Saxon, theory is the very last which we should try to revive. By the "old Saxon theory" we understand Mr. Parker to mean the belief of the elder antiquaries that all Romanesque buildings were older than 1066, and that therefore all Romanesque buildings in England were, in their phrase, "Saxon." It is really too bad to charge us, of all people in the world, with reviving such an exploded theory as this. Have we ever talked about "Saxon" buildings or "Saxon" anything, unless we ever taked about "Saxon buildings or "Saxon anything, unless we were speaking of the really Saxon parts of Germany, England, or Normandy? Have we ever given anybody reason to believe that we thought that Durham and Peterborough and Norwich as they now stand were "Saxon" in any sense? Have we not taken some pains to trace the steps by which, reviving in the course of the eleventh century, the primitive Romanesque style common to all Western Europe, and of which the oldest buildings of England show a rude form, was gradually supplanted by another form of Romanesque, the Norman style, the "novum ædificandi genus," brought in by Edward the Confessor. We should have thought brought in by Edward the Confessor. We should have thought that this was rather different from the way of speaking of those who used to talk of "Saxon" doorways at Iffley. Our only hope is that we are again wrong in taking Mr. Parker to mean what he says. Perhaps it ought to be obvious to us that when Mr. Parker charges us with "trying to revive the old Saxon theory," he is really thinking of something else, and does not mean his words to apply to the "old Saxon theory," but to something quite different. Mr. Parker huddles his remarks together on the top of one another in such an old way, and cuts the same request into two pieces at

in such an odd way, and cuts the same remark into two pieces at such a distance from one another, that it is not easy to follow his argument. His great point, as we all know, is the construction of walls, whether at Rome or anywhere else. It is well known that at Rome the brick-work grew wider and wider jointed from the fine-jointed work of Nero's time onward. This Mr. Parker has the work from the fine-jointed work of Nero's time onward. shown himself. So in England William of Malmesbury notices the fine-jointed masonry of the buildings of Bishop Roger of Salisbury in the time of Henry the First, and Mr. Parker is quite right in saying that the work of the eleventh century is commonly wide-jointed. We are not so sure that he is right in arguing that the masonry of "three generations before that period" must have been ruder still. So however he does argue; and yet he argues

The construction of the first half of the eleventh century is so bad that it is evidently an imitation of the much better construction of an earlier period.

Because a thing is bad therefore it must be an imitation of something good. Mr. Parker also argues twice in his paper that, because there is fine-jointed work at Bradford-on-Avon, it is therefore proved "not to be of the eleventh century, nor of the tenth." "It is," he adds, "most probably of the eighth; although I do not remember one of that period like it anywhere." We also believe Bradford to be of the eighth century, but we certainly should not have been led to that belief by Mr. Parker's reasoning. As far as we can understand him, fine-jointed masonry had, long before the eighth century, gone out of use in Western Europe generally, and it did not come into use again in England till long generally, and it did not come into use again in England till long after the eighth century. But Bradford-on-Avon would seem to have been a peculiar, exempt from all ordinary jurisdiction, Roman or English, and authorised to indulge in fine-jointed masonry, while most parts of the world could make nothing better than the bricks of Constantine or the stones of William the Conqueror. Bradford in short is, as Mr. Parker tells us in two places, an exceptional case. "It stands in the middle of some of the best stone of the lost of the contraction in England, it was therefore change to have a fine to the lost of the quarries in England; it was therefore cheaper to build of some there in the eighth century." This is true of Bradford; it is equally true of large parts of England besides. It is true of Northamptonshire, where early buildings are common; it is true of Northampton-shire, where early buildings are common; it is true of Somerset, where they are unknown. The exceptional thing about the church at Bradford is the fact that it is there now. It was one of a class built at the same time by the same founder; the others have been taken, but Bradford has been left.

This brings us back to our former illustration that, if a man is known to have been killed, it proves that he once was alive; of churches, if a building is recorded to have been pulled down, it proves that it once was built up. This Mr. Parker does not seem to allow. He so tells us:—

Professor Willis, in his admirable History of the Cathedrals of Canterbury and Winchester does not say that we have any building of the tenth century remaining in either. Archaeology has to do with existing remains;

"the things that have been" belong to history only. At Winchester present church was built on a new site, near the old one, not on the

All this is just what we have curselves said over and over again. We never said that the buildings of Odo and Æthelwald were there now; we only said that they had been there once, and that, as they were built there, and built of stone, at the very time when Mr. Parker says sometimes that nothing was built at all, sometimes that nothing was built at all, sometimes Mr. Parker says sometimes that nothing was built at all, sometimes that things were built only of wood, the fact that they had once been there at once upsets his theory. But Mr. Parker's distinction between history and archeology is altegether beyond us. Besides the words which we have just quoted, he says in another part of the essay: another part of the essay :-

History is a record of things that have been, and depends upon written evidence only. Archeology has to do with existing remains, only compared with, and confirmed by, history.

We-"my learned friend and that school," as Mr. Parker calls us-must explain that history has both to do with things that have been and with things that are still, and that it uses, not only written evidence but every kind of evidence that it can get. Archaology, we should have thought, is one branch of history; Mr. Parker seems to think that the two may be opposed to one another, and that what may be true in one way may be false in the other.

The rest of the paper consists of things which have been said over and over again, and answered over and over again, only put perhaps in an order which makes it a little harder to follow than usual. in an order which makes it a little harder to follow than usual. We are told too that there was a time when "England and Normandy were provinces of the same kingdom." We are first told that the Lincoln towers are of the age of Onut, and then, what is the truth, that they are of the age of William. We are told that Jarrow and Monkswearmouth, buildings partly of the time of Benedict Biscop, partly of the time of William the Conqueror, prove something as to the first half of the eleventh century. And we are told, as the foundation of an argument, that Onut built churches "on the site where churches had been Onut built churches "on the site where churches had been burnt by his father or himself during the wars which ended in the settlement of the Danes on the eastern side of England," while every one knows that the Danes had been settled on the eastern side of England long before the time of Onut; while too William of Malmesbury says nothing about churches being burned, but only about their being "partim feedata, partim cruta." The only approach to a new argument is this; Mr. Parker asks,

If the Roman art of building was not lost at least for one generation of men, how does it happen that the art of vaulting was entirely lost, and no builder ventured to throw a vault over a space twenty feet wide before the middle of the twelfth century? The general use of wooden buildings in the period between the Roman Empire and the twelfth century is the only manner of caralleine. f explaining it.

We had always thought that the Roman Empire, both in East and West, was in remarkable vigour about the middle of the twelfth century, but never mind that. Mr. Parker has got hold of a fact, though he does not see the explanation of it. Except in the case of cupolas, there is very little vaulting over large spaces between the fourth century and the twelfth, in architecture we should rather say the eleventh. The cause was this—during that time few public buildings were built except churches. Nothing was built after the type of the Baths of Caracalla or of the Basilica of Constantine. It was Constantine himself who made the change. At the Lateran and at St. Peter's he brought in the fashion of using columns in the inside of churches, and such columns clearly could not support a vault. The use of the vault over large spaces therefore went out of use; it came in again when the use of more massive piers was fully established. The basilican churches were not vaulted, because they could not be; St. Sernin and Speyer could be and were. could be, and were.

We now hope that we have done with this matter for ever, All that we ask is to be allowed to believe that the fact that Queen Anne is dead of itself proves that she once was alive; that the fact that Wulfstan and Walkelin pulled down certain churches of itself proves that those churches had once been built up.

WATER-COLOUR EXHIBITIONS

THREE chief Associations—the "Society of Painters in Water-Colours," the "Institute," and the "Dudley"—exhibit in their several galleries a total of more than fourteen hundred drawings. The public are almost too familiar with the leading arawings. The public are almost too laminar with the seating artists here represented to stand in need of formal criticisms or descriptions. Sir John Gilbert, Mr. Frederick Tayler, Mr. Birket Foster, Mr. Joseph Nash, Mr. Collingwood Smith, and Mr. Dobson, all of the "Old Water-Colour Society," have been long pronounced in manner; Mr. Louis Haghe, Mr. Hine, Mr. Collier, Mr. Linton, and others, are well-known favourites in the less mature "Institute"; while Mr. Walter Crane, Mr. Hemy, Mr. Hennessy, Mr. Hamilton Macallum Mr. I C. Moore Mr. Pownter, Mr. Sayarn, and others Macallum, Mr. J. C. Moore, Mr. Poynter, Mr. Severn, and others once again cast in their fortunes with the adventurous "Dudley Gallery." It will then be readily understood that the large Gallery." It will then be readily understood that the large majority of these fourteen hundred works, whether they are marked by the presence or the absence of talent, fall into accustomed routine; they are, in short, both in choice of subject and in treatment, just what everybody acquainted with the antecedent, of these three galleries might have prognosticated beforehand. "We will not then retrace our steps over the well-besten ground; we prefer to deviate into paths which allure by unwented aspects of

abium or by mer or sym construct phases of art. The works before us are, in fact, sufficiently representative to point to growing tendencies in our national school of water-colour painting.

The vanesable "Society of Painters in Water-Coloure" has stoler's merch upon its rival the "Academy" by the admission of the "May element." The Catalogue upons with the startling superiors and the indication of the following "Honority Members":—the Right Hon. William Gladstone, Sir Richard Wallace, Mr. Prescott Hewatt, M. Madou, and Mr. John Ruskin. The first two on the list indicate, at all events, has too many irons in the fire to amuse Mindicate, at all events, has too many irons in the fire to amuse Mindicate, at all events, has too many irons in the fire to amuse Mindicate two only appear in the list of contributors; one is the accomplished surgeon Mr. Prescott Hewatt, the other is the omniscient Slade Professor, Mr. John Ruskin. The former exhibits two landscapes (100, 331), painstaking and relined, after the choicest manner of amateurism; the other sends also two architectural studies (97, 105), subtle in form, rapturous in colour, iridescent in play of light—qualities which reflect the ardent and eloquent word-pictures of the author of the Stones of Fenice. We have not had the pleasure of greeting Mr. Ruskin as an exhibitor for several years; these studies, made on the spot, are of interest in many ways. We may just mention as an amusing misudventure that "the study of the colours of marble in the base of the Church of St. Anastasia at Verona" (97), appeared at "the private view" upside down. This mistake of the hangers was in part accounted for and excused by a want of pronounced form in the drawing. Mr. Ruskin, in fact, with the utmost subtlety and sensitiveness, educes out of the polychrome marbles of Verona a play of colour scintillating and evanescent as that of the rainbow. The result is Turnervaque. Turner himself indeed once suffered the severe satire of having one of his florid, but formless, compositions turned topsy-turvy.

Among the salient manifestations of the period is the prismatic play or the sensuous pulsation of colour. This phase, which is peculiarly patent in the Gallery of the "Old Water-Colour Scotety," may have been brought about through two synchronous causes; the one the ever-present power of Turner, intensified by his rapturous commentator, the author of Modern Painters; the other, scenic expositions of the spectrum made by men of science. We occasionally, in fact, meet with pictures painted as if for the express purpose of propounding philosophic principles. We come, for instance, upon landscapes professedly transcribing a mountain, a valley, or a lake, which might almost serve for diagrams to lectures at the Royal Institution on the analysis of light and colour. Among the best-balanced demonstrations of such chromatic relations are "A Mountain joyous with Leaves and Streams" (343), and a drawing of "Durham" (350), both by Mr. Alfred Hunt. Such compositions are visions; they hold an intermediate position between painting and poetry, between fiction and fact, between art and nature. Mr. Alfred Goodwin is yet another romancer in colours; "Notes from a Sketch Book" (351) strike the eye and move the fancy as reveries from dreamland; they are in form and in colour as passing and pleasing memories writ in water. Mr. Goodwin has a way peculiarly his own of calling forth colour as an apparition out of a region of grey shadow. Mr. Whaite, one of the recently-elected Associatos, pushes what is moody and morbid in these phases to the furthest extremity; "The Last Gleam of the Setting Sun" (61) is little short of muddled. In happy contrast are Mr. Hale's tender greys awakening into half-consciousness of colour; "Oystermouth" (356) is true in tone and full of atmosphere; the artist is studious of quality and relation. Mr. North, though observant of character and careful of symmetry in form, affords yet another proof that painters who nowadays make popular appeal clothe themselves almost as a matter of course in colours. Indeed

The Eighth Winter Exhibition of sketches and studies at the Institute does not materially differ from its immediate predecessors. Of eight honorary members, including, among foreign painters, Madlle. Ross Bonheur, Madame Henriette Browne, M. Gallait, and M. Israels, the last alone is present. M. Israels, in "Evening Sorrow" (246), the picture of a melancholy girl laden with grief, again touches the chord of pathos. This artist habitually makes his immentations in monotones; in painting as in music the prolongation and repetition of a note, the dwelling with tenderness on a tone, give expression to plaintive moods of mind. Such art, however, is almost primitive in its simplicity and is usually restricted in its range. Mr. Herkomer, though a denises among us, wears the aspect of a foreigner; there is something almost savage in the uncouthness of his genius; he has an eye for the grotesque side of nature. "The Old Gardener" (350), and "Fishing in the Black Forest" (352); are salient in angle and quaint in character, while studies of the female nucle have been composed into "A Fairy Overture," haunted by hats and ravene; the whole scene looks like a place of hands forms and strange sounds. In the way of simple naturalism them are, as usual, some good examples? "Little Bo-Peep" (44), by Mr. Small, and "The Friends" (101), by Mr. Frederick Skill,

have the truth and care required in genre-painting. In landerage Mr. Hine and Mr. Collier again take the lead. Mr. Hine archibits a study, fine in colour as in form, of "The Aggilestons, Dorset" (215), and Mr. Collier throws over "Bannock Moor" (250) a breadth of shadow and a grandeur of atmospheric effect not unworthy of De Wint or David Cox. The collection as a whole falls into the common fault of conventionality; many of the drawings seem as if made under the fumes of the midnight lamp; they want the freshness of work done in the face of the sun and the wind. It is an old complaint that these "Sketches and Studies" are not what they pretend to be.

The Tenth Exhibition of the Dudley Gallery, containing 670 drawings, is by general consent scarcely up to the standard of former years. The Gallery continues to labour under both the advantage and the disadvantage of a constituency numerous almost beyond example; thus, while the contributors to the Old Water Society are 57 and to the Institute 56, the number of exhibitors at the Dudley amounts to more than four hundred. The Exhibition is well known to have the speciality of being open to all comers; hence, though the standard continues low, the variety is as great as ever. The characteristics of the collection naturally correspond with these conditions. The enterprise of youth, the daring of untried and ofttimes untrained genius, the aspiration of men who have been striving after an unattained ideal, never fail to make this Gallery a marvel to grave seigniors who have long fallen into established routine, and a delight or an entertainment to those who curiously watch for strange developments, or who believe in possibilities in art yet to be accomplished.

The Dudley Gallery is now, as heretofore, marked by a leaning to historic styles; and we cannot conceive a surer basis on which young men of promise may rear the art of the future than on the master-works of classic and mediaval times. The bane of our English school has long been common naturalism or pretty incident, and in this respect our native art compares unfavourably with the expressly student works of modern France and Germany. We therefore gladly hail efforts in this ideal and historic direction, oven though they should plead for indulgence by their immaturity. We have said that the Dudley is this year below the average; the falling away is specially felt in the absence of Mr. Burne Jones, Mr. Stanhope, and Mr. Burton. Even Mr. Donaldson, strangs to say, has reliquished the mediavalism which he has heretofore planted around Nuremberg and other olden cities, and is now guiltless of little more than innocent landscapes in Matleck Valley. Thus a cause which has been upheld in this Gallery persistently, not to say devoutly, is left to the keeping of Mr. Edward Oliflord and Mr. Walter Crane. The former again excites astonishment by a startling, though thoughtful, composition, "Israelites Gathering Manna" (365). Were it not for a certain dirtiness of colour, the reverse of solemn and sacred, this work would rank well by reason of its high purpose. Respect is due to an art which, though encompassed by infirmities, stands out in protest against the frivolous and popularity-secking products of the day. Mr. Walter Crane, in "Winter and Spring" (262), makes a praiseworthy effort to escape the ordinary influences of an Italian tour. Here, in place of picturesque peasants grouped on the Pincian, are two symbolic figures, one of Winter cronched down and stricken with cold, the other a graceful dame wreathing spring flowers annong classic ruins. In an architectural vista stands old Time with hour-glass and sickle. The accessories, especially the carefully drawn mouldings and ornamental details of classic structures cr

The portraits in the Dudley (iallery deviate as greatly from ordinary modes of treatment as the fancy pictures. "Hugh Rell, Esq., and Daughter" (84), by Mr. Poynter, A.R.A., is a picture studious of form and expression, but we have once more to regret an unpleasing heaviness and an uncomfortable crowding. To the same decisive and unfinching hand we owe a faithful sketch of the oft-painted "Fall at Bettwa-y-Coed" (363). Fach touch is instinct with purpose and with character; the water has movement, the wavelets leap onward. This small study may be accepted in evidence of the often-repeated statement that great figure-painters are also landscape-painters, on the principle perhaps that the larger art includes the less. We end with Mr. J. U. Moore's portrait of "Blanche, daughter of Admiral Hon. F. and Lady Louisa Egertom" (224), a drawing which by its brilliancy shines as a gen among its dusky companions—the hangers, as usual, have pitched the Gallery in a singularly low key. The portrait of this little child in a mob-cap, sheltering herself under a Japanese parasol, has a quaintness and an old-fashioned misn which might belong to the girlhood of our great-grandmothers. Such union of piquancy with simplicity gives a peculiar charm to the children of Reynolds.

THE THEATRES

THE THEATRES.

The is a relief to find the Haymarket Theatre resorting to comedy drams of last year for suggesting the burlesque of the Happy Land, but perhaps the next piece of the same kind might not have been useful in the same way. It must be owned that Mr. Gilbert has lately succeeded best when he has written in verse, nor need he be deterred from writing good lines because they are certain to be paredied. The last three pieces which he wrote for the Haymarket attained a popularity which was perhaps surprising, and now that he writes in prose the reception of his piece is, we think, rather below its merit. He is always an effective satirist, and whether fairies or men and women speak, the audience can perwhether fairies or men and women speak, the audience can per-ceive that they are themselves aimed at by clever epigrans. It may deserve attention by Mr. Gilbert and other authors that that may deserve attention by Mr. Gilbert and other authors that that interesting member of modern society, the prig, offers himself for dramatic scarification more complete than he has yet received. The younger Smailey in the play called Charity is slightly priggish, and we feel entire confidence in Mrs. Van Brugh's discernment when she says that she does not like that good young men. When he proves himself a scoundrel in the last act we are able to congratulate ourselves that we and Mrs. Van Brugh saw through his veneer of respectability from the first. He is like some of the young gentlemen of Mr. Trollope's novels, and we cannot help thinking that Mr. Gilbert could draw other pictures of the same kind. The scene between the two Smaileys, when the father finds to his delight that the principles instilled by him into the son's mind will direct his conduct, is admirable. Both father and son look like men whom we have often met, and they speak and act in harmony with their looks. The Bishop elect has our entire sympathy when he remarks that his profession restrains him from laying fingers on young Smailey, but he rejoices restrains him from laying fingers on young Smailey, but he rejoices that be has a son who is at liberty to do as he likes. We may remember the dying Highlander who was reluctantly persuaded by his confessor to say that he forgave his enemies, and added, "My son, do you remember them." Mr. Buckstone, whether on earth or above the clouds, is Mr. Buckstone always, and it need not be or above the clouds, is Mr. Buckstone always, and it need not be said that as the private detective, "a professional sceptic at two guiness a day," he is infinitely amusing. His firm, having been employed by Mr. Smailey to watch Mrs. Van Brugh and by somebody else to watch Mr. Smailey, have, as he says, combined the jobs; and when the smash of Mr. Smailey's character occurs, the detective mentions that Mr. Smailey's own policeman will take that gentleman into custody. Nearly all the parts in this play are well acted, and Miss Robertson as Mrs. Van Brugh and Mrs. Mellon as Ruth Tredgett, a tramp, are particularly good. But the subject is difficult to handle, and if Mr. Gilbort wishes to say all that is in his mind upon it, he had better perhaps choose fairyland to hold discourse in.

Mrs. Van Brugh is a young and handsome woman passing for a widow, living in good style, and dispensing her ample income liberally in charity. Her early history is rather indistinctly told. She admits, as we understand, that she was never married to the late Mr. Van Brugh at all; but it is suggested by the artful Smailey

Mr. Van Brugh at all; but it is suggested by the artful Smailey that she was married to him in the lifetime of his former wife. We that she was married to him in the lifetime of his former wife. We do not expect that a manager should have a play perused and settled by counsel before producing it, and therefore it would be idle to complain that this play conflicts with legal notions. Smailey is the heir-at-law of an old gentleman who left an estate to his god-daughter by the description of "wife" of Mr. Van Brugh, and it is assumed that, if the devisee was not really, but only estensibly, the wife of Mr. Van Brugh, the devise would fail, and the heir-at-law would be entitled to the estate. Mrs. Van Brugh looks so prettily distressed when Smailey hints to her the nature of the old leval maxim. veritae nominis tellit errorem demonstrations. claim to the estate, that one feels almost tempted to inform her of the old legal maxim, veritae nominis tollit errorem demonstrations. It is, however, assumed to be highly important to ascertain the date of the death of Mr. Van Brugh's first wife, and the production of a certificate of this lady's burial by Ruth Tredgett is an important incident of the play. Both the morality and the law which it enunciates are slightly hazy. It appears to be assumed that, if the lady called in the play-bill Mrs. Van Brugh married Mr. Van Brugh in the lifetime of his first wife, she would be guilty of bigamy. What she really did, as we understand her own account, was to live with Mr. Van Brugh without anything which she regarded as a binding marriage having passed between them. English society declines in general to take unto itself ladies, however pretty in look and manner, and exemplary in conduct, who have committed these youthful indiscretions, and Mr. Gilbert's sarcasus are not likely to alter the views of society on this head. This perhaps would not greatly matter. A more serious consideration is, that English society is not likely largely to patronize an English play which contravenes and ridicules its own rules of conduct. If this were a French play, or if the characters were fairies, or perwhich contravenes and ridicules its own rules of conduct. If this were a French play, or if the characters were fairies, or perhaps if Mrs. Van Brugh were a particularly wicked as well as fascinating woman, the thing might do. But she is too much like one of themselves to be forgiven by English ladies for her aberration; and therefore we infer that this play, in spite of much clever writing, is not destined to a long run. We understand that Smalley is "wanted" on a charge of forgery, but what he has forged we neither know nor care. Mrs. Van Brugh and her daughter announce their intention of departing under the escort of the Bishop elect and his son, for some new and happy land where har early history will not interfere with her reception into such

society as the country affords. Of course if you go for enough the bush there is nobody who can call upon you, and therefore need not secribe the want of callers to any social projudics ago

need not secribe the want of callers to any social projudica against yourself.

A novel by Mrs. Edwardes has been converted by Mr. Giffert into a play in which we can find no defect of workmanship. The excellent acting of Miss H. Hodson in a part well suited to har will be likely to attract full houses to the Royalty Theatre for a long time to come. It would probably not have occurred to any reader of Ought We to Visit Mer? that this novel is particularly capable of being dramatized, except in the circumstance that the horoine, having come from the stage, easily goes back to it. As compared with Mr. Gilbert's original play at the Haymarket, this adapted novel has the advantage that the characters in it do not pretend to be any better than they are. Jane indicates with considerable frankness what is likely to happen if her husband neglectaher, and what nearly does happen before the curtain falls. Of course every play must have some kind of plot, but the earliest and lightest part of this play, before the plot discloses itself, is the best. "Jane is an actress by birth, early training, natural proclivities alike, and her rendering of Mrs. Crosbie is perfect. The conscious rectitude, the British matron walk, the very expression of the cye is lifelike." Jane's talk with her husband about their first yours of married life, her meeting with the Crosbies, her frank and too fascinating manner to the young "gunner," are all excellent. She shows him her photographic album with its three pages of vagabonds, including her sister and her ther first years or married file, nor ficesting with the Ordshie, and too fascinating manner to the young "gunner," are all excellent. She shows him her photographic album with its three pages of vagabonds, including her sister and her uncle, and then her husband on a page by himself, "a land-mark between the Old World and the New." Crosbie is rather shocked to see in the collection the landlord of the "Golden Eagle" at Frankfort. Jane tells him that Carl Hofman was her husband's good friend when he was ill, but she will not presume to put Crosbie in such company. "I've got a bishop somewhere—indeed I have. Min [her sister] gave him to me when she was weeding her book. I don't remember his name, but he is some one very celebrated, who went wrong about the deluge, and I'll put you beside him. Yes, you and a bishop all by yourselves, on one page." She talks in a perfectly unabashed manner of the "profession" to which she was brought up. "I tell Theobald sometimes that when everything clase fails I can earn my bread by giving dancing lessons. Will you attend my classes, Mr. Crosbie? I'll take you on moderate terms as an old friend." If this part had been written for Mass Hodson it could not have Oroshle? I'll take you on moderate terms as an old triend. It this part had been written for Miss Hodson it could not have suited her better, and perhaps not so well, and she is supported by an efficient company. It would be hypercritical to complain that the heiress Emma Marsland does not contrast so sharply with Jane Thoobald on the stage as in the novel. According to the story she was plain, with hair which was called auburn, and her one redeeming quality was a fortune of 30,000l. The manager perhaps considered that he could not pin upon a lady's back a label stating that she is worth 30,000l., and unredeemed plainness might hinder the success of his play. At any rate the fault that one of the characters is too good-looking may easily be pardoned. Recent attempts to dramatize novels have not produced encouraging results. The most popular novels of the day, such as those of Mr. Trollope, seem to want life and colour for the stage, or it may be that the stage of the day and the stage of the stage of the stage. that we have few dramatic artists capable of rendering a delicate portrait without either daubing it or allowing its characteristic features to vanish into air. We cannot exactly say how much of the success of Ought We to Visit Her? is due to the author, how much to the adapter, and how much to Miss Hodson; but we can easily imagine that a failure might have resulted from entrusting the part of Jane to less skilful hands. "I can never," she says, "go into the might-have-beens of life. The facts as they are are enough for me—rather too much just at present. If I hadn't left the stage I might have been a second Taglioni by this time." These words ought to be spoken by some one in whose mouth they do not seem a mere empty boast, and probably the speaker could have done this, or something like it, if she had not done better, as those who remember her Ariel and Imogen may think she has. The discreet adapter has omitted Jane's sister, Min, who might have spoiled the play. To act an actress would be almost more difficult than to act a "might have been" dancer who "got married" instead of mounting a pair of wings. Among other disqualifications for the place of a lady in Chalkahire society, Jane is rather too graceful. This is one of the slight touches which show that the author knows what she is writing about, nor is it any discredit to her that the same thought occurs in Coningsby. Jane tolls her husband, "Till I was sixteen—till the time you raised me above my station, sir.—I was trained to move my limbs well, and although I am in the position of a lady new, I can't remember always to be awkward." Mr. Gilbert's success in this adaptation may console him for the partial failure of his own comedy.

REVIEWS.

BAIN'S MIND AND BODY.

READERS of Professor Bain's treatises on the Mind are well aware of the intimate relation which the author seeks to esta-

* Mind and Body; the Theories of their Relation. By Alexander Min, LL.D., Professor of Logic in the University of Absolute. London: Henry S. King & Oo. 1872.

bish between mental and bodily phenomena. Indeed Mr. Bain may be said to be the first psychologist who has endeavoured to trace out thilly and combistently the bodily counterpart or equivalent of every thought and facing. Mr. Spencer is even now his only rival in the endeavour to clucidate all developments of human consciousness by makins of facts and hypotheses of nervous action. The sensationalists of the last century had no adequate physiological its for working out in detail the connexion of mind and body, for did they conceive with sufficient steadiness the twofold nature of the phenomenon, but rather confounded the bodily, or at least the nervous, with the mental. It is Mr. Bain's great merit to have clearly recognized and firmly maintained the radical and indestructible distinction of the mental or subjective and the bodily or objective, while at the same time he just as firmly maintains the complete connexion of the two in the conscious and organized individual. Yet, though his opinions on the subject were well known, it does not follow that there was no room for a clear and succinct statement of the nature and law of this peculiar union as a kind of Prolegomena to his psychological system. This is what Mr. Bain's new volume, published in the International Scientific Series, aims at supplying. Its purport may perhaps be better understood by contrasting it with Dr. Maudsley's volume, Body and Mind. This last also aims at establishing the dependence of mind on body; but it is concerned chiefly with pathological facts, the relations of abnormal states of mind with abnormal states of the brain and other organs. The work before us seeks to complete the doctrine of the relation between consciousness and bodily organism by noting and classifying the normal instances. It proposes to show not how curiously disease or any sudden change in bedily function affects the brain, and through the brain the mind, but how completely all the familiar processes of sensation, thought, and emotion flow, so to speak, upon the s

Mr. Bain's volume opens with a brief statement of all conceivable theories of the union of mind with nervous structure. It is possible to say that, though united in our present life, they are wholly unaffected by each other, having perfectly distinct modes of existence; or that only in the lower departments of mind, as sensation and appetite, is any dependence of mind on body discoverable; or again that, supposing a dependence of the one on the other to be established, the laws of the two worlds—the spiritual and the material—are too dissimilar to allow of our using the one set to explain the other. In opposition to these views Mr. Bain sets the growing scientific opinion that the study of the brain must tend to throw light on mental processes whether in the present star of physiological knowlege, as he himself thinks, or only after considerable advance in that science has been made. The reader may feel a little indistinctness in this proluminary statement, from the want of a clear separation of the metaphysical from the scientific problem involved in the union of mind with body. Thus it looks at first sight as if the first supposition, including Leibnitz's hypothesis of a pre-established harmony, were incorrectly made an alternative with a scientific conception of phenomenal dependence. It is clear that a Leibnitzian who believes in the perfect adjustment of the material and spiritual order can as legitimately employ nervous facts as clues to mental facts as a pure empiricist. This apparent ambiguity would be removed if Mr. Bun were to premise distinctly that he is merely discussing the several scientific suppositions as to the extent and value for scientific inference of the connexion between mental life and bedily processes.

It must not be supposed, of course, that Mr. Bain holds the concomitance of all the higher mental phenomena of thought and reasoning with nervous changes to be as yet directly ascertainable. He thinks, however, that the number of clearly ascertained facts bearing on the union of the two regions of phenomena warrants the presumption that they are intimately united throughout. Very wisely, therefore, he tirst of all puts into light the certain foundations of this union, before seeking to determine, with the assistance of hypothetical conjectures, the precise forms which it assumes throughout the development of thought, emotion, and volition. The region of the hypothetical is approached in the third chapter, which treats of the connexion of mind and body as an example of the method of concomitant variations that is employed in the case of two phonomena inseparable, and so not susceptible of observation in complete isolation, but displaying a certain parallelism in their respective variations. The relation of brain size and structure to quantity of mental power; the general correspondence between the number of nervous elements, fibrous and cellular, and that of our ideas, associations, &c.; the agreements of conscious life and both as established laws within certain limits, and as highly probable hypotheses for the whole range of mental phenomena. Mr. Bain here shows himself fully abreast with the most advanced physiological research both English and German. Yet we think a fuller reference to the experiments of Wober, Du Bois Reymond, Helmholtz, and Fechner on the laws of nervous stimulation would have been a gain to the expession. Possibly the reader will sometimes find it difficult to follow the exact order of the argument. It would be an immense advantage, for example, if the very adequate description of the nervous system could be taken from this chapter, in which it strikes one as a digression from the main course of the thought, and made a preliminary chapter. We think, too, that, as the book means adds to th

drift of the argument, in the shape of connecting phrases and even distinct headings, would be an improvement. In both these respects it strikes as that Mr. Spencer's exposition of the same subject in the chapter of his Psychology headed "Estho-physiology," with the praceding account of the structure and laws of the nervous system, though characterized by a much more abstract language, would probably be a charact unfolding of the subject to a new student.

In the chapter on the General Laws of the Alliance of Mind and Body Professor Bain specially aims at finding the nervous equivalents for the principal mental functions and laws which his equivalents for the principal mental functions and have which has psychological system recognizes. It need hardly be said, therefore, that this part of the treatise is the most hypothetical of all. Nobody can quarrel with this. If a writer avows his conviction that the complete correspondence of mind and body is established at least as a high probability, he is almost required to suggrest some conceivable mode of this connexion applicable to these more models mental whenevers whom provides convenitions in the subtle mental phenomena whose nervous concomitants in the hidden structures of the brain cannot as yet be observed. Mr. Rain's suggestions on this subject may be compared with Mr. Spencer's hypotheses on nervous action. The latter is much bolder, Spencer's hypothesis on hervous action. The latter is much boider, and seeks to penetrate into the intimate structure of nervous issue and the precise molecular changes which compose nervous action. Mr. Hain, on the other hand, whose aim is more purely psychological, contents himself with a few conjectures as to the larger dispositions of nervous elements answering to different mental processes. An interesting example of this new hypothetical matter is to be found in the attempt to determine the process collections of the great law of grassionarces called by Mr. nervous conditions of the great law of consciousness, called by Mr. Bain relativity, that all distinct states of mind are transitions, and are intense in proportion as the transition is great, and that no he-ling can be sustained beyond a certain time or renewed in any considerable intensity until after an interval of quiescence. Mr. Bun, with a characteristic scientific caution, conceives the nervous change answering to this condition of consciousness in one of two ways. He thinks that during unconsciousness, as in a deep sleep, either the nervous mass as a whole is quiescent, unagitated by currents of nervous energy, or the currents kept up are flowing at an even, unaltering pace. On the one supposi-tion the initial stimulus is the origination of motion, on the other the disturbance of a uniform motion. The most remarkable physiological suggestions, however, which our author offers are in reference to the number and precise arrangement of cerebral elements, and the retentive power of the mind. Taking language and visual recollections as the highest acquisitions both is variety and amount, he forms a rough conclusion that "the cerebral growths, of a certain typical complication, cannot be adequately stated in hundreds: they amount to thousands and even quately stated in hundreds; they amount to thousands, and even tens of thousands; they scarrely count by hundreds of thousands." Starting again from physiological data as to the minuteness of the ultimate nervous fibres, on Dr. Lionel Bosle's hypothesis, and thickness and compactness of the layers of grey substance in the brain, Mr Bain conjectures that there may be, in the higher corderal centres, something like one thousand milion corpuscles, and five thousand milion fibres, and that thus for each nervous grouping of a certain complexity there would be from live to twenty thousand cells, and from twenty-five to one hundred thousand fibres. Mr. Bam has also some interesting suggestions, illustrated by diagrams, as to the precise mode of arrangement among the various cells. Although much of this reasoning will doubtless strike the reader as very rough and tentative, he can hardly fail to be impressed by the fact that the knowledge of mind and brain has advanced to the point which at least makes such a

hypothetical comparison of quantities possible.

Probably the part of Mr. Bain's volume which will excite most interest in that which seeks a final expression for the mode of union between mind and body, and compares this conception, in a highly instructive historical summary which concludes the look, with the various metaphysical theories of spiritual substance. The writer takes the extreme Positivist ground in deaying mystery, in the sense of something demanding a "why," to the muon of mund and matter. This connexion, he thinks, could only be further explained by assimilating it to other phenomena, and, thus being impossible, it must be accepted as an ultimate fact. As to the ultimate statement of the union, Mr. Bain rejects the view that mind and body act on one another, or that the mind uses the body as its instrument, since these imply that the mind, in part at least, is isolated from all nervous process. He then goes on to show the difficulties in conceiving the union of the objective or material and the subjective or spiritual, as the most widely opposed facts in our experience. He puts saide all theories of local connexion as inexact, the mental having no proportion of position or extension, and decides that the only mode of formulating the union is in forms of time. It may be said that the difficulties which Mr. Heiu supposes in realizing the union of mind and body apply only to the individual subject. But, in conceiving this union, we unturally think of the double process, material and spiritual, as going on in some other person; and even in trying to frame an idea of our own twofold existence, we set ourselves in imagination in the place of another expalls of observing us as objects detacked from his own personality. We think again that, looking at the mere phenomena, the union of the mental activity and nervous process is even more a dependence of the former on the latter (rather than the converse) than Mr. Bain shows it to be. For example, in stimulating one of the somes, we have at first a purely physical process which only afforts a mental process when it reaches the central structures. On the other hand,

when emotional excitement causes derangement of a lower organ, it is not a case of a pure and isolated spiritual operation originating a material one, since the material, in the shape of subtle cerebral activities, was always an accompaniment of the spiritual. In other words, we have in every external stimulation, as also probably in the order of individual growth, and possibly in the history of animal evolution, the material as antecedent existing apart from the mental; but we never find the mental existing without the material. With regard to the metaphysical theories of one or more substances underlying mental and material phenomena, it may be remarked again that Mr. Bain does not quite sufficiently distinguish the metaphysical problem from the scientific. The theory of a double substance cannot be disproved by scientific progress. What science does is to give to human thought another and absorbing occupation, by force of which ontological speculation falls into disuse. Hence we cannot quite follow the author when he concludes his history of opinion by the remark that the discoveries of science have shown the hypothesis of two substances to be untenable, and favour the supposition of one substance with two sets of properties—the physical and mental. No doubt science tends to invalidate many of the old arguments for two substances, but it does not affect it as a pure metaphysical speculation. When Mr. Bain says that science favours the notion of one substance, which theory he calls "guarded or qualified materialism," we confess ourselves unable to attach any definite meaning to the term substance. We know from his other works that Mr. Bain does not believe in an independent substance matter, and we can only suppose that by substance is meant simply the fact of the connexion of the mental and bodily in the same individual. If this is so, however, it is clearly no metaphysical doctrine at all, and cannot therefore be co-ordinated with any theories of substances in the ontological sense. A little more fulness an

FORSTER'S LIFE OF DICKENS.

IN one of the last chapters of this, the concluding, volume of Mr. Forster's life of Dickens, the author makes a few remarks in answer to criticisms upon the earlier parts of his work. He was charged with making himself too conspicuous. He replies that he "studied nothing so hard as to suppress his own personality, and has to regret his ill success where he supposed that he had only too perfectly succeeded." We cannot withdraw our opinion as to Mr. Forster's success in self-suppression; but, after such an apology, we shall not press the charge any further; and yes from the more ready to withdraw from the question because the present volume is not open in anything like the same degree to our former criticism. Mr. Forster is here a much less conspicuous figure, and has published some letters which were not raddressed to himself. Of another charge which he endeavours equally to repol we must say a little more. People, he says, have complained not only of Mr. Forster's presence, but of Dickens's absolve. They have been disappointed because Mr. Forster does not make them talk to Dickens as Boswell made them talk to Johnson. Mr. Forster's reply is remarkable. He says that the book could not have resembled Boswell, because Dickens carried nothing of his authorship into social intercourse. "His talk was unaffected and natural, never fookish in the smallest degree." Just the same remark might have been made of Johnson. The charm of Boswell is precisely that he shows us the man Johnson whom we should never have inferred from Johnson the author. The reason for Mr. Forster's incapacity to rival Boswell is a simpler one. It is that Dickens was not a Johnson, and that Mr. Forster is not a Boswell. The hiographer has not the power of dramatic representation, and the subject of the biography did not, it may be presumed, present such good materials for the art of conversational reporting. Yet Dickens's mode of uttering himself was characteristic in its way, and perhaps a writer of the necessary qualifications might have succeed

whose disappointing.

What, we naturally ask, was the real Dickens? What was his domestic and social character? What view did he take of his own calling, and how far did he act up to his beliefs? The curtain cannot be altogether drawn aside; but we may expect to learn something of that inner life which can never be completely recorded in a man's own writings. The answer which Mr. Forster gives us is very inadequate. We are indeed rather grateful than otherwise for

. The Life of Charles Dichens. By John Forster. Vol. 3. London;

certain omissions. Mr. Forster touches very lightly indeed upon that passage in the life of Dickens which chiefly determined the course of his later years, and which, in consequence of some unfortunate revelations, has left a rather disagreeable impression upon the minds of many of us. It is plain, however, that the whole truth cannot be told, if any one is competent to tell it, with due regard to the rights of social privacy and to the feelings of survivors. Under these circumstances we unreservedly approve of Mr. Forster's reticence, though we must add that the reticence necessarily deprives us of the means of judging of Dickens's behaviour under the most critical circumstances. Leaving this question, however, we proceed to ask what kind of impression Mr. Forster gives us in this volume of the last twenty years of Dickens's life? The first answer must be that it is on the whole a melancholy one. The book consists chiefly of letters in which Dickens describes some of the scenes in which he was placed; of other letters giving the account of his success in public readings; and, finally, of criticisms upon his later books and his general merits as a writer. The first of these divisions is agreeable enough. The letters in which Dickens gives his impressions of French life and manners are admirable in their way. They are in much the same vein as his charming Uncommercial Traveller: and perhaps even pleasanter, because lets marked by his peculiar mannerism. There is, for example, a description of his landlord at Boulogne, M. Beaucourt, who was afterwards sketched by him as M. Loyal Devasceur. It is a really admirable example of Dickens's vein of playful humour, and as perfect in its way as anything that we remember in his books. The humour is not forced as it is too often in his later writings, and the power of rapid observation is as marvellous and characteristic as in any of them. We will not quote; but we may briefly say that this and some other foreign sketches are, in our opinion, the pleasantest parts of the v

We pass, however, to the more personal part of the narrative; and here we become sensible of that melancholy impression which we have noticed. The story of Dickens's last years, as here set before us, is indeed as sad as it is simple. We see a man of genius killing himself by inches in the effort to make money. The strong man breaks down by constantly straining his powers a little too far; the work which was once done spontaneously without a conscious effort has to be performed at high pressure, and with an ever-increasing sense of its paintulness; and, moreover, as Mr. Forster says himself, the task under which Dickens ultimately broke down was one which, if not below his dignity, was at least not the highest to which he might have devoted himself. Should a man of genius show himself in public for money? Should a great novelist condescend to be an actor? These are questions which we need not answer; there is much to be said on both sides; but at least it is painful to see a man whose powers were in their way unrivalled actually working himself to death in an employment which, to say the least of it, did not give scope for the worthlest employment of his faculties. And what was the cause of this restless, uncassing, unsatisfactory labour? The answer is only too plain; but we preface it by one distinct statement. "No man," says Mr. Forster, "could care essentially less for money" than Dickens. We fully and unreservedly accept the statement. We believe as fully as Mr. Forster that Dickens was as generous a man as could be named, and was entirely above any sordid desire for money-making; and yot he himself tells us in the plainest language that his primary motive for undertaking a task of this kind was the pecuniary reward. The pages of this book are painfully full of the subject. He wanted, says Mr. Forster, to make a provision for his sons. It is impossible to avoid the reflection that he had apparently ample means for providing for a large family by the ordinary exercise of his profession. He was beyond all com

edd be modish to blame any man for not being insensible considerations. Moreover we have no doubt that the to such considerations. Moreover we have no doubt that the pecuniary gain was but the smallest part of the inducement. Nothing is more agreeable than to discover the existence in yourself of a new power over men's emetions; nothing is more flattering than the sympathy of large andiences. It is no wonder if Dickens was group or less intoxicated when he found that, besides being the most between witter, he could be the most popular actor of the time; that thousands of people would have to be turned away from the score where he was reading; that the emotions of the the rooms where he was reading; that the emotions of the audience would follow his lightest gesture, and that women would have to be carried out of the room by the dozen, "stiff and rigid," when he read the murder scene from Oliver Twist. We must when he read the murder scene from Uliver Twist. We must add, too, that he naturally miscalculated his own strength; and that his courage forbade him to flinch from fultilling his promises till he was imperatively stopped by medical advice. All this is enough to vindicate him more than sufficiently from the charge of having sacrificed the highest interests of his art to pecuniary considerations. Indeed we should be much more disposed to blame the multiplications. more disposed to blame the public than the poor author who was the victim of their adulation. From a very early age he had been the object of flattories calculated to turn the strongest head, and the sympathy to which he owed his power naturally rendered him amenable to popular enthusiasm. The fact remains that this volume is the history of the method by which a man of true genius may be tempted to lower his aims, and finally to sacrification that the history of the method by which a man of true genius may be tempted to lower his aims, and finally to sacrifications. his health, by the unintentional cruelty of his admirers. temptation was overpowering, but the process is not the less melancholy. As Mr. Forster has been forced to tell us comparatively little of Dickens's domestic life, we no doubt receive a rather exaggerated impression. The readings did not readly occupy so large a share of his time and thoughts as we are apt to fancy when reading letters which are almost confined to a record of his successes. Many indications, in fact, show us that he found time for employments more worthy of a generous and imaginative nature. We see him only from the manager's point of view; and the hours which he devoted to his friends and manny, to his charities, to his amusements, and to his dogs, are scarcely noticed, because they afford few materials for description. Still the moral is not the less forcible. Having found a man of genius of unprecedented popularity, we insisted upon his perpetually straining brains already overworked, and, not content with that, forced him to rush about in railways and exhibit himself in public masses till we had fairly broken down a tough constitution. Great that are the dangers of popularity; and it is kunentable enough that we seldom hit off the medium between allowing a great man to die before he is found out and overwhelming him with noisy and demoralizing worship. It is really more cause for wonder that Dickens accomplished so much, and stood the strain so long, than that he fell short of the highest achievements that might have been within his caracity.

have been within his capacity.

The novels produced within the period of this volume show the produced within the period of this volume show the provided and the produced within the period of this volume show the produced within the period of this volume show the produced within the period of this volume show the produced within the period of this volume show the period of the period of the period of this volume show the period of the period of the period of this volume show the period of the period His later manuscripts gradually became more corrected, and ous. His later manuscripts gradually became more corrected, and his style more painfully elaborated. Some of his happiest fragments were written in his later years; but we confess to the opinion that his power culminated with David Copperfield. After that time there is a perceptible loss of freshness, and no corresponding gain in depth of reflection. How, indeed, could a writer so harassed and excited produce work of that maturer kind which we expect from the later years of a man of genius? We need not, however, argue the critical questions involved. Mr. Forster takes occasion in this volume to attack M. Taine, for whose estimate of Dickens we have little sympathy; having settled M. Taine, he proceeds to make a rather angry reply to a paper contributed by Mr. Dickens we have little sympathy; having settled M. Taine, he proceeds to make a rather angry reply to a paper contributed by Mr. Lowes to the Fortnightly Review. Mr. Forster hints his opinion that the article was biassed by some personal feeling. We do not think that Mr. Forster's answer is calculated to persuade anybody who does not already agree with him, or that he even seizes very distinctly the force of Mr. Lewes's remarks. But such questions as these are not strictly relevant to the biography. The readers of Dickens may doubtless find many things in Mr. Forster's three volumes which will throw more light upon the novels than any direct criticism. The portrait of Dickens is, indeed, very incomplete and unsatisfactory; but it would be unfair to deny that it direct criticism. The portrait of Dickens is, indeed, very incomplete and unsatisfactory; but it would be unfair to deny that it puts us in possession of many facts which render both the merits and the defects of the novels more intelligible. That will be its principal merit, for its independent interest is certainly less than might have been expected from the subject.

BRACHET'S ETYMOLOGICAL FRENCH DICTIONARY.

TF there is any class of people who are curious in the historical and philological study of the French tongue, but who have not enough practical knowledge of that tongue to read about it, so to speak, in itself, Mr. Kitchin has done good service for them in translating M. Brachet's Dictionary. Of course, if it were Chinese or even Slavonic, we should be glad to read about it in our own tongue; but with a tongue so familiar as the French, it might to the same who are qualified to make any man of the translation. at those who are qualified to make any use of the translation

would be also qualified to make use of the original. ever there is a class who wish to know about the French to and yet are not much accustomed to read hooks in that tongue. and yet are not much accustomed to read moors in and tongen, a if so, we are pleased to see so clear and full a book as M. Brack set before them in an English shape. The Introduction is to one me even better than the Dictionary itself which it introduces. Dictionary is a wonderful instance of compression, of putting wast deal of matter in a very small space, and yet in a shape when makes it perfectly clear. Yet we have now and then wished in full to the coulerties the same of the s vast deal of matter in a very small space, and yet in a shape which makes it perfectly clear. Yet we have now and then wished it to be fuller, both in the explanations of particular words and in the insertion of some words which are not there. Perhaps beever we are asking for something which is not strictly expended to the which belongs rather to the history of the use of words than to the history of their formation. Thus we looked to that strange word garçon, and all that we found use that it was "diminutive of gars and of unknown origin." These under gars all that we found was "See garçon." We were all the disappointed at finding no mention of the feminine fura, and of the strangely contrasted history of the two words. As longer-fort remarked long ago, the history of the masculine and feminine fort remarked long ago, the history of the masculine and femining forms has been exactly reversed. Both doubtless were harmless in their first origin, whatever it was. M. Brachet, it should in their first origin, whatever it was. At Israchet, it arouse be remembered, always puts down an origin as being unknown while it is uncertain and while it is under discussion aroung scholars; but the feminine form, perfectly harmless in starting, and still, like our own quean, preserved in a harmless sense in some local dislects, after having sunk as low as a word could sink, seems wholly to have vanished out of the received French language. The wholly to have vanished out of the received Fronch language. The masculine, on the other hand, after having sunk nearly as low as the feminine—we may remember the strong words of St. Themas of Canterbury to one of his murderers: "Garcionem eam et lenonem appellans"—has within the last century or two come up again into decent company, and become, if not honourable, at least perfectly colourless and respectable. Each word, we may add, produced a great crowd of derivatives, most of which are words of contempt, nearly all of which seem either to have vanished out of the language or to have not more respectable meanings. But of the language or to have got more respectable meanings. perhaps, as we have just said, all this, curious as it is as part of the history of the language, is not M. Brachet's immediate purpose. Perhaps, as he has no certain etymology to give of the word garçon, he has done all that we can ask of him by saying that he has none to give. Still it would almost be part of the etymology to have at least recorded the fact that garçon has, or has had, a fominine; because it shows that, whatever the etymology is, it must be something capable of being applied to both sexes. This custom of M. Brachet, of only putting in such derivations as he looks on as absolutely only putting in such derivations as he looks on as absolutely certain—perhaps he might have made a distinction between words whose origin is doubtful and words whose origin is absolutely unknown—is pointed out by himself in his preface as one of the features in which his book differs from earlier etymological distionaries, as those of biez and Littré. As he writes for learners, he leaves out all discussion of doubtful points; and for the same reason, whereas his predecessors, when a derivation was absolutely certain, have thought it enough to state the Latin word from which the French word came, M. Brachet makes it his business to trace out the steps by which the Latin form grew into the French. About the usefulness of this last feature of the work there can be no doubt. no doubt.

M. Brachet belongs to the best school of French scholarship to the school which is satisfied to give to its own tongue its rightful place among other tongues. He fully acknowledges the services of the German Diez as the first thoroughly scientific expounder of the history and relations of the Romance languages. Once only do we see a passage which varies in the least from perfect clearness and accuracy, or which shows the least wish to set the French language at all too high above its fellows. This is when he says:—

When popular Latin gave birth to the French, it created four other sister languages, formed, like the French, with amszing regularity and similarity—the Provençal, Italian, Spanish, Portuguess; or, as the Germans would say, the Romance languages. Consequently, we must use comparison between the Romance forms and the French, as a touchstone by which to verify and confirm our hypotheses.

And again when he says, directly after, "Between the Latin a the French, the Romance tongues stand in the same relation of space as old French does in relation of time," there is a certain confusion, or at least something which may cause confusion in the mind of a learner, by speaking of the Romance languages as if they were something outside French, instead of French being simply case amongst the Romance languages. So again, after M. Brachet has spoken of several analogies in the history of meanings between French and other languages, especially German, he warms us

We must not imagine from instances like this that the German language has taught the French its method of procedure; the resemblance spring from the identity of the operations of the human mind in general, and is a transmitted from language to language.

No doubt this is true with regard to languages in general; but it is curious enough that one or two of these examples—control and General, for instance—have been chosen by Professor Max Müller to illustrate the influence of German—i.e. of course of Old-Frankish idioms on French. No doubt there is something to be said either

way.

M. Brachet's Introduction goes thoroughly through all theolements of the French language, and through the rules by which the Lasin forms were gradually broken down into the modern French. And

^{*} An Styliological Dictionary of the French Liunguage. By A. Brecher, Translated by G. W. Kitchin, M.A. Oxford: at the Clause on Press. z973.

here at least we have nothing to complain of on the score of giving modern French one jot more than its due. M. Brachet's chapter on "Words of Provencel Origin" must, one would think, strike the genuine Parisian with the same kind of amazement with which some people hear that Englishmen always have been Englishmen. We cannot help quoting the passage:—

Englishmen. We cannot help quoting the passage:—
Some persons may doubtless be astenished at seeing the Provengal here as a distinct language, parallel with Italian, Spanish, Portuguese. But if we would really understand its importance, and the influence it has exercised over the French, we must leave off regarding it in its madern form, and shearly despised patois, and look at it in its historical development; we shall see that before its decadence it had, between the cloventh and the fornteenth century, a brilliant and flourishing existence.

Provençal, or the "Langua d'Oc," is the language of all the population of the Garonne basin, and of the southern part of the Rhoue basin; it gives the name to a race of nea, quite distinct from the French of the North; it is parent of a brilliant lyrical literature, translated into German in the thirteenth century, admired by Dante, imitated by Petrarch; and lastly, it satisfies the two criteria which in a historian's eves distinguish a language from a patois—it is the instrument of a people and of a literature. The philologer sees attill more clearly the linguistic originality of the language when compared with the French; of equal age, it has certain more archaic characteristics, which bring it nearer the Latin and give it the same intermediate position between French and Italian that Provence holds geographically between France and Italy. But the course of events quickly put an end to this independent life, the rivalry between South and North which ended with the Albigensian war and the defeat of the South, gave a deadly blow to the Provencal tongue.

In A.D. 1272, Languedoc fell into the hands of France, and the introduction of the French language followed close after. The Provencyal was no longer written; it fell from the rank of a literary language to that of a patois. The Provencyal, Languedocian, and Gascon patois of our day are the mere wrecks of that "Langue d'Ou" which in its day had been so brilliant.

In a note M. Brachet quotes two passages, one in Latin of the thirteenth, the other in Provencel of the fourteenth century, showing that the people of Southern Gaul looked on French as no less foreign than Spanish or even than English. The words of the Latin extract are specially curious; "In lingua Gallica vel alia nobie extranea," just as Orderic constantly opposes "Gallia" to Normannia." M. Brachet too does full justice to "Gallia" to Normanna," Al. Brachet too does full justice to the Tentonic element in French; we mean of course the Old-Tentonic element, the words which came into French from the Franks and other conquerors whilst the French language was still forming, as distinguished from the handful of words which the fully formed french language has borrowed from modern German, chiefly during the Thirty Years War. One of the best things in the Introduction is the way in which M of the best things in the Introduction is the way in which M. Brachet distinguishes between the two great classes of words, to which these two kinds of German words in French severally belong. These are the words which really make up the language, what M. Brachet calls "Elements of Popular Origin," and those which he calls "Elements of Learned and of Foreign Origin." The first are of course mainly Latin, with a large Teutonic and a small Celtic infusion—words which, so to speak, have come of themselves, which have never been consciously invented, and which have gone through the regular laws of change by which the French language was formed. The others are words which have been consciously formed from Latin or Greek words, or borrowed from other tongues—Provencal and the other sister Romance tongues amoug them—and which have not gone through the same laws of change as the older ones. The large number of Teutonic words, and the small number of Celtic, to be found in modern French is one of the things to be constantly borne in mind. It shows how thorough the Roman conquest of Gaul was. No one can doubt that the prevailing blood and the prevailing national character of modern France is Celtic, and not Roman or Teutonic, character of modern France is Certic, and not Roman or leutonic, and yet the Celtic element in the language is utterly insignificant as compared, not only with its Latin essence, but with the large Teutonic infusion. M. Brachot makes himself justly merry with the people who talk Celtic nonsense in Gaul just as we have had sometimes to make ourselves merry with the people who talk Celtic nonsense in Britain. At the same time, as M. Brachet sets acide six hundred and fifty words in modern French as being of unknown origin the charges certainly are that a good sets acide six hundred and fitty words in modern French as being of unknown origin, the chances certainly are that a good many of these may turn out to belong to the Celtic element, rather than to more easily recognized Latin and Teutonic. While on the subject of Celtic follies, M. Brachet opportunely points out that they have had the effect of discrediting the real value of Celtic philology, and that for their first scientific treatment the Celtic tongues have to thank, not any Celt, but the German

The formation of the French language M. Brachet looks upon as having been complete by the eleventh century; of this he gives a curious instance. It is then that we got the first beginning of what he calls learned words words formed not instinctively, but consciously; such a one is the word innocent, perhaps the earliest of the class. Of this class M. Brachet says:—

of the class. Of this class M. Brachet says:

They have been created, long after the death of the Latin language, by karnel men and clerks, who got them out of books, as they needed them express their thoughts, and who transplanted them just as they were into the French speech. Thus in the eleventh century we find in some MSS, the word is necest, the exact and servile reproduction of innocentem; the French beinge had them no term for such a quality, and the writer, embarrassed in his attempt to express himself, was obliged to copy the Latin word. The hearsed origin of the word is shewn from the fact that it has not undergone those transformations which popular usage impress on all the words adopts; thus, in popular words, in becomes on (as infamteen, enfect; inimious, cames), and nocentem becomes authors; so that if innocentem had suffered popular transformation, it would have become emissions, not

inspecent. Popular words are the fruit of a spontantime an learned words are artificial, matters of conscious reflecting instinctive, the latter deliberate.

institutive, the latter deliberate.

At first, each learned word, for some time after its introduction into the French language, remained as unknown to the people as actuatific terms are in our day. The barons and villains of the days of Robert the Flone were as little able to understand the word innecent as the labourers of our day are to comprehend paleography or stratification; but as there was no popular word for the thing, innecent presently passed out from the learned into the saveral use: it appears for the first time in exclusional works; less than the found in the Chanson de Roland, and other popular points it has passed from the scientific and special vocalulary to the usual and daily language of men.

In the latter part of the Introduction M. Brachet goes minutely through the history of the processes by which Latin turned into French. He gives the history of each letter, and the rules of change which each letter in its several positions goes through. So too with the suffixes, which are by no means the least curious part of the story. Most of them of course are Latin, but one or two, as ard and and, are Teutonic; both of them having, curiously enough, a tendency to take a bad, depreciatory, or diminutive sense. Who could have thought that clubuid and craptual are both Teutonic words, and with Teutonic endings—the and and the ard being the same as the wald and the hard which end so many English and other Teutonic names? English and other Teutonic names?

We need not tell any one who has the least inkling of such matters that the Latin c before a at the beginning of a word regularly becomes ch in French, but some may have been a little puzzled at sometimes finding seeming exceptions to a rule which ought to be universal. Why, for instance, is the place where a famous treaty was signed Cities. Combresis and not Chileau? and, at the other end of the land, why do we find Castel Sarrasin? Because the one form is Bicard and the other Provençal, and, as this particular change did not affect the Provençal language, any more than the Italian and Spanish, so by some old chance it did not affect the Picard dislect at the other end of the territory of the Romance speech. Thus, besides proper names, besides those we have quoted, some ordinary words have got into classical French in the Picard or Provençal form—as camp, campagne, casse, alongside of the truer French forms champ, Champagne, chasse. Among them, in page lxxxvi. of his preface, M. Brachet puts cadeau from capitellum, while in the body of the Dictionary we get the more carrious, and we think truer, deriva-tion from catella, which is a kind of Romance in itself.

THE FIRST EARL OF MINTO.

THE Earl of Minto left a high name behind him, among HE Earl of Minto lett a nign name in the first clear-tiovernors-tieneral of India, as a careful, laborious, clear-Liovernors-General of India, as a careful, laborious, clear-sighted, just, benevolent, and courageous administrator. Without noise or pretension, he was a popular Governor-General; he was not brilliant, but of solid ability and judgment. These three volumes of his memoirs terminate when his great work of Indian administration began. He left England for India in December 1806. After seven years of work as Governor-General, he reached England again in the summer of 1814, and hurrying from London to rejoin in Scotland his wife, from whom he had been all this while separated, he died on the road, at the first day's halting-place, in his sixty-fourth year. He had been made an earl before his pattern to England, and during seven years of high public labour his return to England, and during seven years of high public labour had aggrandized his children's fortunes. Sir Walter Scott mentions that for many years afterwards the deceased lord was supposed to haunt the house at Minto. The people in the neighbourhood, knowing that he had reached London, thought there was something mysterious in his not arriving in Scotland, and conjectured that he was kept in hiding.

This memoir carries Lord Minto, with much minuteness of detail, and with great abundance of private correspondence, through thirty years of Parliamentary life and European official employthirty years of Parliamentary life and European official employments, and amply proves the high qualities of mind and heart afterwards exhibited in India. In noticing a work like this, we must presume the reader to be generally acquainted with the course of public events from 1776, when Sir Gilbert Elliot, as a Whig, first entered the House of Commons, till 1806, when, a member of the House of Lords, and holding high Cabinet office (President of the Board of Control) in Lord Grenville's Ministry of "All the Talents" he hade adian to English politics, accepting of "All the Talents." he bade adieu to English politics, accepting the Governor-Generalship of India. We shall perhaps best do justice to the book by unconnected extracts showing the various

interest of its contents.

Early in his Parliamentary career Sir Gilbert Elliot won the special regard of Burke, who greatly appreciated his abilities. At Burke's special and pressing instance, he took charge of the prosecution of Sir Elijah Impey, the Indian judge, in Parliament. It was in this style that Burke wrote to his young friend, December 14, 1786 :-

I wish you would look over the charges, and select such a part as you might think most proper for you to open. There is no some in being in Parliament without taking such a part as your abilities fit you fee. To do less is to injure and maim yourself as well as your friends; and I really am most carnest that whatever you do, great or small, should not be done caralemly or greatly within the limit of your powers. You are too talkfor

Life and Letters of Sir Gilbert Elliot, First Earl of Mints, from 1751 to 1806. Edited by his Great-Rines, the Counters of Mints. 3 vols. London 1 Longuans & Co. 1874.

the amount week. You implicate the latter, Dring up the Imper papers with you, for that in hardness which among or inter we ought not to blink, God lines was

Just a swelvemouth after the letter, quoted from Burke, Elliot brought the dharges against Impey before the House of Commons, and had a success which more than falfilled Burke's hopes of his sublitties. Elliof wrote to his wife in Scotland, December 13, 1787, the day after the speech:—

the day after the speech:

'My success on this occasion has very far exceeded my expectations before, and "galeed, my own opinion after; and if it had not been for the general excellence of approbation, and for the particular warsath of my own friends in their applause, I should literally have come home very ill satisfied with myself.

Burks is quite out of himself on the subject, and I am quite convinced that nobody on earth, except yourself, can feel as he does about it. His expressions as to the composition and delivery of it are extravagant, and I will not repeat them—" the most beautiful thing that ever was heard, divina, beyond human sweetness," and such like. For God's sake do not show this so anybody else, for it is a little too bad to repeat even to you, though I do not think it fair to rob you of anything that will give you pleasure. But Burke's praises in other points, which I think more material, are really both pleasing and affecting to me—in a word, as to the substantial points which go to character. I went home with him afterwards to dinner, and be could not at all contain himself. He was darting overy now and then across the room to embrace me. At dinner, without any provocation, he had his hand every now and then across the dishes to take my hand.

The manner of everybody was changed to me, and it was easy to perceive that I had got on higher ground. The shabby people proved it as well in their way as the heartiness of my friends. In short, the success was complete.

Burke and Windham wrote with the utmost fervour of encounting

Burke and Windham wrote with the utmost fervour of encomium to Lady Elliot. As this speech irrevocably settled Elliot's political calibre, a further extract from his correspondence showing Fox's enthusiastic approval may be excused:—

I dined yesterday with Dudley Long. The party were—Charles Fox, Mr. Grey, Lord George Cavendish, Windham, Long's brother, myself, Lord Maitland, and Tom Pelham. . . . Charles Fox, who is not apt to praise to anybody face, said nothing about me one way or other (although I had leard his opinion from others) till we had sat a considerable time after dinner and began to open a little, when, talking of one of the topics I had treated, he broke out with the most violent expressions of admiration I have undergone yet from anybody. He swore that, "No, by Ci—, there never was anything so entirely perfect as Sir Gilbert's speech!" and then he went on with passages of it, just as if he had spoken it himself. You may langine whether this testimony is tickling to me or not.

Sir Gilbert Elliot's letters enter very fully into the political crisis caused by George III.'s insanity in the winter of 1758-9. He was now the confidential counsellor not only of the Duke of Portland, the recognized head of the Opposition, but of the Prince of Wales and the Duke of York, to whom the Queen placed herself in hostility. There had been some estraugement between the Prince of Wales and the Duke of Portland, on account of the refusal of the latter, in the spring of 1787, to support a movement in Parliament for the payment of the Prince's debts; the Prince now sent a handsome message to the Duke by Fox, and the Duke needed and had Elliot's assistance for a suitable letter in reply:—

onsistance for a suitable letter in reply:—

On parting with Fox the other day, he took him by the hand, and said, "Pray shake the Duke of Portland by the hand for me, and tell him that I hope everything that is past may be forgot between us; and, as a proof that I retain no impression from it, assure him that as soon as I come to town, which will be in a day or two, I shall come to Burlington House, and I do not desire that my going there should be kept private." This looks more like heart, and is done more like a gentleman than one looks for from any other Princa we have known in England. The Duke was properly touched with this conduct, and sat down to answer the message. He wrote five letters, four of which he burnt, and at length sent for me to revise the fifth, and help him out if necessary. He sent for Windham at the same time "as another great crite"—these are the Duke's words, not mine. I found the general purport and matter of his letter excellent, but thinking some part of it a little objectionable and a little obscure, I wrote another on the same plan, and not departing from the material conception of the Duke's, which, being approved by Windham and the Duke, was sent just as I wrote it. So I have the honour to be the author of the first state-paper of this reign or regency.

The reply of the Prince of Wales to an address from a Committee of both Houses on the subject of the Regency was also written by Elliot. "The answer made by the Prince was entirely mine, and done in a great hurry half-an-hour before it was to be delivered." Later he prepared a memorial for the Prince of Wales, to be presented to the King on his recovery, justifying the Prince's conduct with reference to the Regency Bill, and attacking Pitt. Soon after he settled a letter from the Duke of York to the Queen, in reply to an irritating speech, purporting to convey a message from the King for him and the Prince of Wales. It was ascertained that the Queen had misrepresented the King's message, and herself added what there was offensive in it:—

Barke therefore advised the Duke of York to write a letter to the Queen accepting the invitation and touching very lightly on the offensive part of the message. The Duke of York ast down immediately and wrate the conclosed, which I send you in his own hand, as it may he a curiosity in the country. I sid not think it quite enthactory, and I altered it to the enclosed paper, which you will see is my hand. The Duke of York immediately copied mine fair, surised it off to the Prince of Walas, who approved, and it was sent off. Sook afterwards Lord Loughborough came in, and then Lord Rorth, and then Lird, Stormout, but the business was already despatched. They approved, however, perfectly what had been done.

Sir Gilbert was called in to Carlton House to join Burks and Sheridan in preparing an answer from the Duke of Charence (afterwards William IV.) to a harsh letter from the King, written under the Queen's influence. All this proves the confidence of his party in Sir Gilbert Elliot's judgment, a quality which pre-eminently distinguished him.

The French Revolution brought about a disruption of the Whig Opposition to Pitt. Burks, who first quarrelled with Sheridan and then with Fox, led the way to this disruption. Windham and Elliot, who did not follow Burks on the French question of Parliamentary retorm by Grey and Fox, both within and outside Parliament. They vigorously objected to the formation of the Society of Friends of the People, of which Grey was a foremost promoter. When Parliament met in December 1792 the Whig party was disorganized. Unable to obtain decisive action from the Duke of Portland, who frequently promised it and failed, Elliot came out in the House of Commons, December 28, declaring his differences of opinion from Fox, and saving that the Duke of Portland agreed with himself in support of the Government. Windham stood by Elliot:—

I went last night to Burlington House [the Duke of Portland's] with Windham. Fox came soon after, and we had a most unpleasant conference, each of us claiming the Duke of Portland, who is involved in such a labyrinth of inconsistencies as he can never extricate himself from. I was however, extremely relieved indeed by his avowing cosplicitly that I had his authority for all I had said in his name, or intended to pledge him for—that is to say, as to the resolution to support Government in those measures which the present crisis required.

France declared war against England in February 1793. Pitt was now in cordial rolations with Windham, Elliot, and those of the Whig party who agreed with them. When the letter announcing the French declaration of war reached Pitt, he sent "it inmediately to Burko, and desired that he would communicate it to Windham and me [Elliot]; and he generally joins us in anything like confidential communications." Overtures for office followed. Elliot was offered the Governorship of Madrus, and declined it. Soon after he was designated Civil Commissioner at Toulon, on its surrender to our forces by the French. Burke and Windham were delighted with the appointment. The Whig Lord Loughborough had shortly before been appointed Lord Chanceller, on Thurlow's dismissal. Elliot's was the second Whig official adhesion to Pitt; his brother-in-law, Lord Malmesbury, who had taken a similar course in the Whig party, was appointed Minister at Vienna; and in the next year, July 1794, the Duke of Portland, Earl Fitz-william, Earl Spencer, and Windham joined Pitt's Administration. One appointment led to another, and Sir Chilect Elliot basines.

One appointment led to another, and Sir Cribert Elliot, leaving England for Toulon in November 1793, did not return till March 1797, after he had been nearly three years Vicerov of Corsica. His Corsican administration brought him into very close relations with General Paoli, whose power over the Corsicans had effected the annexation of the island to England, but who, after a time, became dissatisfied at finding himself in a position inferior to the Viceroy, jenlous, suspicious, and a fomenter of opposition to Sir Gilbert. Sir Gilbert's letters are full of complaints of difficulties, increased for him by home mismanagement. In September 1796, without any previous notice, he received a despatch from the Home Government ordering the immediate abandonment of Corsica. Hardly was Corsica evacuated under these orders when Sir Gilbert, too late, received further despatches, announcing that the Government had changed their intentions, and wished Corsica retained. Sir Gilbert, after the evacuation of Corsica and termination of his Viceroyalty, went on a visit to Naples, where he saw much of Nelson and Lady Hamilton. He established a lasting friendship with both; his letters about them contain many interesting details, and are the letters of a kind and friendly critic.

Soon after his return to England Sir Gilbert was made a peer, with the title of Baron Minto. He was promoted to an earlion afterwards, towards the close of his Indian Governor-Generalship.

Soon after his return to England Sir Gilbert was made a peer, with the title of Baron Minto. He was promoted to an earlion afterwards, towards the close of his Indian Governor-Generalship. In 1799 he was appointed Minister at Vienna, and held the post actif the end of 1801. He had felt himself aggrieved by the sudden termination of his Corsican appointment, and by cerbain personal complications in which the Duke of Portland, the Secretary of State, who was his immediate chief, had by carelessness acted prejudicially towards him; and he did not regard the possess conferred on him as a full satisfaction of his claims. The following was written to his wife after he had been mode a peer. Lady Elliot had apparently urged on him an application to the Government:—

I shall do what is necessary and reasonable; but I shall not force myself too much on that point in opposition to feelings which are not to be listened to. There is so much dogust and humiliation to the sort of importantly which is required even for obtaining rigorous justice, that it approaches very near to meanness to submit to it. What I must aim at in to set record on higher ground by obtaining a larger slave of public and Publishmentary consideration. While I am a mere suitor even for justice, I shall probably be treated as such, and nothing diminishes real weight and estimation so much as that postage.

Lord Minto, on his return from Vicana, found Addington in possession of the Premierchip, and though his friend from Pelham (now Lord Pelham) was a member of the Administration, he took his place in the House of Lords as an independent member, more inclined against than for the Government. He disapproved of Addington's anti-Catholic policy, on which he had come into Pitt's place, and he also disapproved of the Peace of Amiens, Addington's handliwork. In May 1304 a combination of elements of opposition, including both Pitt and Fox, overthrew Addington, and Pitt was again Prims Minister, against the feeling of the King, who peremptorily objected to Fox being included in Pitt's Ministerial arrangements, and thus prevented the junction with Pitt of Lord Grenville and the Whigs, including Sir Ginbert Elliot. Pitt died in May 1805, and the Whigs came into power as "All the

Talents," under the presidency of Lord Grenville. Lord Minto was President of the Board of Control, and a few months after he was appointed Governor-General of India.

There is much variety in this very interesting book. Suddenly, in the midst of politics and Ministerial arrangements, we come upon such an incident as this, showing Lord Minto's thorough goodness of heart and simplicity of character:—

I met three little children lost yesterday in Piccadilly, and after trudging a mile or two through all the bye streets of St. James' parish, in rain, it ended in my being obliged to bring them to the hotel and desiring the landlady to bring them some supper and put them to bed, meaning to advertise them to-day. However, an hour after I was gone to Roehampton, the mother of one of them had discovered them with the help of the Cryer; and I was very glad to find to-day on my return that I was relieved of this family. I never saw an uglier little boy; and the two little girls no beauties. They had wandered from beyond Oxford Road; and are the children; one of a collar-maker, and two of a carpet-maker; they made me a full hour too late for Lord Buckingham's dinner.

children, one of a collar-maker, and two of a carpet-maker; they made me a full hour too late for Lori Buckingham's dinner.

Lady Minto, the editor of the work, has been fortunate in her materials. Lord Minto was an excellent letter-writer, and had matters of great interest constantly to write about to his wife. Burke and Windham are valuable correspondents. Letters to Lady Elliot from her sister, Lady Malmesbury, are very pleasant contributions to the work. It is right to add that Lady Minto has made a skilful use of her materials, and done nothing to spoil their effect. We have gone carefully through the volumes, and found nothing like error or inaccuracy, except the repetition of a charge against Spencer Perceval of unhandsome public conduct towards the Princess of Wales (vol. iii. p. 392); this was doubtless in print before the publication of Mr. Walpole's biography, which effectually disposes of the charge, and clearly establishes the thoroughly pure and disinterested character of an undoubtedly narrow-minded and bigoted politician. We have to note that Lady Minto, a propos of Sydney Smith and Holland House, suthenticates, on the distinct authority of Earl Russell, a remarkable story of a conflict of wit between Sydney Smith and the Prince of Wales, in which the latter had a marked advantage, told by the authoress of Holland House, and contradicted by the Quarterly Review. One story told by Lady Minto strikes us as very surprising; indeed, with all respect to so intelligent and painstaking a lady, we should say it was almost incredible. In connexion with the subject of crime in London towards the close of the last century, the following extraordinary adventure is mentioned as occurring to Lady Elliot, some time between 1782 and 1788:—

Her carriage was standing at the door of one of the great Loudon shops in a crowded thoroughtare. While her sister, who accompanied her, was speaking to a shopman at one window of the carriage, a gentleman, perfectly well known to her as a member of society, rode up to the other at which she sat, and stooping towards her, but without a sign of recognition, or a deprecatory or explanatory word, snatched her purse from out the carriage-baset and rode off with it at full speed. Lady Elliot never saw it again. In after years she was wont to tell the story as an instance of the desperate courses to which the gambling mania of the day drove its victims, but not even to her children did she ever confide the name of the individual who had placed himself at her mercy and was saved by her silence from overwhelming disgrace.

Cortainly this statement seems in every way extraordinary. The criminal was a well-known member of society. Why did not lady Elliot tell her sister, who was at her side? Why did she not tell her husband? This complete reserve surely prejudices the story, which we cannot but think that Lady Minto would do well to investigate further.

PHINEAS REDUX.

an excellent novel is the doubt whether it can be called a novel at all. Does the question of the Disestablishment of the English Church, discussed at elections, by leaders of parties in the House, in Cabinet Councils, and Clubs, alternating with the grievances of a master of hounds on the poisoning of foxes, constitute material for a novel? Above all, can that be a novel where there is no plot, where everybody, with the exception of one insignificant couple, is on the shady side of thirty, and all the love-making is carried on by a widower and two widows of mature years? We imagine the youthful reader will hold a very decided opinion that it is not. We can only say then that it is far more amusing than most of the novels which it is our lot to criticize, and that our pleasure in it is derived, not from sympathy with the author's views and propossessions, but from the play of qualities which are as essential to the novelist as either plot or lovemaking. Every generous reader must so far feel himself the friend of the author who has once bestowed on him the gift of pleasant hours, whose works have once charmed and absorbed him, that his success is a personal matter to him, and his failure in like manner a subject of personal regret. There have been times when Mr. Trollope's friends, recalling the pleasure they took in his earlier fictions, have experienced this regret. His later work has not seldom seemed to them a falling off; the subject perhaps was ill chosen, or the manner hurried, careless, mechanical; but here we see him himself again, enjoying his work, feeling the old mastery over his characters, and careful because the toil is congenial. Two points combine to bring about this success. The subjects are of a nature most attractive to

Phiness Redux. By Anthony Trollope. 2 vols. London: Chapman

the author, and his characters are his, as well as our, old therets. Both the recent action of political parties and the universal public interest in a long protracted total have evidently excited his keenest observation, for what interests the majority of people will always interest Mr. Trollope. But a novelist cannot be a mere observer or a mere reasoner; he has an inner area, a stage where all great questions and moving insidents have to be acted out, worked out, and talked out, according to his ideal of the fitting, the natural, or the humorous; and for this purpose Mr. Trollope entertains a standing company of the formers suited to his genius, who hold possession of the ground, ready to personify the gifts, qualities, and leanings of the master but with him a new personage is mostly a clever sketch; he cannot show, because he does not see, him all round. But with his familiars there is a perfect intimacy, there is such an entire grasp of his conception that they are parts of himself; he realizes so absolutely the whole man or woman on whom his fancy has long dwelt that his mind has not room for new images; the interests that occupy him most must be delineated by the old ones; they, and they only, have the knack of giving expression to his wit, thought, and observation. Some writers so circumstanced, retaining the image in their own mind, give it a new name and belongings, in the hope of mystifying the reader. For our part, we very much prefer to have the old set of people as we have long known them, rather than to see them under the most cunning transformation, which simply hampers the author and distracts his undivided attention.

Of course it is the thoroughness of his conception of characters that enables Mr. Trollope to make such large use of them. Take, for example, his Lady Glencora. How true to herself she shows on every occasion; how thoroughly he has malized in her case character, antecedents, and position in life, playing upon one another! One of the consequences of recurring again and again to the same dramatis persona is that an author grows fond of them. Habit and their faithful service make him like them. He calls Lady Glencora's good nature in a great measure caprice; and we know it is so. She answers too well to our own experience to doubt it. But the person who does good-natured things, and thinks it worth while to bestow her wit and liveliness upon us, is loveable in spite of the questions which an analytical survey of character raises. And the author who finds her the ready vehicle for his own vivacity likes her on similar grounds. Lady Glencora is a general favourite, because she makes things pleasant; though her good nature is largely qualified by caprice, and her kindness by patronage, and in spite of the recklessness which is so apt to betray—even in ladies who are not quite duchesses—a sense of vast superiority to the lesser people for whom laws and rules are all very well. Such a personage fits in excellently with sense of vast superiority to the lesser people for whom laws and rules are all very well. Such a personage tits in excellently with Mr. Trollope's cheerful portraiture of life. He certainly enjoys delineating that class of society which lives freest from the cares and anxieties that vex mankind at large, which consists of people who have the best of overything as a matter of course—state, rank, money, horses, and dogs, and the government of the country into the bargain. The reader relishes some of these pleasant circumstances at second-hand enough perhaps to sympathize with the hero Phiness, who, having once tasted what life is to a sharer of these joys, having who, having once tasted what life is to a sharer of these joys, having been listened to in the House and petted by the finest of fine ladies, finds life slow in Dublin, where he has retired upon a place under Government and married the "girl of his heart." It was under these circumstances that the reader of *Phineas Fine* took leave of him some few years back. And it has suited Mr. Trollope to recall him from obscurity rather than put a stranger on the old scene, though the arrangement compels him to cut off the life of Mrs. Finn prematurely, and to introduce her husband again to the reader with a great deal too much on his mind and hands, and especially with too ready a fitting into the old order of hands, and especially with too ready a fitting into the old order of things which was interrupted by his retirement, to have much time to bestow on her memory. The poor lady has to be ignored alike by author and reader. We gather that Phineas, the handsome Irish-man, is Mr. Trollope's ideal of the agreeable man—the man who man, is Mr. Trollope's ideal of the agreeable man—the man who combines those particular qualities which make everybody, especially the ladies, like his company; and perhaps we recognize a charm in this second appearance more than in the first; we see that he really is a pleasant fellow. Of course the man whom this designation fits is especially dependent upon general regard and estimation. Nobody can be pleasant who does not feel himself liked. And yet this comfortable persuasion must be free from vanity and self-assertion. We don't like either a vain or a pushing man. So the ideal agreeable man has a quick perception of what vanity and self-assertion. We don't like either a vain or a pushing man. So the ideal agreeable man has a quick perception of what is fitting and graceful without valuing himself on it, and attributes his general acceptance rather to good fortune than to merit. And yet he must have self-respect, and take his luck without much speculating or wondering at it. In fact, too much self-study, as well as any deliberate effort to please, is an absolute bar to char as well as any deliberate effort to please, is an absolute bar to charm of manner either in man or woman. And finally, the pleasant companion, the person who is perfectly adapted to the circle in which he finds himself, is dependent in an especial degree for happiness on its approval. All the faccinating qualities depend on a cordial response; they must be met, and see themselves reflected in approving eyes. It is, of course, indispensable that a hero six first high, if put into the dock at all, should make a grand figure there; and it is natural to the favourite of society to hold up heavely so long as the world's eye is upon him; but it is also natural that he should

break down when the size is over, more utterly than other people, under the consciousness that many of his friends bettered him guilty. He field that even the prospect of being hanged would not have tried and conquered his manhood so entirely as the knowledge, which his satisfit veness of opinion brought home to him, that many of his associates, and even of his friends, thought him guilty of the murder for which he was tried. Mr. Trollope, who of all things hates affectation, dwells on this mental collapse as to him for more interesting than stoical dignity or any aim at effect. things hates arectation, dwells on this mental collapse as to him far more interesting than stoical dignity or any aim at effect, any more of manner which should belie or conceal the inward agency. The situation is elaborated with great care, and the character is a study, though we consider that the intemperate language and behaviour which draw suspicion upon his here are both offensive and out of learning, but as something of the next was recommended. offensive and out of keeping; yet, as something of the sort was necessary to connect him with a murder, it has to be excused as indispensable to the story.

We do not complain of Mr. Trollope's courage in his handling

both of law and politics, though it amounts to audacity, and he may say, with his great predecessor in fiction:—

I do what I please with the Greeks and the Romans.

As time gets on, these masculine topics supply the place of love-making with readers as well as novelists, and Mr. Trollope's viva-city and perception make very lively subjects of them both. There is hardihood, certainly, in murdering the President of the Board of Trade and accusing a popular member of Parliament of the deed, but public events and proceedings have taken an eccentric turn lately, and we are used to surprises elsewhere than in novels. In such matters success is held to be the proper justification, and Lord Fawn in the hands of our old friend Mr. Chaffanbrass is a very instructive comment on scenes we are familiar with. for the evidence against Phineas, it is too slight for artistic effect, but we excuse this, and allow his friends the ladies to think that he is going to be hanged for the sake of the picturesque situa-tion and the truth of minor detail which show the master-hand. tion and the truth of minor detail which show the master-hand. The politics of the book serve the same purpose. It is, in fact, a satire on the Conservative party and their leader. Mr. Daubeny insinuates to his rustic and admiring constituents of East Barsethire some enigmatical phrases which, interpreted by his more advanced followers, prove to be a scheme for the disestablishment of the English Church. Of course the dismay of the one party at the inevitable task laid on their shoulders, and the rage of the other who see their own weapons turned against them, give occasion for a great many sharp sayings of the Rochefoucault order. The debatealso furnishes an opportunity for some clever portraiture The debatealso furnishes an opportunity for some clever portraiture in which Mr. Trollope betrays a strong prejudice, partly we think, due to his dislike of the impenetrable—of a manner which allows nothing to be read or deduced from it. Mr. Gresham is more to his mind, because here the observer is sup-

posed to detect, and in detecting to sympathize with, every pang of annoyance, irritation, or impatience.

No novel of Mr. Trollope's will be wanting in an example of woman's constancy. The victim of the quality in this case is not attractive, nor intended to be so. Lady Laura Kennedy, separated from her husband, unhappy, faded, and unamiable, bestows upon her once-rejected lover, now her lover no longer, a great deal of embarrassing fondness. Artistically she may not be ill drawn, but the reader is always sorry when she comes on the scene, and is quite ready to agree with the Duchess (our old friend Lady Glencora), who, when the other fair widow, devoted to the hero's interests, sadly prophesies that his end will be to marry Lady Laura, exclaims, "Poor fellow! if I believed that, I should think truel to help him to escape out of Newgate." But he does not marry Lady Laura. It might indeed have been foreseen that two marry Lady Laura. It might indeed have been foreseen that two such names as that of the hero and Madame Max Goesler must such names as that of the hero and Madame Max Goesler must come together at last and destroy one another like chemicals in combination. We have said nothing of Lord Chiltern and his standing grievance of Trompeton Wood, with which he troubles the last hours of the old Duke. It would be a greater injustice still to pass over the capital portrait of the ideal Master of Hounds drawn in a series of antitheses. There are many minor characters well sketched, and much animated description, but these the reader will not need to have pointed out to his attention.

TINNE'S WONDERLAND OF THE ANTIPODES.

FOUR hundred books, according to Mr. Anthony Trollope, of which however he had never read one, had already been written about New Zealand when his own work upon the Antipodes was given to the light. Yet, so far from the theme being exhausted, Mr. J. E. Tinne has little need for the apologetic tone with which he adds to the list number four hundred and two. Nearly all the recent writers about New Zealand, including Lady Barker and Sir recent writers about New Zealand, including Lady Barker and Scharles Dilke, having confined their descriptions to the South or Middle Island, where both scenery and people most remind the visitor of the home country, he preferred for the period of his visit in 1872 to turn his back upon the glaciers and lake scenery of the Southern Alps, and to betake himself to the exploration and study of the North Island, where not only are the natural phenomena. of the North Island, where not only are the natural phenomena pre-eminently wonderful for variety, heauty, and interest, but the

sami-tropical aspect of the vegetation under a personnel spring, and the indigenous manners and contoms of the Macri population, offer the charm of especial novalty. Without putting forth any pretention to write as a scientific explorer, and without claiming any specific qualifications as a naturalist, he brings to the teak of recording his impressions all the advantages which his in a genuine love of nature, and in an eye for all that is pictures que is sensory or piquant and characteristic in imperfectly civilized life. The training and muscular powers of an eminent University caremen and athlete doubtless stood Mr. Time in good stead during his contests with hardship and risk by flood and field, where firmness of nerve must combine with bodily endurance for the safety and the steady progress of the traveller. Further reminiscences of Oxford are not wanting in the shape of scrape of classical reading, somewhat trite and hackneyed it must be allowed, which come in every now and then to illustrate some critical episode of travel, or to point some moral of New World experience. We can but symmetric than writer in the ill fortune which has given over his to point some moral of New World experience. We can but sympathize with the writer in the ill fortune which has given over his manuscript to a corrector of the press who has had to draw upon the light of nature for the revision of the lines of Latin. The natural result is a list of errata over which a reader of classical taste may laugh or weep as the case may be. More telling as well as more opriate illustrations of what he saw and felt in the course of his

appropriate illustrations of what he saw and felt in the course of his rambles will be found in the photographs of scenes visited and described by him, which he selected with this view from studies on sale in Wellington and Auckland.

The result of Mr. Tinne's exploration, chiefly on horseback, during the year 1872, of the Hot Lakes of Rotorus and Rotomahana, continuing his journey to Lake Taupa and the town of Napier, is to confirm his mind as to the friendly treatment and the hospitable reception which are to be looked for from the natives, even of the most recently disaffected districts, by intending settless the Edge of the South. Not less inviting or sustaining to the smirits the Eden of the South. Not less inviting or sustaining to the spirits and the hopes of the new comer is the wondrous atmosphere which like an elixir of life exhilarates the soul and stimulates the frame. like an elixir of life exhilarates the soul and stimulates the frame. The sunset of the semi-tropical day is the hour when, above all others, this charm of nature is felt. The landscape is then bathed in a soft light which brings into clear relief the sharply-out outlines of the distant mountains and the foliage of the trees. On such an evening our traveller rode out of Auckland up the Grafton Road towards Mount Eden. His whole equipment was comprised in a value some fourteen pounds in weight, containing clothing and a small plus of tabacco for research to natives. No mantion is and a small plug of tobacco for presents to natives. No mention is made of firearms, even of the well nigh inseparable revolver; so easy and confident he seems to have been as to the welcome he was to expect from the tribes of the interior. Below him lay the was to expect from the tribes of the interior. Below him lay the lovely Waitemata harbour, with the extinct volcano of Rangitoto gracefully rising in the foreground, and far in the distance the purple ranges of Coromandel and the Thames, across which was to be seen the track lying over the Razor Back like a white line on the mountain-side. A fifty-two mile ride from his first night's halting-place put to a somewhat severe test the endurance of both the rider and the screw in which he had made an ill-starred investment but which he have your he was able to change advantage and act ment, but which, however, he was able to change advantageously at Walker's Swamp at Moans-tui-tui. Neither creature comforts no civilized companionship are wholly wanting in the New Zealand bush. Mr. Tinne seems to have come day by day, even between the intermittent townships, either upon some comfortable but or hospitable farmhouse, while in every settlement dignified with the name of town was to be found an hotel more or less in the style to name of town was to be found an hotel more or less in the style to which the wayfarer is accustomed at home. He regretted much not having visited Alexandra and Te Awamutu, which lay not far off his path, the homesteads there being described as presenting a more thoroughly English aspect with their neat enclosures and country stiles. Crossing the plains from Ohaupo to Cambridge on a still, close day, the notice of the traveller is attracted to the pillars of dust which rise in whirlwinds like waterspouts, scud across the fields, and as suddenly collapse. Here Mr. Tinne made the acquaintance of a retired Major, a brother of our Consul at Tripoli, where he had himself spent six months investigating the circumstances attending the melancholy end investigating the circumstances attending the melancholy end of a Dutch lady traveller who was murdered by natives some few years ago. Amongst other bush stories—some, it was few years ago. thought, overmuch in the vein of Munchausen—the Major gave a bit of his own advice to a new "chum" or novice in colonial life. Being asked what amount of baggage he would advise, he himself carried, he replied, nothing beyond a moderate-sized empty canvas bag. "If it rains," quoth the old bush-hand, it is the hear and walk the color of the hear and walk the color of the hear and walk.

advise, he himself carried, he replied, nothing beyond a moderate-sized empty canvas bag. "If it rains," quoth the old bush-hand, "I immediately take off my clothing, place it in the bag, and walk on till it stops, when I am in the enviable position of having a dry suit to fall back on at the end of my journey."

One of the first incidents of native life which struck our traveller's attention was the proof of a capacity for engineering, dating from a very early period. The history of his swamp given by Mr. Walker threw a curious light upon what seemed at first sight a lusus natures from its height above the place. at first sight a lusus natures from its height above the place and the facilities for drainage. Centuries ago, it appears, the and the facilities for drainage. Centuries ago, it appears, the Maoris, who even now subsist to a large extent upon eels and sharks' fins, dammed up the stream running from this plateau with a strong and wide barrier of fascines, which were disclosed to view by a deep drain recently cut through the land. Having thus formed immense eel preserves or stews in the soft mud, they left a very small opening in the centre of the dam, where they laid their wicker traps or baskots. The same high intelligence applied to the art of fortification was often shown to our

^{*} The Wonderland of the Antipodes; and other Sheiches of Travel in the Forth Island of New Zesland. By J. Benest Tinne, M.A. (University folloge, Oxford). With Map and numerous Illustrations by the Antotype neess. London: Sumpson Low & Oc. 1879.

cost when a Maori pah had to be stormed in the late war. In many characteristics these simple but hardy and keen-witted islanders reaemble our own predecessors as depicted by the earliest Greek and Roman authors, or as brought before us by their pre-historie proofs of art and organization. That the old intuitive sense of bospitality and good manners exists in the New Zealander of to-day is shown by perpetual traits in the reception of strangers by the natives. Such a trait was displayed on the first evening spent by Mr. Tinne in a native tent, when a young girl, after peeping in several times, and seeing that he was the only one of the party without a blanket, pulled off her own new shawl with a muttered ejaculation of pity, and threw it over him, running away immediately to nestle in the adjacent mass of Maori humanity, where he could only hope she found warmth enough to compensate for the loss of clothing. We are glad to hear that she was rewarded the next morning with a plug of his best tobacco, which evidently more than repaid her for the loan of the shawl. That the fragrant weed has charms for every stage of Maori life is shown by a nasty habit which women have of sticking their pipe through the lobe of the ear, disfiguring it most revoltingly, as well as by their quieting the babes strapped to their backs by handing them a half-finished pipe to suck. A more odious practice is that of themselves acting as wet-nurses to amall pigs and puppies, of which Mr. Tinne has "no reasonable explanation to offer," not having apparently come across the reasoning of the South American chief when defending to the missionary the like usurpation by such animals of the prescriptive food for babes—"Piccaninies plenty; pigs and puppies few!" That wholesome and palatable food of a stronger kind is forth-coming in due need and season he found when treated in the hospitable hut of the old "rangatira," or native gentleman-farmer, and his wife, to a mess of chickens, onions, and potatoes, which the thought a great may also the pre

the steam had time to escape, filled the hole in with the fish, potatoes, and squashes which thoy had in readiness. Over all were patted down some armfuls of flax, fern, and soft mould. In about twenty minutes a delicious meal was the result. It may be that the brisk appetite had something to do with the preference expressed for it by the author over the usual boiled vegetables of a European cuisine. The fresh-water crayfish (goura) found in these lakes are justly thought a great deal of, and he found two or three dosen go down very easily, in spite of the dirty fingers of the old hag who insisted on shelling them for him.

Among the hot geysers the natural boiling holes supply a ready means of cookery, while the cooler crystal pools yielded watercresses in great abundance. Along the shores of Rotorus some of the curious "falt-balls" wore picked up, composed probably of the coats of fibrous plants rolled into shape by the action of subaqueous geysers. There is no little danger to horse and man of breaking through the treacherous crust which covers unknown depths of scalding mud. One of the party, setting down his foot imprudently a few inches from the beaten track, was just hauled out in time, with his ankle and instep badly scalded. On the way over the great terrace of Te Tarata one of the old Maori women screamed out lustily at finding the horny soles of her feet beginning to blister, and she had to be landed by the rest of the party making stepping-stones of themselves, a moderate douceur contributing to her cure. That the volcanic energy of this district is somewhat on the decline would seem to be inferred from the fact that no trace could be found by Mr. Tinne of the great geyser shown in the frontispiece to Lieutenaut Meade's Hot Lakes. Joining in a conversatione with a large party of natives, irrespectively of sex, stewing themselves while their evening potatoes and calabash were boiling in a hole hard by, he found that he was actually bathing on the spot where this magnificent jet formerly arose. At tim

Business, as much as pleasure, drew our author to dive into this novel and somewhat troubled sea of experiences. About a hundred miles north of Auckland his brother had set up on a considerable scale a mill for manufacturing fibre from the Phornesum tenar, of which promising industry readers of Lady Barker's book have heard so much. Here, for some months, he worked his hardest, in alternate drought and rain, when the mill-hands refused to turn out, his hands sore with pulling a clumsy punt or flat, with ears to which Searle's or Salter's weightiest would be the merest feathers. Of the prospects of this branch of native produce Mr. Tinne is most sanguine, seeing that it already cuts out the hemp of Manilla in the market of San Francisco, where immense rope walks are constructing in dependence upon the New Zealand fax. For

strength of fibre, no less than for rapidity of growth, he discerns for it no rival, nor are its uses readily limited. A strip of the green leaf of this also-like plant, especially if slightly heated at the fire to melt the gum, will mend a stirrup leather, or girth, or do for a boot-lace. The very refuse when fresh forms an excellent febrifuge, or tonic, not unpleasantly bitter to the tasts; and, since nobody is often sick in New Zealand, it becomes farther of use and ornament when boiled as a rich brown dye; while, in conjunction with the peaty water of the swamps, it is employed to colour the pretty hand-bags, kits, and mats which the natives plait for sale in Auckland and New Plymouth. New Zealand flax saving survived as well the antipathies and prejudices which beset a new manufacture as the blind rush which brought to it schoolmasters, clergymen, and small capitalists with even less knowledge than means, hopelessly to burn their fingers, there are now men of experience and energy combined with capital from whom may be expected a wide and remunerative development of the new staple. Mr. Tinne's photographs give a good idea of the rich and dense vegetation of the phormium bush, its gracefully curving stalks nearly forty feet high, from which hang crimson petals, yielding to the wild bees the sweetest of honey. No bush or river scenery has been seen by Mr. Tinne like it for loveliness. The beauty and the physical features of the volcanic terraces and hot springs do not come so well under the hand of the photographer, the glistening white marble and the streaming cascades baffling the power of the lons. These illustrations, however, as a whole, add much of vividness and embellishment to a work handsomely printed and got up.

POSTHUMOUS PAPERS OF NAPOLEON III.*

WE do not profess to know the personal history of the Count de la Chapelle, or how it came about that the former War Correspondent of the Standard, and tolerably free critic of the Imperial strategy, became the confidant and literary executor—for the position he claims is no less than this—of the fallen monarch in his last days at Chislehurst. We are concerned with only two preliminary questions in approaching the work before us; the first, as to how far we may trust the editor's account of the genuineness of those portions of it which he attributes to Napoleon; the second, the degree of historical value to be assigned to the various fragmentary writings which are jumbled into the volume.

various fragmentary writings which are jumbled into the volume.

On the first head the reader might rest satisfied even without the lithographed copies of bits of the Emperor's manuscripts, which are freely offered him as evidence. Napoleon III., even in his days of decline and depression, wrote very much better himself than his editor could have done for him. When he has a lame story to tell, he tells it to the best advantage possible. And he shows in every paragraph of the military and political sections of his writings that special knowledge of the expert in which the Count, who so devotedly admires him, is hopelessly deficient. Moreover, of the three essays of his here collected (for the last two chapters of that printed as "The Campaign of 1870" at the end of the volume are, in fact, a separate work from the other five), two were published during the ex-Emperor's residence at Chislehurst, and were openly attributed to him without any contradiction. These are the "Principles, by an Old Diplomatist," and "The Military Forces of France," the latter forming the five chapters above spoken of. As these have been long before the public, we shall diamies them with but a brief examination.

shall dismiss them with but a brief examination.

The "Principles, &c.," is a theory of a thoroughly Napoleonic order developed at some length, and freely applied to the circumstances of Europe from 1815 to 1870. Barely stated, it is this. Europe was bound to recognize the assumption of sovereignty by Napoleon I. for himself and his heirs, and was equally bound on principle to frown on all other changes of government in France. Put thus nakedly, the proposition is startling enough; but the nephew and heir of the great Emperor was of course not the man to state it without giving something like argument in favour of what seems so unjust to the revolutionary movement to which his family has owed so much. Following his own words, the reasoning runs thus:—The sovereigns of Europe, being once fairly compelled by a twolve years' war "to recognize the new dynasty of Napoleon I., understood that this recognition . . . could not be considered as the abandonment of a principle, but sanction given to one of those great historical facts which appear at intervals of many centuries, such as . . . the substitution of the House of Hanover for that of Stuart." Such an exception, it is added, could neither form a rule nor establish a dangerous precedent. But when Europe in coalition dethroned Napoleon I., after admitting his dynasty for tan years into the family of sovereigns, she dealt a fatal blow to recognized rights. The punishment was not long delayed, and 1830 overthrew the edifice founded in 1815. These very same sovereigns then suddenly changed their line of conduct, and made up their minds to recognize for the future every de facto Government, whatever its right or origin. This is the want of sound principles of which the "Old Diplomatist" complains, especially when it is estrict so far as to "show the weakness and revolting cynicism" which permitted the Government of the 4th of September to be publicly acknowledged.

Now there is real shility of a perverted sort in all this casuistry. The falseness of the argument, which otherwise would

* Posthumous Works of Napoleon III, in Easth. By the Count de la Chapelle. Loudon: Sampson Low & Co.

m real examples in the last in the party basis, the facts of the sealest Repoleon I. For these were not carried on, as asserted, "for twolve years first mentioned, want against Napoleon 1.

is asserted, "for twelve years"—the twelve years first mentioned, from 1702 to 1803, are here evidently meant—to put down from 1702 to 1803, are here evidently meant—to put down Kapeleon and his dynasty, which eventually triumphed, but were simply sondanted, after the very first feeble campaign of Brunswick, to control and limit the ambition of France. The successful general of France got his new rule acknowledged indeed among the conditions of peace, and that rule was also the choice of France at the time. But in this there was no also the choice of France at the time. But in this there was no missister whatever, but a bare acknowledgment of the existing principle whatever, but a bare acknowledgment of the existing facts which for the moment had turned General Bonaparte into the sovereign of France. Had he been able to retain his position the sovereign of France. Had he been able to retain his position without attacking his neighbours, the dynasty which was acknowledged with him and upheld by his aword for ten years of fresh wars, might no doubt, in the course of a generation or two, have very possibly come into the legal position claimed for it. That it never had the chance of doing this was entirely his own choice. He played for a higher stake than France, and in doing this lost all to those from whom he had originally won the acknowledgment of his sovereignty. The theory here broached, when reduced in the crucible of historical truth, would be consider who saives supreme power amount to this - that the successful soldier whoseizes suprome power

broached, when reduced in the crucible of historical truth, would amount to this—that the successful soldier whoseizes supreme power in a country weary of the turnoil of revolution is not only, when accepted by it, to be accepted also abroad, but is entitled in his new capacity to make conquests to any extent among his neighbours without expeaing his young dynasty to suffer with him should he be defeated. This is a theory which even believers in modern Capacism will generally shrink from when viewed in the abstract; and it may be well left to such ardent supporters of this new form of right divine as the Count do la Chapelle himself.

Of the second of the ex-Emperors casays, which has been also previously republished, although little noticed, still less needs to be said here. What can it possibly profit now to the friends or enemies of the reputation of the dead sovereign to pursue his elaborate calculations of what his army needed for its efficiency, and of the means by which all requisites might have been supplied, when the will was wanting which alone could have carried on the work, supposing its defects were indeed really recognized before war brought them to light? How feeble the mind of the man was whose careful "predeliberations as Chief of the State" are here laid before us, his own writings prove more forcibly than may argument from the outside world. We will quote but one passage illustrative of the curious imbecility which made a really clever thinker apparently helpless in the hands of mon whose brains were as inferior to his own as their official position. Apologizing for the want of real organization which all the world discovered before the war was a month old, Napoleon III. tells us—

The Emperor several times urged that the regiments should be allotted to divisions, a plan which would have the advantage of formur, the staffs

The Emperor several times urged that the regiments should be allotted to divisions, a plan which would have the advantage of forming the staffs beforehand, and placing the various generals in communication with the troops they had to command, but at the War Office so many obstacles were made to the scheme that he was obliged to relinquish it.

We in England, of all countries in the world, who have recently shown that we had actually not the means of sending out a single weak brigade to Africa without collecting troops, staff, and general from various quarters by something that was near akin to chance, have little reason to sneer at the unreadiness of the French in 1870 as compared with their opponents. But then we have not at the head of our military affairs a "Chief of the State," or any other chief, who professes to be bent on thoroughly reforming our system; and there is the same difference between the cases of England and France as between that of the man who blindly stumbles along the wrong road under the belief that he is wisely standing on the old ways, and that of him who, knowing what is right, wilfully allows himself to be kept from it by a set of dullards

self-chosen as his confidential servants and advisors.

Passing on to the hitherto unpublished portion of the book, reasing on to the interio impunished portion of the book, the two chapters on the campaign of 1870, we find ourselves once more, in the fallen Emperor's story, treading the same ground which we had already gone over in his first hasty apology for his disaster issued to the world from Wilhelmshohe. Nor are we sure that the "causes which led to the capitulation of Sedan" are in any sense more faithfully or perfectly told. of Sedan" are in any sense more faithfully or perfectly told in this new work than in the pamphlet so named; whilst the Chislehurst statements want the freshness and reality of the shorter narrative. This, indeed, is very much repeated here without being greatly improved; as, for instance, at the opening, where the abortive project for crossing the Rhine suddenly into South Germany is again explained at needless length; the chief difference which we detect here being that the original French available army of a quarter of a million has abrunk since the Wilhelmshohe pamphlet was published to two hundred and twenty thousand men—a number which may just as probably be the correct statement of the combatant strength at the outset of the campaign, and, if it he so, only makes the rushness of the Imperial policy seem more senselessly foolhardy and miscalculated than before. Dousy's corps, by the way, is not included here. As the ex-Emperor more senselessly foolhardy and miscalculated than before. Dousy's corps, by the way, is not included here. As the ex-Empasor writes, "it experienced great difficulties in forming," which, as a general fact, is perfectly true. Had the pen which wrote that single line about it desired to do history true service, it would have left the strategical blunders which followed thickly to be told by others, and applied itself to trace out the zero be told by others, and applied itself to trace out the zero were massed in these positions so as to afford an excellent mark for the enemy's fire. A similar complaint is urged against wellington in reference to the siege of Burgos, which, says the client of the disasters of the Second Empire in that thorough social demoralization which began with the Court of St.

Cloud, where it kept this very General Dousy (as the world.

learnt from the narrative of the Volunteer of the Anti-the Rhine) hanging about the palme for a week to comp tour of attendance at the Imperial table, whilst his new of was allowed to form itself near Belfort without him. Wi was allowed to form itself near Belfort without him. When this was the idea of duty to the State which the Sterend Empire had inculated in its chief soldiers—and Douay is by no means an unfavourable specimen of the class it raised up—who can wonder at the rottenness of all things below them?

Of the rest of this memoir, which ends with the autobiographer's arrival at Wilhelmshole, it may be said as a whole that it is not written in sufficient dutail to make a substant in sufficient dutail to make a substant in sufficient dutail to make a substant and the sufficient dutail to make a substant and the sufficient dutail to make a substant as a substant in sufficient dutail to make a substant as a

pher strives at vinicinations, it may be send as a whose tast as not written in sufficient detail to make even valuable suctivial for the historian, and that the personal particulars given by Napoleon III. of his own scutiments and movements are of little interest save to devoted Bonapartists. To us, if desiring to study his last days of rule, it seems that more may be learnt from the Count de la Chanelle's tawdry narrative than from the confessions. study his last days of rule, it seems that more may be learnt from the Count de la Chapelle's Luwdry narrative than from the confessions of the monarch he adores. When one reads, for instance, thoughtfully that one page which describes, with all the power of a Court newsman, the first arrival of the Imperial cortège at Mets just before the campaign opened; the Cent Clardes resplendent in their sky-blue uniform and scarlet fixings, the outriders in the Imperial livery the squarry the open carriages, the long suits, and all the livery, the equerry, the open carriages, the outriders in the Imperial livery, the equerry, the open carriages, the long suite, and all the gilded paraphernalia which had been wont to dazzle the loungers of the Rue Rivoli, transported down the Moselle to be metched against Moltke and his staff—one knows not whether most to wonder at the follies of mock Imperialism, or at the fact that the man who was thus led about adorned and helpless as some crowned and gaudily dressed sacrifice had in him deep thoughts, large knowledge, even great aspirations, and yet no spark of the necessary strength of purpose. And for want of this history will pronounce him but a clover dreamer, the ready-made tool of his own creatures, selected though these often were for their very inferiority in intellectual power to the master whom they ruined.

DUNCAN'S HISTORY OF THE BOYAL ARTILLERY.

THE general effect of this book is disappointing. It repeats the outlines of the history of the great French war, with which we are all familiar, and superadds details which may perhaps interest an artilleryman, but are exceedingly wearisome to the general reader. The chapter on the Walcheren Expedition of 1809 has, however, the merit of presenting a view of that unfortunate unhowever, the merit of presenting a view of that unfortunate undertaking different from that which is generally entertained. "Justice," says the compiler, "has not been done to the conception and partial execution of this expedition." There was a strategic value in the idea, which was proved even, by its incomplete realization. And there was a determination and an uncomplaining suffering among the troops, "which have been ill repaid by the nameless graves of Walcheren." We must all feel persuaded that the artiflery did their duty alike in disaster and in victory. Quagnat delirant reges, plectuatur Achies; whatever folly Ministers and generals commit, the soldiers suffer for it, both in person and reputation. The heroes of defeat necessarily fight under a cold shade, and in our desire to forget national humiliation we treat with immerited neglect examples of individual courage and capacity. The capture and dismanting of Flushing courage and capacity. The capture and dismantling of Flushing appears a miserably inadequate risult of the employment of an army of nearly forty thousand men. Napoleon, when he heard that we had occupied Walcheren, said that he was perfectly satisfied that the Euglish should die there without assistance from him. The sickness was fearful, but the compiler thinks that it was due to exposure, injudicious diet, and inefficient hospital arrangements, rather than to any local influences. After the capture of Flushing, the commanding officer of artillery claimed, on behalf of his corps, the bolls of the city, or an equivalent, according to ancient custom; but the inhabitants protested, and petitioned the English Government, which disallowed the claim.

Lamentable as was the waste of power in the Scheldt, Wellington thought that at that time it would have been equally wasted in Spain. If, he said, we had had sixty thousand men instead of twenty thousand, we should probably not have got to Talavera to fight the battle; but if we had got there, we could not have gone further. The account given in got there, we could not have gone further. The account given in this book of the battle of Talavers adds nothing to our knowledge, except that the artillery did their duty, and sustained a loss which is exactly stated. We really cannot see the utility of such a history. Crawford's fight upon the Coa is described in Napier's history. Crawfords nght upon the Coa is described in Napaer's language, with the addition that Captain Ross commanded the artillery. It is stated that in the battle of Busaco, Wellington displayed an ignorance of artillery tactics from the results of which he was happily saved by the intelligence and gallantry of the representatives of that arm. "This want of knowledge, which he never overcame, was the cause of a not infrequent irritation content overcame, was the cause of a not infrequent irritation." against artillery as an arm, and a tendency to depreciate its value."
This statement adds something to our knowledge, or at least to our notions, of the battle to which it refers. Instead of massing the artillery in reserve until the attack should develop itself, the guns were placed, as a rule, in the eastest parts of the position, where it was supposed the French would attack, and they

compiler, "is a blot on his military reputation, and revealed an ignorance of what artillery could and could not do, which every now and them manifested itself in his military operations." It has been stated by an officer likely to be well informed, that Wellington need not have undertaken this siege with inadequate means, as there would have been little or no difficulty in augmenting the siege train to any extent, either from the guns and ammunition found at Madrid, or from ships on the coast. Wellington believed in the bayonet beyond any other weapon, and, if a legitimate belief became occasionally credulity, it is hardly to be wondered at when one reflects on the gallantry of the infantry which he commanded. What seemed to be impossibilities were found, when ordered by him, possible, and the consequently increased belief in the power of the hayonet seems natural. But this creed was supported at terrible cost. The want of adequate ordnance was often severely felt by Wellington, and compelled him to an exaggerated use of other arms; but this fact was hardly an excuse for neglecting its employment when available in sufficient quantities, and obtainable with moderate exertions. Such is the substance of one of the few passages of the book before us which make anything like an original contribution to the history of the Peninsular war. We can easily understand how barbarous Wellington's procedure must appear to the scientific artillerist who is used to wield the tremendous power of modern ordnance. At the first siege of Badajoz the only guns employed were Portuguese brass guns, nearly two hundred years old. Afterwards iron guns were brought from England; but, looking to the wealth and mechanical skill of this country, it is wonderful that the general should have trusted so largely to the simple method of the bayonet. He stormed cities "with rapidity and loss of life" rather than complicate his plans by indulging in siege operations of a larger and more regular description. At the battle of Vittoria the artillery w

The American war and the battle of Waterloo are described in the compiler's least interesting manner. One troop of horse artillery had been reviewed a few days before Napoleon's advance by Blucher, who declared that every horse was good enough to mount a field-marshal. There were 200 of these splendid horses, and 140 of them perished in the battle. A letter of the Duke of Wellington, published only last year, contained some sharp and apparently undeserved strictures on the conduct of the artillery at Waterloo, and originated a controversy which imparts almost the only novelty to this book. After the battle of Vittoria pensions for service had been given to field officers of artillery by the Board of Ordnance without consulting the Duke of Wellington. He was not unnaturally irritated at this interference of the Board, and when a similar claim was referred to him after Waterloo, he advised its rejection, adding, "To tell the truth I was not very well pleased with the artillery in the battle of Waterloo." He complained that his artillery fired on the French artillery instead of reserving their fire for bodies of troops, and also that when the French cavalry charged, the artillerymen retired too far and could not get back to their guns in time to fire upon the same cavalry in retreat. "Mind," he says, "I do not mean to complain," but it would not do to reward a corps under such circumstances. The artillery, like others, behaved most gallantly; but when a misfortune of this kind has cocurred, a corps must not be rewarded. He says he has objected to all propositions for a history of the battle; for, if a true history be written, what will become of the reputation of half of those who have acquired reputation, and who deserve it for their gallantry, but who, if their mistakes and casual misconduct were made public, would not be so well thought of? A critical discussion of everything that occurred would show ample reason for not entering into the subject. It might be added that even the Duke himself would lardly escape

critical discussion.

The compiler contrasts with the censure of this letter the commendation bestowed upon the artillery by the Duke's despatch, and he shows that one passage of the letter states that the army "behaved most gallantly," while another passage appears to state that the same army ran away. When the charges of French cavalry took place, the English guns lined the creat of the position, and the infantry had formed in squares in their rear. The order given by the Duke was that the artillerymen should stand to their guns as long as possible, and then take refuge in the infantry squares, and that the limbers should be sent behind the squares. The idea of six limbers, with six horses to each limber, going into a square of infantry, was of course an impossibility, and was never contemplated. The gunners had

cartoush-boxes slung round them containing ammunition, and invariably took refuge in the adjacent squares, or under the beyonets of the kneeling ranks. When the cavalry retired, the gunner ran out, and the guns were in action against the retiring cavalry before they had got sixty yards. The delay of a few moments occurred once or twice while shot was being brought from the limbers, and the Duke expressed impatience on such occasions. But the delay never exceeded a few moments, and no limber ever left the ground. It is said on good authority that there was an exception to the general practice of the gunners retreating into the squares of infantry. Captain Mercer thought that if his men left their guns the infantry (not British) which was near him would immediately run away; so he stood to his guns, and drove back the hostile cavalry. The Duke's remark that the army which fought at Waterloo was an entirely new one was much more applicable to the infantry than to the artillery. It would certainly seem from this letter that the Duke had such a prejudice against artillery as the compiler represents. It is a pity that the letter should have been published, as it only shows, what might have been otherwise suspected, that the Duke was sometimes hasty or imperfect in his judgments. The conduct of the artillery must have been visible to the whole army, and the compiler forcibly urges that no word was spoken after the battle to their prejudice. If it were not that this aspersion on their corps has given pain to many gallant soldiers, we should almost rejoice that it had beer found possible to start a fresh controversy about the battle of Waterloo. We think that the compiler has abundantly proved that the artillery at Waterloo did their duty, and, considering that it was commanded by veterans of the Peninsula, we should think the contrary supposition in the highest degree improbable. It is best to assume that all branches of the service did their duty on that day.

FRENCH LITERATURE.

The learned Professor of History at the Sorbonne, M. A. Geffroy, has just published a volume which we hasten to recommend to our readers.* In a series of interesting articles contributed to the Revue des Deux Mondes he had endeavoured, taking as his text the Germania of Tacitus, to describe the elements of the old Teutonic society, to sketch its religion, its customs, and its laws, and to place before us an animated narrative of the struggle which the Roman Empire carried on up to the time of Trajan against the barbarians inhabiting the wilds of Germany. It is the collection of these articles (or lectures, for they formed part of a course delivered at the Sorbonne) that has now reached us, and we may safely say that Tacitus has seldom had so able a commentator as M. Geffroy. The former works for which we are indebted to our author well qualified him to elucidate the complex character of Toutonic civilization; he had made Germany and Northern Europe the special subject of his studies, and his acquaintance with Scandinavian literature is probably unequalled by any other French scholar. Before making use of the information supplied in the Germania, it was obviously necessary to prove that the work itself is trustworthy, and to determine the merits of Tacitus as an historian. This preliminary question takes up the first two chapters of the book; the third and fourth are devoted to a detailed account of the religious, political, and social institutions of the Teutonic races, whilst the fifth and sixth deal with the various phases of the contest between Rome and the Barbarians. In concluding this important work, M. Geffroy discusses the opinions respectively maintained by the Abbé Dubos and by Montesquieu with reference to the invasion of Gaul in the fifth century, and he has no difficulty in showing the utter fallacy of the former. We need scarcely add that our author has carefully consulted the numerous essays and treatises composed on the subject by French and German writers.

consulted the numerous essays and treatises composed on the subject by French and German writers.

M. Zeller's new book † might be entitled, "On the Power of Imagination in Political Disturbances." Italy has supplied the world with specimens of almost every kind of revolution; the Sicilian Vespers were connected with a national rising; the movement at the head of which Arnold of Brescia placed himself was a kind of classical episode carried out according to a pattern farnished by the annals of ancient Rome. Mysticism formed the fundamental element of Rienzi's enterprise, while Socialism endeavoured, under the direction of Michael Lando, to establish itself at Florence during the fourteenth century. Masantello's émeute had all the characters of a merely popular disturbance. If every one of these five insurrections failed, it was, says M. Zeller, because no Government can be permanently established except with the help of wise and sober-minded persons who look at things from a practical point of view, and do not allow themselves to be led astray by utopias. M. Zeller writes in a clear and picturesque style, and his little volume is very amusing as well as instructive.

The life of Lord Herbert of Cherbury has afforded M. de Romusat an opportunity for making a new crusade in favour of rationalism.; He complains bitterly that the movement so brilliantly begun forty years ago by Royer Collard and Victor Cousin has proved abortive, and that the only school of philosophy

^{*} Rome et les barbares, études sur la Germanie de Tacite. Par M. A. Geffroy. Paris: Didier.

† Lord Harbert de Cherbury, su vie et ses suserus. Bur Ch. de Rémusat.
Paris: Didier.

popular at the present day is that at the bead of which MM. Auguste Counts, Litter, and Taine have placed themselves. The fact may be deplorable, but it is easily accounted for. M. de Rémuest quotes the names of Leibnitz, Thomas Aquinas, and others, to prove that in former days even the thinkurs the most attached to revealed religion would not have opposed, as Roman Catholical do revealed religion would not have opposed, as Roman Catholical do revealed religion would not have opposed, as Roman Catholical do revealed religion would not have opposed, as Roman Catholical do revealed religion would not have opposed, as Roman catholical do revealed religion when the second religions to the contract of the country of the contract attached to revealed religion would not have opposed, as Roman Catholicism does just now, the efforts made by independent metaphysicians to ascertain the great truths which form the substratum of all sound spiritual teaching. He forgets, however, that during the seventeenth century, the Renaissance period, and the middle ages, the philosophers who heat deserved that title accepted the data of revelation, and explicitly declared their adhesion to Christian theology; whilst explicitly declared their adhesion to Christian theology; whilst the great majority of contemporary French metaphysicians scarcely take the trouble to conceal their belief that philosophy, as they call it, is not the handmaid of religion, but its substitute. M. da Rémusat may be regarded as the most distinguished veteran of the school of speculative theism, and in his biographical sketch of Lord Herbert of Cherbury he adds a valuable instalment to a brilliant series of monographs on the history of philosophy.

able instalment to a brilliant series of monographs on the history of philosophy.

The third volume of M. Guizot's Histoire de France * takes us as far as the death of Henry IV.; that is to say, it contains the whole of the Valois dynasty, Francis I., with the brilliant-but useless Italian campaign, the wars of religion, and the League. In point of interest, therefore, it stands unrivalled, and the attring scenes which marked the introduction of Protestantism into Biography and described with wonderful virgue. M. Christians into France are described with wonderful vigour. M. Guixot aketches not only the intrigues of politicians and the exploits of great commanders, but the development of literature, the splendid fruit of the Renaissance, and the progress of scientific research in its various branches. Rabelais, Clément Marot tific research in its various branches. Rabelais, Clément Marot (the poet who contrived by his translations to make the Psalms of David fashionable even in the most corrupt Court of Europe). Calvin, Erasmus, and the two Marquerites, may be quoted as some of the leading pictures in this brilliant gallery. M. de Neuville's illustrations are extremely spirited, and the publishers have done well in giving a facsimile of Henry IV.'s celebrated declaration at Rouen, in November 1596.

M. Ménant † has rendered a service to science by the publication of his Assyrian annals. Hitherto the information which is to be found in the cunciform inscriptions had supplied materials only for monographs, or for explanatory notes such as those printed

for monographs, or for explanatory notes such those printed by Sir H. Rawlinson in his translation of Herodotus and in his "Great Monarchies." M. Monant is the first scholar, we believe, who has arranged these numerous documents chronologically, so as to place before us a complete set of Fasti in which the Assyrian despots are left to speak for themselves. It is very noteworthy, as our author remarks, that no people of antiquity ever took so much pains to send down their records to posterity. The history of Nineveh and Babylon is engraved on marble, on brick, on stone; it covers the walls of temples and of palaces; columns, cylinders, tablets of every size and shape are filled with it, and wherever any space remains available between two series of bas-rehefs, there rows of cuneiform characters appeared in quaint array. M. Ménant observes that in certain edifices every single brick bears a stamped inscription containing the name and genealogy of the monarch who caused them to be erected. This cacoethes scribendi has proved an inestimable boon to the students of antiquity for the result has been an accumulation of students of antiquity, for the result has been an accumulation of historical evidence such as never was realized before. may add that the burnt clay used for the purpose of preserving these documents is almost indestructible, and that the most terrible imprecations were fulminated against any person bold enough either to destroy or to deface them; hence the mass of data now within our reach, which seems perfectly incredible considering its extraction and the state of the person of t antiquity. M. Monant has, we think, been very successful in the arrangement and translation of these inscriptions; and his work, illustrated by occasional disquisitions and excellent maps,

is a masterpiece of scholarship.

The second volume of M. l'abbé Houssaye's Life of Pierre de Bérulle I describes the circumstances which led to the establishment Birule I describes the circumstances which led to the establishment of the Oratoire, and the difficulties which the founder of the Erench Order had to encounter on all sides. About the beginning of the seventeenth century the state of the Catholic Church on the other side of the Channel was deplorable; if ignorance and superstition prevailed amongst the laity, the condition of the priests was not much better, and from the evidence of Bishop Camus, quoted by M. Houssaye, we find that sporting parsons were of frequent occurrence. These irregularities originated no doubt with the civil wars, and they had become so scandalous that a reform was imperative. De Bérulle undertook it; he threw into it all his energy, and, thanks to him, France witnessed the foundation of an Order which soon rivalled the Benedictines in learning, and which boasted of men like Malebranche, Richard Simon, and Massillon. M. l'abbé Houssaye's interesting work abounds in inedite documents and valuable foot-notes.

Dr. Chomet's pamphlet on music § has met with so many

Dr. Chomet's pamphlet on music & has met with so many

mishaps since the day when it was first written, that we almost wonder at its having survived. Composed nearly thirty years ago as a memoir to be read before the Paris Académie des Sciences, it was, in the first place, buried under a heap of papers, where it remained unnoticed and forgotten. M. Pelcuae, who had pledged himself to introduce the author to the learned public, after having completely forgotten his promise, died at the very moment when he was about to realize it; then came the Comp after of 1852, then the Prussians, finally the Commune; and Dr. Chomet, feeling himself justified in saying of the Académie, Lacriste eges spermuse roi che entrate, wisely resolved to challenge the opinion of a larger circle of readers, and send his manuscript to the pross. We hope he will succeed in getting a fair hearing, for he treats in an original and striking manner an important branch of applied science. Dr. Chomet's subject is the influence of music upon health and disease; but, before discussing this question, he offers a few general remarks on the harmonic and molodic character of music amongst different nations, and he contends that to a certain few general remarks on the harmonic and melodic character of music amongst different nations, and be contends that to a certain extent the ideas, manners, and opinions of a community can be determined from an inquiry into their favourite style of music. Reminding us that the philosophers and legislators of antiquity employed music as a moralizing agent, he has no difficulty in showing by numerous instances its curative results, especially in nervous allments, and he reduces them into rules for the guidance of professional man.

showing by numerous instances its curative results, especially in merous allments, and he reduces them into rules for the guidance of professional men.

M. Fernand Papillon has followed the universal custom of the day, and made up a volume composed of review articles. His object in publishing it is twofold; in the first place, he aims at giving in a popular form the most essential traths established by natural philosophy, chemistry, and biology; in the next, he endeavours to refute those philosophors who, absorbed by the attractions of positive science, refuse to acknowledge the claims of metaphysics. M. Littrd's volume, La science as paint do vus philosophique, is written for the express purpose of glorifying materialism; M. Papillon lifts up his voice on behalf of those truths which are not the less real because they can neither be weighed, nor handled, nor tasted: The ninetcenth century scenas disposed to stake all its hopes upon natural science; M. Papillon protests against this idea, and shows its fallacy. The introductory article of the volume, treating of the constitution of matter, is especially interesting.

M. Pablé Fabro d'Euviou contributes his share to the religious controversice of the day in the shape of a thick and closely-printed octavo volume.† He remarks that scientific investigators, giving undue weight to their respective studies, cannot conceive that the truth lies not in geology exclusively, nor in chemistry, nor yet in astronomy, but in a synthesis which individual all these aciences and which at the same time admits a

in chemistry, nor yet in astronomy, but in a synthesis which includes all these sciences, and which at the same time admits a reasonable interpretation of the narrative of creation in the book of Genesis. M, d'Envieu is convinced that most of the objections raised against the sucred records might have been easily avoided if theologians had not construed the first chapter of Genesis too literally; accordingly he gives the narrative of the Mosaic Hexameron in the original Hebrew, the Septuagint translation, the Vulgate and Le Maistre de Sacy's version, accompanying them by a new rendering of his own, and by a commentary intended to show that the meaning of the whole passage has been misunderstood by ultra-orthodox critics, and more particularly that the Hebrew word bara does not signify creation ex nihilo, but transformation ex materia presjacents. After developing his thoughts as a geometrician would by propositions and corollaries, our author concludes that there is nothing in the data of sound philosophy and geology repugnant to the statements of Scripture.

The fragments I collected by M. Heinrich are interesting not so much for their own sake as for the memorials they contain of a young man full of promise and of real talent. Unlections of young man full of promise and of real telent. Unlections of disjects membre like that before us can only be duly appreciated by those who were intimately acquainted with the author. There by those who were intimately acquainted with the author. There is of course a danger of allowing one's sympathies too much weight in the preparation of a work which is really a monument erected to a beloved memory; but M. Heinrich anticipates this objection, and meets it very cleverly. M. Tonnelló would probably have occupied a distinguished place in literature; he writes on art, on religion, on philosophy, with all the enthusiasm of youth, and the depth of his religious impressions gives a very pleasing tone to the volume. The letter of the late Abbé Gratry to the editor is a touching tribute of respect and sympathy.

Even Mgr. Dupanloup, despite all his talent, will not be able to revive the classical ornison fundors \(\xi\$; it may be said to have died with Bossuet, and no one has yet approached the magnificent style which is so characteristic of the "Eagle of Meaux." Nevertheless the funeral panegyric of General Lamoricière will be read with

the funeral panegyric of General Lamoricière will be read with interest; it forms part of the present volume, which includes also, amongst other pieces, the famous speech delivered at Malines by the Bishop of Orleans in 1867.

The indefatigable M. François Lenormant | has contributed more perhaps than any other living archæologist to throw fresh light on the history of ancient civilization and literature. His Lettres assyriologiques, already noticed by us, are an inexhaustible

mine of information respecting the powerful nations which formarly settled on the plains of Western Asis; and the commentary in the flagshbilts of Herosus may be regarded as a complete mention of Assyrian mythology and cosmogony. We have now to specify of two handsome octavo volumes which sake us not only over the ground with which the learned anthor is so familiar, but also through Phenicia and Egypt. This new work consists of articles published from sime to time in various periodicals, and it opens with a long disquisition on the subject of human palesontology, a science of recent birth, but which has made wonderful progress during the last few years. M. Lenormant proposes to give merely a review of Dr. Hang's Precis de paleontologue humaine; but he really treats the whole question da pareo. The collection of Egyptian antiquities in the Paris Endwistion of 1867 gives him an opportunity of akotching the frincipal characteristics of the divilization which figurished on the banks of the Nile, from a careful study of the artistic monuments it has left belind it; a notice of the various domestic animals indihas left belind it; a notice of the various domestic animals indigenous in Egypt comes next, and the literature, properly so called, of that country, is represented by an account of the poem of Pentacur, and the noval of "The Two Brothers." The former of these compositions is an each as long as a book of the Iliad relating to one of the explaits of Secretis or Ramses II.; it was rendered for the first time in 1855 into French by the late Viscount de Rouge; the latter, translated likewise by him, is the popular rendering of a mythological tradition corresponding to the legends of Atys and Adoms. The original is in the British Museum. In his second volume M. Lenormant reprints, first, with considerable additions, the article he published in the Correspondent on the table additions, the article he published in the Correspondent on the table of the first which formed the theological library of the Accounts the third essay treats of Merodachbaladan, has left belind it; a notice of the various domestic animals indi-

tated version of one of the sacred books which formed the theological library of the Accedes the third essay treats of Merodachbaladan, King of Fishylon; and the concluding one describes the history of Cadmus and of the Phonician settlements in Greece,

Among the exents which have most excited the curiosity of the French activities would during the last few months are the attempt made to be in a four a monarchical restoration, and the famous visit of the Count of Paris' to the Count of Chambord. The account of these negotiations as it is given by the newspapers is not always estimatory, and we are glid to have the evidence of one who is well informed about all the circumstances. The anonymous author, a decided and outspoken Royslist, does not attempt to conceal his disappointment at the final resolution of the Count of Chambord; at the same time he is of opinion that the Conservatives have greatly gained as a party in consequence of the whole affair, and that the Orleans princes have covered themselves with glory by their abregation and their patriotism.

patriotism.

Count de Gasparlu's new volume is a heavy bill of indictment against the period of modern history which preceded the Revolution of 1785.† The author may be called a thorough Protestant of the orthodox Calvinist school; for him the middle ages are what they were for Voltaire, and what they are still for M. Michelet—an epoch of unmitigated barbarism. The ancien régime faces quite as badly at his hands, for it recalls nothing to his mind but the despotism of the Court of Versailles, religious persecution, and fashionable vices. Clount de Gasparin persists in seeing only one side of every question; his reading is of the most limited description, and he owes his literary success to the undoubted talent he possesses of dressing up his prajudices in sensational language. Of course "the good old times" were not, as nitra-Conservatives would fais make out, absolutely perfect and spotless; but, on the other hand, the result of the Revolution has not been what the ultra-Liberals endeavour to show, the realization of absolute justice, Count de Gaspariu's new volume is a heavy bill of indictment

Liberale endeavour to show, the realization of absolute justice, freedom, and good will.

The new instalments of Mesers. Hachette's Bibliothèque des mayorilles are fully equal in interest to their predecessors. M. Collignon, veilles are fully equal in interest to their predecessors. M. Colliguon, for instance, discourses upon machinery; with much completeness. After giving us, in a preparatory chapter, clear notions of mechanics, he handles forth into "industrial mechanics," the proper subject of his book, and describes the various characteristics of machinery. The second chapter enumerates the leading motive powers; in the next, the author treats of the transformation of movement; and in the fourth we find a review of the chief industries in which machinery comes into use. The concluding chapter puts together a few elementary notions on political economy.

M. Deharme's book § is a port of episode of M. Oollignon's; but the in addition an archyological or historical algument. The

thas, in addition, an archeological or historical element. The author, discussing the various means of conveyance, takes us back to antiquity, beginning with the biga and carpentum; he describes Alexander the Great's funeral car, and shows how Pascal and the Duke de Roames invented the first omnibus. This volume,

like the other, is plentifully illustrated with woodcuts.

The works of the Russian author Alexander Hertzen are not specially known to French readers; hence a translation, the first fume of which is now before us. I It comprises six tales of short transions, which are chiefly interesting on account of the light throw upon a condition of society with which we are only

La verité sur l'essai de restauration monarchique. Paris: Dentu.

THE ELECTIONS.

THE ELECTIONS.

THE ELECTIONS.

THE success of the Conservatives has continued day with assonishing uniformity. They have guided everywhere except in Ireland, where, however, they have dertainly not lost if their fortunes are compared with those of pure Ministerialists. But me every part of England, Wales and Scotland, they have centhalively shown that the country is with them. That they were sure to gain in the countries was well known, but that they would gain in countries of such very different that they would gain in countries of such very different that they would gain in countries of such very different that they would gain in countries of such very different that they would be such decisive majorities it was impossible to forcese. They have counties of such very different characters and by such decisive majorities it was impossible to forcese. They have beaten the Liberals by almost two to one in Middlesex. They have turned and so formidable a cindidate as Mr. Locks Kind in East Survey; they have given Sir William Strates Maxwest his own again in Perthibite. The Home Counties are almost entirely in their possession, and they have reduced Mr. Gosonsa to being thankful that, the multipy clause enables him to creep atmally that the minority member for the City. These have been a few Laberal gains to set against the triumphs of the Conservatives, of which those in North-West, Yorkshire and North Durham are the most conepictions. But no party can possibly win all over the conspictions. But no party can possibly win all over the kingdom, as local influences about sell here and there, and personal popularity will have its own weight. But even in Scotland the Conservatives have gained nine souts and lost two, and their gain has not been by any means exclusively in the counties where the influence of great landowners preponderates. The minority clause has seated a Conservative for Glasgow, which is a victory just in the sense in which it is a victory that Mr. Goschen keeps his sest after the City. But in the Ayr and the Wigton burghs Consign the City. But in the Ayr and the Wigton burghs Conservatives have been returned after a hard and close fight.
In some constituencies—as, for example, Middleex—the
result has been partly due to Liberal abstentions, and to the
total want of Liberal seaf and organization. But this has
not been the class generally. The Liberals have not lost
pround so much as the Conservatives have gained ground.
The Liberals have this time police humbers which last time
sufficed for victory only to find that the Conservatives had
gone fur thead of this standard. The constituencies have naturally increased, partly from the general increase of population gone ar ahead of sans standard. The constituencies have naturally increased, partly from the general increase of population and wealth, and partly because in 1868 there had not been time enough to get on the register the new electors whose wotes had been given them by the Reform Bill of the previous year. The pew voters must have somehow contained a very strong Conservative element. There have also been many voters who this time have recorded their votes, although in travious very strong they were too indifferent to register. many voters who this time have recorded their votes, although in previous years they were too indifferent to party politics to vote. They have now come forward, a little it may be under the shelter of the Ballot, but principally moved by a strong desire to get rid of Mr. Gladdrown's Ministry. A class usually quiecent, has been roused by wrath and alarm into extent. The dwellers in those happy hideous houses which line the roads out of great towns have made a great effect to a marriage of a ignoral, and have gone to the poll the world their votes againgt a Ministry which seemed to be roused that votes againgt a Ministry which seemed to be read that votes againgt a Ministry which seemed to be indeed their votes againgt a Ministry which seemed to be indeed their votes againgt a Ministry which seemed to be indeed their votes againgt a Ministry which seemed to be indeed their votes againgt a Ministry which seemed to be indeed their or those who had been and down by a retrenching Government; the least which it cannot have. That it cannot have what would be very had for it to get, and nearly its bad for England to give, he had gone the result of the without the hard their cry has the only true priginal the winhed to keep effect and disposed, shout with it.

They will not easily melt away, for they are in a great measure the fruit of careful nursing, and of the return to those habits of subordination to wealth, and rank, and great neighbours of every kind which are deeply implanted to the Conservatives, and to do them quite as much good as it did the Liberals in the early days of Mr. Chapstone's Government. It will be necessary to rule firmly a people which, never in the least content with or grateful for what it has got, is always craving after some truly and the conservatives seem specially designed and qualified to impact this useful piece of instruction.

The will have been to careful nursing, and of the return to those habits of subordination to wealth, and rank, and great neighbours of every kind which are deeply

Undoubtedly there are a certain number of constituencies, chiefly in the North of England, where, to succeed, the Liberal party must always be signalling its existence by lighting up one political benire after another. They cannot do without excitement, and care more to be moring that what somewhere than to know where they are going. the present elections must have forced home to the minds, of Liberal leaders is that these Northern constituencies do not by any means represent the general tone of the Liberal constituencies of England. What the great fulk of Liberal electors like is to be able to persuade themselves Internal electors like is to be able to persuade themselves that they know more or less where they are going. This persuasian has been cruelly out away from them lately. The Teah thursh and Land, Mots were distinctly recommender in the early days of the distinctly as defing with wholly exceptional cases. Last autima a leading Cabinet; Minister recommended them as useful precedent, which might be conveniently spalled to England. The ordinary Liberal elector has not the slightest intention of letting a set of factions impracticable Irishmen break up the Empire, and he looks to his leaders to express his sentiments. To his confusion he finds that neither Mr. Gladstows nor Mr. Beight will say a word against Home Rule. They cannot gress what it a word against Hodge Rule. They cannot gness what it means, but in the proper time will have something to say to it. This dismays the humble Liberal of the faint Southern type, who thinks that these are subjects as to which the heads of his party seed not wait to see how the cat jumps. Very likely this faint Southern Laboral is not so enlightened, so zealous, nor so far-seeing as he might be; but what is important is that he exists and must be taken into account. So must the quiescent neutral in his Their retiring figures and timid faces must in villa-home. the future flit before the mental vision of the Liberal leaders both in Opposition and in power. Whether the Liberal leaders need think of power for a long time is doubtful. On the one liant, the moment Mr. GLADSTONE goes into Opposition a great part of the bittorness that now is felt towards him will die away. A sort of respectful pity may spring up for the man who has done so much and who has received such a rebuff from a nation which he con-ceived was ardently admiring him. The Conservatives are sure to make mistakes, and then many of those who have now risen up in their moral majesty to pronounce sentence on Mr GLADSTONE will rise up in an equally noble attitude to propounce sentence on Mr. DISRABLI. We may imagine that the constituencies, having got used to the excitement of the wholesale condemnation of Ministries, will not like to abandon the pleasure altogether But, on the other hand, the Conservative majorities are likely to prove compact.

Mr. CLADSTONE should resign as soon as the last oction is over. If he takes this step he will have done all in his power to repair the inconveniences attending on the unfortunate choice be made of the time for a dissolution. He also distinctly put it to the constituencies whether they wished that the arrangement of the next Budget should be in his hands, and they have as distinctly replied that they do not wish this. To give a fair opportunity to his opponeuts of arranging the Budget after their fashion seems therefore the natural and proper consequence of the reference he has made to the wishes of the electors. That all March should be wasted before a new Government can meet the House of Commons seems a matter much to be regretted. Unfortunately, the only precedent for taking the course which convenience suggests is the one set by Mr. DISEASELI in 1868; and, atill more unfortunately, Ms. GLADSTONE then took upon bimself to taunt the Conservatives with not daring to face the Parliament they had called together. No doubt the general current of precedent is in favour of a beaten Minister accepting his defeat only at the hands of Parliament, and the custom is grounded on the salutary doctrine that it is only through Parliament that the nation can speak. If this is the ground on which Mr. GLADSTONE thinks himself bound to retain office until a formal vote displaces him, he must be congratulated on his tardy perception of wholesome constitutional doctrines. Minister should have transferred the consideration of the Budget from Parliament to the electoral body, and then a few weeks afterwards have discovered that Parliament alone ought to decide what Minister shall be in power, shows that every reasonable mind may be converted, and that the uses of adversity are sweet. A subsidiary discussion that the uses of adversity are sweet. sion has been started as to who is to be Speaker, and some of those who claim to be in the confidence of the Ministry have suggested that an occasion has arison for a bargain. and that the Ministry should resign at once if Mr. Brand is accepted as the new Speaker by the Conservatives. Those who have regarded such an arrangement as dignified and feasible must be the same adventurous spirits as those who have hinted that Mr. GLADSTONE is capable of shocking opinion and disorganizing a whole department of administrators by putting Mr. Ayeron in the India Office as the successor of Mr. Herman Merivale. The Conservatives have every right to say who is to be Speaker. If they take Mr. Brand, it will be because they know and respect his high qualifi-cations for the office. If they think they have a good man on their side, they may properly put him in the hair without the slightest reference as to when Mr. GLADSTONE goes out. It entirely rests with Mr. GLADSTONE to say whether he will go out in a few days, or, it may be, a month later; and, whichever way he decides, it is perfectly certain that he will not be swayed in his decision by any unworthy wish to retain office, and to give away a few minor posts for a few days more.

MR. DISPAELIS MATERIALS FOR A GOVERNMENT.

In forming an Administration Mr. Diseaell will not be embarrassed, like some of his predecessors, by an excessive abundance of materials. The Conservative party has not, after the lapse of nearly thirty years, recovered the loss of its entire staff of leaders which occurred in the disruption of 1846. The Governments which have since been formed by Lord Derby and Mr. Diseaell have been too unstable and too brief to train up a race of official statesmen. There is now a reasonable probability that the incoming Government may maintain itself in power at least during the existence of the present Parliament. The vexatious law which vacates the seats of Ministers on their acceptance of office may perhaps afford a few constituencies the opportunity of exhibiting the caprice which seems to be encouraged by the Ballot, but the principal members of the new Cabinet are, fortunately, almost certain of re-election. Mr. Diseaell, Mr. Hardy, Sir Stafford Northcore, and Mr. Ward Hunt are not likely to be troubled with contests. The future Law Officers in England and Scotland are not less fortunately situated, and Irish Attorney-Generals have for some time past been liable to the chance of exclusion from Parliament. The House of Lords, if it had no other merit, would be a highly useful institution in supplying a certain number of Ministers who may be selected solely in account of their qualifications for office; and it happens that several Conservative peers have an undisputed chaim to places in the Cabinet. No statesman commands more general confidence

than Lord DEEST; the Duke of RICHESOND is an able and experienced man of business; and Lord Carranvon may naturally be expected to return to his former post at the Colonial Office. It would be an injustice to suspect that Lord Salissury could allow any personal differences to interfere with an opportunity of readering good service to his country. During his short tenure of the India Office he laid the foundation of a great administrative reputation; and, as the Duke of Argyll will necessarily retire, no other Minister will be as competent as Lord Salissury to deal with the grave question of the impending familia.

In ordinary times Lord Salisbury's energies might be not less advantageously employed in the War Office, where it will be difficult to supply the place of Mr. CARDWELL. The actual MINISTER of WAR has effected greater charges in the military system than any of his predecessors; and during his five years' tenure of office he has mastered all the details of military administration. Although his measures have been distasteful to many officers of the army, Mr. Cardwell has never added to the difficulties of his task by giving unnecessary offence. For the issue of the Royal Warrant, which was his most questionable act, Mr. GLAD-STONE is perhaps more responsible than his colleague. It may be hoped that Mr. CARDWELL'S SUCCESSOR, even if he should himself be a military man, will devote himself in good faith to promoting the efficiency of the system which is now definitively established. There was much to be said in defence or extanuation of the undoubted anomalies of purchase; but no reasonable advocate of the practice would have deliberately greated the system if it had not already existed. It is perhaps unlucky that Mr. Cardwell's chief subordinates hold Parliamentary office, so that they must necessarily retire with their chief. The new First Lord of the Admiralty may feel satisfaction in reflecting that he knows as much of the navy as Mr. Goschen knew when he entered on his office two or three years ago. One of the addition of Panliamentary government is that the principal partner in a firm is sometimes also the youngest approntice. If Mr. Goschen's successor is as intelligent and as industrious as himself, he will give reasonable satisfaction to the navy; and he will gradually learn to form and express independent opinions on the construction of ships, on the disposal of patronage, and on the distribution of the fleet. Ex-Ministers of departments discharge a useful function in applying their acquired knowledge to the supervision and criticism of the arrangements of their reigning opponents. It is, in fact, not more impossible for a Parliamentary leader to learn the details of a special branch of administration than for an advocate to argue a technical case by the aid of instructions supplied for the occasion.

The most difficult and important selection which will devolve on Mr. DISRABLI will be the choice of a Chancellor of the Exchequer. He has hitherto been content that the duties of the office should be discharged by a novice or an amateur; but finance, unlike naval or military administraamateur; but mance, unlike haval or military administra-tion, is not an accumulation of details, but a part of the special knowledge of a statesman. Mr. DISEAELI may be consoled by the example of Lord Melbourne and Lord RUSSELL for his own imperfect acquaintance with the principles of finance; but it is expedient that he should neither deceive himself as to his own qualifications, nor lightly place any but the most competent of his colleagues in direct comparison with the greatest financiar of that inc. direct comparison with the greatest financier of the time. Mr. GLADSTONE, although he has recently yielded to the temptation of making financial expediency subordinate to party interest, has introduced great improvements of financial and commercial policy. He has also created great embarrass-ment for his successors by his premature offer of reductions which may perhaps be popular. Many Conservative members have unwisely pledged themselves to the repeal of the Income-tax, though Mr. Dissaeli, as soon as he recovered from his first surprise, repudiated his hasty adoption of Mr. GLADSTONE'S proposal. If he is well advised he will entrust the Exchequer to Sir STAFFORD NORTHGOTE, who was re larly trained in the knowledge of finance as a pupil of Mr. GLADSTONE, though he is not pledged to the later innovations ar eccentricities of his former master. Public confidence ar econtricutes of ms former master. Public confidence will be reposed only in a skilled financier who may be trusted to regard the interests of the revenue and of the taxpayer to the exclusion, as far as possible of political considerations. Next to Sir Sykerone Normacell. Mr. Cave would perhaps be the most competent condition for the office. It is no disparagement to Mr. Wasse Hunt, who will in some other depastment be found as efficient administrator,

Martin Strategic Commencer

to eng that his financial measures were constructed rather for the purpose of conciliating the support or tolerance of Mr. Grapesure than from any original exercise of discretion. The provision for the cost of the Abyssinian war by increase of the Income-tax, and the creation of temporary enumities, were virtually dictated by Mr. Grapesons.

Long Person will probably regame the conduct of the oreign shies, and continue the policy of Lord GRANVILLE. Forciar in lice, and continue the poncy of Lury Granville. Since the settlement of differences with America, and the practical withdrawal of England from Continental affairs, the duties of the Foreign Office leave sufficient leisure for the exercise of a general influence in the councils of the Government. Lord General influence in the councils of the Government. Lord General was supposed to be the most confidential and probably the most judicious adviser of Mr. Glabstone; and Mr. Dishaeli will do well to allow a large share of influence to Lord Deeby. Where impetuous genius has produced universal distrust, it may be desirable to try the experiment of a policy of dis-passionate common sense. Lord Derey is more thoroughly in harmony with English opinion than Mr. DISRAELI himself, and he will have no tendency to indulge in dangerous and uncertain experiments. It would perhaps be still more advisable to induce Lord DERBY to accept the succession not only of Lord Ripon and Lord Aberdane, but of the able Minister who really discharged the duties of their office. It is of the utmost importance that the active Minister, whether he is called President or Vice-President of the Council, should be heartily devoted to the cause of education, and that he should be free from any occlosiastical bias which might tend to hamper his exertions. The continuance and completion of Mr. FORSTER'S invaluable Bervices would be a task worthy of a statesman of the highest rank. Mr. HARDY will probably return to the Heme Office, which he has already administered with success. Among the younger members of the party, Mr. Plunkerr and Mr. Lowther will perhaps be thought to have a claim to office. Mr. Disraell is probably already engaged in the composition of his Government, and he enjoys a reputation for knowledge of character which ought to secure him against the commission of gross mistakes.

THE CONSERVATIVE REACTION.

THE defeat of Mr. GLADSTONE'S Government, while it may be partially attributed to many secondary causes, undoubtedly proves the reality of the disputed Conservative reaction. Ministerial supporters have shown much good sense in simply acknowledging the change in public opinion which has taken all parties by surprise. It would have been easy to explain away the results of a dozen elections, where the Liberals had put forward too many candidates, or where personal influence was unusually powerful; but the loss and gain of a hundred soats for large and small constituencies evidently proceeded from general causes. markable and unexpected because it has occurred at the second general election after the institution of household suffrage in the boroughs, and the wider extension of the franchise in counties. There can be little doubt that the constituencies as they existed from 1832 to 1867 would have returned a still larger majority against Mr. GLADSTONE. None of the measures or proposals of his Constituency, with perhaps the execution of the proposals. ment, with perhaps the exception of the unlucky Beer Bill, were especially obnoxious to the working class; nor is there any reason to expect that the future Ministers will be more favourable to popular demands than their predecessors. Although it is impossible to scrutinize the votes, there can be little doubt that the 101. householders have had a large share in the return of a Conservative House of Commons. In the early part of 1867, Mr. GLADSTONE obtained a majority of seventy for a Resolution which virtually affirmed the expediency of abolishing the Irish Church; during the whole of the Bession he enjoyed the satisfaction of defeating Mr. Disascel on every important with his and of remodelling the Reform Bill in accordance with his own opinions, although the defection of some of his adherents opinions, authorized the detection of some of his adherents prevented him from rejecting it as a whole. It is true that the subsequent election both increased his majority and established for the time his personal supremator; but it eight not to be songotten that the Liberal party was predominant before the last Referrit Bill.

If the immediate operation of secret voting had been

The work of the second of the

foreseen, the Ballot would neither have been actively in moted by the more zoalous Liberals, nor obstinutely resisted by the Conservatives. The contrivance which was designed to counteract the influence of property and station has thus far chiefly tended to relax the bends of party connexion. The Conservatives will have no monopoly of the benefits which result from the safe indulgance of personal inclination. Hull, Renfrewshire, and, above all, Stroud, have afforded striking illustrations of the opportunity which the Ballot offers to political caprice. The Opposition has naturally profited by the instinct of antagonism and the love of change, and to a certain extent popular feeling will perhaps at the next election tend to oscillate in the opposite direction; but, when full allowance has been made for a natural love of novelty and contradiction, the result of the election must in great part have been influenced by permanent motives. Mr. Disharl's remark that men are governed by custom as well as by law showed a sounder knowledge of human nature than Mr. Lowe's elaborate oulogy of hurassing legislation. It is true that improvements are effected, not by leaving things alone, but by legislative action, and yet the process of amendment is occasional, exceptional, and generally trouble-some. Houses cannot be repaired without the help of masons and carpenters, but repair is not the normal condition or the primary object of a house. When the alterations are proposed, not for the convenience of the occupier, but on the dimand of his neighbours or at the discretion of some public authority, it is not surprising that the selfish householder should become impatient of firquent interference. It might perhaps be justifiable to harass landowners, publicans, military officers, holders of University endowments, and many other sections of the community with actual or throatened logislation; but every person who was interested in the maintenance of any established justitution, or in the possession of any kind of property, became uneasy at the restless activity of political projectors, and at the readiness of the Government to entertain proposals of change. A statesman of mature years might have been expected, even before the late election, to know that many persons prefer their own interest and comfort to the most beautiful schemes that can be devised for the general welfare.

The Conservative reaction is to a great extent a reaction against the PRIME MINISTER; and its sudden prevalence may be partially explained by his latest exhibition of the qualities which had provoked universal distrust. The English nation, like other well-ordered communities. dislikes surprises, suspects impulsive temperaments, and resents violations of constitutional practice; and the circumstances of the dissolution confirmed the general belief that Mr. GLADSTONE'S character was deficient in steadiness, in prudence, and in regard to precedent. It was evident that he had formed the design of dissolution on a sudden, with the result, if not with the purpose, of taking opponents, supporters, and even his colleagues, by The same Minister who, in the issue of the Royal Warrant on purchase, had superseded the authority of Parliament by the revival of an obsolete prerogative, now usurped on behalf of the multitude the distinctive function of the House of Commons, by submitting the Budget in the first instance to the judgment of the constituencies. These who questioned the soundness of Mr. (HADSTONE'S political judgment had always acknowledged his pre-eminence as a financier, and now they were compelled to admit that he had for party purposes disregarded official propriety even in his own special department. The irritation which was startled into an outburst of hostility had been long accumulating. It had become impossible to anticipate the construction which Mr. GLADSTONE might place on any sentence in a despatch, or on any clause in an Act of Parliament; nor was there an institution in the country which he could be trusted to defend. If a foreign statesman quoted the remark of an English Ambassudor that war must ensue in a certain contingency, Mr. Chapters insisted that the warning was not a warning, because it was proceded and followed by inverted commas. Enactments that a certain office should only be conferred on a Judge, or a certain benefice on an Oxford graduate, were interpreted into provisions that both Judge and graduate should be apositly manufactured for the occasion. Within two years from the passing of a Reform Bill, the Prins Ministry wantonly amounced that universal suffrage must ultimately prevail. When Mr. Minist introduced a resolution preparatory to the abolition of the Established Church, a trusted

colleague of the PRIME MINISTER merely contended that the motion was premature; and although on a later occasion Mr. Gladstone bimself defended the Church in a powerful speech, his son soon afterwards informed his constituents that the meaning of the PRIME MINISTER had been misapprehended, and that he had only intended to disavow any personal intention of preparing a Disestablishment Bill. Within two or three weeks Mr. CLADSTONE'S inveterate love of ambiguity has been displayed in his profession of inability to understand the exact meaning of the Irish demand for Home Rule. It may or may not be true that the intentions of Mr. Butt and his party are indefinite; but, whatever may be the meaning of Home Rule, no project which bears the name could conscientiously be entertained by an English Prime Minister. The affectation of uncertainty could only be interpreted by habitual tolerance of every democratic demand. A year or two ago Mr. GLADSTONE professed his intention of thinking three times before he suppressed the House of Lords, which was too much inclined to resist his dictation. The country is not prepared to endure the concession of Home Rule after any number of repetitions of the thinking process. Mr. Lowe, who has the quality of thinking clearly and speaking plainly, found no difficulty either in understanding the meaning of Home Rule, or in making up his mind to resist the discontinuous of the Levisian in which up his mind to resist the disruption of the Empire, in whatever phrases it might be proposed. Future Ministers may learn from the ex-perience of Mr. GLADSTONE that it is prudent to impose a limit on their readiness to encourage proposals of change. The present Cabinet has habitually acted on the principle candidly avowed by Mr. Stansfeld, that the Liberal party must justify its own existence by the incessant discovery and accomplishment of political innovations. They now find that the nation is more ready to dispense with a Liberal Government than to subject its institutions to perpetual alteration. After an interval reform will probably again become popular, but scarcely for the sake of the party by which it may be undertaken. The Nonconformist preachers and their adherents will do well to profit by the rebuke which has been inflicted on their sectarian agitation. The Liberal party has for the time rejected the pretensions of the Dissenters to make political action subordinate to their own religious and social objects. The Conservative reaction is partly a protest of moderate Liberalism against the bigotry of sects and against revolutionary tendencies.

MR. DISRAELI AT BUCKINGHAM.

MR. DISRAELI, in addressing his audience at Bucking. ham, naturally spoke in a strain of the most radiant good humour. Everything was going as well as possible, and everything showed that he had always been right. He had no cloudy showed that he had always been right. He had no cloudy showed that he had no doubt that the Government had done its best to help India in the present torrible crisis. He even wished it to be noticed how much he loved and was loved by Liberals, or at any rate Buckinghamshire Liberals, and on what terms of cordial intimacy he lived with the chief leaders of Liberalism in the district where he resided. Naturally, if everything in England looks nearly perfect with a strong Conservative majority daily increasing, Buckinghamshire is perfection itself; and Mr. DISRAELI was able to assure his local admirers that directly he had passed the Thames and the Colne he felt a subtle superiority in everything above and around him. More especially he always rejoiced in the fact that in one part of Buckinghamshire there was gathered a nest of houses where lived almost all the families which were instrumental in giving our glorious Constitution its peculiar character. There were days when the founders and upholders of this peculiar Constitution were described as a Venetian oligarchy whom Connesses and all other good and enlightened young men were bound to hate with the bitterness natural to epigrammatic heroes. Among the recent prophets of evil and the gloomiest painters of the hidden dangers threatening England was the Rector of Glasgow University, who gave young Scotchmen to understand that they were treading on the treacherous ashes of a society beneath which the fiery passions of democratic equality were smouldering. All these melancholy theories and gloomy visions have for the moment passed out of Mr. Disraell's mind. He was radiant and genial, and found that everything was showing itself at its best in this best of all possible worlds. Nor is it uninstructive to remark that every successful party

turn much the same language. They all insist that for them the sun ought never to set, nor the flowers of the field to fade. Their claim to success and power and office is perennial. For a long time we have heard this language from Whig philosophers. Their party was born in the nature of things to be always in a position of appropriate superiority. Tories were all very well in Opposition, for if there were no Opposition there would be no fun in having a good Whig majority; but for Tories to be in office was an aberration from the scheme of things which a logical mind must contemplate with aversion. Now Mr. DISRAELL, in his turn, is not content with having a majority. He likes to think that anything but a Conservative majority is an unnatural accident. Last general election there was no time then for Conservatives to get at the great mass of the nation, who have really but one desire, and that is to have the historic majesty of England upheld. Now the healthy mass of English feeling has been once for all reached, and a Conservative Government takes the place which properly and inalienably belongs to it.

Mr. DISRAELI noticed one feature in the elections, and laid great stress on it, which ought to be satisfactory to men of all parties. In spite of all we have heard in recent years of the tendency of class to be set against class, and of he deep separation that was springing up between conflicting interests, the elections have not revealed any of this want of social harmony. The Trade Unions have not succeeded, except in the most limited way. Employers have not separated themselves from the employed, nor have servants risen up against masters. The tenant-farmers go with their landlords as much as ever, and the county elections have been as satisfactory to Mr. DISRAELI as the borough elections. Lastly, Mr. DISRAELI has been able to ask his admirers with just triumph whether they do not now believe in the Conservative working-man. There can be no doubt that in many constituencies the victory has been won for the Conservatives by the new voters, and the new voters must be in a large degree men of the type who are generally called working-men. For some reason or other these new voters have been prompted to vote for Conservative candidates this time. It may be that the Conservative registration agents looked them up, or it may be that they are more alive to thoughts of the historic grandeur of England than their neighbours in the next street who had had votes for some years could pretend to be; or, lastly, it may be that, not having voted at all before, they were new to the work, and more easily persuaded, and more alive to the fascinating eloquence and stimmlating arguments of the publican whose tap they specially loved. Let us take it all at its best. Let us say that Stafford and Morpeth recognized that their working-men candidates were, as Mr. Disraeli says, of an admirable type, and that other boroughs saw that their working-men candidates were, as Mr. DISKAELI described them, odious Jacobins; and of course this keen discernment on the part of the constituencies was most creditable to them. Let us agree that, in spite of the Ballot, the tenant-farmers went heartily with their landlords; and, not to make two bites at a cherry, let us suppose that the new Conservative voters paying four shillings a week for their houses were, with few exceptions, animated with the patriotic ardour that springs from an intelligent study of English history. Nothing could be more delightful than all this, but whose anticipations does it falsify? It was surely not the Liberals who said that olass was being set against class, and interest against interest. It was not the Liberals who said that the Ballot would prevent men from gratifying hereditary and local attachments, nor was it the Liberals who said that the working-man, with his acknowledged interest in English history, ought not to have a vote. It was Mr. DISRAELI'S desponding friends who used to call heaven and earth to witness that they were going to be ruined by the perils which they have now so going to be ruined by the perils which they have now so triumphantly surmounted. If in the course of time the interest of the working-man in English history undergoes an accidental and temporary abatement, and so a Liberal Ministry comes again into power, it will certainly be justified in saying that the measures of its party the not always been dangerous; for some that were called a were scarcely passed before it was found that they had been entirely consistent with if not a worm the center of the establishment. consistent with, if not among the causes of, the establishment of that rock and tower of national safety, the installation of a Conservative Ministry with a community majority.

Mr. Demant is now so very nearly a Prime Minister that, although he never went beyond the bounds of discretion, he could not altogether avoid speaking like one at Buckingham. He took subjects so important as those of India, of Ireland, and of national education; and though he did not commit himself on any, he showed that he looked on them from the point of view of a man whom responsibility with regard to them would soon begin. If to India, he did not separate himself from the present Government. He could not do so, for in the first place he does not as yet know in detail what has been done place he does not as yet know in detail what has been done, and to judge of anything about India requires the know-ledge of innumerable details; and in the next place he is perfectly aware that the ordinary course of Indian affairs is, that the Cabinet approves whatever the Secretary of State approves of, that the Secretary approves of whatever the Council approves of, and that the Council approves of Conneil approves of, and that the Council approves of whatever the Vicercy approves of. As a rule, all comes back to the Vicercy at last. He has the inestimable advantage of being on the spot, having real power and real responsibility. The Duke of Argyll has been severely criticized for having had the gout at Inversry this winter. Of course it would have been more official to have had the gout in London, but the result has been probably much the same to India. Sanguine speculators on political changes have suggested that Lord Salisbury will soon be at the India Office, and that he will do wonders in averting or remedying mischief. Nothing could be more unfair than to expect Lord Salisbury or any other statesman to do what is impossible, and to sugor any other statesman to do what is impossible, and to suggest some novelty which has never occurred to the VICEROY or any Indian official here or there, and which will mend matters at once. Mr. DISRAELI does not encourage such a notion for a moment. The Duke of ARGYLL some time ago gave Lord Northbrook carte blanche-that is, told him to spend as much Indian money as he liked; and now Mr. DISRAELI asks whether we might not possibly let him spend a little English money too. The Irish policy of Mr. DISRAELI is simplicity itself. It is to say to the Irish that they shall not have Home Rule or anything like it, and that, as they have been first distracted and then gagged by the Liberals, they will have to thank the Conservatives if the pressure of this gagging is in any way relaxed. The beauty of this policy is that, if severity continues to be necessary, the Conservatives are not to be blamed for it. If it becomes gradually less necessary, then, even though Mr. GLADSTONE'S measures may be the cause of the improvement, the Conservatives are to have the glory of treating Ireland in a new spirit of kindness and confidence. There is not much to complain of in this, or in the ingenious advice given to Conservatives to stick like men to the grand 25th Clause, and leave other questions of education to a right-minded Ministry. Most cautious statesmen guard themselves in this way when they see office close before them, and caution and discretion are essential features in the programme of Mr. DISEAELI.

THE BENGAL FAMINE.

Calamity like the Bengal famine is so plainly marked out that it would seem more correct to say that it would have been a discredit to Mr. DISRAELI if he had made it a party question than to say that it is a credit to him that he has abstained from doing so. Still attention even to plain duties is not so universal in politicians as to make it inappropriate to praise him for the good sense and good feeling which marked his treatment of the subject on Tuesday. He acquitted the existing Government of any responsibility for the difficulties with which they have to contend in India; he bore testimony to the industry, firmness, and resource of the Viorboy; and he pointed out that, as regards the feature of the Viorboy; policy which has been most attacked—the refusal to forbid exportation—a Government which undertakes to superseds the private trader may find that it has neither the skill nor the connexion which is needed to do the private trader's work. So far no one could have told from hearing Mr. DISBAELI to which the of the House of Commens he belonged. The one adverse criticism contained in his speech referred to the application of the labour test, and on this point Mr. DISBAELI consurer would be perfectly just if it were really deserved. When we hear," he said, "of women of high "caste absolutely obliged to go to the public works in order

"that they may do that which they never did in their "lives—labour to obtain sustenance—it is impossible not "to believe that the consequences will be of the most distressing character." That there may be isolated instances of the employment of high-caste women in this way it is of course impossible to deny, but no faith can be put in the reports which represent it as a thing of common occurrence. The rules of applying the labour test as originally framed were especially directed against such a contingency, and it is highly improbable that the Government of India would have entirely changed its views on this question without communication with the Home Government, or that its orders should be systematically disobeyed by its own servants. That women are largely employed on the relief works is certain, but this applies to a class which the secustomed to "labour to obtain sustenance." Unless the system of relief works is altogether abandoned, and gratuitous distribution substituted, it is difficult to see any reason for exempting women from the necessity of doing during the famine what they do as a matter of course at all other times.
